The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

A FOURTH DEED OF GIFT.

A careful study of the existing situation in international yacht racing leads us to the opinion that if a race for the America's cup shall be sailed in 1895 it will be under neither of the three deeds of gift which we published last week, but under a fourth deed; which has been for some time in process of construction, and is now practically completed. Until quite recently it appeared that the position of the New York Y. C. in the present negotiations was the same as that in the Valkyrie-Vigilant match, of accepting a challenge with but one dimension given, but insisting rigidly on every other provision of the new deed. Such a position was bad enough, the acceptance of a challenge without the four specified dimensions was, we believe, clearly illegal in itself, and the abandonment of this demand by the very men who made it was the strongest possible proof of the truth of the charges we have made against it.

While the whole document was in a measure weakened by this repudiation of one of its vital requirements the club was still able, with no serious degree of inconsistency, to insist on the legality and force of the new deed as a whole. The developments of the last three weeks, however, have carried matters to such an extreme that all the other demands and limitations of the new deed have practically followed the demand for the dimensions, being wiped out entirely by the latest interpretations of the new deed, and the rapid expansion of the mutual agreement clause to cover every possible contingency of future Cup matches. In order to secure a challenge under the new deed from the Royal Yacht Squadron, the New York Yacht Club, or its accredited representatives in the negotiations, have first agreed to accept a challenge giving but one dimension, in spite of the wording of clause 5; they have offered to sail a match in November, though such action is explicitly prohibited by the same clause; and they have even admitted that the holder has the power to accept a challenge without name of owner, name of yacht, dimensions or Custom House registry. Further than this, they have insisted most strenuously, as a justification for their violation of the requirements of the deed, that the provisions of clause 6, recognizing a mutual agreement, cover every possible point of the Cup racing.

The challenger has not been slow to appreciate the effect of this wholesale misinterpretation of the stringent and exacting document to which he once objected, and he is very likely to profit by it. We look to see the Royal Yacht Squadron, at its meeting next week, consent to challenge and to hold the Cup if won under the new deed of gift—but only with a formal and written explanation from the New York Yacht Club that, in its opinion, the mutual agreement clause covers every possible condition and limitation contained in the whole deed. Such an interpretation has already been made by the Cup committee in its various letters, but we look for a demand from the R. Y. S. for an official statement from the New York Y. C. confirming it beyond question

Should the New York Y. C. finally indorse the action of Commodore Smith and his committee in carrying out this sorry farce of upholding the new deed, such action will be practically equivalent to the nullification of the third deed and the recognition of still another deed of gift, which, while no more legal than the third, would be quite as loose and indefinite as the original deed was said to be. This new document would contain clauses 1 and 2 of the third deed, the first second and third lines of clause 6, as printed last week, and clauses 7, 8, 10 and 11; with the honored names of Commodore Eldridge T. Gerry and John T. Bird still left intact. The portions omitted include everything relating to the qualifications of clubs entitled to challenge, the limits of size and other general limitations of yachts eligibl as challengers and the definition of a "challenge in due form."

Under such a broad and sweeping interpretation of the mutual agreement clause it could no longer be claimed that any of the provisions of clauses 3, 4, 5 and 9 are binding, or that they may not all be waived at the will of a future holder.

The Field last week made a suggestion which may seem absurd, but it is none the less true under the latest construction of the Cup committee; that a holder may agree with a challenger to race for the America's Cup with boats of 20ft. water line and carried across the ocean on a steamer; and if the Cup should be won by a British club, there is nothing to prevent it from accepting a challenge from some small continental club whose sailing ground is a river or mill pond.

There are two possible interpretations of the new deed; one, which we have urged repeatedly as the only legal one, is to construe literally the fifth clause, defining a challenge, in the light of the established precedent of the club, and of the known intent of the framers of the deed to hamper and restrict a challenger. By this interpretation, the mutual agreement clause No. 6 is limited, as it was intended to be, to the secondary conditions, "as to dates, courses, number of trials, rules and sailing regulations," and, by special mention, the ten months' notice.

The other interpretation, that of Com. Smith, deliberately ignores each provision of clause 5 and makes every possible contingency of racing subject to clause 6 by virtue of the words "and any and all other conditions of the match."

The first interpretation maintains the new deed in its integrity, as the New York Y. C. professes that it always intends to do. The second interpretation is but a cowardly way of avoiding the charges against the deed; and if it is followed, the America's Cup is left with absolutely no restrictions, but may be raced for by any one and in any way.

The loss of prestige, the discrediting of the America's Cup as the great yachting trophy, and the cessation of racing, all began with the motion of Commodore Smith at the meeting of Oct. 4, 1887, that the New York Y. C. return the Cup to him and his fellows, empowering them to make a new deed of gift. The trouble that has followed this action is small compared to the probable results of the adoption of Com. Smith's interpretation of this same new deed. The mistake of 1887 cannot be retrieved by anything short of an open and honorable repudiation of the new deed by the New York Y. C., such a devious and doubtful course as that now proposed is certain to lead to further trouble.

A BETRAYAL OF PUBLIC TRUST.

The Forestry Commission of New York has signalized the close of the year with an action which appears to be a gross betrayal of public trust.

The new constitution adopted last November to take effect with the new year provides that none of the public wild lands owned by the State shall be sold or granted to private parties but shall always remain in the possession of the people of New York.

On Thursday of last week, when there remained but four short days for the consummation of public lands jobbery before the going into effect of the new constitution, which should render it forever after impracticable, there appeared before the Land Board representative of the wood pulp and kindred interests, with an impudent lie on their lips that were acting in behalf of pleasure seekers and sportsmen, and with an impudent demand for a right of way for the Adirondack Railroad over seven miles of State land. Foiled here by an injunction restraining the Land Board from acting, the timber grabbers then had recourse to the Forestry Commission. There were present in Albany of this Board Messrs. Tilden and Weed; and Commissioner Shuyler was brought by a special train to make the quorum. They convened in secret session behind closed doors, and with incontinent and indecent haste gave the wood pulp schemers all that they asked for. In this they violated the spirit of the new constitution, which if not actually in force should, nevertheless, have been regarded as binding on them as trustees of the public interests; and at the same time they gave us as fine an example of callous disregard of public trust and subserviency to the demands of private greed as we have had during the past year of revelations of incompetence and worse in public office.

There is reason to believe that the action of the Forestry Commission will not stand the test of the courts. They assumed to act under that section of the law which gives them power to construct roads or paths. Authority to lay out roads is not authority to hand over a slice of the public domain to wood pulp and railroad land grabbers. Captain Anderson of the Yellowstone Park is empowered to lay out roads, but he would not be likely to assume that such an authorization gave him power to grant a railway right of way through the park to Cooke City. The assumption on which the New York Forestry Commission has acted is quite as ridiculous an usurpation of power. When it shall come to the test the "grant" will be revoked.

SNAP-SHOTS.

In a paper read before the American Folk-Lore Society last week, Rev. J. Owens Dorsey related that the Elk gens or family of the Wapa Indians are not permitted to eat elk meat if it be so called, but if spoken of as venison it may be eaten with impunity. Some such notion sometimes prevails among white men, at certain Adirondack hotels, for example, when if deer meat comes to the table as venison it is tabooed; but if it is down on the bill of fare as "mountain mutton," no one dreams of making any bones about it.

The tarpon has inspired many columns of capital reading and the literature of the subject is constantly growing. Some entertaining chapters are added in Mr Alfred C. Harmsworth's long promised story of his experiences in Florida last winter. The account has added charm because it gives us the impressions of an entire stranger in the country, to whom many things appears novel which would be to Americans commonplace, but take on a surprising interest when seen through the eyes of another. From Florida Mr. Harmsworth went home with enthusiastic stories of Florida's attractions for European fishermen, and the West Coast may look for an increased number of anglers from abroad.

A small item in the Sundry Civil Service Appropriation bill, now in the hands of the committee of the House of Representatives should receive the support of every member of Congress. The amount involved is small—only $1,800—to provide for the pay of four scouts in the Yellowstone National Park for six months in the year. Last spring the Forest and Stream published Mr. Hough's ghastly story of buffalo destruction in the park, and a result of that publication was the passage by Congress of a law which, if enforced, will protect the few remaining buffalo and enable them slowly to increase. But to be effective the law must be enforced, and it cannot be enforced without an increase in the number of scouts employed. At present there is only a single man to cover 3,600 square miles of territory.

Experts who studied the game question in the park last autumn had the conviction forced upon them that without such protection as this item will provide the buffalo in the park can not last ten years. The struggle for existence in those high mountains is hard enough to make their preservation at best uncertain and the work of the poacher will turn the scales and insure extinction. If it was worth while to pass the law providing a government for the park—if it has been worth while at any time during the past twenty years and more to make appropriations for its care—it is worth while now to appropriate this ridiculously small sum for the better protection of the game.

The matter has been so long neglected that the breeding stock of buffalo has run dangerously low and the last and largest surviving herd stands in urgent need of protection. Every Representative and every Senator ought to vote for this item.

In the Willow Brook ponds of the Minnesota State fish hatchery at St. Paul are some hybrid trout produced by a cross of the lake trout with the brook trout. The fish are large, beautiful and exceedingly gamy. The commissioners intend to secure a large number of them and to put them out for a trial plant in some particular waters. If this initial planting shall prove a success, a general distribution of the hybrids will follow

The Sportsman Tomist.

DUTCH HENRY AND THE BEAR.

While running through an old diary the other day in which were occasional and brief notes concerning some incidents of life in our camp I came across a name the mere mention of which, I am certain, would bring smiles to the many faces of those who knew him in the days gone by. There was nothing at all engaging in his appearance, but about the quaint, jovial personality of "Dutch Henry" there clusters a host of pleasing reminiscences.

As his name would imply, he was a German, and if his appearance in any way belied his nationality his speech proclaimed it in no uncertain tones, for he possessed a dialect which would have driven Gus Williams wild with envy. In figure he was rather short and stout, but was quick in his movements and possessed of tireless energy and phenomenal endurance. He had a large, round and quite rubicund face, which phase of his personality was intensified by fiery red whiskers and hair. I said his face was large and round, but when it comes to describing the capacities of that face in mirroring the emotions which throbbed underneath Henry's well worn and rather soiled shirt, I throw up my hands in mute despair. He was, I think, without exception, the most thorough going and consistent optimist I ever saw, for never do I recollect seeing him cast down, although at times old hard luck jogged close on his heels. His good nature, however, was proof against everything, and the quaint manner in which he used to relate his experiences never failed to attract a knot of interested and amused listeners. The men used to joke him a good deal, as they enjoyed intensely the amusing comments which were certain to follow, and not a few practical jokes were played upon him, many of them exceedingly funny, all of which he took with the most imperturbable good nature, frequently laughing harder than anyone else at his own discomfitures.

Who of those who heard it will ever forget Henry's account of the ghost which he swore he saw one night swinging from the limb of the tree on which "Big Mike" had been hanged by the vigilantes some time before?

Some graceless fellow had, it seems, suspended from the limb in question a white quaking asp log about the length of a good sized man, and as it slowly swung to and fro from the limb of the tree which most of the men in camp always regarded with a certain amount of squeamishness when passing it after dark, it looked as much like a ghost as it is possible to imagine, and presented a spectacle well calculated to send a chill to the stoutest heart. Henry had, I think, a firmly grounded belief in ghosts, but in any event it was not at all surprising that, when passing this lonely and uncanny spot one night and seeing this sepulchral like object slowly swinging from the limb of "Big Mike's tree," as it was called, he should be grievously shocked and frightened. There was not the slightest doubt in his mind that he was gazing on a real ghost, which opinion was amply confirmed by his appearance when he reached camp a few minutes later, for he told me confidentially that he "runned like der duyvl vas after me." Out of breath, with pale face and bulging eyes, he rushed into the store where there were a dozen or more men gathered, and so evident was his agitation that several voices simultaneously asked what was the matter with him. Casting a frightened glance behind him as though fearful that the spook might still be after him, he managed after considerable effort at composure to reply, "Vhat vas de matter mid me? Vall, I shust see a—vot you call dot somedings dot vas ded already yet?"

No one for a moment seemed to comprehend the drift of his question, but in an instant some one replied: "Do you mean a ghost, Henry?"

"Yah, yah, yah," he excitedly exclaimed, "dot vas vot I see on de tree, vot they hang 'Big Mike' on."

His appearance and excited demeanor left no doubt as to his thorough earnestness in the matter, and inasmuch as several of the men were inclined to believe in spooks, and all of them had a sort of creepy feeling when passing "Big Mike's tree" at night, Henry's positive assertion created something of a sensation. The look of amusement upon their faces gave way to expressions of startled interest, and there was an evident purpose to learn the particulars of Henry's experience, when some one remarked in a tone of decided incredulity: "Oh, pshaw! You didn't see anything on that tree. What are you talkin' about?"

"Don'd I?" shouted Henry in a tone of excited, indignant protest. "Vas I plind? Vas I grazy dot I don'd know noddings vot I see somedimes?" And then after a moment's pause he added in a tone of contemptuous disgust: "You make foolish."

"What did you see, Henry?" asked another of the men anxious to hear his story.

"Vall," he replied in mollified tones turning to his questioner, "shust as I cross dot pole breedge I see dot long somedings vhite shust like a pig man. He go dees vay und den he go dot," imitating the slow swinging motion of the log. "Gott und himmel, don'd I vas scared! Den I dink I hear somedings in de droat like a man vas shoking much, und den I hear noddings more for I runned like der duyvil."

Time may efface many things from my mind, but it can never efface the effect of that brief speech, set off as it was by Henry's appearance and actions. The effect was irresistible, and although many of those present were inclined to think that perhaps he did see something after all, yet no one could resist the effect of that speech, and an uproarious shout of laughter followed his last words.

"Maybe you mens dink I vas a liar?" said Henry in an injured tone, "but I bet you anydings you vant dot you mens von't make so foolish ven you see dot ghose shust like I."

The next morning revealed the cause of Henry's alarm, and much to his disgust and disappointment, for I think that he took a deep sense of satisfaction and pride in the thought that he really had gazed upon an undoubted spook. "It vos dot Dan Peeler" (Beeler was his name and he delighted in playing tricks on Henry), he said, "he do dot to make foolish of me by der mens."

But the "chef d'œuvre" of Henry's experiences, the one incident that will go rumbling down the musty annals of time, was his adventure with the bear. I cannot swear to the truth of this from actual knowledge, but Henry solemnly swore that it was gospel truth, and, save in unessential details, I am rather inclined to believe that it is as he declared it to be.

A good share of Henry's time was occupied in prospecting about the tops contiguous to Geneva Gulch, and when so engaged he lived in an old log cabin down in the valley. A fellow by the name of Joe Bullen, a prospector like himself, occupied the cabin with him, although they worked independently of one another. They were an odd pair, but seemingly got along very well together, having many tastes in common, not the least of which was a pronounced one for schnapps and beer, which they gratified occasionally at the stage station at the mouth of the gulch, a few miles distant.

One memorable Saturday night they had a more than usually interesting seance of this character, one feature of which was a most sanguinary struggle at "old sledge," in which Henry, fortified by numberless glasses of beer, succeeded in inflicting a veritable "Waterloo" upon Joe. Joe was usually the victor in these contests, and Henry's unequivocal triumph this night filled his heart with that haughty "pride which goeth before a fall." He could not refrain from mildly taunting Joe about his defeat, all of which the latter took in a very ill-natured spirit, so much so as to finally declare that he didn't want to have anything more to do with Henry, and declined flatly to go home with him when he announced his intention of returning to the cabin. There was ground for the suspicion that Joe's decision in this matter might have been influenced to some extent by the rather unstable condition of his legs, which owing to the fact that he had been steadily imbibing schnapps during the progress of the game, seemed to be on the verge of a sudden attack of muscular failure. Henry evidently thought that a little delay would not be detrimental to his partner, for he didn't urge him to accompany him, but started out for the cabin alone. He was moved to do this by a knowledge of the fact that Joe would probably follow more quickly when thus left alone, than if he were to stay and urge him to accompany him.

It may be remarked incidentally too, that Henry was feeling pretty well himself independent of the exultation incident upon his victory over Joe, but his locomotion was not affected, and it did not take him very long to cover the distance to his cabin. This, too, despite the fact that he carried quite a load, for he had invested in a good-sized piece of bacon and quite a large chunk of fresh meat, this being a luxury which he seldom indulged in save when he chanced to bag an occasional black tail or antelope, or when some passing hunter gave to him from an abundant store. All the way, up his mind dwelt with a sense of most pleasing satisfaction upon his victory over Joe, for it was a consummation which he had most eagerly longed for, and many times was his face wreathed in smiles as he recalled the evident chagrin with which Joe took his defeat.

It was in this frame of mind that he reached his cabin, and after depositing his burden on an old table he lighted a candle, filled his pipe and sat down to enjoy again in retrospection the sweets of his recent victory. The cabin contained two rooms, or at least there was a rough, low partition which purported to divide it into two rooms, the outer one of which—that near the door—was used as a sort of store room, while the other was devoted to living purposes. It was in the latter that Henry sat down and puffed away in a state of boozy, happy content, now recalling various incidents of his contest with Joe and then speculating as to Joe's homeward progress, for he had little doubt that his partner was now on his way to the cabin.

Thus he sat for some little time, when suddenly the door opened and he heard a slow shuffling movement as of some one crawling across the floor.

"My, but don'd vas Sho awful drunk," he thought to himself, and he shook with inward laughter at the sad plight of his pardner. "Sho he drink too much schnapps," ran his thoughts, "den I dink he vas all proke up by dot vay I peat him," and again he was convulsed with inward laughter.

"I vonder dot he effer got home, he vas so drunk," he went on, "he must all preak up shoost vhen he got by der haus, odder he haf never been here by morgen yet."

Then he heard the sound of tearing paper in the other room and then one of his bundles of meat fell to the floor with a heavy sound.

"I dink Sho vas hoongry," he thought, and again was he overcome with merriment at the thought of his pardner trying to eat the raw bacon and meat which he had brought home with him. "Maybe he vas so mad abowd dot game dot he don'd gare vedder dot meat vas cook oder not;" which thought tickled him so immensely that it was only with the greatest difficulty he was able to keep from laughing outright.

Then the sound of some one crunching meat came to his ears, and of such a stalwart character was it that it surprised him not a little.

"My, I dink Sho vas gone grazy dot he eat dot meat so," he thought. He had previously decided to preserve a strict silence until Joe saw fit to come into the room where he was, but the sounds that came from the other room made him feel a trifle uneasy, until at length he thought it better to break his silence.

"Sho," he said in kindly tones, "don'd eat dot meat, it don'd vas cook yet, it make you seek already."

But no response greeted his words, and after waiting a minute or so, during which the munching sounds came steadily to his ears, he spoke again and this time with a slight tone of disgust in his voice: "Sho, don'd make foolish. Don'd make mad abowd dot game yet. I peat you fair, und vhy don'd you stop dot foolish abowd it."

Again did silence follow his words, save for that steady, persistent crunching. "Sho," almost shouted Henry this time, "don'd make so foolish mit me. Ven you peats me I don'd vas so fool like you vas abowd it."

Silence again, and then Henry, thoroughly exasperated, shouted as he rose to his feet, took the candle and started for the other room. "Sho, I dink you vas so big a fool vot I never haf saw. I vas dink you know somedings, but I don'd somedimes any more yet."

As he entered the other room he was confronted not by Joe, but by a big black bear, which, having finished Henry's supply of fresh meat, was looking about, Alexander like, for more worlds to devour.

To say that Henry was surprised is a rather feeble estimate as to the real facts in the case. He was figuratively and literally paralyzed, and afterwards he owned up to me confidentially that the shock which he experienced from beholding the spook in "Big Mike's tree" wasn't a circumstance to the one which took hold of him as he gazed on that bear. He stood for a moment rooted to the spot, and then with a wild yell of terror he dropped his candle and made a mad plunge for the outer door.

There must have been something appalling about Henry's appearance and yell, for bold bruin, who had hitherto seemingly been unmoved by the presence of Henry in the other room and the sound of his voice, suddenly became inspired with a frantic longing for the freedom of the open air, and he likewise bolted for the door. If the bear had only delayed his departure a moment all might have gone well, but as it was he reached the door about the same moment as Henry, and as they were moving from opposite directions the old formula of two imponderable bodies meeting was again illustrated with the usual results. Henry swears, too, that the bear gave him one with his right, but, however that may be, he described a graceful inshoot and during the course of his flight collided with the old table, and with most disastrous results to this piece of furniture. Desperate as was his situation, it was rendered infinitely more unpleasant by the fact that the outer door was closed, which fact explained why the bear had not gone away with his booty after capturing it; and as Henry could hear him scratching at it and working desperately to make his way out, he lost all interest in the door as an avenue of escape for himself.

Several moments thus passed, during which time Henry lay very low, for he was not at all anxious to remind the bear that he was still present with him, when suddenly the door was pushed open from without. Joe had returned, and as he pushed open the door the bear, which had gradually been working up to a state of considerable nervous excitement, took advantage of the opportunity and proceeded to get out. There wasn't the slightest decorum or formality about his departure either, and as he shot out he struck Joe and sent him a-sprawling several feet from the door.

The man, still befuddled as he was with liquor, was too surprised for a few seconds to form any idea as to what had struck him, but in a moment he decided as to the cause, and as he slowly picked himself up he roared in a fury of half drunken rage: "Ye Dutchman. What do ye mean by jumpin' on me like this? Ye ain't satisfied with beating me at cards, but yer want ter kill me, too. I kin lick yer, and I'm goin' to do it, too."

Henry had by this time reached the door, and as Joe's savage threats came to his ears he understood in a moment what had happened. The keen humor of the situation appealed to him irresistibly, and although he tried to smother his laughter he succeeded very poorly as he answered: "Sho, it don'd vas me, it vas a pear."

"A bear," roared the other, more infuriated than ever by Henry's evident mirth. "What do yer take me for? I'll bear ye." And with that he made a rush at Henry. The latter was no match for Joe in a rough and tumble fight, and he knew it, and without stopping to argue the matter he turned and fled. Joe only chased him a few feet when he turned about, entered the cabin and proceeded to close and bolt the door.

Then the element of humor seemed to Henry to suddenly fly out of the situation, for he realized that Joe probably would not let him in, and the prospect of camping on the outside for the rest of the night without covering of any description was not pleasant to contemplate. He decided to wait a few minutes in order to let Joe's anger cool off a bit and then to attempt to explain the matter to him.

After a little he approached the door and knocking at it vigorously said in a very conciliatory tone: "Sho, Sho, I want to oxblain dot matter mit you."

"Get out," came the surly response from within.

"But, Sho, it don'd vas me," said Henry in an entreating tone; "one bear it vas done it und he eat my meat und he drashed me already yet."

"Well, ye'd better go and find him and bunk with him, then," said Joe, "fer I'll not let ye in here to-night." And Joe was true to his word, for despite Henry's most seductive pleading he declined to open the door to him.

And thus it came about that after an hour or so of waiting around Henry finally started for the stage station, for the night was too cold for him to remain outside. Quite naturally his disgust with the bear and especially with Joe was utterly immeasurable, and his explanation to those at the station of the cause of his return was nearly responsible for several cases of hysterics.

The next morning Joe readily saw from the appearance of the door that Henry's tale about the bear was true after all, and when a little later Henry hove in sight Joe was profuse in his regrets for having locked him out the night before. At the same time I have always thought that there was a rather deep sense of satisfaction to him in the thought that he had evened up matters with Henry quite effectually for his defeat at "old sledge."

The incident was so remarkable that Henry had to come over to our camp that day and tell us about it, and when under the inspiration of several glasses of beer he recounted the story much as I have told it, its effect upon his auditors can readily be imagined.

There were not a few who were disposed to think that he made it out of whole cloth, but his very evident sincerity impressed me with the fact that he was telling the truth. In any event, it was a good story, and as such I give it to the FOREST AND STREAM. SANCHO.

Prairie Chickens.

RECENT reports received by the Chicago, Milwaukee & St. Paul Railway from stations in the prairie chicken country of Minnesota and South Dakota all indicate a prospect of the best hunting for years. Chickens are very plentiful and in fine condition. Duck shooting prospects are also good. Full information can be had by addressing Ticket Agent, Chicago, Milwaukee & St. Paul Railway, 207 Clark street, Chicago.—*Adv.*

AN ENGLISHMAN'S EXPERIENCE OF FLORIDA FISHING.—I.

BY ALFRED C. HARMSWORTH.

It should be a source of pleasure to all who are interested in the unity of the Anglo-Saxon race to know that the number of British sportsmen who visit the United States each year is increasing. English big game shooters no longer visit the States for buffalo and have turned their attention to Africa and Asia, but it is inevitable that the United States, which is one of the best and certainly the cheapest angling country on earth, must in future years attract vast crowds of Englishmen in search of sport with rod and reel.

Salmon fishing of England, Scotland and Norway has become so expensive as to render it impossible sport for all save people with more money than they know what to do with. The competition, too, for merely average angling in these countries is preposterous. The rent of trout streams in England has quadrupled in the past few years.

Tarpon fishing has for some years aroused considerable interest in England. I met a goodly number of British anglers in Florida last winter. More than one of our makers supplies complete outfits for the sport, and I hear that a great deal of business is being done for next season. Since my return to England and the publication of some papers on Florida fishing, I have received letters from Englishmen in all parts of the globe anxious to try for tarpon, and considering the relative cheapness of a trip to Florida, where all sport is free, and a corresponding visit to India, where, though mahseer fishing is open to all, expenses of travel are great, I feel disposed to think that some of the tarpon records will come to this side of the water for a good many years. One or two I believe are already held by us. A winter holiday that will combine the maximum amount of sunshine with good fishing has not hitherto been considered easy of attainment by Englishmen. And thus it is that of the scores of thousands who exchange frost and fog for blue skies and flowers every Christmas, few, even though their angling proclivities be of the keenest, take their rods with them.

I have tried most of the popular winter quarters of my own people, and have usually found that fishing either with fly or float is rarely enjoyable in any of the Egyptian or Mediterranean holiday places. As many American readers will know, there is sport to be had on the streams in the Italian Riviera; Cyprus has fairly good sea and river fishing if one happens on the right place, and the Nile has fish in plenty, though few seem game, and so far as I am aware, only two kinds rise to the fly.

I was almost in despair of getting any sport last winter within a fortnight's distance when a friend recommended Florida. Upon this I wrote to headquarters, that is to say, to a member of the staff of the London Fishing Gazette, and asked him for information. The editor very kindly referred me to Mr. A. N. Cheney of Glens Falls, N. Y. His name is almost as well known in the old country as in the new, and with that generous desire to assist the Britisher which I found among all American sportsmen, Mr. Cheney, though a stranger to me, went to vast trouble in obtaining information.

I cannot thank him too much for his exertions on my behalf. His kindly task was all the more difficult because Florida is a State of the Union about which comparatively little seems to be known in America. It is true that a number of Northern people go there every winter, but as a rule they sit about the hotels, and talk money, politics or dress, as may be. Mr. Cheney had not himself been to Florida, but he immediately placed himself in communication with a number of gentlemen who had fished there, and these also took any amount of trouble on my behalf.

From Tampa we went to Punta Gorda, and here I had my first day's fishing. Punta Gorda is a day's journey further south. The pleasant and extremely cheap hotel there was filled with tarpon fishers, who sat patiently out in their boats all day and discussed every possible phase of tarpon fishing at night. It was pleasantly reminiscent of home to sit round a blazing wood fire (for it was chilly in the evening) and hear sportsmen exchanging experiences in the capture of what is undoubtedly the finest game fish in the world—and that the tarpon is the finest game fish in the world is admitted by every salmon fisher I have met who has ever taken both fish.

Tarpon fishing is quite a new sport. Up to March, 1885, no large tarpon had ever been captured with rod and reel. In that year, however, a Mr. Wood of New York city was successful in bringing to gaff a tarpon weighing considerably over one hundred pounds, a scale of which is on my desk as I write, a present from Mr. Cheney.

The fish itself is in reality a gigantic herring. The finest salmon I have ever seen must yield to it in point of looks, strength, activity and cleverness. One of the best authorities on the tarpon is Colonel W. N. Haldeman, editor of the Louisville Courier Journal. Mr. Haldeman told me that the tarpon is essentially a sea fish, but that for the pursuit of small fry it will ascend rivers for a considerable distance. Very little, however, is known as to the habits of the fish, and I find that many experienced anglers contradicted each other flatly on many points with regard to its capture.

On the morning following my arrival at Punta Gorda I arose early and put in a couple of hours "trout" fishing. The fish I caught were not trout, but as they had spots on them and were fairly game they were therefore so regarded.

The clearness and warmth of the atmosphere at 6 a. m. was equal in every respect to that of Egypt, and I thoroughly enjoyed my experience. Before breakfast I had landed half a dozen, weighing anything from half a pound up to a couple of pounds. They seemed to take live bait, phantom minnows or fly with equal avidity. After some experiments with a bamboo pole, I used an 8½ foot greenheart rod, with an ordinary light reel, and from the head of a small jetty about a quarter of a mile out in the creek I found, to use a very common expression in these parts, that "one could get all the fish one wanted" (pronounced "wornted").

That this particular salt water fish is not a trout is obvious from many points, not the least of which is that it is a scaled fish. It has silver sides, a dark bluish, greenish back, with rows of black spots above the lateral line. The head is small, mouth fairly large, and for a minute or two it fights well.

My fly was a silver doctor, to which I had added a largish white feather. What particularly surprised me in Florida fishing was the enormous amount one could catch on favorable days. Using a small local fish known as the minnow, but resembling what we call a king carp, a local urchin had, I was assured, captured over a couple of hundred of these sea trout, weighing between half a pound and six pounds, in one day. I myself, on more than one occasion, captured nearly 100 pounds of fish in a morning, and all of them fighting fish.

These southern sea trout are most delicious eating, and for anyone who does not get tired of catching the same kind of fish hour after hour afford very satisfactory sport.

The hotel people at Punta Gorda and the kind-hearted American visitors, anxious that the Britisher should get the best possible chance at tarpon, had accorded me one of the best guides, Fulton McGuire by name. Maguire is a colored man, and though experience has taught me to beware of trusting any but white people in cases of emergency, I found him to be thoroughly reliable in every respect.

He came early to the hotel to overhaul my tackle, concerning which I now propose giving a brief description. Expert tarpon fishers will please kindly skip these details and excuse any of the errors that will inevitably creep into the rough notes of a traveler with regard to my views of what I saw on your side.

The tarpon rod is a 7 foot Conroy, made all in one piece; the guides are circular eyelets, and at the top of the rod the line passes through and out of a brass hole lined with agate. The butt is stringed like that of a cricket bat, and the method by which the reel is attached to the cord is particularly strong, though for safety sake every other tarpon fisher whom I met invariably lashed the reel with string, or better, with leather boot laces, in order to make it yet more secure.

The reel is a Vom Hofe "Silver King." It cost, I think, £6, but it is worth it. It runs on ball bearings and with marvelous freedom, is comparatively light and has stood the strain of catching half a dozen sharks measuring from 7 feet to 9 feet in length.

Attached to the reel is a small leather guard, which, in addition to the check, can be used as a brake by pressure of the thumb on the reeled line.

I need scarcely say that it would be almost impossible to fight a fish weighing from 100 pounds to 200 pounds unless one had some rest for the rod.

You may kill your tarpon in ten minutes if you are very lucky. On the other hand, he may fight you for five or six hours. In order to afford more security it is well to wear a butt rest—a substantial leather belt worn around the waist, having in front a stout leather cup into which the butt of the rod fits.

To press the rod against the otherwise unprotected abdomen may result seriously, and I would impress upon all those who go out to battle with tarpon not to neglect this simple protection. I would suggest also the taking of india rubber finger tips, such as are used by photographers who do not wish to soil their fingers with chemicals. Frequently, in the excitement of a run, one may forget to apply the leather brake. On one occasion I unconsciously applied my bare thumb to the line on the reel. It was running out at a tremendous pace, and the friction took the skin from my thumb and made it painful for many a long day.

Upon the reel was wound 600 feet of 18 line. At the end of this is attached a hook. This hook is attached by a strap, or snood, of raw hide, two and a half to three feet in length. It is concerning these snoods that so much difference of opinion occurs. My snoods that so much difference of opinion occurs. My hook was first attached to a swivel and then to a snood. I found some who objected to the swivel. One man believed in snoods made of stout blind cord with thin piano wire running up its center. Some used plaited snoods of cotton; others again adopted snoods made of simple unprotected wire. Colonel Haldeman describes a good snood as absolutely necessary as a safeguard against the scissor-like jaws of the tarpon.

The fish's teeth injure only by abrasion, but his jaws are massive and powerful enough to crush the back of a hardshell crab with ease. Therefore the snood should obviously be of a soft and pliable texture rather than such as to offer any resistance. There are many other kinds of snood, and there are various kinds of hooks. In tarpon fishing in some parts of Florida one needs a large supply of snoods and hooks for reasons I will describe presently. Next time I visit Florida I shall take a couple of hundred with me at least, for my own use and for the many folk who go insufficiently provided.

The rest of the equipment for a day's tarpon fishing is a very large sized gaff. Those with the telescopic handles seem popular.

With a good lunch on board we left the Punta Gorda Hotel for Tarpon Camp about 9. We are running up Peace river. Picture to yourself a wide inlet bordered on each side by mangrove swamp or great reedy grasses, filled with all manner of wild fowl. The sky is dazzling and cloudless, and round about us myriads of mullet jump, sometimes singly and sometimes in shoals. The mullet is one of the most familiar features of Florida waters. It is quite unlike our mullet, weighs, I was told, up to three pounds, though I never saw one over one and one-half pounds, is caught, it is said, by fishing with light tackle and paste, and has most remarkable powers of jumping. As a rule, a mullet skips out of the water three times in succession. In the intervals of tarpon fishing I have counted the jumps of hundreds of them. On one occasion one jumped four times, another five, but nine times out of ten there were three distinct jumps. Florida anglers often wonder why the mullet jumps; but I heard of no satisfactory reason. It is certainly not after any kind of fly or insect visible to the human eye. Sometimes, no doubt, they leap when chased by larger fish, but usually they appear to be merely disporting themselves. To tarpon fishers mullet are essential. They form his bait.

Our little naphtha launch travels gayly up the wide river, and we amuse ourselves by taking a flying shot at an alligator as the great mass of his long dark body glides from the bank into the stream.

On this particular day my companion shot a handsome "gator" nearly ten feet in length, and the brute, stuffed by our London big game naturalist, looks at me as I write. It was a particularly good shot, as he was only armed with a revolver and it is not easy to kill an alligator with a revolver from a boat traveling at six or seven miles an hour. It is not easy to kill an alligator at all at a distance. I sometimes put as many as seven shots into one of them with a rifle without effect. The old delusion about hitting them in the eye is a mistake. Except on the back a rifle bullet will penetrate anywhere. On the other hand, an alligator will carry as much lead as most creatures.

One sees all sorts and conditions of strange fish and fowl in these Florida waters. Not the least curious is the horse shoe crab, of which I brought several specimens home. It resembles no living thing that I had hitherto seen, and it has the honor of possessing the most ancient descent known of almost any creature of life, for it is found in the earliest geological deposits.

The turtle, too, is a queer thing to set eyes on for the first time. As we were gliding up the stream I saw what I took to be the head of a dog occasionally popping out of the water, snapping its jaws the while, and presently a large dark mass appeared. That it was a turtle did not occur to me, for I had imagined turtles to lie lazily floating at ease on shallow shores, but here was an animal that traveled as fast as we against stream. I was raising my revolver when he caught sight of us and disappeared.

All the hotel world at Punta Gorda were going tarpon fishing that day. At Punta Gorda most of the visitors are from the Northern States. The traveling Englishman is there of course, as everywhere else, but we had just managed to miss some of our countrymen, for which we were not sorry, for the Englishman abroad is often a most unpleasant creature unless you can devote a considerable portion of your life to getting to know him.

Some six miles from the Punta Gorda Hotel was a little camp consisting of a single tent and a log fire, a small pier and a dozen tarpon boats It was here that we said goodby to the naphtha launch, and Fulton Maguire and I removed our tackle (and our lunch) into one of the boats. They are simply ordinary small rowing boats with flat bottoms. In the center is a revolving chair upon which the tarponer sits. We pulled up about a mile, the anchor was cast overboard, and then Maguire cut off the head of one of the mullet we had brought, attached a long skewerlike handle to a snood, threaded the flesh on to the hook, fixed the snood to the line, and standing on the boat cast out the bait with considerable dexterity. As a rule, such tarpon or other fishers as I saw were not remarkable casters from our point of view.

Maguire was quite the best of them. He threw the bait with unerring accuracy in any direction. Then began my first moments of tarpon fishing, and monotonous as the sport may seem I am bound to confess that I was never for one moment tired of it. The check is taken off the reel and some spare line is kept coiled up in the boat so that in case of a run the fish may be able to take the bait without feeling any weight. But here is one of the points upon which tarpon fishers appear to divide. I was assured over and over again that should a tarpon feel the least resistance he will drop the bait at once, and my experience teaches me that this opinion is the correct one. It appears ridiculous to suppose that a monster fish weighing perhaps 200 pounds should be shy, but in a peculiar way the tarpon is certainly most timorous.

The bait being cast and some spare line in hand, you sit back in the boat and bask in the sun. Some tarpon fishers read, others write, all smoke and one or two sleep. One's whole surroundings are so peaceful, the mere chance of a run so exciting, that boredom was out of the question.

From Maguire I heard much that was interesting concerning the status of the negro in America, and, that apparently without the least prejudice on his part. He is a man of intelligence above the average. He understands the relative positions of the European States, and appreciated the difference between the English and American character, has a good sound commercial head, has read a good deal, and is as good a companion for a day's sport as any Thames boatman or Scotch gillie of my acquaintance. Naturally our talk turned upon tarpon. It is, as I have said, the great subject for conversation, not only at Punta Gorda, but at Fort Myers, St. James City, Punta Rassa, Naples, and other places in the Gulf of Mexico. The element of luck that is part of the charm of all fishing is particularly in evidence in the pursuit of tarpon. There are authentic cases of men who have fished steadily for a month at the right time of year without getting a single fish. On the other hand, a Mr. Mygatt, an Englishman, I was told and hope, caught no fewer than eight in one day; and a delightful old gentleman, a certain Dr. Prime, author of a particularly delectable book, "I Go A-Fishing," who is a well known figure at Punta Gorda, caught 26 in a little more than a fortnight.

When I say that more than once a tarpon has completely out-tired a fairly strong man, it will be understood that the feat of catching eight tarpon in one day betokens not only luck and skill, but also immense strength.

As I sat there I placed my rod across the boat and lazily watched the slack line. Now and then it would tighten; and at first my heart began to jump with pleasurable anticipation when it crept out some 10 or 15 yards. This, however, meant nothing, that is to say, a catfish. These catfish are the curse of sport with rod and line in Florida. I am not sufficient of an ichthyologist to know to what species of fish the catfish belongs, sufficient to say that it is the most

deep, bottle shaped house at a great expense of time, labor and mucilage, but the dangers which surrounded the original barn swallow have ceased to exist and the cunning workman, realizing this, now makes a shallow and more simpler nest, which answers the purpose equally as well. In the outskirts of cities and towns, where birds of prey seldom come, the oriole builds a more open and loosely woven nest than does his country cousin, who must protect himself from ariel foes.

There are few more interesting subjects for study and observation than the reasoning power of the birds in rearing and guarding their families, and it would be easy to point out and multiply instances of it. How, before the leaves are fully out they build their nests with a view to being shaded and screened when the foliage is more mature; how the woodpeckers in the South locate their dwellings on the north side of the tree to avoid the heat, while those in the higher latitude build in the south side to secure warmth; how the arctic owl lays her eggs at intervals of several days, so that the first are hatched before the last are laid, thereby making the warmth of the young birds assist in hatching out their younger brothers and sisters, while the parents are away in search of food. These and a thousand other marvelous things are revealed to him who has the leisure and the inclination to wander through the fields or sit at the threshold of the forest and study the habits and characteristics of the birds. Soon his eye and ear will become trained to catch the sights and sounds which hitherto have escaped his notice, the shrike impaling his victim on a thorn, the mother partridge feigning helplessness and fluttering along the ground just out of reach, attracting the attention of the pursuer while her chicks run away and hide themselves; the sentinel crow, always posted where he can get a wide view of the surrounding country and notify his companions if an enemy approaches. The keen observer will surprise, in their furtive and unnatural act, the cuckoo and the cowbunting that lay their eggs in other birds' nests and know nothing of the joys of mother hood. He will be able to distinguish the notes of the birds and to call them all by name; the wren's cheery diminuendo, the kingfisher "sounding his rattle along the fluvial street;" the hermit thrush thrilling the forest with his melody, the yellow hammer sending his mellow, rippling call across the sunsteeped fields, and the rollicking bob-o-link balanced on some swaying weed and pouring out a torrent of sweet sounds.

Like every other affection, a love for birds is susceptible of development. It grows by what it feeds on. and we may indulge it without satiety and without harm.

Game Bag and Gun.

THE ADIRONDACK DEER.

Editor Forest and Stream:

I am glad to see that the question of the better protection of Adirondack deer being agitated through the columns of your excellent journal. As I live in the Adirondack woods all the year round and note the workings of the present law in all its features, I trust that I may not be considered incompetent to offer a few suggestions in relation thereto. I would suggest that the law be amended so as to prohibit the hunting of deer with dogs in the Adirondacks. It must be evident to every one who gives it the least thought that a method of hunting that requires no experience, no skill, no good shot and one that forces the deer into the water without any effort on the part of the hunter, and when once in the water the game is reduced to the same condition as in the snow crust, a club being the only weapon necessary to complete the work of destruction, must be more destructive than any other.

The sportsman that visits only the interior of the Adirondacks and employs law abiding guides has no conception of the extent to which deer are slaughtered nearer the borders of the woods. This easy and sure method of hunting deer invites hundreds of people into the woods who care nothing for deer protection or the law, only intent on killing all they can. Two years ago deer were fairly plenty about here. But at the opening of the hounding season the woods were filled with hunters, and every pond, lake and stream was watched. Over three hundred deer were taken out, besides supplying the camps and feeding the dogs, which would require ten deer each dog. Deer wandered in here during the past season from adjacent private parks, so that there were a few here at the opening of the hounding season. But then even more meat and skin hunters were on the ground and the same slaughter was repeated, until now there are no deer left here.

Hunters of this class do not go far into the wood if expense is incurred, so that sportsmen who visit only the interior are not fully impressed with the destructiveness of hounding. This method reduces the hunting of deer to a level. One as well as another can kill a deer. It is virtually placing the deer in the hands of the public and trusting them for their protection. And how well the public acts as a game protector we have only to look to the past. Extermination has followed where hounding has been continued in all places like the Adirondacks abounding in lakes and ponds. The lake region of Florida and Maine are examples. Maine had reduced her deer to a scarcity by hounding. I happened to travel through the Maine woods only a year or two after hounding was prohibited in that State. There were very few deer left. I would sometimes travel two miles through the best game woods without seeing a deer's track. I have visited the same locality every year since with the exception of two years. I have noted the steady increase of deer. Slow at first because the breeding stock were so few, but gaining faster each year. And the past two years the increase has been astounding. This fact has been abundantly substantiated by reports published in Forest and Stream. I traveled over the same grounds last fall and judging from the tracks I should say that where there was one deer six years ago there are fifty now. And this increase is made with the law adverse to their protection, as the open season continued late in the winter when snow aided the hunter and passably deep and crusty snow.

I would have a heavy penalty for the owner or harborer of a dog caught running at large on grounds inhabited by deer.

I would also prohibit killing deer by jack light. It has been suggested that the killing of deer in the water be prohibited, but this would amount to nothing so far as protection is concerned and would render the enforcement of the law impossible without an army of protectors. All the runways leading to the water would be watched and if a deer slipped by and got into the water it would be an easy matter for the hunter on the lake to place himself where the deer is coming out and shoot it as it gets well on the bank. Besides, there are hundreds of lakes occupied by hunters during the hounding season, and who will be there to see that there is no deer killed in the water. The hunter will certainly not report each other. This only adds complication and the enforcement of the law is impossible. But with the dogs excluded from the grounds at all times the enforcement of the law would be a simple matter, for no one would take the chance of evading the statute. The above amendments to the game law would insure the rapid increase of deer in the Adirondacks. Owners of private parks and club preserves may object. If so, then exclude the dogs from all lands in the Adirondack not posted according to law. Deer protection will be a farce so long as this most destructive method is open to the public one month in the year.

MUSSET.

The Supervisors of Broome County have adopted this resolution relating to deer:

"Whereas It is a well known fact that the wild deer in the forests of this State are becoming anually more scarce, and

"Whereas, We believe it for the best interest to the sporting public as well as a humane preservation of the noble game that further rstrictions be placed in the method of hunting deer, therefore, be it

"Resolved, "That we recommend to and request our representatives at Albany and they are hereby requested to adopt such means as may seem best to them to procure the passage of an amendment to the game laws prohibiting the hunting of deer with dogs in each and all counties of the State of New York."

TEXAS AND THE SOUTHWEST.

Deer and Turkey.

SAN ANTONIO, Dec. 25.—Charley and Billy Campbell, two well known votaries of the gun and rod, returned last week from their anual week's outing on the Trio. Charley says that he is not a good hunter, as he likes the soothing sensation of a prone position under the sheltering branches of a friendly live oak much better than a stumped toe amidst the crags of the canyon's sides. He was thus dreaming of home, sweet home, and wondering what he would buy to please the blue-eyed baby the most on Christmas day when he was startled out of his delightful reverie by a turkey flying up the tree. It being nightfall the hunter immediately guessed that the bird was going to roost. Up flew another, then another and in a few moments at least twenty-five of the bronzed backed beauties were smoothing their plumage preparatory to slumber. Charley crawled out from under the tree, and as he straddled a grape vine out flew a big gobbler stuttering out a frightened "put-put-put!" The gun quicklyspoke and the bird thumped against a flat rock as it fell stone dead. Then another flew out, and as the hunter turned sharply to kill he tripped and fell headlong in the midst of a bed of newly sharpened thongs, which brought blood in many places. Of course, the turkeys all flew off the tree before Charley could recover his equilibrium. The American turkey has that habit largely developed. They don't tarry long when they know the enemy is about.

Charley reached the camp with his big gobbler just as Billy, his brother, staggered up with a pretty little buck on his shoulder. They killed all the turkey the ranchmen could eat, brought a dozen nice ones to San Antonio together with five deer, three bucks and two does. The boys report squirrels very numerous, also state that they saw numbers of the famous Messina quail. I am tempted to go there.

* * *

To Eliminate Fraud.

The Texas State Sportmen's Associaton will hold its 19th annual tournament on May next at San Antonio. The committee on rules have been in session, and I am assured by a member thereof that the amateur trap shooter will have no fault to find with the changes made in the shooting rules. While I am not fully in possession of all the facts, I am authorized to say that the "old timers" and experts will not have it their own way and that no dropping for place will be tolerated. It will be severely punished when detected. The shooting will be straight, and any one attending the tournament will be made to feel at home. It is proposed by the management of the shoot to issue the most attractive programme ever sent out from this State. An effort to raise $1,000 in prizes will be made and every cent raised for that purpose will be given as promised. The guarantee is made that the disgraceful scene of 1891 will not be repeated.

* * *

Quail Returning.

For the past three years it has been very evident to every sportsman in this section that the quail or partridges have migrated to pastures new and greener fields. Where there were thouands in former years there were none at all the last season. Several theories have been advanced and rejected and the mystery is still on.

Marcellina, a flag station thirty miles south of San Antonio, was a famous place for quail a few years ago. All of a sudden the birds disappeared and up to last season one could walk himself blind without starting a single covey. This year, however, the birds are plentiful, having evidently returned from their migrations. This is good news for San Antonio sportsmen.

* * *

After Canvasbacks.

Mr. Dick Merrill, the celebrated dog man from Milwaukee, Wisconsin, left the city on the 15th inst. for Rockport, where, in company with the Messrs. Schmidt of Milwaukee he will try to lure the gay tarpon from his damp abode and plunk ye canvasback as he flies. Dick says that he is about to purchase another celebrated dog to add to his already large and choice collection of canines, and he proposes to pay a large sum for him.

Game on the Border.

J. M. McCormick, an energetic hunter and first rate trap shot, who has the honor to attend to a bell rope on the Southern Pacific, came in on Christmas Day. Mc. says that the famous bottom of the Rio Grande in the free zone of Mexico abounds with game of all kinds. That reminds me of a delightful fishing trip I had two years ago at San Juan de Allenade, 40 miles in Mexico, where I spent a week with the fiercest black bass I ever encountered and saw turkey and deer every day, and not a human being but members of our pary during my entire stay. Great country for game.

* * *

Chickens on St. Joseph's Island.

A few years ago Mr Wynne Andrews, then general passenger agent of the Aransas Pass Railway, stocked St. Joseph Island, owned by Col. Sam Allen, with quail and prairie chicken. A visit to the island elicited the knowledge that both the quail and grouse were doing well and multiplying at a gratifying rate.

TEXAS FIELD.

OUR BOSTON BUDGET.

BOSTON, Mass., Dec. 25.—Pickerel fishing has begun unusually early this season in Massachusetts. The ponds have been covered with ice earlier than usual; and this is the signal for the traps to be put in order. Mr. E. C. Paull was elected the other day as one of the Common Councilmen of the City of Taunton, but he likes to go pickerel fishing or yachting just as well as before he went into politics. About Thanksgiving he was doing Sampson Pond with pickerel floats. The shores were icy. Almost everything was icy, in fact. In running for a float that was "bobbing" he stepped into an old boat that was icy. His feet flew forward with such velocity as to cause him to sit down very suddenly. His landing position was a graceful one; upright as one would naturally sit. But the sitting down was so sudden as to jar the gold fillings out of several teeth in his upper jaw. Such is pickerel fishing in slippery weather. But Councilman Paull caught a good string that day.

Mr. A. W. Tompkins loves his camp and fishing tackle about as well as any busy commission merchant in Boston, and the camp on the Sudbury river is kept up. The other days he rode up to see how things were for winter, hardly thinking of going fishing. He scarcely thought that the pond was frozen over, in fact. But he found ice and it would bear his weight. The pickerel tackle was there and it was easy cutting holes. Out came the rigging. A farmer, a short distance away, was interviewed for the "shiners" for bait. It was fun alive. He took forty-two fish, all pickerel, but a perch or two and one or two bass. He regards his success as pretty good for the first pickereling of the season.

Mr. Claude R. Tarbox, with his friend Charlie Bailey, has been the first to try the Byfield ponds for pickerel. The other day the ice proved to be sufficiently strong and the boys went on and cut holes enough to put out about forty traps. The fish bit splendidly and they got thirty-two. While they were fishing a party from Haverill came down to the pond and asked for advice as to the best points for putting in lines.

Mr. Bailey and Mr. Tarbox answered that their own lines were already in the best places they knew of on the pond, and that other positions would be simply a matter of experiment. The Haverill party tried several other positions, with very little success.

Some of the Boston parties who have been after moose this season have had most remarkable success. Mr. M. L. Pratt, prominent in the Boston Athletic Club, and Mr. Talbot Aldrich, son of T. B. Aldrich the poet, with another friend, have been successful in taking a couple of moose. They went into the region of Umbazooksis Lake (the spelling of this name I am not certain about) and they were greatly delighted with the country and their success. The friend who gives me the information does not care to have his name mentioned till he is fortunate enough to get his moose.

Mr. R. P. Woodbury is one of the greatest lovers of the rod and gun to be found in Boston. At the same time he has the courage of his convictions, and his convictions run in the direction of the truth. He is recently back from a Maine hunting trip after big game. He bought his moose meat and he has the courage to say so. He says he "owns a little hatchet and is proud of it," and dislikes the big stories told by other hunters, where he is perfectly well aware that their guides really kill the game. He went to Elliotsville, about 15 miles from Monson, a region that has given him great sport in years past. He hunted in the vicinity of Boarstone Mountain. But the crust was terrble, and besides every native for miles around was in the woods with a Winchester rifle. Mr. Woodbury says that the number of rifles owned by the citizens in that part of the country would surprise anybody who had been there before the great increase in big game. They are all hunters and hunting; but the amount of game they take is not great, when the number of gunners is taken into account. Mr. Woodbury's moose was killed by a French man, who followed the big fellow for days; first wounding him, and then getting several shots that brought him down with a broken leg or two. But the hunter's ammunition gave out at this most important time. He tried to club the noble fellow to death with his rifle, and then with such other clubs as he could get without an axe. Failing in this, as the moose would strike terribly with his forefeet, he tried to lash his hunting knife to a pole and thus cut the throat of the poor beast. In this he failed, though cutting him terribly with the dull point of the knife. He had to give up the fight that night. The next day he returned with more ammunition and put an end to the sufferings of the poor beast, whose only sins were that of being a noble game animal, such as God saw fit to make him. Such killing is the worst of hunting. If the Maine forests could speak out the tales of wounded moose and

far as its source in the Rocky Mountains. This was the wildest country I saw. I ascended some mountains over 5,000ft. high, and found little snow on them." Count de Sainville recently sent to his relatives the first letters he had a chance to mail in five years. He expects to return to France and write a book.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

ROUND ABOUT NEW ORLEANS.

[From a Staff Correspondent.]

NEW ORLEANS, Dec. 22.—The protracted drouth still continues without a break, much to the injury of shooting, and to the injury in particular of shooting with the wild-fowl. In respect to the latter, shooting parties report most unsatisfactory experiences. Many of the bayous, sloughs, lagoons and marshes being entirely dried out, or in respect to the larger ones, lowered to a degree beyond the memory of the oldest inhabitant, the ducks frequent new haunts. Swamps which ordinarily have from one to four or five feet of water, are now dry, and lakes, in places unapproachable owing to swampy borders, have a good footing around them.

The warm weather, too, has kept vegetation rank and thus increased the difficulty of shooting on the uplands. All reports are that quail are in abundance, but, owing to the dry weather and the consequent dryness and hardness of the prairie, the snipe shooting practically amounts to nothing. In ordinary seasons at this time of the year much of the prairie is good snipe ground, the heavy rains softening it and forming sheets of water here and there, making most abundant feeding grounds for the snipe and woodcock. Some of the bags made in good seasons are enormous. There are authentic records of bags of between three hundred and four hundred snipe being made by one shooter in one day. The largest one is said to have made by Mr. Pringle of New Orleans, famous as an expert shot throughout the Southern country. It is said that the record bag of nearly four hundred, which he made some years ago, was made with two guns, one being insufficient, as, in rapid shooting, it becomes too hot to hold. A darkey carried the spare gun, others carried the ammunition, and still others retrieved the birds and carried them. A little figuring will show that this was pretty rapid work, and to the sportsman whose experience has been limited to snipe shooting in the North it may seem to be in the realm of fairy tales. But Northern snipe shooting is no standard of measurement for the shooting in the South. In favorable seasons in the South the shooter simply walks along on the feeding grounds and flushes and shoots, sometimes as fast as he can load and fire. A dog is no service then except to retrieve. Still, it is a most uncertain sport, owing to the erratic habits of the birds, for a ground which is swarming with snipe one day may have none on the next day.

The most successful bag made recently in last week's trip out to the duck mines of Bayou des Allemands, so far as I have learned, was that made by Messrs. Frank Ellermann and L. Wenet, 47 ducks, and these were gotten by hard work. That is, by walking through mud in the prairie to a hole where the ducks were seen to frequent. They report ducks very wild and the shooting to decoys as very poor.

The Market Shooters.

No section of country can preserve its game supply if it is systematically worked by market hunters. Few sportsmen realize the enormous destruction of game which is constantly in progress to supply the demands of the market. Forty or fifty birds each day to one gun do not seem to be a destructive quantity, but it amounts to an enormous total in four or five months. When there are several guns in one neighborhood, used in market shooting, such shooting must result in the destruction of the game in that section.

The western part of the State, I have been informed, is losing its game birds rapidly from this cause. Market shooting is in progress there on an extensive scale, and not the old-time style of shooting, wherein the shooter relied on his individual effort and carried his modest bag to the nearest dealer to sell for such sum as he could get, but organized shooting with modern equipments. The shooters scour the surrounding country, killing all the birds that they possibly can. A wagon is engaged to visit certain prearranged points at stated times to collect the birds killed, and take them to the town in which is the shooters' headquarters. The birds are put in a refrigerator box made for the purpose, and when 1,000 pounds are collected they are shipped in the refrigerator to New York.

I was told that the shooters netted from $4,000 to $5,000 per year from their work in market shooting. This State needs a non-export law badly. The law protecting the birds is lax. Quails and prairie chicken can be killed from October 1 to April 1, six months in the year, which, so far as it protects, is no legal protection at all, since it covers a longer time than the natural conditions of climate cover, etc., will permit sport, and it unquestionably covers a longer period than in which the game should be permitted to be shot. With the modern equipment of improved guns, improved ammunition and multiplication of shooters, the present destructive conditions are not those of a few years ago. As game becomes scarcer in the North, the Southern game sections will be more and more invaded each year by non-resident shooters. The number which come here now is quite large. While no legislation, in my opinion, should be made to discriminate against the non-resident shooter, legislation which will preserve the game sufficiently to guard against its decrease is necessary.

No land in America is more favored in its bountiful variety and quantity of game than is Louisiana and eastern Texas. Wild fowl in countless numbers winter there. Snipe and woodcock, the latter in the last of December and early January, are in abundance, so great that to the non-resident any mention of their vast numbers or the great bags made savors strongly of Munchausenism.

Bears, too, are quite numerous, though difficult to kill owing to the protection which their habitat, the dense swamps, affords them By the way, I notice in a local paper a mention of a party arriving here in quest of bear. Under date of December 19 it states:

The Kenton Hunting and Fishing Club, of Kenton, O., comprising the following prominent business men: Col. J. M. White, D. W. T. Gemmel, Dr. A. D. Bailey, George L. Barrett, P. H. Hisey, W. D. Bich, Wash Shadler, John L. Valley, John Wilkins, W. Emmons, Eugene Crawford, John E. Helman and George Roberts, arrived here this morning in their private car, and will spend about thirty days fishing and hunting on Bœuf River. They were well equipped for sport, having with them cooking utensils, dogs, and all necessary accoutrements. They say they are here for a general hunt and frolic. Mr. B. V. Lilly, with whom they corresponded, met them at the train and at once piloted them across to the camping grounds. Mr. Lilly has killed more bear than any other one man in the State, and will spend his time with the club, and a grand hunt is assured them.

Deer, too, are quite plentiful, but, owing to the denseness of the swamps and forests, they are difficult to shoot. Capt. A. L. Bordes, a local rifle man of extraordinary skill, told me of three deer being killed near the city limits near the swamps last Sunday.

My reference to the deer shooting brings to mind a most charming afternoon spent with Capt. Bordes last Tuesday, and I then learned much concerning rifle shooting in New Orleans. It is the shootingest city that I ever was in. There are about fifteen rifle clubs in this city, all strong in membership, and nearly every one has its own range. The club of which Capt. Bordes is a member has about one hundred and fifteen members. In a turkey shoot, closed last week, about 10,000 cartridges were fired, which will give some idea of the interest in shooting. The shooters were divided into three classes, according to their skill, and each class had a turkey to shoot for.

The range is fifty yards, two inch bullseye, with rings one-half inch apart, scoring from one to thirteen, the latter the bullseye. Each shooter has 25 shots, shot in series of 5 shots. Thus a possible for 5 shots is 65, and the possible total is 325. To win a prize requires almost perfect shooting.

Capt. Bordes kindly showed me the club house and grounds. It is on Broad street near Dumaine, in the older part of the city, which still retains its quaintness of architecture and customs and a pervading air of content and easy going habits. The club house was on the first floor, open on the side facing the range, thus affording accommodations for the shooter when a contest practice was in progress. A long bench at the score made a convenient place to hold cartridges or to lay the rifle on when not in use during the shoot. At the other end of the range, fifty yards distant, were the targets in a row, each one numbered.

On the second floor was a locker for the rifles and a kind of club room for meetings or gatherings. The captain very kindly gave me an exhibition of shooting, and the precision with which he would ring the bell at fifty yards was extraordinary. It is no easy matter to hit a two inch bullseye at fifty yards. I know because I tried it. Still, I hit the target, which the captain informed me, after it was all over, he did not think I would do, as before shooting I struck about the same shooting attitude that a lady does when about to throw a stone.

Rifle competitions are numerous. There are two leagues, the State and a city league, about the same number of membership in each.

The following clipping from a local paper will give an idea of the scores with the 22 calibers at fifty yards:

The Jackson Rifle Club held a turkey shoot at their range last Saturday, and the following scores were made:

P. Carvers 189, D. Fleishinger 187, G. E. Hauck 186, J. F. Bank 185, L. A. Joachim 180, Louis Wieland 179, E. Herman 178, A. Campson 171, C. Desemare 168, C. Hurley 166, A. Fleishinger 164, H. Carvers 160, J. Lambert 156, I. Rachel, Jr. 155, Jos. Hug 153, E. Shuster 151, L. Huber 150, S. Stumpf 148, H. J. Mindchen 147, W. Walz 144. The shoot will close at 4 P. M. next Sunday, when the prizes will be awarded. Next Friday night the Jackson Rifle Club will compete with the Eureka Rifle Club in a shoot by electric light at the Young Men's Gymnasic Club. The teams are practicing for the event, and promise to make the score interesting.

In reference to Sunday shooting, it is not looked upon here as any violation of the day of rest and devotion. It is considered more as a harmless diversion and pleasant recreation, in the same manner as it is considered harmless in some sections to go walking or driving, or on an excursion on Sunday. It carries no sacrilegious violation of religion either in act or intent, from the ethical standpoint of this community.

The customs of one's own province always seem to be the correct standard by which to measure what is right or wrong for all communities, just as the horizon of one's own knowledge is a measure of all knowledge. But as to which horizon is right I do not pretend to say. The custom, so far as refers to this section of Uncle Sam's territory, is so old that the mind of man runs not to the contrary.

A new hunting and fishing club was organized here recently, with the following membership: M. O. Shaughnessy, captain; Jos. H. Darr, president; W. J. Stoessel, secretary; W. J. Scanlan, C. Shurt, Jos. Brown, J. L. Sprich, T. Burke, E. L. Stream, A. C. Grosskoff, A. Bothe and L. Picker; and O. M. Dunn, honorary member.

B. WATERS.

A Game Menu.

NEWBERN, N. C., Dec. 25.—On this Christmas day the Hotel Chattowka, Mr. D. C. Smith, late of Minneapolis, manager, set out a game dinner which I dare say has been seldom equalled except by friend Drake of the Grand Pacific in Chicago. Twelve kinds of fresh fish, including shad, twenty-one kinds of game, with oysters in variety, winter radishes and asparagus, made up a menu which is not only hard to beat in itself, but is strikingly indicative of the abounding forests and covers of this delectable region. Bear meat, wild turkey, venison and opposum figured prominently, all of them home products, while the quail, woodcock, goose, mallard, pintail, redhead, butterball, canvasback, brant and Carolina dove all come from our own fields and waters. Thermometer at noon 63 degrees. Negroes hilarious with horns, firecrackers and persimmon beer. Sunday school children happy and everyone enjoying the charming weather and bright sun. C. H.

(Where did the Buffalo tongue come from? Here is the full list of fish and game: White fish, trout, shad, redfin, mullet, redsnapper, sturgeon, eel, pickerel, halibut, flounder, drum, ham of black bear, wild turkey, leg of mountain sheep, buffalo tongue, venison tongue, saddle of antelope, opposum, loin of venison, pintail grouse, Virginia partridge, American woodcock, Wilson snipe, Canada goose, mallard duck, pintail duck, redhead duck, canvasback duck, brant Carolina dove, butterball duck, quail.

Natural History.

OUR FEATHERED FRIENDS.

There is an old East Indian proverb to the effect that "an abode without birds is like a meat without seasoning." That would indeed be an insipid spring, or an unsavory summer, which found us deprived of this piquant sauce to out-of-door feasts. The return of the birds marks a bright spot in our calendar and the most sluggish blood is stirred when the first blue-bird sends his divine note over the brown fields or the pioneer robin offers his melodious spring greeting.

These feathered messengers are always on time and there are no delays nor mistakes in the train service which conveys them to their destination. The first real snow storm brings the snow birds as certainly as if they fell out of Heaven with the flakes themselves. The unfailing accompaniment of the first balmy spring day is the blue bird, and when the reign or frost is fairly over and the nights and days are warm alike the chimney swallows bring us notice that they and summer have come to stay. How came they at the right moment? By what mysterious foreknowledge do they plan their journeys and arrivals? And by what unfailing instinct do these tiny wanderers, traversing hundreds of miles of country, crossing mounains, lakes and rivers, at last settle down with unerring precision upon the very spot they left the year before, so that the oriole rears another brood in the same tree and the ground sparrow builds another nest under the identical tuft of grass which shadowed her the previous season?

As with our human companions, so with our feathered friends, the most familiar ones are dearest, and although we gaze curiously upon strange or rare species we most love the common songsters. If all our birds were pelicans, parrots and cockatoos we could soon tire of their presence and their barbaric utterances, but the robins, the thrushes and the song sparrows seem as much a part of our orchards as the blossoms and the fruit, and belong in our gardens as assuredly as the hyacinths and roses.

It is a fact worth noticing that the gentlest and most inoffensive of our songsters have the sweetest voices. Their notes are the smybols and exponents of their loveable dispositions. Timid, but not wild, and seeming to be in a measure dependent upon man, with whom they associate and share the results of the cultivation of the soil, they are very properly called our domestic birds, and their cheerful ways and joyous minstrelsy insure them a warm place in our regard. When we come to the more quarrelsome and beligerant birds, such as the blue jay and the king bird (appropriately named the tyrant fly catcher) we are struck with the sharpness and harshness of their cries. There is something disagreeable and metallic in their voices. What they have gained in ability to defend themselves and create a disturbance among their fellows they have lost in these softer charms which distinguish and endear to us the more peaceable and helpless birds. Those fierce and predatory rovers, the eagles hawks and owls have no song at all. Nature is consistent in all she does, and to put a sweet song into the throat of a bird of prey would not be in the eternal fitness of things. Bloody deeds are generally done in silence and when the woods and fields are filled with the melody of the little songsters no note of music comes from the rapacious birds. The scream of the eagle, the shrill cry of the hen hawk and the dismal hoot of the owl have a quality in perfect consonance with the nature of the birds that utter them.

Sweetness of song, however, is rarely accompanied by brilliancy of plumage. But as nature has kindly planned some compensations for homely people, so the sober-tinted birds are in some respects better off than their gaudy fellows. There is an element of safety in dull plumage, because it blends so harmoniously with the colors of the weeds, grasses and bark of trees where the birds build their nests that they thus escape the notice of their enemies. Contrary to the laws of dress with us, the male member of the bird family wears the most showy garments, while the wife and mother is clothed in Quaker colors. But this, too, is a wise provision of Providence, because the female does most of the nest warming, and her inconspicuous dress contributes to the security of herself and young.

It is worth noting in this connection that the birds of brilliant hue take the greatest pains to make their nests secure against the attacks of their foes. The scarlet tanager builds a model house, and, like "the straight and narrow way," few there be who find it. The golden robin swings his hammock from the long, pendulous branches of the elm, where no terrestrial enemy like the squirrel or the snake would venture, and the pouchlike nest, which almost closes at the top with the weight of the mother bird, is so deep that no claw of hawk or owl can reach its inmates. The ruby throated hummingbird also deems it necessary to construct his nest with a view to attracting as little attention as possible, and although it is usually in an exposed position, saddled on a tiny limb, it is built with so much art that only the most practiced eye can discern it. The cunning architect sticks bits of moss and lichen on the outer surface to make it resemble the bark of the tree. Thus we see that even among the birds beauty is a dangerous thing and must be hedged about with many safeguards, while plainness has little need of concealment or defense.

These little feathered people know how to adapt themselves to circumstances and spare themselves unnecessary labor. Under changed conditions they vary the character and style of their living and building. The European martin used to construct a globular house, with a hole in one side, thus protecting herself at nearly every point; but the sanitary arrangement of this sort of nest was bad and proximity to man made such an elaborate shelter unnecessary, because the predatory birds were driven away. Therefore the martins, recognizing the situation, made a new depature in architecture and began to build open nests!

Our common eave swallow formerly constructed a

numerous annoying and one of the most unpleasant of the fishes in these waters. No sooner has one cast one's bait than the catfish assemble round it in myriads. Frequently I have lost almost a whole bait in ten minutes. If it were not a fact that in most places one can catch hundreds of catfish in an hour it might be some sport to play with them on a light rod. I did so on one or two occasions, but was speedily tired of it. The trouble of removing the fish from one's hook is considerable. They are not only strong, but possessed of sharp spines, which inflict poisoned wounds; indeed, so sharp and hard are these spines that I have seen them sticking into a deal board. Maguire had a theory that by catching a couple and attaching them by short lines to a bottle they would scare all the others away, but it did not appear to be effectual. Their number is legion. As one reels in the remains of one's bait in order to replace it by a fresh mullet, such as is left on the hook is followed up by a small army of these nuisances.

Nor is the catfish the only thorn in the side of the tarpon fisher. There is a heavy and dull creature known as the Jew fish. The Jew fish possesses a particularly ugly head. I do not know exactly what it weighs, but I was assured they have been caught up to 400 pounds. I hooked more than one, but rather than go through the labor and waste of time of killing it I reeled in as much of my line as I could and cut him adrift. The Jew fish is not a good fighter; it relies on its weight and its power of hiding itself among the roots of the mangrove trees. In addition to the Jew fish there is the shark, but as I was not troubled with sharks at Punta Gorda, and as shark fishing with rod and reel is, in my opinion, excellent sport, I will defer them until another chapter

Toward the evening the mosquitoes get troublesome, and later on in the season comes the minute insect called, for some reason I do not understand, a sand fly. The Florida mosquito does not seem so bad as the others of its kind, but it is occasionally extremely numerous.

If heat and sun be drawback, I fear tarpon fishing must be considered uncomfortable. Personally I did not suffer. I do not object to either heat or sunburn, so long as I am not obliged to wear a collar three inches high.

All that day Maguire and I sat steadily on without the least sign of a run. The only thing I captured was one of the biggest appetites I ever remember, and here let me say that, despite the heat, this part of Florida (I do not refer to the internal swamps of the country) is distinctly bracing. Our party did not suffer a moment's illness the whole time we were there, and though we were told by New York doctors to take quinine and be most careful of malaria fever, we not only did not suffer from anything of the kind but did not even hear of any illness.

As a country Florida is poor, and in many parts extremely unhealthy. Thousands of young Englishmen and young Americans from the Northern States have been entrapped there by stories of the alleged profits derived from orange growing. The people who get them there are land speculators; some of them, I regret to say, Englishmen. At the present time thousands of fine young fellows are eating their hearts out in Florida without the least chance of bettering their position. The place contains a number of Englishmen of the retired officer type, many of whom have sunk their little all in an orange grove. Not even local patriotism could induce "crackers," as the inhabitants of Florida are called, to pretend that Florida has the least chance as a center for emigrants.

Englishmen have lately opened up phosphate mines there, and have undoubtedly made fortunes, but from the agricultural standpoint the soil of Florida is so poor that it will never become a prosperous country for agriculture. Its ranges are good, though they are in many ways not equal to those of Spain or the East. One day, when they have proper railway facilities, this vast country may derive profit from its wonderful fisheries, and in course of time it is destined to become the great winter health resort of the United States.

But to resume. Towards 6 o'clock the naphtha launch came along and took us up. It was chilly as we went down the river towards Punta Gorda, but I had the plesaure of seeing one of the famous Florida sunsets. They have not their equal anywhere in the United States, and I doubt whether the famous desert sunsets present more remarkable effects.

It was quite dark when we reached the hotel, and it was pleasant to come into the bright hall with its crowd of sportsmen in careless attire lingering round the fire or rocking themselves in the national chair.

There had been no tarpon caught that day or for many days previously.

In all these tarpon hotels a list is kept in the hall of the fish killed in the local water, and the record is kept in a unique way. The scales of the tarpon are often as large as a five shilling piece and occasionally considerably larger. Upon these scales the weight of the fish, the name of the captor, the minutes or hours of the killing and the date are written. The scale is then pinned to a board. It is the ambition of every angler who visits Florida to figure on one of these hotel records.

(*To be continued.*)

In the San Joaquin Valley.

Away up at the south end of the great valley of the San Joaquin river in California, the land spreads out like a plain that reaches away off to the hills of the snow-crested Sierras Nevada, whose wintry peaks tower high above the clouds, far in the blue Italian sky, and the rarefied air blows every night, cool, dry and stimulating. Happy is he who on horseback gallops with comrades in this fragrant mountain air, over the green sod spangled with poppy violets and fileria, riding away off to the pine clad knolls that fade afar in the smoky distance. Aside from the scenery and invigorating air, the gunner will find plenty of game, ducks and geese in abundance, rabbits and quail, and larger game further back in the mountains. The jack rabbit is in his element here.

H. T.

AN INCIDENT OF TURKEY CALLING.

Some weeks ago a friend from your city, M. C. E. Gudebrod, of the firm of Gudebrod Brothers, silk manufacturers, spent a few days with us here in the county of Goochland, Virginia, and tried his hand at wild turkey shooting, that sport so wearisome to the unpracticed, so fascinating to the adept. He was a true sportsman, and derived enjoyment from the charming exercise of tramping from morning to night during the delightful autumn days of the "Old Dominion," through the sweet-scented woods and old field pines, even though he did not slaughter much game in pot-hunter fashion. He succeeded, however, on his first hunt, in bagging a fine gobbler, and saw a great many turkeys, and became personally cognizant of their extreme timidity and wariness, which alone have prevented the extermination of this noblest of all game birds of America. Especially was he struck with the vigilance of the old gobblers. These are generally found in pairs or small flocks by themselves, and when found have to be "scattered," and it then ordinarily requires hours to decoy one by the skillful use of the "yelp," within gunshot of the spot where the huntsman is concealed.

Upon his return home Mr. G. stopped in Ashland and informed his friend, Mr. J. M. Leake, himself a great lover of the sport, of the large number of turkeys in Goochland, and as an instance of their wariness said that the old gobblers in approaching a call took and carried before them in their bills an evergreen brush, cuningly concealed behind which they would reconnoitre to discover whether the call proceeded from a turkey or a man. Fired with ambition to out-general and bring to bag one of these, Mr. L. immediately paid a long promised visit to Goochland to try his luck.

On his first day's hunt he found and scattered a large flock and killed two fine turkeys, and could have killed more out of the flock, but they were young and did not satisfy his ambition. Soon after he flushed a flock of old gobblers and selected and arranged his "blind" with every precaution known to the art, exerting every device that experience and skill could suggest, yet hours went by and still he heard no sound of the game At length, as the sun was jetting low in the west, in response to one of his most persuasive calls, there came a far off answer. He waited some time and then called again. Again he was answered. Presently he heard distinctly the tread of the turkey in the dry leaves as it approached. A stick cracked and then all was still. Again he uttered a low call, and again he was answered, and again heard the same distinct sound of footsteps as the turkey cautiously advanced. It drew nearer. With gun ready and every nerve strained with expectation, he peered through the evergreen boughs which hid him behind an old log from sight, but could see nothing, except a small cedar rustled by the wind; but still he heard the tread of footsteps in the leaves. "Is it possible," thought he, "that some man has mistaken my call for that of a turkey and is creeping up to get a shot at me?" The idea was startling. He recalled an instance where a man had been shot in that very way near Ashland. He grew nervous. The slow measured tread grew louder. Drops of perspiration stood on his brow. He could stand it no longer. Springing up in his blind he shouted: "Who is that? Don't shoot!" Instantly there darted away from behind the cedar a magnificent turkey clothed in all the gloss and beauty of perfect plumage, and before Mr. L. could recover from his fright he was gone.

Inasmuch as some uncharitable persons might question some of the facts stated above, for most of which I will vouch, I have given the names of the gentlemen concerned.

I have just ordered a renewal of my subscription to Forest and Stream. As the years go by it becomes, like an old and trusted friend, nearer and dearer to my heart. It is associated in my mind with the names of honored and departed friends, and among them that charming writer and excellent gentleman whose nom de plume was "By a Mule," and the genial, witty and whole souled "Wells."

M., OF NORTHSIDE.

CALLING MOOSE.

There is no department of the noble science of woodcraft that needs more skill and nerve and patience than that of moose calling.

The game is as wary as a fox—his powers of scent and hearing are nothing short of marvelous—and he is almost certain to detect the first false step or the first false note in the music.

There is room for question whether the moose is ever wholly deceived by the call even when it is given by a past master in the art. He thinks it is the voice of his lady love, but he is not without suspicion. The conjugal impulse is wearing out his very soul; his appetite for food is gone; he has been living the life of a vagabond, his days without rest, his nights without sleep; he has been pawing up the black muck on the barren these moonlight evenings and strewing the mountain trail with saplings torn up by the roots in his sullen fury, and now—Great Scott!—what is that sweet and soulful sound he hears stealing up from the shores of the lake? Is it the voice of his only ownest Mary Ann, who ran off from him in a huff a year ago, or is it Sarah Jane, the giddy jade, who eloped with that worthless wretch, William Henry, last Sunday night? Or is it the cry of that phantom maid, of whom he has been warned, whose glances pierce the heart like fiery hail, and from whose mystic bower no bull moose e'er returns? If it is our own Mary Ann it is all right. If it is Sarah Jane we'll have to fight lively with William Henry, that's certain. But by the Big White Moon, what if it be the phantom maid? It didn't sound at all like Mary Ann, that's a fact, but mebbe she has a bad cold, or mebbe she's got an old whopper of a lilypad root stuck slashways in her gullet. She always was a holy terror on roots. Well, whose's afraid, anyhow? We'll just sneak down to the shore of the lake, and if that miserable, low-lived William Henry is there we'll proceed to knock spots out of his mangy carcase and shovel him into the lake if it takes all night to do it. But, hark! there it is again. That was never Mary Ann nor Sarah Jane either! If that is the music of the phantom maid she needs a new set of reeds in her throat right away. Well, there's no great rush about it; here's a nice old blowdown; we'll just lean up against this and smell and listen for all we're worth. We feel very much like giving a grunt to show we're here, but we won't; we'll keep our beautiful mouth shut for fear of accidents. Come to think of it, things have been going on kind of queer about the lake these last two days, anyhow. The ducks have been quacking and flying about to beat four of a kind. We saw the smoke this morning over on the point; we heard the sound of blows and falling trees and we smelt a track on the shore unlike anything we ever struck before. What if it should be a Man, the animal that walks on two legs, the foe of everything that breathes and everything that grows? He slew our forefather before us and our hind father behind us. Hush! there it is again. Jumping Jupiter! there never was a maiden moose on earth with such a harsh and hollow croak as that. It must be a Man. It is a Man. Good day, Mr. Man, we'll see you later!

There is no material to be found in the woods that is put to so many uses by the hunter as birch bark. It supplies him with a roof for his camp; with a kindling for his fire; with a torch to light him through the wilderness by night; with a canoe by which he speeds in silence and security over the lakes and rivers and under which he may seek shelter from the storm; with pot, pan, kettle and dipper if need be, and with writing paper by which to send as chance occurs a message to the outer world. Last but not least it supplies him with his moose call.

This implement is made from 16 to 20 inches in length. It should not be shorter or it will not give sufficient volume, and its tone will be harsh. It should not be longer or the human lungs will not suffice to fill it. The tree from which it is taken should be well nourished with sap so that the bark shall be soft. With four strokes of his knife the caller cuts the bark and strips it from the tree. Then peeling the bark as thin as he can with safety, he trims it in the general form of a triangle and rolls it in the shape of a horn. The small opening should be about three-quarters of an inch across; the large opening about five inches. If there are spruce trees growing near, the hunter simply shoves his horny hand down in the soft, black mould and speedily yanks out a long, tough and pliable root. Stripping off the bark, he splits the fiber from end to end, and with the string thus made secures the horn at either end. Then he raises the horn to his lips and (if he really knows how to give the call) gives forth the most plaintive, melodious, voluminous, soul-moving sound that e'er was heard on sea or shore. There is a drop of two full octaves from the first flute-like whimper to the deep, resonant chest note at the close. Yet the caller is not quite satisfied with it. He trims the horn off at the big end, or he rolls it more compactly together, or he opens it and trims off a wart or two on the bark inside.

He raises the horn to his lips and again that weird, wailing cry echoes and eddies down the valley and over the hills. When he takes it down he says: "Well, I guess she'll do." I should think so!

There is seldom any heaven-appointed spot at which to call for moose. It should be where the signs are fresh. It should be away from the sounds and scents of the camp. A good place to call is on the shore of a lake, or pond, or dead water, or on the edge of a barren, where the king of the valley can be seen as he draws nigh. There is not much need of concealment at first; a moose is not at all keen of vision; when he comes you are going to see him swaggering, or lounging leisurely up the shore, or hear him pushing his way through the bush in plenty of time for you to break for cover. The main thing now is not to let him catch your wind, for if you do the jig is up. You are at liberty to take the buck fever, of course, but I don't see why you should. If you can hit anything you ought to hit the broadside of a moose. If you know what a good rifle will do, you ought to reflect that you are going to punch an awful hole in that moose if only only keep cool. You need not be afraid of the moose for, after all, the number of full grown men that have been devoured by bull moose is comparatively small. It is a thrilling experience, no doubt, to ride through the forest on the chair car of the bull moose express; still the chances are that the train will not stop at your station. If you positively cannot pull yourself together in any other way, lean your gun bush fashion against a tree or over a log or stump, or lie down if you can and shoot from the elbow. Take lots of time, aim straight, aim a little lower that you expect to hit and keep aiming till you hear the gun go. Then, unless your moose is down, man the pump as soon as you can and shoot—and shoot—and shoot.

Now and then it happens that the guide, while tramping along the trail, thinking how he can pull your leg for the greatest number of dollars in the shortest space of time, will find himself minus his horn, right on top of the awfulest big moose on record. There is only one thing to be done and that is for the guide to use his hand for a horn. It can be done, but it takes an artist to do it.

Bull moose are dead ripe early in September and unless the law says otherwise that is the time to look for them. The mating season is just then beginning; by the last of the month nearly all have mated, and the chance for calling then is not as good as it will be a month later when the cow has tired of married life and the old man is keeping bachelor's hall. Last year my friend Braithwaite called up three moose at once on the 15th of November, but this is very unusual.

As a rule, the best time of day to call for moose is about sundown. The wind will have calmed down then, if it is going to calm at all, and the horn can be heard a long way off. It is almost useless to try it on a windy day as the call can only penetrate in one direction, and the roaring of the trees drowns out all other sounds. The moose cannot hear you and if he could you cannot hear his answering grunt. Moreover, like most wild animals, he is restless when the wind blows and very much on the alert. Indian callers generally begin about sundown and keep on calling by moonlight until a late hour of the night. Moose will then respond more readily than in the daytime, and from a far greater distance, but it is going to be difficult to plant your bullet in the right spot. The noble red man is not

deer would strike to the heart of anybody but a butcher. It is a pleasure to hunt, but to wound game and suffer it to escape is a shame. The leaving of it half killed over night is something sad to think of.

Mr. Woodbury worked hard for a deer, and jumped many a fine buck, but that region had been hunted till the deer had found out the forms and generally the scent of their worst enemies. SPECIAL.

DEER IN MICHIGAN.

LANSING, Dec. 24.—Mr. O. D. Hardy, with C. Towner, Harland Towner, J. C. Harrington, George Northup and Clyde Smith, have just returned from their annual camping and deer hunting trip to Northern Michigan. They had the good luck to get eleven deer—two bucks, two fawns and seven does. In the immediate vicinity of their camp a great many deer had been killed during the close season, and the people paid no attention whatever to the law prohibiting the killing of deer or to the game warden. It is reported that the deputy warden visited one of the camps and not finding the campers at home inspected the camp and found abundant evidence of illegal shooting. He returned to town for assistance, and with the sheriff again visited the camp and attempted to arrest the hunters. The hunters pulled out their guns, and with the business end of three or four Winchesters pointing toward them the wardens took their departure and gave up the arrest.

The Hardy party have gone deer hunting so many years together that when the season opens no questions are asked, but each member of the old company gets out his rifle and with camp equipage always ready and supplies by the carload, they fall in line like veterans, and start on their journey. Last year I gave you a full report of their hunt and as a result the woods were full of hunters in the neighborhood of their camp, so I conclude that hunters read Forest and Stream pretty generally, and that they pick up all the good points and make good use of alll suggestions that come their way. This year the location of the Hardy hunting camp they keep to themselves. The party from Bath, consisted of Mr. Tricker, Tom Hall, Cyclus Rose and Charles Cushman. This party is also an old one. It was organized a great many years ago. The membership has changed a little, but its constitution and by-laws never change, no more than the Declaration of Independence. The party always get plenty of deer, because they know how to shoot, and this year they have splendid luck. Last year they got a big bear, but this season the bears were not at home.

In the vicinity of their camp this year hunters were so plenty and the shooting so careless that many of the hunters wore strips around the shoulders to distinguish them from the deer. Hounding was practiced quite generally all throughout Northern Michigan. The location of the Bath camp was kept concealed because of the great number of new comers who visited their last year's camp before the season opened. It would seem that our letter to Forest and Stream "gave away" all the good things of that section, and was instrumental in flooding that country with a new set of hunters.

Mr. Hardy met a hunter from up North who claims that he saw the elk that was shot up there. He states that the elk—the shooting of the elk—and the 600 pounds of dead elk—was a fact. How the elk got into Michigan is quite a question.

It is the opinion of most of these hunters that a better law is needed in Michigan, not only for deer, but for all kinds of game. They suggest a uniform season for all Michigan and Wisconsin, a tax on non-residents, prohibition, the sale of all game, limiting the amount of game allowed to one gun and prohibiting the shooting of does and fawns. JULIAN.

A Virginia Game Country.

WEST POINT, VA.—Being a generous and philanthropic sort of shootist and not even remotely related to the dog in the manger sportsman, who keeps a religious and awe inspiring silence whenever he finds a good thing, I have decided that (now that I have finished) the rest of the world may have a chance, and if you appreciate the information of virgin possibilities as I think you do, he who runs may read. Perhaps thirty or more investigating hunters, besides yours to command, have enjoyed the almost unlimited sport to be had in the swamps and territory contiguous to the Mattponi and Pamunkey rivers, thus far this season. Did those who are rushing off to Missouri and other foreign countries know what they are missing we would not be able to kill mallards off the Terminal Hotel verandas, as Mr. Wm. T. Mayer of Albany, N. Y., did yesterday. This, however, is no novelty, for in the short time I have been down I've seen three flocks within gunshot of the hotel. Messrs. Piel and Cook of Brooklyn went back this week loaded to the guards with everything but deer, and it was only because they didn't go after the last named game that there is something left for the rest of us. Last Thursday a local hunter bagged two deer weighing 116 and 164 pounds respectively in one afternoon. As I said before, I merely want some of the rest of the world to benefit by my experience. THOS. M. WILLIAMS.

Foxes in the Mohawk Valley.

ROME, N.Y.,—Sound the tally-ho horn, for the woods are full of foxes and the foxes are full of the poultry they are stealing from the farmers in the valley of the Upper Mohawk. During one night of this month a nd of these wily midnight maurauders made a raid on a well known poultry yard about three miles north of us, stole sixteen Christmas ducks, then taking them down to the moorlands, but a short distance away, they seemed to have held high carnival over the feast for the rest of the night.

From the number of tracks made in the new fallen snow it would seem that they must have been at least one hundred of the "varmints" at the banquet. Yet it is not probable that there were more than three or four in the ring. With high bred hounds, costly guns and all the trappings going to make up the fox hunters' equipments, the boys are prepared for the chase and the way they will soon make the fur fly will be a caution to all they do not kill dead on the spot.

In the town of Lee, bounding us on the north, the officials report that six hundred turkeys have been destroyed during the past year, and they are praying the Board of Supervisors' to offer a bounty of one dollar per head for all foxes killed. As that part of the town bordering on the big woods and that famous old trout stream, Fish Creek, has ever been the home of game indigenous to the State of New York I believe the statement given to be true. J. B. MCHARG.

Combination Arms.

Editor Forest and Stream:

In your issue of Dec. 8 Mr. J. J. Meyrick writes so earnestly and well concerning combination arms and guns generally that I regret feeling obliged to form an issue with him on a collateral matter. But it seems necessary. The reason lies in his prefatory paragraph which says that in your paper for Oct. 8 "there is an article by Cayuga condemning the combination gun chiefly on the ground that it is inferior to a shot gun for winged game shooting, or to a repeating rifle for large game." Hence when I read this statement I turned to my file of FOREST AND STREAM with some misgiving that perhaps my residence among the Siwash of the North Pacific coast had distorted my comprehension of "English as it is spoke" on the Atlantic seaboard.

So I called in a philological expert, whose name is ornamented with several university degrees, besides being learned in Chinook, and bade him read and interpret. He says my demurrer is sustained, and in my opinion that settles it. Now let Mr. Meyrick again read my little script in your issue of Oct. 6, read as carefully as he shoots, and perhaps he will discover that I did not condemn the combination arm, per se, but the all-round arm, so called, as not possessing perfection under all conditions. I think he will also notice that I spoke favorably of the combination arm for certain uses, pointing out, however, that it is fallacious to treat it as an all-round weapon of complete satisfaction where special calls will frequently be made upon it for artistic, economic and effective service, all of which is not in controversion of the fact that the union of a rifle with double shot barrels for a general outing in some particular locality is a most desirable combination.

CAYUGA.

Tiger-Slayer-in-Chief.

To those who are aware of the proficiency and courage shown by French sportsmen in their pursuit of big carnivora, it will be no surprise to learn that the Governor of the Straits Settlements has just selected a citizen of that aspiring nation, M. De Nancourt by name, to fill the post of "Tiger-Slayer-in-Chief" at Singapore. It appears that M. De Nancourt has killed 500 tigers with his own rifle, against a bag of only 400 made by Major-General Probyn, the well known English shikarri. Some of our Parisian contemporaries claim credit for the French nation as supplying an official akin to their own Grand Louvetier for employment in a British colony.

We are reminded by our lively friends across the Channel that until M. Du Chaillu encountered and slew the gorilla we knew nothing as to the existence and habits of that formidable monster, and that the greatest of our living hunters Mr. Selous, is of French origin. If M. de Nancourt is able to keep down the number of tigers in the jungles and woods of Singapore and taking toll of the native inhabitants, neither the latter nor any other British subject will take any exception to his nationality. The great bulk of the population of Singapore, numbering altogether nearly 200,000 souls, are Chinese and Malays, who, like the natives of India, look to white shikarris to rid them of dangerous and savage beasts of prey. In the meantime the importance of Singapore and of the other dependencies of Great Britain in its neighborhood demands that what is called "the scourge of the colony"—the tiger—should be kept within reasonable limits.

We hear, therefore, with satisfaction that a "Tiger-in-Chief to the Governor of the Straits Settlements" has been created for this purpose. The commerce of the colony has increased enormously within the last few years, justifying the acumen and foresight of Sir Stamford Raffles, whose early death at the age of 47 was a severe loss to this nation.—London Daily Telegraph.

Talk of Gun and Rifle.

Editor Forest and Stream:

Positions in shooting, combination arms, aiming at the head, light loads and heavy—what an enticing list of subjects for the cranks to spin theories about. Already the flood of manuscripts which "Uncle Belknap" anticipated has begun.

Now, I have long been a convert, theoretically, to that business of aiming only at the head or neck, but "most ingenerally always" when I get a chance at a nice deer I seem to forget, and let drive at the place that is easiest to hit. I mean, of course, the vital part of the bouy; I am not such a chump as to shoot at the hams or side back of the ribs. I scarcely think the objection of deer getting away with a broken jaw is valid. The point of aim is really the neck, as one does not care to spoil a pretty set of antlers, and every experienced hunter is very cautious about shooting over. A shot in the neck with a decent bullet, if it does more than cut the skin, will, as a rule, knock the animal senseless. Though I will confess that I let a little deer get away from me once with his under jaw smashed by a .44 bullet. The thing troubled me a whole lot, too, poor fellow.

I was surprised not to find in "Modern American Rifles" (good book, that), among the many cuts illustrating positions in shooting, one that is exceedingly common among the mountaineers of the West and which I often employ. Perhaps the reason it is not included is that it is scarcely feasible on perfectly level ground. It is simply sitting down with the feet near together, the knees thrown apart and the elbows resting on them. If on a hill side, where the feet can be placed on a level slightly lower than the seat, it is a position that can be taken with great ease. Even on level ground it is not impossible if one's joints are still supple. (I have just now tried it on my study floor and find that I can get the muzzle of my gun down to the level by something of an effort.) This position offers the advantage of a comparatively firm support for the arms, with almost entire freedom from the effects of heavy pulsations. I have found it especially good after a run up hill. But, nevertheless, I pin my faith to straight off-hand shooting, with the arm pretty well extended. I think if a man is going to use the rifle he ought to learn to stand up and shoot it like a man.

That is some interesting information that J. J. M. gives us about loading heavy guns with a light ball. When men have actually tried and proved a thing, as he and "Iron Ramrod" (why can't we have something from his interesting pen again?) always do, it gives much weight to their advice. I have a .45x90 rifle, and got from the Ideal man a little mold for a light bullet (192 grs.). The twist of this gun is about the same as that of the .44-40 Winchester, and I saw no reason why this bullet, which weighs about the same as that of the cartridge mentioned, would not perform well with the same charge of powder. But all I got in the way of results were some shells swelled at the point where the bullet was seated till they stuck in the chamber, and the bullets scattered all over the target at fifty yards.

If I can get some lubricated wads I am going to try Mr. Meyrick's plan of leaving the bullet in the mouth of the shell and seating the powder with a wad. I wish very much to get a charge for this gun that will do good service at squirrels and rabbits and that will kill a turkey without blowing it into atoms.

"Projecting" with the service charge of this gun has given me great amusement. I have at last settled down to the load of 85 grs. powder and the 330 gr. Gould bullet. I am surprised that the Winchester people do not put this load on the market. It is the most accurate one at the target that I have tried, beating both the 90-300 solid ball and the 85-300 hollow point. I have not tried the 85-350 solid ball load fully, as I fancied the recoil was greater. I believe in the hollow bullet for game, anyhow, though the 300 gr. hollow point is too much taken up by the hollow and flies to pieces badly on striking. I have only killed one deer as yet with the Gould bullet, and that was shot through the neck, so that I could not study the effect of the bullet to advantage. But I believe if your "Tenderfoot" correspondent—who is, by the way, no great shakes with the pen—had used it his big elk would have tumbled at the first shot, instead of scaring him to death by walking off. (I had a big buck deer treat me that way once, when I was using a .38-40 Winchester).

The three-barreled gun stands well here in Mexico, though most that I have seen are in the hands of men who use the shot gun comparatively little. It seems to be a well made and honest weapon. It is muzzle heavy, of course, and clumsy about the breech, but is a shooter with both ball and shot. A friend of mine and companion of many a hard-fought still hunt after the cunning white-tail, has just killed his one hundredth deer with a three-barreled .38.55-rifle. He is under promise to write up the story.

I want to ask a question of those gentlemen who have been recommending means of making shot act as a solid ball, cutting around the shell, stringing them, sticking them together, etc. Would they risk that in a choke-bore gun with light barrels? And, by the way, again, what makes a choke-bore gun shoot about a foot higher with heavy buck shot when you have fitted them to the muzzle than it does with drop shot? Mine shoots nine buck shot (about 1⅛ oz.) very close together and drives them home, but throws them too high at forty yards.

About the time I get this folded and sealed I'll think of something else I meant to say. But probably the Editor will be glad I forgot it. Next week we're a gwine after the tigres. If we get one you shall hear about it. I think about all the ducks in Mexico are wintering in Acambaro. I was there the other day, passing through, and, between trains, killed twenty-five. I never saw fatter fowl. There are none hereabout. No water this year. Acambaro is about half way between here and the city, and on the main line of the Mexican National. The railroad has a fairly comfortable little hotel there. AZTEC.

SAN LUIS POTOSI, Mex.

Sea and River Fishing.

ANGLING NOTES.

"Greetings from Red Spinner."

In a recent personal letter from Mr. Wm. Senior fishing editor of The London Field, he refers to the proposed organization of a Fly Fishers' Club in this country in a way that I predicted he would should he know about it.

"I have just seen The Forest and Stream of October 20, in which your proposed Fly Fishers' Club is dealt with.

"You are perfectly right in thinking that such a scheme is one that interests me quite as much as it does our always good mutual friend Marston. Let me, therefore, in formal words send you greetings that are not second to his in heartiness, and wish your Fly Fishers' Club an out and out 'God speed.' That is not a bad idea of Marston to make your club a sort of Siamese twin, for the States and the Dominion, in the matter of fishing, are bound very close together by kindred interests. I do not see, however, why there should not be two clubs, one American and one Canadian, in close and clearly arranged affiliation. When I was in Canada last year they told me that all the good salmon fishing there, if possible, was snapped up by cute sportsmen of the great Republic, so there is a really practical, as well as a sentimental, connection between you.

"We are having our annual dinner of the Fly Fishers' Club here on Friday next and I wish you were here to respond to the toast of the visitors. Our success has been really a marvelous one, for we have only a modest club room (although it is a very beautiful and well furnished one) we have no water of our own, we publish no proceedings, yet here we are with, I think, about three hundred members, more or less, and we shall sit down Friday night under the presidency of 'John Bickerdyke,' about two hundred strong, and all gentlemen representing the highest branches of the sport that we all love so well. Marston is not one of our seniors, either in years or appearance, but he is practically the father of the club, and but for his almost superhuman energy and perseverance during the early years of its existence, the institution would not have existed.

"Our harmony has never been broken and I doubt whether there is a more delightful brotherhood of the kind in the world. I suppose when your fishing club is formed you will, as usual, "go one upon us in many things, but I do not think you will beat us in that primary essential of all club life—good feeling.

"This will reach you in time to wish you and all American anglers, in the old English phrase, 'A merry Christmas and a happy New Year;' and for next season health, happiness and sport of the best."

This letter is characteristic of the great angler, "Redspinner," who is the embodiment of kindly good feeling, which radiates from him as heat from the sun, not only at this glad season, but at all seasons. But I am of the opinion that our club in New York City can be made broad enough to shelter the fly fishers of the United States and the Dominion of Canada. This also seems to be the opinion of Canadian anglers so far as they have expressed themselves on the subject, and yet for actual fishing American anglers are turning their faces more and more toward Canada.

A few days ago I lunched at a club in Albany and afterward talked fish and fishing with friends over our cigars, and I was surprised to hear a gentleman whose interests are largely in the Adirondacks say that the fishing in the North Woods was good enough for those

enthusiastic gunner will remain out all day, picking up the scattering birds that come along.

Marsh shooting is also very good here. A large pond lying directly back of the beach affords good opportunity to secure an occasional wild goose, as well as quite frequently black and teal duck, small birds—yellow legs, jack snipe and plovers—are also quite plenty in their season.

Partridge shooting is very good and an occasional woodcock or quail is found, as there is quite a heavy growth of woods near by.

With all our experience in eating the various kinds of birds we have never eaten a "coot stew." The smaller birds are broiled, the large ones roasted, and if you want a really fine dish let us recommend a thoroughly well cooked young grey coat or a more delicate black duck. But remember that three things are very necessary in cooking sea fowl: Plenty of salt, plenty of black pepper and plenty of onion, and then there will be no complaint of their tasting fishy. We seldom parboil a bird, as it is liable to leave the flesh too dry; but depend rather on long and moderatey slow baking, keeping the bird well basted. The old farmers about here consider loons, which they parboil and then bake, a great dish, exceeding to their taste even the domestic fowls; but as a general thing the gunners do not care for them. The coots sometimes bed off the coast here, and if left undisturbed for awhile afford great sport for the gunners and give excellent opportunity for some large bags. There is usually a ready market for all the birds and the fine feathers secure a ready sale, to say nothing of the delight derived from the sport itself.

PORTSMOUTH, N. H. MILO.

CHICAGO AND THE WEST.

The West of the Present and the Past.

UNCLE BILL HAMILTON.

CHICAGO, Ill. Dec. 22.—He lives, as I have said before, by the side of the great Yellowstone, whose green waters whisper up all kinds of things to the cabin window, and over Uncle Bill Hamilton's little home floats a tattered flag. Uncle Bill is getting old now, beyond the limit set for the average man, but he is still straight as an arrow, and there is fire in him yet, if you only can get him talking and thinking of the old times in the West. It is easier to get him to think than to get him to talk, but he was kind to us, and in his quiet fashion told us many things. One would be sorry to report him inaccurately in even the least detail, and if any word of what he told us is not said as he said it he will pardon the error, for the wish is really to give the readers of the FOREST AND STREAM a little news about the life of a genuine old-timer, faithful in every respect and vaunting in no wise. Uncle Bill has had little newspaper talk made over him because he has never wanted it, but has sought to avoid it. As modest as a girl ought to be, he has set an example the direct opposite of that of most or many would-be old-timers, and has kept out of print all he could. He has never yet sent me that picture of himself which he promised, because he is afraid it would get printed, and probably it would. But while I ask him to exclude himself from the notoriety-loving class of "Scouts," Wild West posers and long-haired people for whom he has so ready and thorough a contempt, I beg him also to exclude FOREST AND STREAM from the general class of sensation-loving newspapers. Before the FOREST AND STREAM family Uncle Bill can come and talk without reserve, because they are the right sort, and have no use for pretenders, but love a man of actual deeds.

Hamilton's History.

In Uncle Bill's light hair, blue eyes and florid complexion one can still see the Anglo-Saxon trace. The dare-devils of the forest, who followed the life for the adventure of it and not for the commercial gain mostly had Saxon in their ancestry, unchanged by generations, perhaps, of American ancestors. Uncle Bill was entitled to be called both American and English. That he was of English birth you could tell by his accent even to-day. That he was an American you could tell by his talk and by the tattered flag whose colors are never lowered from above his cabin on the Yellowstone. As a matter of fact, Bill Hamilton was born outside of America, of English parents, perhaps in England. He came to New Orleans more than 70 years ago, when he was a child two and a half years of age. There is a story that once he served in the English navy, but he says little of that, and probably got tired of it. At any rate, he drifted West, just as naturally as water runs down hill. At the tender age of twelve we find him out at a trading station, where Laramie now is. He was for a time a protege of Bill Williams, one of the border characters, and Williams thought much of him. It was only a short time after his appearance at the post before the young Hamilton showed his great national aptitude for the "sign language" of the Indians. (He has long been known as an authority on sign talk, and probably no white man ever surpassed him in facility in the unspoken language.) "Mark my words, fellows," Bill Williams used to say, "this boy is going to beat us all at the sign talk."

Hamilton as a Sign-Talker.

He did beat them all, and became known to scientists who were interested in this strange and universal language of the American races.

"I once met in California years ago," said Bill Hamilton to me, "a scientific gentleman who had traveled a great deal in South America. He told me that he had learned the sign language of some of those tribes, and when I heard that I began to talk with him in the sign talk of the North American Indians. We found that we could converse pretty well, in fact, get along and make ourselves perfectly understood. He told me that he thought the sign language must be universal on both continents.

"There were more scientific men came and talked with me over this and some years ago they sent me up into British America to go among the tribes there and try to learn what was the beginning of this sign language, and where it came from. I found that I could talk with all those strange tribes, but I did not learn where the sign talk began. They would tell me, 'Our father had it, and their fathers gave it to them.' Then they would make the sign of 'ice,' and of 'dog,' and of 'sledge,' and point to the Northwest and stretch points of the fingers of their opposite hands as far apart as they could and say, 'ee-ee-ee-ee,' meaning a 'very long time.' That was all they could say about it, but they seemed to think that the sign language came with their fathers across a frozen sea to the Northwest."

Even to-day, when Uncle Bill meets Indians with whom he wishes to converse he usually talks with his hands to them. It is an interesting sight to see them sit down thus, often for an hour or more, steadily talking and never saying a word. The rapid motions of the arms, hands and fingers are graceful and interesting to the last degree. If you will notice Uncle Bill when you speak with him you will see that he uses a great many gestures, especially for a quiet and self-restrained man. Undoubtedly this is a survival of habit from the old days, when he traded and talked with his fingers so long and so generally. I can refer all scientists interested in this fascinating study to Uncle Bill Hamilton, who is to-day no doubt the best authority on the sign speech of the American tribes.

In those old days Bill Hamilton came to be an Indian in every respect of practice and habit. He lived with them, rode with them, hunted with them and followed their customs in every way, even to those of costume. He was widely known among the various Indian tribes, and universally respected by them. The Indians always said he was the only white man they ever knew who could ride over the plains day in and day out, naked except for the breech-clout, and never be burned or blistered by the sun.

Hamilton as Explorer.

Uncle Bill was on the plains sixty years ago, and that means a great deal. What days those must have been! How puny are the deeds of our hunters to-day, how narrow the "wilderness" in which they perform! California in '49 Uncle Bill took in as an incident, but he cared little for gold. He pushed on to the wilder North, and always respected and trusted by those who knew him, notably by the officers of the U. S. Army, he filled various terms as scout, guide and hunter. He was employed by the army commandant then stationed at the chief Oregon post to cross the Rockies to the east and thence go north in order to feel the disposition of the tribes (of what is now Montana), whether friendly or hostile. Bill had with him one companion whose name I have not now with me. These two men, absolutely alone, away back in the days before Montana had been dreamed of as a gold field, crossed the continental range, working over the rough Cœur D'Alenes and thence southwest, working east of the range as low down as what is now called Gold Creek. They crossed the rich gold fields which were later developed, but knew nothing of gold, cared nothing for it. Then they went north, keeping east of the Rockies, getting beyond the St. Mary's country, well up into the British possessions. They had long since developed the disposition of the tribes and found them about all full of fight and scarce of friendship. From their northernmost point they went back southeast. "From there to Lake Pend d'Oreille," said Uncle Bill, "we had a hard time. We lost about all we had and barely made the lake. We had an Indian fight every day. We got so used to it that we looked on it as a matter of course. I don't know how men came through such trips, but they did in those days. We shot and ran ourselves out of the country. Of course, we were fine rifle shots, and the Indians never were as brave as some writers have made them out to be. I never went much on the 'heroic bravery of the red man' that we read about and never did like Injuns much, anyhow." In this way at least, Hamilton got to Lake Pend d'Oreille, though I believe his friend was killed before that. Hamilton got through all right, after crossing the lake and made to his commanding officer a report which was of the greatest value and which governed army action very largely. Together Uncle Bill and I hung over a big map while he traced with his long forefinger the line of his path in those old, old days, talking to me the while in his low, monotonous, even tone of voice, as if we were speaking of a journey some one had made with a cow outfit the year before. I could feel a little of the thrill I used to feel when as a boy I read about Daniel Boone.

As Frontier Sheriff.

The whole of that great stretch of country between the Pacific coast and the Missouri river seems to have been roamed in the old days by these men of the wilder West, the West of the past. The hunter was here this year, perhaps the next year with a tribe far away. Of course, Uncle Bill—who in those days wasn't Uncle Bill yet—had varying fortunes. Sometimes he was rich, sometimes he was poor. His occupations often changed. He was what his environments demanded. But always he seemed to be respected as a square man, so say other old-timers who knew him, and always also feared as a man who would fight a-plenty when the time came. In course of time he came to be sheriff of Choteau County, Montana. He was sheriff in the wildest days of old Fort Benton. There used to be so many Indians killed out there that the United States Government sent out a peace commission to inquire about it. That was in Bill's regime. The commission was a real nice lot of men, and in great earnest about their mission. They were all in full session one day when there was a great cry of "Injuns" and a galloping of horses down the street and much shooting. The procession was led by Bill Hamilton in his favorite costume—that is to say, nothing at all—who was riding bareback and pining for a fight. They do say that the Indian fight was bogus, got up to scare the commissioners out. And some do say that the commissioners were candidly told that they would be hung if they stayed. On these points Uncle Bill saith not. Anyhow, the commission adjourned, and the steamer was very soon carrying them back down the river.

Bill Hamilton's Duel.

I suppose no human being ever had a grander physical constitution than Bill Hamilton, and greater natural powers of endurance. His feats in this line are quoted even to-day along the Yellowstone. It was a favorite thing for him to straighten up, after a whirl with the boys, by getting into a redhot sweat, then stripping naked and jumping through a hole in the ice into the river (a very good way, I should think). This he learned of the Indians, but he was the only white man who kept it up as a pleasant pastime, and the old-time men speak of him now with a shiver. Once a man, an Englishman, I believe it was, anyhow some stranger who had rather stilted ideas about affairs of honor, got offended at some prank of Bill and challenged him to fight a duel. In a country where duels usually began synchronously with the challenge this struck Bill as being rather funny, and he accepted promptly, naming the conditions himself. The contestants were to fight that night by moonlight in the street. Both were to be stark naked and were to fight with swords or knives if swords could not be found. Before fighting each man was to jump four times, naked, through the ice into the Missouri river (it was in the winter), four holes having been cut for each man. The entire town turned out to see the fight. The challenger was game and stripped and took the plunge into the icy bath, the water catching him above the waist. The first dip was enough to take all the fight out of him, and he crawled out, shivering.

"Git into your next hole!" shouted Bill, who was standing in the water with his head just showing over the ice. "Git in or I'll claim the fight!"

"Then t-t-ake your old fight," chattered the other. "I w-w-won't fight t-t-this way to please no man!" So he broke and ran up the street in the moonlight, with Bill chasing him, swinging his sword around his head and uttering yells of triumph. This heroic battle has never before been described, but it is worthy of the wild days and the wild men of the past. You can't get Uncle Bill to talk much about that duel now, but he is older and more dignified nowadays.

Pursuit of a 'Savidge."

Another episode of the old days which I had to get from a friend of Bill (Liver-eating Johnson, another Montana character, of whom I must say something) still further illustrates the eccentric personal habits of Mr. Hamilton in the past.

"We wuz all kind of having a good time at a saloon one evening," said Liver-eating Johnson, "and Bill wuz, as usual when he wuz feelin' good, without no clothes on. He had crawled into a back room, sort of store room, and wuz fast asleep in there with his head sort of restin' on a cake of ice fer a piller. All at once in comes a bad man, with plenty of guns and a big-jag. He begins to shoot around and make trouble and be real annoyin'. He runs about everybody out of the place and not wantin' to kill the feller nor see any of my friends get into trouble I steps back into the back room to wake Bill up. 'Bill,' says I, laying my hand on him and sort of laughin,' 'you better git up; they's a savidge out there that's shore bound to kill everybody round yer.' Bill he didn't rightly understand me, I reckon, or else he woke kind of dazed, not knowin' just what was goin' on. When I said that he just jumped up on to his feet at one motion and he grabs the first thing convenient, which happened to be a big cheese knife and out he goes on the full jump into the other room where this yer bad man wuz. Well, when this feller sees what wuz comin'—a long, slim, naked man wavin' a long knife round his head—he wuz scared the worst I ever seed a man git scared. He just dropped his gun and run with Bill after him. 'Where is the savidge? Show me the savidge!' Bill wuz a-hollerin,' 'I'll fix the blame savidge!' I thought I'd die a-laughin' at the way that feller run. I'll bet he thought he wuz among savidges hisself!"

Good Shot.

Our friend W. J. Dixon writes from Cimarron, Kan.: "I killed a buck antelope that weighed 125 pounds after his entrails were removed. I shot at his heart and hit him in the ear, But I got him, wind was blowing hard. My horses are fat and very unruly. I am going to Colorado now to eat chile and converse with Mexican ladies.. Tell the Hon. W. Mussey if he will go I will share both chile and conversation with him. A man told me he was one of the best men in camp he ever saw."

It will be observed that Mr. Dixon is not losing any of the dead shot propensities of his earlier days. There is no better place to hit an antelope than in theear.

Another Man in the Mackenzie Country.

Count V. E. de Sainville, of Paris, is a lucky man. He has had a wilderness experience of a very genuine sort up in the Mackenzie country and the wild northwest, and which will before many years be hard of duplication. Before long the wealthy men of adventurous turn of mind will be advertising in Forest and Stream, "Wanted; some Wild Country." The newspaper which interviewed the traveler speaks of his experiences as follows:

Count de Sainville left Edmonton in 1888 and has spent the past six years in the Mackenzie territory, arrived at San Francisco on Oct. 29 by the steam whaler Jeannette. "I did not intend to stay any length of time," said the Count, "but when I got so far north and found that so little was known of the country, I decided to turn explorer. I had the best maps with me, but I found many inaccuracies in them. These I corrected as I descended the great river of the north, and my notes will make material changes in the geography. I expected to find winters in the north long and wearisome, but I was mistaken. I like them better each year. There is no more ideal place for a hunter than along the north coast of North America. I found plenty to do. Deer were plenty, and while not hunting I was studying language. I discovered that Esquimaux Lake is merely a chain of small lakes, beginning not far from the Mackenzie River, about 300 miles south of the mouth, running in a northeasterly direction and emptying into the Arctic Ocean near Cape Bathurst. One summer I explored the delta at the mouth of the Mackenzie and I found many inaccuracies in the maps and charts. The great river itself is some distance from the place assigned to it on the maps. New islands are being formed at the mouth. When Mackenzie discovered the river about 100 years ago, he reported clear water north of Holket Island. Now he would have to pass many islands north of that island to find clear water. The river is a tremendous stream—one of the greatest in the world. The quantity of sediment it carries down is enormous. One summer was spent in exploring the country west of the Mackenzie. I started out as soon as the snow left the ground, with two natives, and ascended the Peel River as

much gifted in the musical line, and I am compelled to admit that the call he gives is usually a monumental fake.

A common mode of calling is for the guide to climb a tree. From this elevation he can reach further with his horn, see further and hear sounds which cannot be heard on the ground. It is unwise to conclude because you have heard no answer to the call that there is no show for moose meat. If your moose is at a distance of half a mile or more he is apt to take his own elegant time about it, and come poking around mussing things up an hour or to after you have lost patience and gone back to camp. As a rule, if an unmated moose is handy to the horn he will give the answering grunt. As he comes nearer he will stop now and then and listen. This is the time the caller needs to know his business. If he is not a master of his profession he had better lie low and run the chance of the game coming within range. He should never give the loud call, for the moose would detect it at once. If he knows how to give the low call, or "coaxer," he will probably bring the noble game to the firing point without delay. When a moose is mated he will often answer the call, but will not come to it, unless he is a very short distance off. He is a firm believer in the adage that a bird in the hand is worth two in the bush. The curse of the hunter if he is trying to still hunt a mated moose is the moose calf. He is always scouting around, somewhere within a radius of a quarter of a mile of his mother, and upon the advance of the enemy is sure to give the alarm. No matter how badly he is off for milk he is never fool enough to come to the horn.

In the mating season the bull moose is the most tyrannical brute on earth The cow can often be heard bellowing in distress at the abuse she receives from him. At last, poor soul, her patience is exhausted and she runs off into the dense thickets where, from the obstruction offered by his horns, he is unable to overtake her. It is the firm belief of most old hunters that the immense horns carried by the moose at this season of the year are placed there by a wise Providence to enable the cow in this way to escape.

A singular fact observed by all woodsmen is the very irregular manner in which the sexes are distributed in a given district. In one section of the country four out of every five animals will be cows; in another section the proportion will be reversed. In the winter when the snow is deep the old bulls fraternize, and it is not uncommon to find half a dozen of them in a single "yard." There is not the least need in this province of prohibiting the killing of bull moose in the calling season, for the number of animals then killed in fair, open, honest sport must in the nature of things be very limited. It is the indiscriminate killing of moose by trappers, loggers and Indians in the deep snow that calls loudly for a remedy.

There is a marvelous difference between a bull moose in September and the same animal in March. In the former season he is kingly in his strength and courage —the veritable monarch of all he surveys; in the latter his regal crown is gone, he is wearied with his long battle with the snow and the scanty food he obtains has greatly impaired his vitality.

The height of a full grown bull moose at the shoulder is about seven feet, never under six feet and a half, never over seven feet and a half. He is much darker in color than the cow—in fact, almost black—and somewhat larger. The widest spread of horns ever mounted by Mr. Carnall, the well known taxidermist of St. John, who has handled some hundreds in his time, was five feet two inches. Mr. Phair of Fredrickton, has a set that measures just five feet, from which the outermost prong on one side is missing. In the Crown Land office is a pair of antlers with a spread of four feet ten inches. The average spread of horns on a moose five years old and upwards in this province appears to be about four feet. All bull moose have the bell at the neck, but with some it is not fully developed.

By some writers the bull moose is described as "bellowing." What these gentlemen heard, if they heard anything, was doubtless the call of the cow moose, which on a still night in September can be heard for miles. When Braithwaite was calling with us last fall he was answered once or twice by a cow moose. The resemblance between the genuine and the spurious article was very close indeed. The call of the bull is a short, basso-profundo grunt, or succession of grunts, pitched at so low a note in the musical scale that, like, the drumming of a partridge, it is impossible to tell how far away it is. It seems to come out of the ground almost at your feet. Unless you are listening for it you will hardly hear it at all, and on a windy day the most experienced caller will imagine he hears it a score of times when all that he hears are the myriad murmurs of the forest.

The birch bark horn is used as a caribou call as well. The cry of the caribou is very easy to imitate. It is the same with both sexes—a very short grunt that is almost a bark—and the doe is just as apt to answer the call as the buck. When a caribou comes to the horn he comes on the dead run and will circle around the hunter as if totally bereft of reason. The main difficulty in calling caribou is that the call is so low that it can only be heard for a short distance, but when a herd has been alarmed it can often be used with good effect in bringing the game to a stand.

I wonder how many of the readers of The Forest and Stream have ever worn a moose shank? In the fall of the year a pair of shanks is the finest footgear the hunter can wear, being perfectly noiseless and water tight. They are made from the skin of the hind legs of the moose, the hide being stripped off intact from a point about a foot above the joint to about a foot below. After drying in the sun for a day or two every scrap of fleshy matter is carefully scraped away, the lower end or toe is tightly sewed with sinew thread and then the shoe is turned fur side out and is ready to be worn. The heel is perfect. The toe is a little tight, but will soon stretch to the shape of the foot. The leg will be rather large, but you can gather it in with a cord, or else cut out a section and lace it up. Three pairs of socks should be worn to protect the feet when traveling is rough. Having once experienced the unspeakable luxury of the moose shank you will not want to wear anything else. But how are you going to get your shank until you have got your moose? Well, if your guide is worth a kettle of beans he will have a lot of old moose shanks knocking around the camp and he will soak a pair of them over night and rig you up in a jiffy.

One of the most thrilling adventures with a moose that I ever heard of befell the veteran caller, Braithwaite, a year ago last October. Having just completed an engagement with a hunting party he was trying to pick up a moose on his own account. For over a week he called at all the best calling grounds without success. At last he shouldered rifle and pack and started to work his way out through the fifty miles of unbroken forest that lay between him and the nearest settlement. When he arrived at Two Lakes he sat down for a rest and gave a casual call. To his surprise and delight he was answered at once from the other shore of the lake. He had just time to throw his pack to one side and hide himself in the hard hacks when a noble moose appeared on the opposite bank and stood for some time looking straight towards him. As Henry gave the "coaxer" the moose walked boldly into the water and started to swim across. Nearing the spot where the hunter was concealed he stood up in the shallow water and listened eagerly, the last ruddy rays of the last sun that he was ever to see lighting up his antlers till they shone like a crown of glory. Again the lone hunter breathed the low, sweet, whimpering call, and the lordly animal waded through the rushes and lilypads until he stood at the very margin of the lake within twenty feet of his hidden foe. His ears were thrown forward, the whites of his eyes gleamed through the gathering shadows, the steam rose from his nostrils and every hair upon his big black mane stood up as straight as the sentinel firs from which he had emerged. He gave himself a mighty shake and threw the spray from his back and mane in a shower over the breathless hunter. Henry could have shot him with ease where he stood, but did not want to drop him in the water. For at least five minutes he stood there as motionless as a statue, one of the grandest, most awe-inspiring sights that ever the eye of man beheld. Then he gave a kind of whistle as if puzzled by the silence and stepped upon the firm, dry land. Out of the dusk came a sheet of flame and a crash, and ere the echoes of the shot had died away among the hills the noble brute lay lifeless on the bank with his great heart torn by an express bullet into atoms.

Henry said when he stood over the prostrate form he felt so sorry for the life he had taken he could have cried. It was not fair play, it was trickery—it was murder. Yielding to the universal instinct, to the master passion of his nature, the king of the valley had been duped and decoyed to his doom by the voice of the siren just as many a human king had been.

But Henry soon got over his grief and proceeded to skin and carve the old chap up to the queen's taste, and when he tumbled into bed that night he took a rare nip of very old Gaelic and felt as happy as a king full. And that, I think, was very human, too. PROWLER.

FREDERICTON, Jan. 3, 1895.

THE OLD MACON DEER PARK.

LITTLETON, N. C., Dec. 21.—Many persons still make pilgrimages to see the historic old country home of Nathaniel Macon, the patriot and statesman of Warren County, N. C., and to hear the stories of his simple everyday life. The quaint old house, in which he often entertained distinguished guests like John Randolph of Roanoke, still stands almost as he left it. The ample fire places, requiring a wagon load of wood to fill them, are unchanged. The old moss covered house stands in a 50 acre grove of lordly oaks. In a shady glen there flows a bold, magnificent spring of cold, pure water. This is called the "Buck Spring" and has been so known for a hundred years. It was a famous "deer stand" in the old days, and many a goodly buck has been killed within a few rods of it When Mr. Macon settled this farm he gave it the name of "Buck Spring," which it bears. He organized some high old hunting parties in this, then out of the way, place. It was his often expressed opinion that neighbors should not live near enough to each other to hear the dogs bark at night. And he lived up to this belief when he built his home in the middle of his thousand acres, noted for many miles around for the great abundance of large game, especially deer.

There are some few old men in this community who can remember Mr. Macon's deer park and the large herd of tame as well as wild deer it contained. The one hundred acre park was in a beautiful, oblong valley, well watered, shady and fertile, producing the greatest abundance of tender grass. It was surrounded by a high, strong fence running along a few yards from the foot of the hill and so inclined inward that it was an easy leap for a deer to jump inside the enclosure. But when once within there was no escape, it being impossible for one to jump high enough to overcome the acclivity of the hill and the height of the fence. In the season of oestruation the wild bucks were attracted from the adjoining forest by the captive does with whom they were forced to take up a permanent abode. It was quite a common sight to see two large bucks engaged in furious combat, the half tame fellow resenting the intrusion of the wild visitors to his harem, while the mild eyed does gazed on in indifferent wonder, and the speckled fawns frisked about like playful kittens. Generally the visitors proved the stronger, and in consequence more wild blood was infused into the herd.

They had food thrown about the enclosure in winter, and venison was almost as common and staple an article of food upon Mr. Macon's table as mutton or beef. In fact, after the building of the fence and the capture of a few fawns, always easy enough when they are young, the trouble of rearing was at an end, and they gave him not as much concern as a flock of sheep, or any other of the domesticated animals. The gambols of these graceful animals gave much pleasure to this old man, great in his simplicity, during his vacations from Congress.

His son-in-law, William Eaton, likewise a resident of Warren County, owner of thousands of Roanoke river lowlands and hundreds of slaves, widely known because of his wealth and high social standing, had constructed a deer park similar to that of Mr. Macon, except that he only arranged that part of the park lying next to the woodland for the wild deer to jump in. He, too, was very successful in his venture, and raised a large herd of deer, many of them coming to his call and eating from his hand. Both of these parks were only five or six miles from this place and often serve as a theme of discussion for the old lovers of the chase. A former neighbor owned a large yard enclosed with a high picket fence. I have seen eight or ten game deer grazing around the house. It was his habit to tie a small bell to their necks when he allowed them to run at large in the fields or woods so that persons would know that they were tame and not shoot them.

If they were molested by dogs they would make a bee line for home. One old doe that had been raised in the yard produced a pretty pair of twins every season.

There are large bodies of woodlands in this immediate vicinity, and deer are still quite plentiful. I notice their tracks very often when I am shooting quail in the low lands along the creeks and branches. Farmers are very anxious to have them shot very often because they are destructive to the pea fields.

During the fall season venison is exposed for sale in our markets at the nominal price of ten cents per pound. It is almost as easy for John Reid and Sharper Kearney to kill a deer as it is for me to shoot a rabbit. They know of all their lairs and runways, their walks and rambles. If John Reid could write poetry he could tell more of a deer hunt than you can find in the "Lady of the Lake." John delights in "driving a buck right slap over you," as he describes it, and has often offered to serve me that way. But I have never yet been mad with a deer. In good truth I feel very much like my friend Polk Miller, who says he had "just as soon shoot a calf through the fence." However, there are lots of good fellows who do not agree with us, and if, perchance, any of them would like to kill a deer I am sure John Reid will give them as fair a chance as can be had. We are only three hours from Norfolk on the Sea board Air Line Railroad, and John Reid lives four miles from the town in the deer section.

L. J. PICOE.

P. S.—I would be grateful indeed if some gentleman could tell me who garbled, interpolated and abridged my "Wild Goose Shooting on the Roanoke River in North Carolina," published in Forest and Stream several years ago, and published it in a late issue of The New York Sun, as an original article. Leslie did me the honor to make a graphic illustration of the story, but forgot to say who wrote it. This was not very "frank."

OFF RYE LEDGE.

Rye Ledge, N. H., is down only on the large maps, for it is a small place, although Rye Beach, of which it forms a part, is well known as a summer resort. But small and insignificant as it is, there is probably no place where more genuine sport has been enjoyed at sea fowl shooting than right here. To be sure, the number of gunners is somewhat limited, seldom exceeding eight or ten, but they include some of the best shots along the coast. The Forest and Stream is a household friend here and the accounts of sea fowl, or coot shooting, are always particularly interesting. But we have never seen an account which described the gunning exactly as we are in the habit of enjoying it.

In the first place, the start from the shore is made at just before daybreak. The boats preferred by the older sportsmen are similar to a dory, only lower sided and rather smaller, having the advantage of showing less prominently in the water. The color should always be white. The start is made directly from the beach and as it slopes off quite abruptly the surf is not very heavy on account of the depth of water, and consequently we are able to get out in nearly all weathers.

The shooting ground which is preferred is off the point of a ledge of rocks, which make directly into the sea from the mainland and which are almost entirely covered at high water. A short row of fitfeen minutes and you are there. Now over with your killock or anchor and out with your decoys. The decoys are of two kinds, the block and the board. Those of the board being made in pairs. The boats, if there are several, are stationed about 75 to 100 feet apart, each with strict orders never to fire across another gunner's boat, a caution unnecessary except with a novice in the sport.

But already the sky is growing red and signs of sun rise are very apparent. Get your guns and ammunition ready. And now just a word about the ammunition.

For loons we use No. 3 shot, for coots and other fowl, No. 5 is the favorite, although some gunners use larger sizes. But we are assured by several sports that their experience proves satisfactorily that the smaller shot do equally good execution. The great difficuly to be overcome in shooting loons is that an amateur is liable to shoot when the birds are too far away, their large size making them very deceptive. An old and thoroughly experienced gunner, who has a record of nine loons killed one morning before 8 o'clock, on that occasion used the smaller sized shot. It should be understood in connection with this that loons are only obtained here singly and on the wing The average weight of them is eight to ten pounds, although they often weigh twelve pounds or more. The same gunner on examiniing the heart of a loon killed by him, and which had lived some little time after being shot, found that a shot had passed directly through the heart, showing the tenacity to life of this really remarkable bird. And, by the way, we never shoot more than two to five feet ahead of a bird, supposing the bird to be 30 to 50 yards distant, the gun, of course, to be carried along with the bird for some little distance and gradually drawn ahead as the bird approaches its nearest point.

The coots which here fly earlier than the loons, one frequently shot as soon as daylight permits their being seen. They come along about an hour before sunrise, which is the time loons are usually looked for. Besides the birds mentioned we get sheldrake whistlers or golden eye, scolders, dippers and various other fowl.

Although the birds are not found here in such large numbers as in some other places, still with a favorable southeast wind a bag of twenty to forty is quite frequently made. Small bags are the rule rather than large ones. Nine or ten o'clock is generally the limit for a morning's shoot, although frequently a particularly

who liked that kind of fishing, but, now, when he went for the very best of fishing he went to Canada.

On the same day I met Mr. Harry Sweny and asked him about the reported sale of his property on the Restigouche, telling him what I had written about it in The Forest and Stream. He said the sale had been made and the price was $35,000 and the purchaser Colonel Payn of New York City. He knew nothing about the sale of the Alford property, which is on the opposite side of the river, nor about any Georgia people forming a club to control it, with the Sweny property, which rumor is not at all probable now that the name of the purchaser is known.

I had written to this point and put down my pen to look over my evening mail when I found a souvenir of the Radnor (Canada) Forges, containing, "Among the Laurentides," written by Dr. W. H. Drummond. One paragraph struck me as being apropos of what I have been writing about. Writing of the Canadian sporting clubs the author says:

"The most prominent organizations are the 'Laurentian,' which has for its president Mr. Frederick Stancliffe, of Montreal, and the St. Maurice, which is presided over by Dr. W. H. Drummond, also of Montreal. The aggregate strength of these two clubs is hree hundred and fifty members; they are principally composed of American citizens, as for some occullt reason—difficult to divine—Canadians have always been lamentably blind to the beauties of their own fair heritage, and it is but fair to admit but for these same Americans, mostly men of culture and refinement, neither of the above mentioned clubs would be in existence to-day."

There is one thing which can be said with truth. Canadian sportsmen are most generous, companionable men and possess a great amount of what Senior says is essential of all club life—good feeling.

From a Woman's Lips.

Really, I thought the back-number testimony about the saibling of Sunapee Lake was all in, but I now have what I believe to be positively the last, and this was exhumed in consequence of my note on the subject a week or two ago. A lady in New York city read my note in the Forest and Stream about Mr. Steven's hindsight, and was at once reminded of summer days spent on the shore of Sunapee. It seems that a house near where she boarded was presided over by a woman who, during all her good life, had lived every fall and winter on the fish of Sunapee. She, too, remembered well the saibling on white trout of the lake and often referred to the good old days when they were abundant and to be had for the picking up. My corresponent has been kind enough to send me the testimony of the good woman in her own language as nearly as written words will express it, and it is positively unique: "You hev to go fishin' in these days with hooks and lines to ketch a tra-owt, but when I was a gal, the tra-owts ust to come into the space in the rocks at high tide, and then wen the tide went out and left the fish in the rocks we ust to wade ain and pick up grade big uns! These fish commishuns are no good, fer you hev to fish with hooks now." Poor soul! It is true that the days for picking up trout or saibling left behind by the receding tide of our mountain lakes are gone; gone likewise, in some degree, the days when the fishing was done chiefly with spear and club at spawning time.

Doubtless she was sincere in thinking that the brook trout (for such the fish were—not saibling) ketched in shallow water in the fall were left behind by the outgoing tide, but it only shows how worthless the testimony of memory of forty years ago really is on the subject of Sunapee saibling existing at the at time.

A Question of Policy.

Mr. B. A. Warner, of Granville, N. Y., writes as follows: "I have just been having a discussion with a friend of mine who is not a sportsman in regard to the pecuniary benefit to a State resulting from the propagation and protection of fish and game within its limits. He claimed that all the money invested for such purposes is lost to the State; that the State taxes individuals to raise the money and that individuals who are not sportsmen obtain no return for money expended. He says that the entire benefit resulting from a good supply of fish and game is monopolized by sportsmen, hotel keepers, guides and such individuals as the hunters and anglers come in contact with in pursuit of enjoyment. I claim that if a State invests $1,000 in fish and game which results in bringing into the State $2,000 from non-resident sportsmen the State in question derives a benefit from the investment. He claims that under these conditions the State loses $1,000 and individuals gain $2,000. I told him that the Hudson river if made a self-supporting salmon river would be a great financial benefit to the State. He replies that the money invested for that purpose would be lost to the State and the return from the investment appropriated by a few individuals with whom the patrons of the river came in contact. Please inform me which of us is most nearly correct in our views on the subject."

Of course your view of the matter is the correct one. Your friend has probably recently returned from a long sojourn in Darkest Africa, where, perhaps, the doctrine may prevail that the individuals of a community can in some mysterious way prosper financially while the collective individuals of the same community make a general assignment and settle for ten cents on the dollar. Fish and game until reduced to possession belong to the State, and the State, like any possessor of property, cares for it in a business-like manner. The State does spend money to propagate and protect its property in fish and game for the benefit of all the people, although all the people may not eat fish and game. The State also spends money to build, repair or maintain and operate the canals as a part of the State system for benefiting all the people, although all the people do not own canal boats, tend the locks or drive the mules. In fact, many of the people live far away from the towpath; and may never ship a pound of freight through them, or perhaps never see one of them; but that is no reason why the canals do not add to the general prosperity of the State, which possesses them. So long as money circulates and fish and game add to the food supply of a State or nation it will continue to be a wise policy, an economic policy, to propagate and protect it. The position assumed by your friend is not worthy of being considered seriously at any length.

The Lady and the Deer.

This is not an angling note, and properly it belongs under a different department head, but as I am a little proud at being able to relate what follows, I put it here because it is good anywhere and at any time. A valued friend wrote me a day or two ago about a number of things, and this is one of them, told in a most matter of fact way: "By the way, that reminds me of a funny thing that happened to my wife on Friday morning when we were after reynard. She had gone up the meadow, just across the broad brook back of our house, and where the hill comes down near to this open field had stationed herself on a fox runway while I took the hounds up the hill further south and started them on a fresh fox track. Hardly had the hounds opened up when over the fence popped a big doe and came within nine feet of her (actual measurement) and stopped until she said: 'Well, you are a beauty!' Even then the deer did not seem to be much afraid, and only walked behind some trees near by. Think of the temptation—loaded gun, deer nine feet away, had not killed one this season and then not to shoot!" I wish I was at liberty to say more about this lady and the deer, but I must stop after a statement of the bald facts. I could, if permitted, tell of this lady's skill with rod and reel and of her skill with the double gun, and it would make the best of reading, no matter under what heading it ought to be printed.

Trout in Alien Waters.

A writer in Land and Water asked: "Do trout, turned into strange waters, maintain their identity?' Mr. J. J. Armistead, one of the oldest and best known fish breeders in Great Britain, answers the question at considerable length and gives so much of information that will be valuable to American readers, particularly those who are given to making new species or varieties out of trout that may differ in color from their fellows, that I quote a portion of his reply: "The great variety of color and marking which exists among trout must have struck everyone who has had much to do with them. There are many influences at work, each of which produces its own peculiar variety; then, again the blending of these influences and their consequent coloring, the crossing of different races, hybridism, age, sex, good or bad breeding, migration, season, food, surrounding, bottom, and last but not least the quality, as well as the quality of the water itself—to say nothing of exposure to light or otherwise—all these and sundry other influences are at work, making up an innumerable number of varieties, many of which have been regarded as distinct species.

There it is in a nutshell, and his explanation will account for varieties and even species, which are constantly troubling some of our own people.

Mr. Armistead says further: "It is quite easy, in the course of a few generations, to so alter the typical coloring of a trout that it would not be recognized as one of the variety or race from which it had sprung." He gives what I believe to be, and have contended for years, a comparatively little known, but living truth, in the following words:

"Breeding in-and-in is undoubtedly a cause of degeneration among fish, and we find on a fish farm that it is just as needful to introduce fresh and selected blood as it is on a cattle or poultry farm. Now, as regards the growth of big trout. This is largely a question of food supply. Many people seem to think that all that fish require is plenty of water, but they must also have a good supply of suitable food, otherwise they will starve, or become stunted in growth, like any other members of the animal kingdom." There is much more of the same sort of information, and as it is a subject that I have harped upon for years I am very glad to quote what I have of it from such an authority.

A. N. CHENEY.

Kennerley's Salmon.

NEW WHATCOM, Wash., Dec. 7.—*Editor Forest and Stream:* A correspondent of Forest and Stream of Nov. 24, signing himself "El Comancho," in a lengthy communication, undertakes to settle the question of what is commonly called the "red fish" of Puget Sound. It is just possible that the fish of which he writes are an entirely different article from those found in the waters of Lake Whatcom, for their existence here and the variety were known by the Smithsonian Institute during the fall of 1886, samples having been sent them for the purpose at the time, the identification classing them as a species of land-locked salmon. The habits of this fish are almost sufficient to classify them. They are never seen except in the fall of the year, when they come from the deep waters of the lake in countless myriads and enter the small tributaries on their way to the spawning beds. At this time they are remarkably pugnacious, but are never known to take a fly or bait of any character. They are so vicious in their attacks upon one another that they will tear out great pieces. This warfare is kept up during the entire spawning season and the same time the little streams are lined with dead fish, while the waters are filled with living ones, some apparently healthy and some without tails or fins and in a dying condition.

That they are not the common trout is evidenced from the fact that the latter is often taken with the "fly" from the midst of the redfish and is easily distinguished from them by the difference in shape and color, the redfish being, with the exception of its difference in size and the "trout spots" on it a small specimen of what is called here the dog salmon.

As stated above, the redfish are never seen except in the fall of the year, and that they are a deep water fish was exemplified during the summer of 1889. At that time two parties were drowned in Lake Whatcom and dynamite was brought into use in an attempt to recover them (the lake at that point being about 200 feet in depth). After the discharge of the explosion hundreds of these little fish came to the surface, showing the same difference from the common trout that they do in the fall of the year. The decision of the Smithsonian Institution was given during the fall of 1886 and fully substantiates the facts contained in this communication.

T. C. AUSTIN.

[See also note on page 471, issue Dec. 1.]

About Black Bass.

The letter of A. N. Cheney with the above title in the current number of Forest and Stream (Dec. 22, 1894) I have just read with much interest. It discusses some of the habits of the black bass, but fails to mention the ordinary nocturnal habits of this interesting fish. From personal observation or from reading I know nothing whatever of the ways of this fish after dark, but since 1886—in which year I had reason to make microscopic sections of the eye of this fish and note the peculiarities of its retina—I have been curious to know whether the black bass maintained a stationary position during the hours of darkness. I am led to think that the black bass (large mouth variety) does not swim around in the dark, from the fact that I do not believe that it can see to do so, because of the histological character of the bacillary layer of its retina, which consists solely of cones. Birds with nocturnal habits, as the owl and bat, sections of whose eyes I have now before me, have only rods in the bacillary layer of their retinæ. Animals of mixed habits—i. e., those which see well in bright and in poor degrees of illumination—have an admixture of both rods and cones. The human animal is an example of this class. Therefore, because of the absence of rods in the retina of the large mouthed variety of black bass I am lead to think that it cannot see to swim around, or, at least, cannot see objects in the dark. If my conclusion should prove to be correct it will be interesting to know that with the microscope alone we can decide the nightly habits of this fish. Will Mr. Cheney or some other naturalist-fisherman kindly throw sufficient light upon this subject to decide the matter? ALFRED HINDE, M. D.

CHICAGO, ILLINOIS.

Fishculture and Fish Protection.

The New Hampshire Trout Season.

CLAREMONT, N. H., Dec. 15.—*Editor Forest and Stream:* We are having beautiful weather here at present, but not good for hunting, as there is a crust on the snow.

I took my horse and carriage yesterday and rode up by the Corbin Park, and it was a very pretty sight to see the elk lying out on the bare knolls in the sun. One old bull had a tremendous set of antlers. I never saw such large ones. I let the little beagle out in a piece of woods and shot three hares on the crust, and had a very pleasant day of it.

I read in the FOREST AND STREAM Mr. Cheney's note as to changing the brook trout opening of New Hampshire to May 1 instead of April 15, as at present. I am a crank on brook trout and I doubt if there is a man to-day in this State who spends any more time than I do with brook trout. I will do all in my power to keep and improve the stock. The law now says no fish may be taken under 5in. in length, and the season is from April 15 to Sept. 1. I go the law one better. I throw back all under 6in., limit my catch and I leave off fishing as soon as I find the trout begin to have spawn. I have fished continually in Maine, New Hampshire and Vermont streams for thirty-one years, and ought to know by this time the habits of the brook trout in the regions mentioned. I have never failed to find brook trout after April 15 that were not well filled with spawn, and this year I found them by July 23, and I did not wet a line after that date just on that account. Now, what sticks me is this, why so much is said about the April 15 law and nothing said about August, when our trout are full of spawn. It seems to me as if somebody did not understand our trout here, or is it done to accommodate a few summer boarders? If so, why not extend it until Dec. 1 to accommodate the farmer after his harvesting is done? One plan is just as sensible as the other. I say, when trout are in spawn let them alone for future increase. In the localities I have named all the trout one can catch between April 15 and May 1 in our cold water brooks will not deplete the trout supply one-thousandth part so much as the amount generally taken in August with their spawn. Although I am well aware that trout are in a lank, poor condition in early spring, I prefer to eat a lank trout to one in spawn, and it does seem good to go out for a day when spring comes around and just wet up your line. If you don't catch as many as in summer you do catch a breath of pure spring air and see the buds on the trees beginning to swell, ready to burst and throw up the beautiful green leaves. A butterfly perchance goes sailing by, you see the early violet springing into bloom, perchance you pick a few to carry home to the wife. There is music even in the clatter of the crows. And if you have been lucky enough to catch a half-dozen trout you are happy, far happier than you would be with a creel full in August, when the crows' clatter is a nuisance, when flowers are all around and the leaves begin to fade. If it is necessary to fix our law to May 1 fix it, but I say that the other end needs it the most, and cutting to Aug. 15 is better than extending to May 1 to save the trout. COLUMBIA.

Protection in Minnesota.

ST. PAUL, Minn., Dec. 22.—*Editor Forest and Stream:* This week has developed several little items of news. On Thursday at Park Rapids, the local gun club caused the seizure of three saddles of venison that were offered at the railway station for shipment, and will prosecute the persons who had the game in charge.

On the same day at Tracy the sheriff served warrants on several persons about town for illegal fishing, and secured convictions before the magistrate, with the result that at least two $20 fines will find their way into the State treasury. The arrests were brought about by the publication in the local paper by one of them of their "great catch." This sheriff is a wideawake fellow, and we extend him our hand. Efforts like these by citizens give great encouragement to the State Game and Fish Commission.

We note also that on the 21st articles of incorporation of the Linwood Gun Club were filed in Minneapolis. The stated objects of the club are to promote the protection of game and fish; to stock the land and waters owned by the club with game and fish, and to own and operate hunting possessions in the Northwest. Several of these gentlemen are recognized earnest game protectors, and have already been written to to co-operate in the new movement for a State game and fish protective association.

A private letter from Denver, Col., gives some notes of interest from that section. The Colorado law is silent on the subject of sale of game other than that taken within its boundaries. There is no co-operation with neighboring States, and as a consequence game killed in these is forwarded to Denver, and game can be bought in their markets at all seasons. This oversight has opened an avenue for deception which at present it is impossible to prevent. Game is killed out of season near the northern State line, shipped over into Wyoming, and from there is reshipped to Denver.

An effort will be made this winter to amend the game law in this direction. Owing to various original package decisions, they will not be able to get at the bulk consignment; but an attempt will be made to pass a law to forbid the retail of the divided portions of the original package, and so break up the business.

The present Colorado game laws, allowing for some bad mutilations of the measure by the committee on engrossment in Legislature two years ago and some compromises that had to be made in deference to the wishes of settlers in order that any law might pass, are very creditable. The State is indebted

to the earnest work done by the Colorado Game and Fish Protective League, and it is to the credit of Gov. Waite that he allowed this measure to become a law, which is in striking contrast to the action of the Populist Governor of North Dakota two years ago.

There is plenty of game in Colorado, and with proper protection it will care for itself in the wilds of the Western slope.

WILLIAM L. TUCKER.

New York State Association.

The annual winter meeting of the New York State Association for the Protection of Fish and Game will be held in the assembly room of the Gates House, Syracuse, Thursday, Jan. 18. The secretary is John B. Sage, Buffalo, and the president, Gen. D. H. Bruce, Syracuse, either of whom may be addressed for circular call relating to the meeting. As the incoming Legislature will deal with fish and game bills, it is highly important that the pending measures should be carefully considered by the Association. Clubs are requested to send representatives. The question will be an important one.

The Kennel.

FIXTURES.

DOG SHOWS.

Jan. 11 to 15—CINCINNATI.—Al. G. Eberhardt, Supt.
Feb. 19 to 22—NEW YORK.—W. K. C., Jas. Mortimer, Supt.
Feb. 26 to March 1—CHICAGO.—Mascoutah K. C., J. L. Lincoln, Sec'y.
March 5 to 8—DENVER.—Western K. C. Co., E. T. Welant, Sec'y.
March 5 to 8—DETROIT.—City of the Straits K. C., J. W. Garrison, Sec'y.

FIELD TRIALS.

Jan. 14.—SALINAS, Cal.—Pacific Coast F. T. C.

Sept. 10.—MORRIS, Man.—Manitoba F. T. C., John Woolton, Manitou, Sec'y.
Jan. 7 to 12.—BARRE, Mass.—Brunswick Fur Club's Winter Meet, B. S. Turpin, Roxbury, Mass, Sec'y.

One of My Dog Friends.

Editor Forest and Stream:

The true story of little Bug in a recent issue of the FOREST AND STREAM revived a long drawn out intention to write a few anecdotes of my dog friends in the hope of inducing other loving masters to do likewise, that the skeptics may be convinced by solid weight of testimony that a dog has a soul attuned to higher thoughts than his dinner, and an intelligence and individuality well worthy of cultivation. If it be true, as the wise men tell us, that the dog has no soul, he certainly possesses something nearly akin to it, which governs his conduct and inspires his heart with such loving fidelity and honest obedience as would put many a man to shame, and ought to entitle him to a heaven of his own with a canine St. Peter at the gate to bar the entrance to all human souls.

Belonging to a family of dog lovers, I have had infinite variety in my canine friends. Among them was a lineal descendant of Scott's Maida, whose aspect was solemn and stately, but who was the veriest offshoot of Satan that ever waved a tail.

He was a fascinating gentleman and a witty one, but for "ways that were dark and tricks that were vain" he, like the "Heathen Chinee, was peculiar." Another was a collie whose family tree had root in aristocratic circles in the land of the heather and bluebell, and who was possessed of so much intelligence as to affright a kitchen divinity into refusing to stay in the house alone with him. "Sure, ma'am," she would say, "he isn't a right dog at all, it's the sense of the ould one he has." A third was a setter who I always maintained was undergoing reincarnation; and after him a greyhound, whose brains never mounted higher than his legs. At odd times there have been terriers of high and low degree, winsome beasties all, and endowed with the wit and wisdom of the sages.

The collie was a member of the family for nine years, and until age and rheumatism dimmed his eye and stiffened his joints he was the most beautiful creature I ever saw. He impressed everyone alike, experts and ignoramuses, and even so won the heart of the usually unemotional railway official that his many journeys partook somewhat of the nature of a triumphal procession. He never saw the inside of a baggage car, but porters were proud to exercise him on the platform, and conductors often urged him to partake of whatever refreshment their car afforded. When arrayed in his traveling gear, his London collar and silver chain he always rose to the occasion and assumed a benignity of expression and suavity of demeanor which lasted to his journey's end.

Usually so ready to rebuff the advances of a stranger, he endured placidly all manner of attentions from all manner of people, and submitted without a whimper, to be trampled on in crowded stations, stifled in stuffy trains and compressed into the narrow limits of a tuttish Adirondack boat. Arrived at his journey's end, he felt his responsibility of guardian to his beloved family greatly increased by his strange surroundings. He followed their every step like a shadow, and woe to the careless body who jostled his charges. A portentious growl, the erection of every hair in his splendid frill and a clap of his powerful jaws insured a right of way in future. A drunken man was his especial abomination, and I remember once his effectual "sobering up" of a bibulously friendly sportsman who ventured to put a hand on the back of my chair.

He ever after hated the man and would growl fiercely at the mention of his name, so that it became a never-ending joke of the Saranac guides to ask Wynn what he said to Uncle ——. He never considered it safe for his "dear miss" and "his auntie" to go fishing without his protecting presence, and he learned so well how to accommodate his bulk to the knees of the frail boats that he could stretch out his head over the side and take a consoling drink without unbalancing us in the least. He, however, shared our guide's antipathy to pickerel, and was so ridiculously energetic in his objections that between our laughter and the dog's attempts to assist at the death of the flopping slimy monster we were again and again within an ace of being served up with lily pad sauce at a pickerel banquet.

Like many of his race, he dearly loved a fight, and took his walks abroad in the very evident hope that some gentleman would tread on the tail of his coat. Many were the whippings he earned from his exasperated mistress, who was often sorely taxed to preserve friendly relations with her neighbors. He had two inveterate enemies, a huge mongrel red setter and a plucky Irish terrier, who lived in the same house and were a terror to every dog within miles. The terrier always gripped the victim just above the hock, and by a twist that John L. might envy plumped him on his back, when his throat was an easy prey to the setter, who without the terrier was an abject coward. Wynn learned this, and if on nearing the house his mistress said, "Rowdy's away!" he would prance boldly along, flinging insulting defiance at the cringing Duke, not in too loud tones, however, as Rowdy was quick of ear and fleet of foot. If, on the contrary, he heard, "Both dogs out, old chap!" he would take a discreet circuit and meet his family further down the street.

After an encounter with Duke and Rowdy he was apt to restore his vanished self-esteem by a gratuitous assault upon an inoffensive setter belonging to our next-door neighbor. Poor Nat was not ever really hurt but he was hustled most unmercifully through the neighborhood until our "Richard" felt himself again. He was decidedly boss of his district, and would permit no other dog to enjoy privileges which were denied him.

When he came into the family he had a villainous habit of rushing out at carriages, grabbing frantically at the wheels and hurling himself like a catapult at the horses' heads with the apparent intention of strewing the road with wrecks for his especial diversion. His former owner had vainly tried to correct his ways and assured me it was wholly impossible to break a collie of that trick. Judicious application of the dog whip most vigorously laid on created a change of heart, but he never after saw another dog enjoy the sport without administering a thorough punishment.

His greatest pleasure was to follow his mistress on her rides. It was useless to shut him up; he would break loose somehow (once jumping from the stable loft onto a concrete walk) and track us unerringly, always arriving with such buoyant confidence that his being left was all a mistake and of course we wanted him as much as he wanted us, that we were weak-minded enough to let him stay, though he usually was a most tumultuous escort. At times he was convenient, for he would carefully pick up anything shown him in the road, standing on his hindlegs or even jumping to deliver the article safely, as we had a predilection for tall mounts. Even shell combs or hairpins could be trusted to him without the slightest fear of injury.

On one unlucky day there was an accident which hopelessly crushed two toes and put an end to his joyous scampers for a weary while. Under the veterinary's hands he was the soul of patient endurance. Our back porch was the consulting room and operating table where the poor foot was dressed daily.

At first the doctor gave ether and put on a tape muzzle for fear the pain might make him savage, but the ether made him very ill, and his feelings were so hurt at our distrust of his temper and comprehension of the situation that ever after his head was simply laid in my lap, while I held the injured leg firmly against involuntary twitchings, and the tedious dressing of the wound was endured without a sound or motion. The doctor admired the dog greatly for his intelligence and fortitude and would gladly have made friends, but Wynn would have none of him. The sight of the doctor's genial face coming down the street would send him in a panic to the house, and a threat to call Dr. Peabody was always sufficient to quell any insubordination.

With all his exuberance out of doors, he was a perfect house dog, never climbing on furniture, scratching at doors or putting his paws on window sills. His "grandma," a title in daily use long before Petie Toone, Esq., and Horace Chace were created by Miss Woolson, was an immaculate housekeeper, and cherished insurmountable objections to dogs' hairs in inappropriate places, and dogs' footprints on polished stairs. That fact was firmly impressed on Wynn's mind, and he was assured that his residence in the family would be brief if he ever forgot that back stairs were made for dogs. He learned his lesson well and always waited for some one to open the back door, though he must sometimes have wished we were as considerate of his needs as he was of our prejudices. Only two occasions I remember his taking the law into his own hands. Once when a heavy picture fell in the dead of night with a crash very suggestive of dynamite and burglars. And again when I rolled off the sofa in a faint, dropping the hem of my gown dangerously near the blazing fire. Not being able to rouse me, he took the nearest way to alarm his master in the dining room. Once when little more than a puppy he was left by accident entirely alone for six hours in the third story; nothing but his conscience prevented his joining the nursery party on the floor below—but I found the blessed beastie with all his playthings gathered about him, lying close to the staircase, a pathetic bunch with paws hanging over the edge and eager eyes peering down, wondering in his doggish soul what he had done to be so neglected.

Like all bright dogs who are constantly in their master's company, Wynn understood much that was said not only to him directly, but in general conversation. If from his rug in the hall he heard mention in the dining room of a bone to be put aside for his future delectation he would come bouncing in with the request that he have it at that instant moment. Or if he heard a bath suggested he would pretend that urgent business called him outside. He could count also, always listening intently to the telephone call, running to hurry our answer to No. 5 and passing Nos. 4 and 6 with absolute indifference. We at first tried to puzzle him by pretending to answer the wrong number, but were soon daunted by his contempt for our intellect, and ended by trusting his ears in preference to our own. The various electric bells in the house were so nearly similar in tone that we were daily confused. But Wynn was never puzzled, correcting our hurried rushes in the wrong direction with most superior air.

He had speech of his own also—a bark in one tone meant food, another to be let out and a peculiar clapping of his jaws that he wanted water. He was so devoted to his "Miss" and "Auntie" that he never would be out of their society a moment that he could help, even imperilling his digestion in his eagerness to spend no unnecessary seconds over his meals. He particularly enjoyed eating a dog biscuit in the house and a cloth was kept in an especial corner for that indulgence. He soon learned to fetch it to me and beg for the privilege. If told yes he would carry the cloth to his own rug, make frantic efforts to spread it out, then rush downstairs to ask cook for the biscuit, which he would bring carefully to me, fairly drooling with impatience, though never taking a nibble until given permission. He was proficient in the usual doggish accomplishments—could shake hands, speak, whisper, sit up, walk on his hind legs, die, wash his face, fetch his mistress' slippers or gloves, and play hide and seek or "I spy" with all the zest of a child. Indeed, my difficulty consists not in the memory, but wherein to make an end of my reminiscence of the dear old chap whose death left a vacancy in my heart that can never be filled. The tale is already over long, and any mention of Wynn's companions and successors would necessitate a supplement to the week's edition and arouse enthusiasts in other departments to watchful lament that the FOREST AND STREAM had gone to the dogs. DE. F.

International Field Trials.

Editor Forest and Stream:

As Mr. Davidson, in his letter, has something to say about my dogs and myself, would you kindly allow me space to reply.

As Mr. Davidson is much put out by your reporter's account of the trials, let me first say that I do not altogether agree with it. I do not think that Luke should have been placed over Tobe, or *vice versa*, until they had had a good test heat together, without which I contend that no man could properly place the two dogs. Both had run excellently; they are different in style, manner of going to their game, in action and in almost every particular. However, I suppose your reporter is as much entitled to his opinion as others. Mr. Davidson thinks he is prejudiced in favor of my dogs. He might say Mr. Davidson is prejudiced in favor of Mr. Davey's dogs, as they strain back to his old native stock, and he might also say that it is a well-known fact that he has very little regard for Toledo Blade's get. It might also be worth mentioning that Mr. Lacy, representing FOREST AND STREAM, and Mr. Stoddard, representing the *American Field*, were last year of the opinion that Luke should have had better treatment when Tobe was placed over him by the same judges, this in spite of the fact that he had no special preparation and was much too heavy to run well. It is only fair to Tobe to say that he also ran a better dog this year as to bird work, but I don't think his speed was any better, if as good.

Mr. Davidson makes comparison between the ground run over by the two dogs, contending that single work in high weeds is much easier than in bush pasture or slashing. My experience does not conform with this. Birds when scattered into brush piles and treetops, having lots of cover, move about freely, letting out the scent, and all a dog has to do is to catch the wind, go as close as he likes and point; a good kick is necessary to flush the bird and sometimes the pile has to be torn to pieces. In heavy weeds, on the contrary, birds as a rule lie very close and a dog has to get quite close before catching the scent, while the noise he makes is very likely to flush the birds. Mr. Davidson admits this when he makes excuses for the flushes in the Tobe—Cleopatra heat. I should have considered Luke lucky to be put down where Tobe did his single work, and nearly every dog that ran there, viz., Dock, Beppo's Maid and Cleopatra, did good work, whereas along the creek the single work, with the exception of Luke's, consisted of points and flushes. One of Luke's points was in weeds waist high and I had to be guided to him by Mr. Davidson himself from the top of the bank. Mr. Davidson is unfair to Luke when he blames him for not finding the birds again from his point in the small bush around which Tobe and Cleopatra had just been run for an hour and a quarter. It was the second time the birds had been flushed; they were not marked and the dogs were only worked in their direction as far as the end of the bush, after which we were ordered in another direction.

For all any one knows to the contrary, Luke pointed all the birds on the ground he worked over, as no birds were seen in any of his beats except those he found. Tobe certainly might have done more bird work in his heat with Cleopatra.

I contend the last heat, if such it could be called, was no heat at all. Four minutes in a very small field, with one dog obeying frequent calls from nature, was no test, and the judges must have had their minds made up before it was started. Why they did not give them a good test heat, as they did other dogs in both Stakes, I am at a loss to know? I have never seen such an unsatisfactory ending to a good trial.

"I have given notice of motion at our next meeting to change the running rules, to read: "Unless the first and second dogs have come together in the first or second series, they shall run a deciding heat of at least thirty minutes' duration."

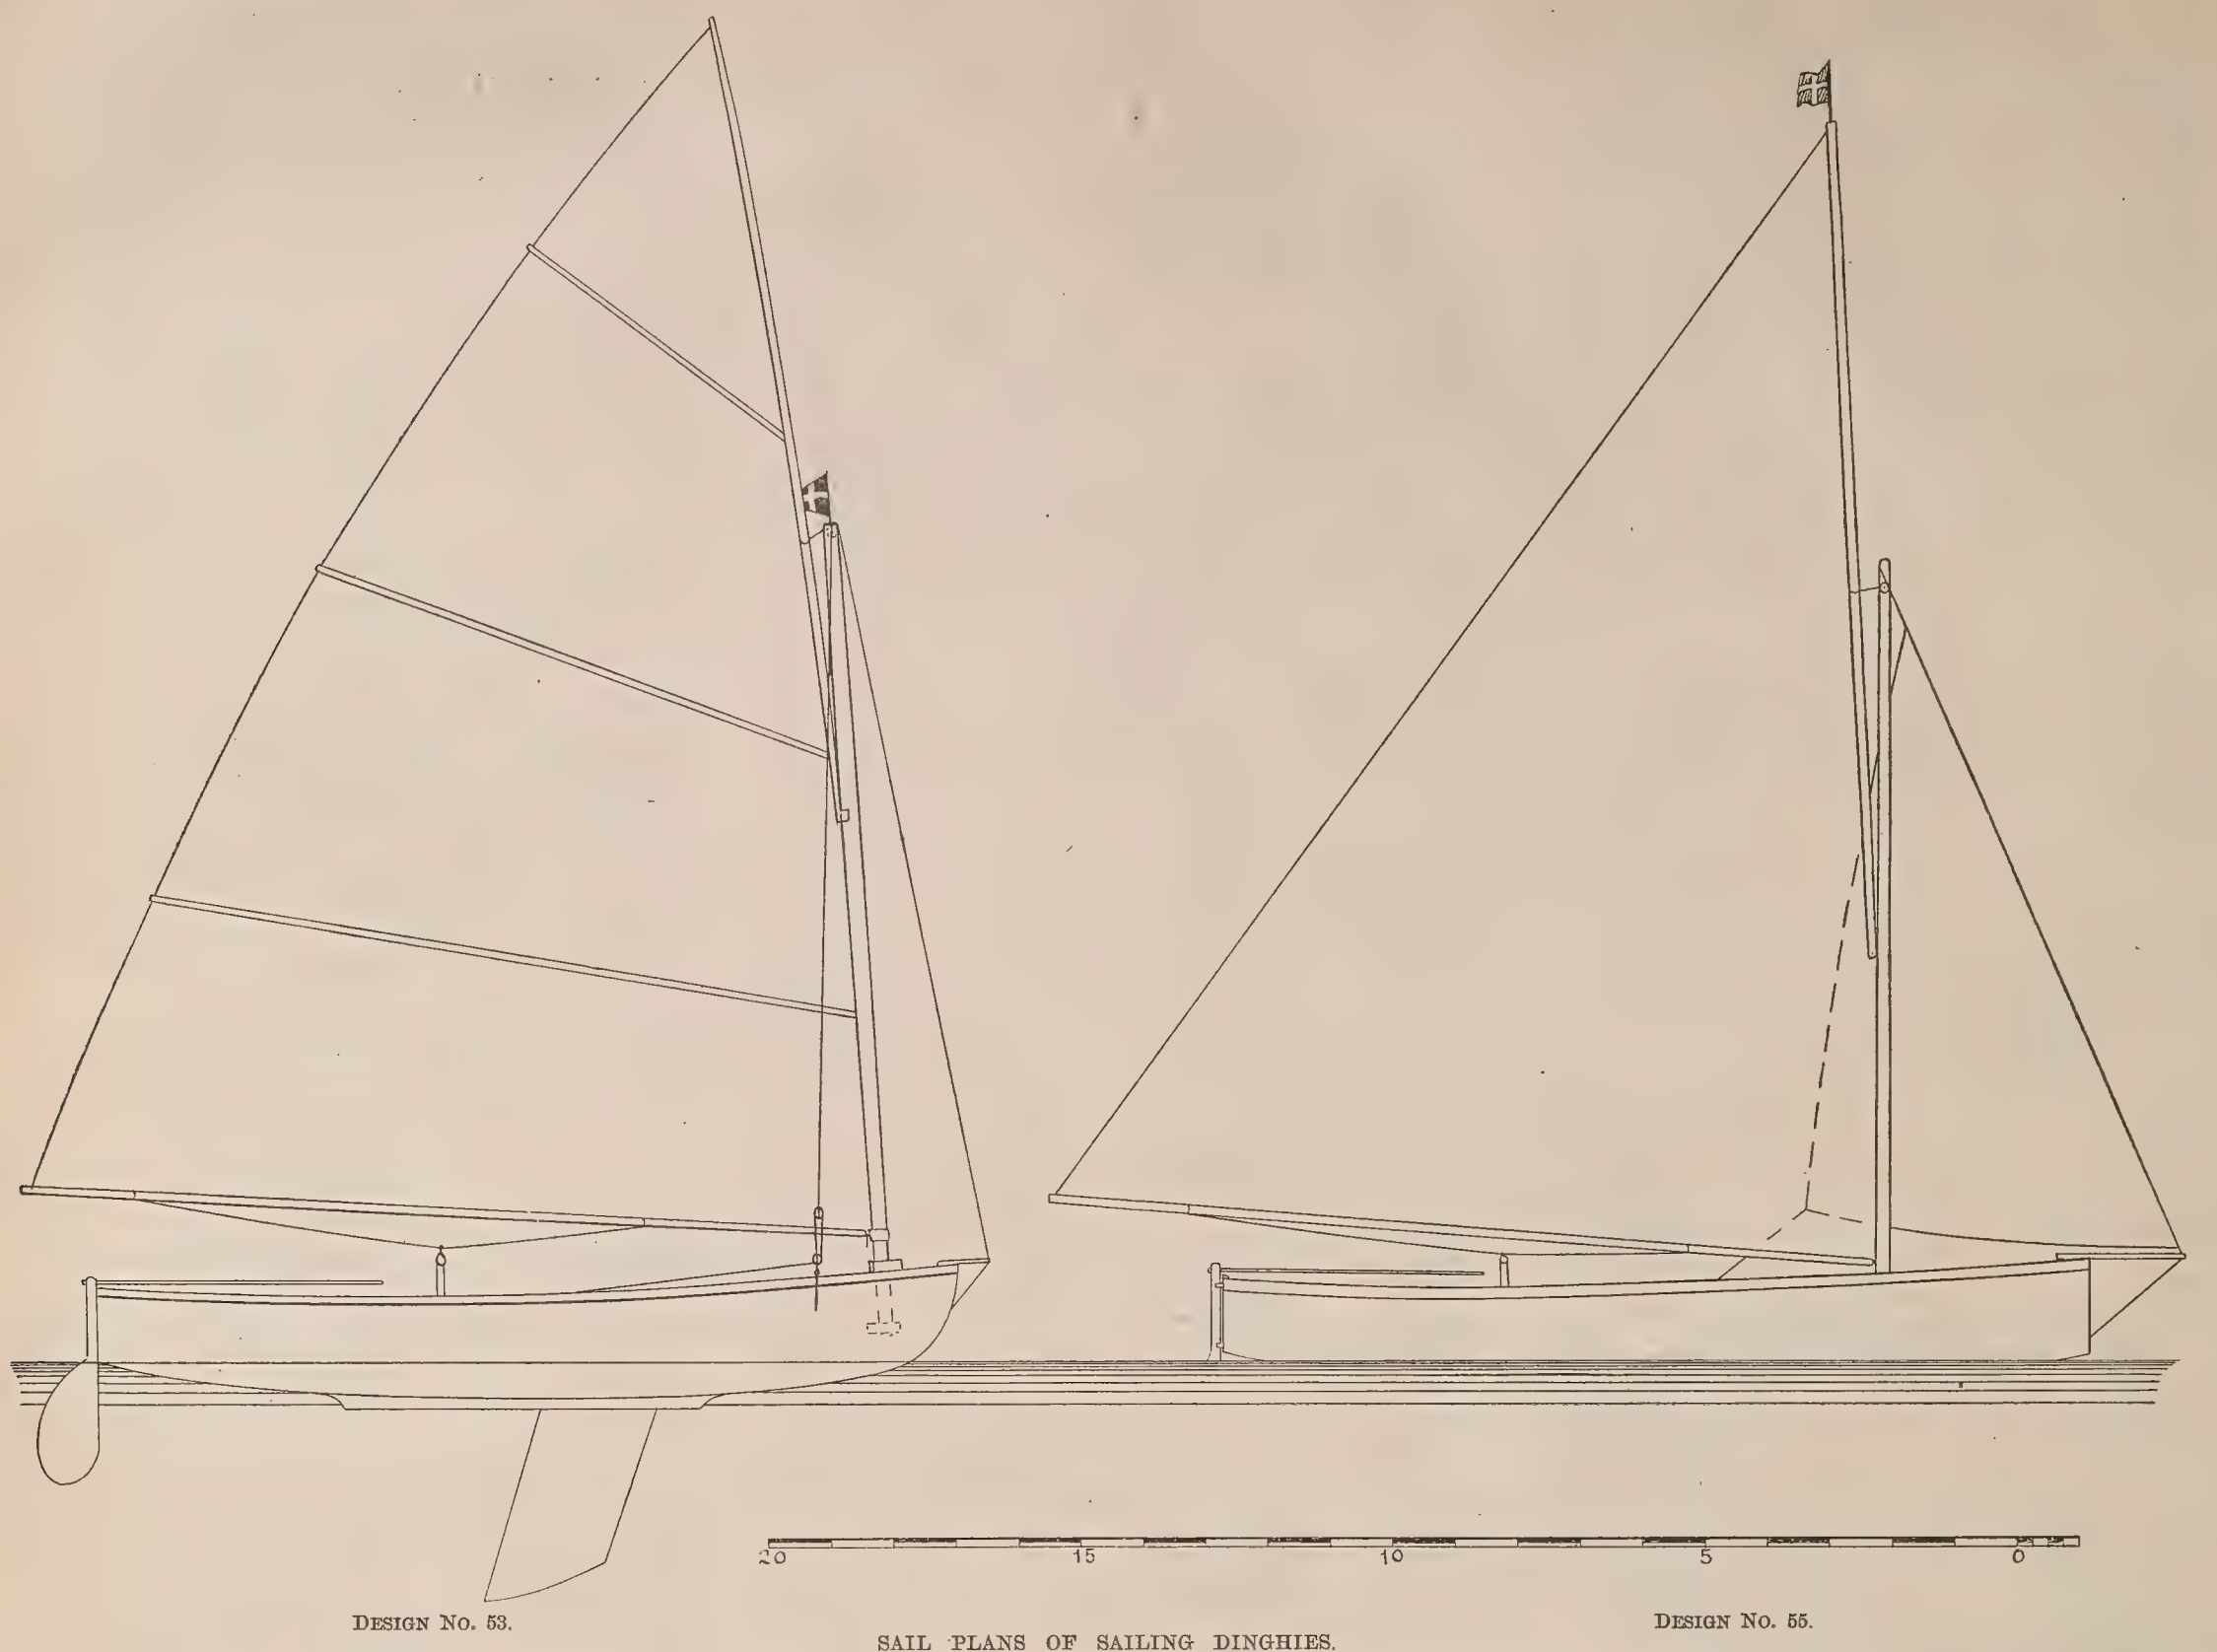
A member of the club who was at the last trials, writing about the proposed change, says: "I think your suggestion about running first and second dogs together until thoroughly tested an excellent one, and do not see how it is possible to arrive at a satisfactory conclusion otherwise, especially if the two dogs are evenly matched, which is very likely to be the case. It has appeared to me the judges slide through the last series rather easily, and that they do not want the good ones together for very long—which is exactly wrong."

When Mr. Greydon has attended a few more field trials, his *ipse dixit* will be taken with more weight; one does not learn all about field trials in a day. I trust he will not let the interested individual with little regard for truth—who deprived Fanny of even the poor consolation of a back—discourage him. What the object of the individual could have been it is hard to say. Perhaps he had his eye on last place. WM. B. WELLS.

A Friendly and Sportsmanlike Challenge.

Editor Forest and Stream:

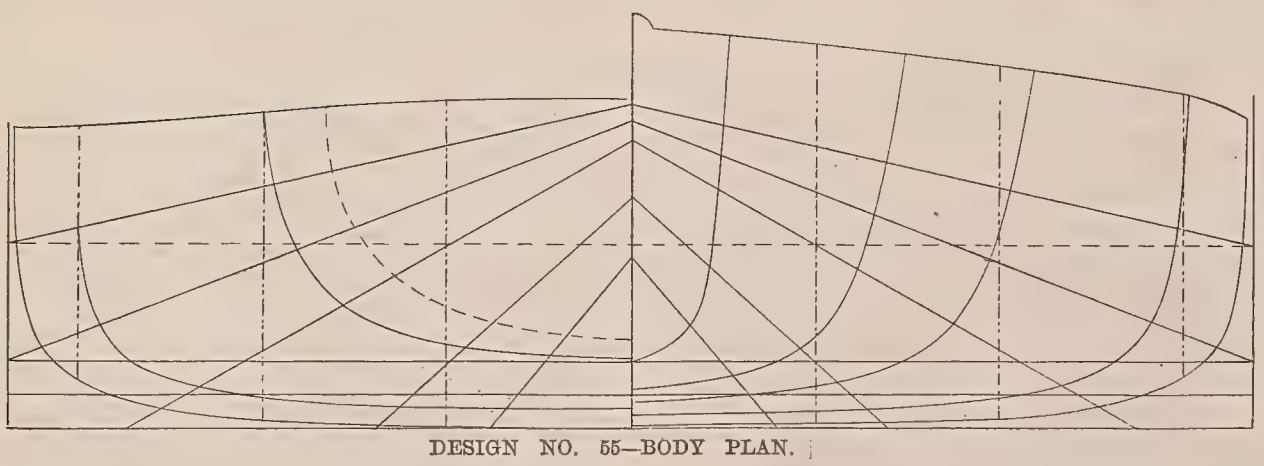
Long and explanatory challenges being in order at this time, I propose a friendly and sportsmanlike one to Mr. Avent. He, I think, knows I am not in the slightest degree unfriendly either toward him or his dogs. I appreciate his skill and the merits of his setters and have no designs upon his money. He remembers that I let him off at Lafayette, La., when our contract was in the hands of Mr. Norvin T. Harris for $200 a side to run F. F. V. against any dog he could produce, eight-hour heat, then and there. He ought to accommodate me now. He claims that Chevalier is "the best combined shooting and field trial dog anywhere." I think Lady Margaret is his superior. The best combined is unquestionably the best. "Chev." was the best that he started according to the decision of the B. F., L. H. and P. W. combination at the Eastern trials. I admit that he is the most conservative and reliable dog that I have ever seen him start. He and Margaret were started three times together at the Southern trials last year. Margaret got the better of him in the first, we were in the downpour the second, and Margaret was "stuffed" (accidentally, of course, I believe) before the third. Chevalier beat her on coveys, she beat him on scattered birds; neither was placed. Both were in the two-hour race this year at Newton, N. C. Margaret ran the first in the morning when the ground was frozen, and the hoar frost, like snow, covered the earth and vegetation. She ran principally down wind, was started on ground on which no birds were found last year or had been found this year. I was handicapped for the first forty-five minutes by being mounted on a 2-year-old colt which refused to cross the ditches, thereby getting behind the judges and other horsemen, and by being directed to hunt in the vicinity of the cabins where curs, chickens and cats were in full force, and where quails were *non est*. In this heat she showed decided superiority over the president's dog, that was good enough in the All-Age Stake to be placed second, and would have no doubt been placed first had he located the covey which Topsey's Rod found when brought up, and which the president's dog seemed to be working when he entered the woods. Margaret was going stronger and faster than Chevalier during the latter part of their respective heats; she was also hindered by the opposing handler's whistle, and his rushing in ahead of her when on point or about to locate scattered birds. Some of the judges also had to be called to order by me for going in advance of me and flushing scattered birds when she was working on them. Therefore she had no opportunity to do her best work in this heat.



Chevalier was started in the afternoon with a reliable pointer in the hands of a comparatively quiet handler; the ground had thawed and settled; a gentle breeze blew in their faces and birds were plentiful and moving. Mr. Avent is too experienced not to know, as does the merest tyro, not an idiot, that the best dog living under the first conditions could not nearly make the same showing that any ordinary average dog could under the last-named conditions. It is true that the judges had "backbone" enough (quotation from Mr. Avent) to decide this race, the most important of what was once considered the first field trial club in America, without running even the second series.

The presiding judge admitted this year that he was wrong in agreeing to a decision last year without further running, though a second series was run because Rip Rap was run twelve or fourteen miles from where the other four dogs in the second and repeat race ran in the first series. The only question upon which the judges could possibly attempt to render a decision approaching a logical or righteous judgment was as between Rip Rap and Chevalier. No competition between either of those or Topsy's Rod and any other dog in the Stake. Surely the best dogs competing with other dogs under unfavorable circumstances should have been braced up and run on the same ground and at the same time with those that were placed. That's what we put in our $50 on Oct. 1 for. Now I want to run Lady Margaret vs. Chevalier for a nominal prize, three hours or two hours, under the Southern rules (the most perfect). We can run a fair and square race under judges as stated in your challenge to Mr. Damon, Jan. 12 or 15, near West Point. "Marg." has been bred to Cid, and should not be run after the U. S. Trials. Win or lose we should be friends. J. R. PURCEL.

NEWTON, N. C., Dec. 20.



The A. K. C. and California.

An editorial which appeared in *Pacific Field Sports* recently is quite to the point in regard to A. K. C. legislation for dog shows on the Pacific coast. We have before alluded to the fact that the dogs owned by exhibitors at Californian shows have no chance to become champions on account of the A. K. C. rule which says that one of the prizes which count for the title of champion must be won at a show where there are not less than 500 entries. Judging by past shows on the Slope, such an entry is hopeless for some time to come, and unless an owner sees fit to send his dog across the continent to one of the large Eastern shows the Californian dog stands a poor chance of ever securing the coveted title, though in merit he may be the equal or superior of many of the Eastern dogs that manage, under more favorable circumstances, to become champions. This is scarcely fair, and it seems as if the A. K. C. might well make an exception to this rule in favor of dogs shown at the Pacific Kennel Club, Southern California Kennel Club, Alameda County Sportsman's Association shows, and others on the coast. That would give the dogs a reasonable chance to gain the title. In the editorial alluded to the suggestion is made that the Pacific clubs start an organization of their own that will control their shows and dog owners. The Alameda Club at present has no delegate accredited to the A. K. C., and of necessity the other two clubs are represented by Eastern men. Viewing their interests from an equitable point of view, it looks as if the Californians had good reason for a little grumbling.

SAIL PLANS OF SAILING DINGHIES.

DESIGN NO. 55—BODY PLAN.

rule, so that a type of vessel of more compact form and having greater depth of underwater body may be produced. The rating rule committee will be much obliged if you will be good enough to consider this matter and suggest what formula you consider necessary to attain the object the committee have in view.

On Dec. 8 a meeting was held, at which the following gentlemen were present, to consider the above request: Messrs. R. E. Froude, G. L. Watson, Wm. Fife, jr., J. Soper, C. P. Clayton, A. E. Payne, C. Nicholson and A. Richardson.

Canoeing.

One of the discouraging incidents of canoeing is the absolute lack of interest on the part of all, racing men, cruising men, if there be any, and canoeists in general, in the very radical change in the method of racing which was recommended by the Executive Committee for next season. The regatta committee has already communicated personally or by letter with a large number of representative A. C. A. men, asking their opinions as to the proposed change and the necessary details; and in particular urging a thorough discussion of the subject through the FOREST AND STREAM.

The result is evident in our columns, half a dozen letters, but one of them suggesting anything of a practical nature so far as handicapping is concerned, and that ended with a postscript which we omitted at the time, "—— a handicap any way." There were men who spoke for the scheme at the annual meeting, and men who voted for it; but now there seems to be no one who cares what is done, one way or the other. Certainly there must still be men who are interested in canoeing, in the A. C. A. and in canoe racing, and who have, or who should have, some ideas on such a vital subject as the radical change of the racing system in a number of important events. It is to such men that the regatta committee has a right to look for aid in carrying out an exceptionally difficult task, imposed upon it, as it would appear now, without good and sufficient reason. If nobody wants a handicap system, and thus far no one has come forward in its advocacy through our columns, then there can be no use in the committee wasting time over the arranging of one. If there is anyone who favors such a scheme, and who has worked out any definite plan, the sooner he makes it known the better the chance of a successful trial next summer.

CANOE NEWS NOTES.

CHICAGO, Dec. 22.—Mr. Robert Lamp writes from Madison, Wis.: "Our canoe club here is booming in good shape, and we may look for several new canoes on our lakes. Last Saturday Vice-Com. Porter and myself went down to Milwaukee to consult with Sec'y Dickens and Huntington about the location of next summer's meet. We should like to have them come to Madison again, but there seems to be a strong pull for Ballast made by the Eastern men. We doubt whether canoeing will be benefited by going to Ballast, and the only argument they advance is that there is always a sailing breeze at Ballast. The midwinter meeting is to be held in Chicago, probably Jan. 12, 1895."

Rochester C. C.

At the annual meeting of the Rochester C. C., held on Dec. 12, at the uptown rooms in the Granite Building, the following officers were elected for the ensuing year: Capt., Harry V. Backus; Mate, Al. T. Brown; Purser, Charles A. Bruff; Meas., Robert Minnick; Executive Committee, William H. Burtis, Geo. Herzberger, Milton H. Smith; Regatta Committee, Harry S. Stewart, C. F. Wolters, Will. H. Martin.

Several new members were elected. The membership of the Rochester C. C. is a limited one of fifty, and there are now forty-six names on the roll. Forty-two canoes in all are stored at the club house, exclusive of the 30ft. war canoe built by Ruggles.

The club has decided to erect a ladies' dormitory in connection with the club house at Irondequoit Bay. The plans have already been prepared and call for two living rooms for the steward and a workshop on the ground floor, while the ladies' dormitory will occupy the entire second floor.

The season of '94 has been the most prosperous that the Rochester C. C. has experienced for several years past. The regattas were a success. The orchestra in attendance during all the races was an innovation that every one appreciated. The club expects that its membership will be more than filled by the time the March meeting is held, and looks forward to a still more successful season than the one that has just passed. Does that look as though canoeing was on a voyage up "Salt River?"

The annual supper will be held on Jan. 11, 1895, at the Alberger. This committee consists of Capt. Harry V. Backus, Mate Al. T. Brown, W. Brown, W. H. Burtis, George Herzberger and Milton H. Smith. Financially the club is in first-class condition, the purser's report showing the largest surplus ever shown since the foundation of the club.

The Revival of Canoe Racing.

MONTREAL, Dec. 24.—*Editor Forest and Stream:* I have been requested by the chairman of the regatta committee of the A. C. A. to give my idea regarding a practical way of handicapping canoe sailing for 1895.

After much consideration, I can see no fair means of doing so without the results being more disastrous to canoeing than the lack of entries is at present.

My idea would be to reduce the advantage one canoe has over another. I do not mean by this to limit the sail area, as I think that one who owns a good honest boat should be entitled to carry a large area in a light wind, thereby preventing a keen canoeist from the evil of a hull cut away to get the best advantage from a limited area.

I would suggest limiting the distance that a hiking seat be allowed to slide outboard to windward. It is well known that sail carrying is pretty well governed by length of seat as well as the agility of the man.

But whatever is done, it must not increase the expenditure attending canoe racing, but rather to decrease it, for to my mind it is largely due to this that we do not have more entries.

Should be glad to hear an expression of opinion through your columns regarding the advisability of the above. MAB.

Trap-Shooting.

FIXTURES.

All ties divided unless otherwise reported.

Send notice of your shoot like the following.

Jan. 9.—YARDVILLE, N. J.—All-day shoot at live birds; handicap, 25 birds, $10 entrance, birds extra

Jan. 10-11.—FANWOOD, N. J.—Two days' tournament of the Climax Gun Club; first day, targets; second day, live birds

Jan. 15-17.—HAMILTON, Canada —Hamilton Gun Club's annual tournament; $1,000 added money. J. W. Bowman, Sec'y.

Feb. 5-7.—UTICA, N. Y.—Two first days, targets; last day, live birds. Open to all. Send for programmes to E. D. Fulford or H. L. Gates.

Jan. 24.—NEWARK, N. J.—Newark City handicap, 25 live birds, $10 entrance, birds extra, under the auspices of the Newark Gun Club. Shoot to take place at Erb's grounds.

Feb. 22.—ALBANY, N. Y.—First tournament of the Eastern New York Trap-Shooters' League, of the series of 1895, under the auspices of the West End Gun Club. Henry A. Kratz, Sec'y.

Feb. 27-28.—ELIZABETH, N. J.—Second bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds. Events open to all.

April 3-5.—WILLARD PARK, Paterson, N. J.—Interstate Manufacturers' and Dealers' Association's third annual grand American handicap at live birds, at New York; $1,000 guaranteed, all surplus added.

May 8-10.—WEIR CITY, Kas.—Ninth annual owl shoot of the Amateur Trap-Shooters' Association of Missouri and Kansas; $300 in cash added. W. W. McIlhany, Sec'y.

May 9-11.—NEWBURGH, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec'y.

May 14-16 —DAYTON, O —Ohio Trap-Shooters' League annual meeting and tournament under the auspices of the Buckeye Gun Club, of Dayton, O. Ed. Taylor, Sec'y, 8 West Third street, Cincinnati.

May 21-24 —Knoxville (Tenn.) Gun Club's fourteenth annual tournament; $1,500 added to the purses.

May 29-30 —CANAJOHARIE, N. Y.—Two-day's tournament of the Canajoharie Gun Club; targets. Chas. Weeks, Sec'y.

May 30-31 —GRAND RAPIDS, Mich.—Valley City Gun Club's annual tournament; targets; added money announced later. C. F. Rood, Sec'y.

June 4-7 —MEMPHIS, Tenn.—Memphis Gun Club's annual tournament; $2,000 added money.

June 19-21 —CLEVELAND, O.—Chamberlain Cartridge and Target Company's second annual tournament; $1,200 in bash added.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament

Oct. 3-6.—Pennsylvania State Sportsmen's fifth annual tournament.

increase of power for the purpose, the Ardent's engine having about 5,000 horse power on the last pair of runs.

"The absence of vibration, which has been so happy a characteristic of the later vessels of this class, was also noticeable in the Ardent while and her improvement was the very small amount of flame to be seen at the tops of the chimneys, even when running at highest speed.

A Restricted Racing Class.

The extreme development of purely racing features, and the rapid outclassing of new boats by others a little newer and of more extreme type, has resulted in the production in England, Scotland and Ireland of many special classes, independent of the recognized rating rule of the Y. R. A., and governed by certain arbitrary and often stringent limitations, intended at least to secure to a boat a longer racing life than one or two seasons; and also, in many cases, to produce a generally useful boat at a moderate cost. Among these classes are the Kingstown "Mermaids" and "Waterwags," the boats of the Munster Model Y. C., the 18 footers of the Mersey, the 19 and 23ft. classes on the Clyde, and a new class of centerboard boat just established in the latter locality. In many cases the rule is "one class, one design," all the boats being built to a standard design, both in model and construction, thus lessening the cost and making the racing purely a test of individual skill in handling. In other cases different designs are allowed, but under such general restrictions as shall prevent the production of a boat of much greater power or sail area than the average of the class.

The boats here illustrated are intended for such a limited class, of sailing dinghies, which exists in the vicinity of Dartmouth, England; used for regular racing through the season, and also for pleasure sailing. The limitations of the class are: the boats to be unsinkable, length over all not to exceed 14ft. l. w. l. not to exceed 13ft., draft not to exceed 1ft., no outside ballast, but metal centerplate, the trunk of which shall not rise above the gunwale, no limit of sail area, but all spars must stow inside the boat on the thwarts. The two designs were made by Capt. Henry E. Bayly, of Exmouth, an amateur whose work is well known to our readers; the first one, No. 53, having been made last year and the boat built and raced with success. The second, No 55, is now building, by Wm. Hodge, of Dartmouth, for A. F. Wood, Esq., with a third, No. 56, for the Earl of Drogheda. The dimensions are as follows:

	No. 53.	No. 55.	No. 56.
Length over all	14ft.	14ft.	14ft.
l.w.l.	13ft.	13ft.	13ft.
Beam, extreme	5ft. 3in.	6ft. 3in.	6ft. 2in.
l.w.l.	5ft. ⅛in.	5ft. 10in.	5ft. 7in.
Draft, hull	8⅜in.	4in.	4in.
with plate	3ft. 10½in.	4ft 3in.	4ft. 3in.
Freeboard, least	1ft. 1¾in.	1ft. 2¼in.	1ft. 2¼in.
Sheer, bow	6in.	6in.	6in.
stern	1in.	1¼in.	1¼in.
Displacement	896lbs.		
Centerplate, weight	60lbs.		
thickness	¼in.	3-16in.	
Ballast, inside	192lbs.		
Mast, gunwale to truck	12ft.	11ft. 6in.	
Boom	13ft. 6in.	13ft. 4in.	
Yard	13 ft.	13ft. 4in.	
Mainsail, luff	6ft. 9in.	5ft.	
leech	21ft. 10in.	21ft. 4in.	
Jib, foot		6ft.	
luff		10ft. 10in.	
leech		9ft. 6in.	
Areas, mainsail	139sq. ft.	120sq. ft.	
jib		28.5	
Total		148.5	

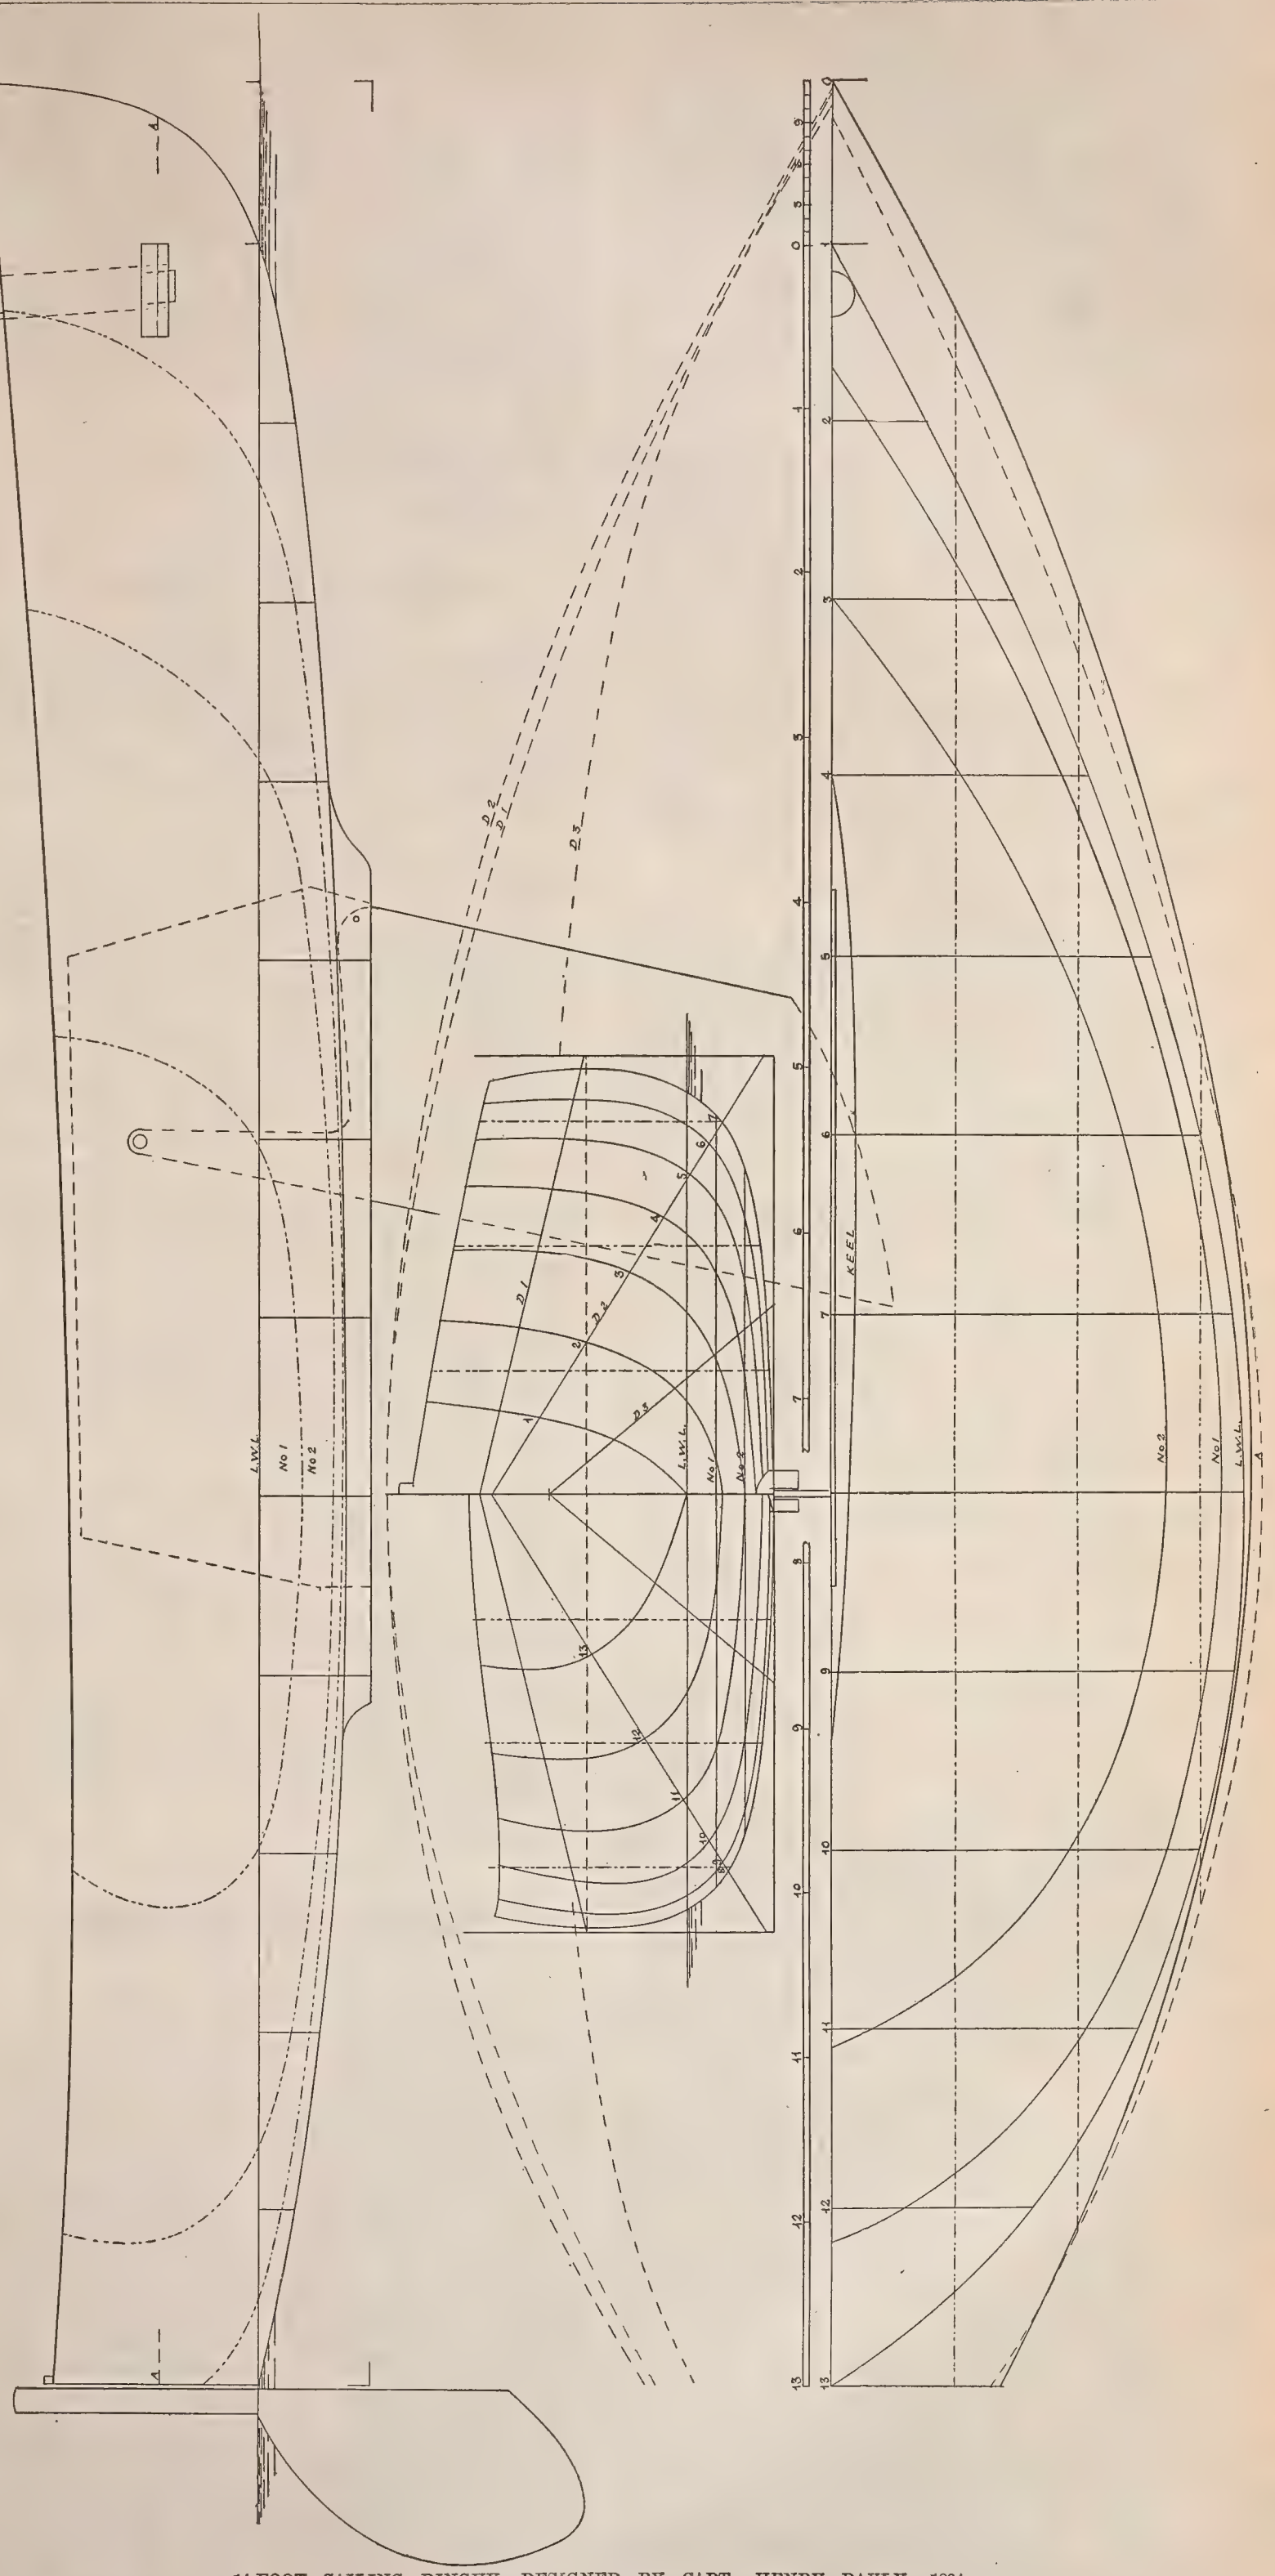
The weights of No. 53 are: construction and equipment, 336 lbs., centerplate, 60 lbs., crew, 308 lbs., ballast, inside, 192 lbs., total, 896 lbs. The centerplates are of the new knife pattern, very narrow and deep, as in Mr. Linton Hope's Sorceress, lifting by a tackle on the inner projecting arm. In the first design the mast is set rather high, and supported by a thick partner piece or upper thwart on top of the gunwales, with an iron hasp on the after side to permit of easy stepping. We believe that this piece and all forms of tabernacles and telescoping masts are now prohibited. The sails are really leg-o-muttons, though set as lugs, the yards being up and down the masts. The yard is set up by flexible wire tye, a single part, with a tackle on the lower end, the fall leading to the middle of the boat. A heelrope is also used, by which the yard may be jammed close to the mast when the sail is reefed.

The boats are fitted with long cylinders of painted canvas stuffed with cork, one lashed fast in each bilge; they are 10ft. long and 10 in diameter, tapering to 4 in at ends, and make good seats for the crew in sailing. The large design shows No. 53, the body plan and sail plan of No. 55 being also given. The latter is quite an extreme of beam and light draft; No 56 being more cut away, and easier in form. The boats are entirely open, as required by the rules, but movable washstrakes are fitted above the gunwales in bad weather.

Captain Bayly has just completed for his own use next season a 1 rater of extreme proportions, 28ft. over all, 18 ft. l.w.l. 7ft. 10in. beam, 5in. draft, with a knife plate weighing 10 lbs and giving a total draft of 6ft. 8in. The rudder, of the fishtail form, will house, through a long well in the counter. Her name will be Boucanier, a new spelling of an old word.

The Valkyrie-Satanita Collision.

The suit of Lord Dunraven against Mr. A. D. Clarke for the loss of the former's yacht Valkyrie II by collision with Satanita was tried before the Admiralty Court, in London, on Dec. 17-18, being decided in Mr. Clarke's favor. The *Field* discusses the main question involved as follows:



It will be remembered that the Satanita sailed into and sank the Valkyrie yacht at the regatta of the Mudhook Yacht Club on the Clyde in July last. The underwriters of Valkyrie treated the case as one of total loss and paid up the insurance. An action was then commenced against the underwriters and owner of Satanita to recover the money paid for the loss of Valkyrie.

The statement of defence of the owner of Satanita (Mr. A. D. Clarke) has now been delivered, and the case, we understand, is set down for hearing on Dec. 18. He admits the collision and damage was due to the faulty handling or navigation of Satanita, but denies that he himself is blamable for it, and claims to have the case settled under the provisions of the Merchant Shipping Act, where collisions take place without the fault or privity of the owner of the vessel to blame. Under this provision the amount recoverable would be only £8 per registered ton.

For the representatives of Valkyrie, on the other hand, it is claimed that the owner of Satanita contracted himself out of the provisions of the Merchant Shipping act by the declaration in the Y. R. A. rules, as follows: "I undertake that while sailing under this entry I will obey and be bound by the sailing rules of the Yacht Racing Association."

The Merchant Shipping Act contains no clause giving permission for the owner of a yacht or other vessel to contract himself out of its provisions, and this point will have to be settled by the Court before the case comes on for hearing on its merits.

In the Oimara *vs.* Fiona case (see the *Field*, Oct. 2 and Nov. 13, 1875), Mr. Commissioner Kerr, in giving judgment, said he was obliged to decide the case under the regulations for the prevention of collisions at sea, as the parties would not agree to have the case decided by the yacht club sailing rules. The Fiona was held to blame, and the Commissioner concluded by saying "he hoped before any yachts were allowed to enter a race there would be a distinct pledge insisted upon that any dispute should be settled by the yacht club committee." Of course this pledge is given, and its observance is a question of honor among the parties concerned, but it can scarcely be expected that underwriters, where their interests are involved, will allow them to be sacrificed on account of a convenient and honorable agreement which other parties have entered upon. However, it is a question of great importance to yacht owners, and we trust the point will be ably argued. It is of special importance to those who insure against racing risks, and we ought to know beyond all doubt to what extent a yacht owner contracts himself out of the provisions of the Merchant Shipping Act when he signs the yacht racing declaration we have quoted. The owner of the Satanita admits his vessel to be in the wrong—presumably whether under the provisions of the regulations for the prevention of collision at sea or under the yacht racing rules; but what we want to know definitely is whether by entering his vessel under the yacht racing rules he legally abrogated all rights he or others (by underwriting or otherwise) had under the provisions of the Merchant Shipping Act? As we before said, it is a matter of great importance to yacht owners, and we hope the case will be well threshed out and an authoritative decision given.

14-FOOT SAILING DINGHY, DESIGNED BY CAPT. HENRY BAYLY, 1894.

Changes of the Rating Rule.

A circular has been sent out by the Y. R. A., worded as follows:

The rating rule committee are of opinion the present rule tends to produce in yachts unduly large circumscribing dimensions relative to displacement and useful living room on board; they consequently consider it advisable to alter or modify the

DOG CHAT.

On Friday last, during the Lexow police investigation, Capt. Schmittberger testified that he did not owe his promotion either to money payments or political pulls, but to the fact that he found Commissioner Wheeler's lost dog. Another proof that the dog is man's best friend after all.

The Pacific Fox-Terrier Club, at a meeting held Dec. 14, condered the question of holding a fox-terrier show in connecon with the Poultry Show to be held in San Francisco Jan. 3, 895. Why not wait until the regular dog show in May? Dog shows and chicken conventions never mix well.

Mr. H. H. Hunnewell, Jr., owner of the Hill Hurst Kennels, has made an addition to his already spacious kennels by building a winter kennel. This is 36ft. by 9ft., divided into eight compartments, with room for stove. These compartments lead to a piazza of the same dimensions with a separate runway. This arrangement provides warm quarters for winter puppies, and dry, sheltered exercising grounds, thus giving the youngsters a good start in life at the most unseasonable period of the year.

At a meeting of the Boston Terrier Club held Dec. 20 at Young's Hotel, Boston, Messrs. H. N. Richards, C. F. Clarkson, T. C. Hollander and T. W. Thorndike were elected to membership, bringing the number of the same up to thirty-five. A change was made in the by-laws raising the initiation from $2 to $5, and the annual dues from $6 to $10. Forty dollars were then appropriated for specials at the W. K. C.'s coming show, and the same amount for specials at the Mascoutah Club s show. Mr. C. F. Leland of New York city was appointed the club's delegate to the A. K. C., and a committee of three were appointed by the chair to submit nominations for next year's officers. The club then adjourned until the annual meeting in January.

We have received a very good picture of Mr. Geo. Douglas's young cocker bitch Woodland Princess (Woodland Prince—Woodland Jude), that won first in puppy class at Toronto show, 1894. Mr. Douglas avers she is the best bitch he has ever bred, and that is praise indeed, when we remember the kind of cockers that have come from the Woodstock kennels. Wood- and Princess will be shown at New York, for we can assure Mr. Douglas that there will be no guessing, though we are not at liberty to give the judge's name.

Kent Elgin, the noted pointer, has been bitten by a mad dog, and will probably be sent to the Pasteur Institute in New York.

The paintings and sketches left by the late J. M. Tracy will be sold at auction at the American Art Association, New York, during the W. K. C. show. In the current issue of the *Quarterly Illustrator* there is an interesting article "With Horses and Dogs" by Miss Marguerite Tracy. In this we are told how her father became an animal painter. The text is liberally interspersed with original illustrations of his works by Mr. Tracy—such as "Southern Field Trials," English setter "Dashing Monarch," "The Enemy in the Camp," a sketch of the Meadowbrook Hunt, Irish water spaniel "Gip," together with a number of pictures of noted horses. In speaking of the trouble in making dogs pose for their portraits, Miss Tracy says: "The contrivances for keeping the model quiet and inspiring the needed expression were as numerous as ingenuity could suggest, for the amount of persuasion that is required to make some dogs pose is past belief. My father always had a man who held them, petted them, tempted them into the desired position with bits of meat. In extreme cases the whole household was called on to assist, and it must be confessed that some of the most perfect "points" of champion dogs have been made not at quail but at cats." The writer gives the pointer a bad character when she says: "The thoroughbred pointer is a thief. This is such an important characteristic that it is really hard to understand why it is not down in "Stonehenge," the great English authority on dogs. At one time and another almost all the famous dogs have sneaked into our kitchen while the servants' backs were turned, and custards, cakes and legs of mutton disappeared. No one really objected except the cook, who accused me of aiding and abetting them, and I remember a company dinner that passed off pleasantly in spite of the fact that old Tammany had embezzled one course."

There are rumors of dark horses to come out at the W. K. C. show, but a St. Bernard that we hear of out Flatbush way should make a sensation. Eleven months old and weighing 198lbs., but "its head is too large for its body," so our informant told us. The sire is Eboracum and the dam Huddersfield Belle, an imported bitch.

Mr. R. Leslie, of Lynn, Mass., has sold his pointer Kentwood (26556), by ch. King of Kent ex ch. Belle Randolph, to Mr. Warren E. Foote, Newton Centre, Mass. Kentwood is two and a half years old, and was trained by Mr. B. C. Miller, Little Rock, Ark.

The judges for the Westminster Kennel Club show are as follows:

St. Bernards, Newfoundlands and pugs, Miss A. H. Whitney, Lancaster, Mass.; mastiffs, great Danes, Russian wolfhounds, greyhounds, poodles, all terriers, except fox terriers, basset hounds, dachshunds, whippets, Italian greyhounds, schipperkes, toy spaniels and miscellaneous classes, Mr. James Taylor, of the *English Stock-Keeper*; bloodhounds, deerhounds, foxhounds, setters, Chesapeake Bay dogs and English retrievers, Mr. John Davidson, Monroe, Mich.; pointers, Mr. Charles Heath, Newark, N. J.; spaniels (except toys), Mr. E. M. Oldham, New York; collies, Dr. L. C. Sauveur, Chestnut Hill, Pa.; bull dogs, Mr. John H. Matthews, New York; fox-terriers and Old English sheep dogs, Mr. R. F. Mayhew, New York; beagles, Mr. Joe Lewis, Moodus, Conn.; Boston terriers, Mr. C. F. Leland, New York.

On Christmas Day the members of the Westminster Kennel Club had a royal time at their club house, near Babylon, L. I. Pigeon shooting was followed by a dinner in the club house. The feature of the day, however, was the presentation of a handsome silver-mounted orange wood cane to James G. K. Duer, the president of the club, by George De Forest Grant, in appreciation of Mr. Duer's long and faithful services to the club.

Mrs. Smyth is still improving, and her many friends will be pleased to hear that her removal from the hospital was accomplished in safety, and she is now enjoying the care and attention that only a home can offer.

With the advent of a new year fanciers' thoughts turn to the spring shows and the W. K. C. show in particular. The coming champions are weighed in the balance of their owners' judgment, the seasoned winners are looked over with a view to preparation for another circuit, and, in case the kennel is a large one, the teams are selected that are to do battle for the kennel prizes. The careful and far-seeing kennel manager should now examine his show dogs carefully as to the state of their general health and for any signs of worms or skin diseases, the main stumbling blocks which he has to contend with in bringing them to that fine condition which all dogs should show when put on the bench. A few weeks of general preparation now are worth much more than a hurried stuffing and conditioning a week or two before the show. Intestinal parasites should be sent to the right about, thin dogs put on a more liberal diet, and the dogs which have spent a lazy winter and which may have a consequent accumulation of adipose matter, should be exercised gently at first. The main points the exhibitor should bear in mind in conditioning his dogs for a show are to create a natural hunger with judicious exercising, avoid drugs, loosen the dogs' bowels by a liberal course of vegetables mixed with other foods rather than by physicking, and regular meals and daily grooming with brushes adapted to the dog's coat. Large dogs should be walked every day, terriers and other small dogs, which are often kept where the owner has little convenience for exercising, may be tuned up into good hard flesh by retrieving a ball, and no better method of exercising every muscle in a terrier can be found than in attaching a ball or stout piece of canvas to the end of a string attached to a stiff fishing rod or light pole; by jerking this about in front of your terrier for ten minutes, morning and night, you will soon put him in shape and afford endless amusement to owner and dog, with little exertion on the former's part. Many of our large breeds, mastiffs and St. Bernards especially, are often shown with thighs as flat as a board, but daily walking exercise would soon fill out the muscles and produce the rounded full appearance they should have. The careful owner will study the dog's health, and by providing clean, dry quarters, free from draughts, judicious exercise, plenty of "elbow grease" for the coat, and a variety in feeding, the burden of conditioning his dogs for the bench will not be a difficult one. As a general diet eggs beaten up in new milk for the morning meal and dry biscuits, varied with well-boiled mutton or beef and vegetables, mixed with stale bread, rice or oatmeal, will afford a scope of dietary measures that should bring any dog not actually sick into proper condition for show purposes.

W. E. Warner, manager of Mr. George J. Gould's kennels, is still strengthening his team of pointers, the latest purchase being Marguerite Kent, by King of Kent, from Mr. F. W. Shaw, owner of the Canadian Pointer Kennels, Forest, Ont. This bitch ran well in the field trials.

POINTS AND FLUSHES.

[From a Staff Correspondent.]

The sportsmen throughout the country will regret the death of Mr. N. D. Wallace, of New Orleans. He died during the past summer. Field trial competitors and supporters will remember that he was prominently connected with the Southern field trials held during the early 80's. If my memory serves me correctly he was at one time president of that club. He acted also in the capacity of judge at Canton, Miss., when the Southern trials were held there. He was a most amiable sportsman and gentleman and had many friends.

A TIP.

From a local paper I take the following, which may be valuable or not, in determining the dog's manner of communication:

"According to the London *Dispatch*, Dr. Louis Robinson, of that city, who has been investigating the mysteries of canine language, has practically set up the theory that a dog speaks with his tail tip. There is certainly a deal of expression in the wag of a dog's tail, and Dr. Robinson, says the Philadelphia *Record*, must be credited with having given a novel and interesting tip to that portion of the scientific world which devotes itself to philology."

Still, in some manner inexplicable with the theory, bobtailed dogs manage to communicate quite as well as the long-tailed ones, and all dogs manage to communicate in the dark when their tails can not be seen. I am disposed to think that the learned Dr. Robinson, notwithstanding that the family is wide and of long standing, has been playing horse with the press of London and elsewhere.

Mr. Norvin T. Harris, who is famous both as an admirer and owner of well bred horses and dogs, contemplated spending the winter in New Orleans after Dec. 20, but I was told that it was possible that he might change his plans and not come here, or at least not till much later than he originally contemplated.

The breeder of a good dog is entitled to no small share of the credit which comes from the dog's successful competition and good performance. In this connection, it may not be amiss to mention that Mr. J. M. Freeman, of Bicknell, Ind., was the breeder of Mr. P. T. Madison's famous dog Rodfield. Mr. Freeman does not make much hullabaloo in the papers, but he is one of the men who are reliably present when the trials come off, and he is a supporter of field trials.

In the *Times-Democrat* of Dec. 22 I note the following: "An appeal case was filed in the Civil District Court yesterday from the First City Court by Col. J. C. Wickliffe against the Red River Line. The petitioner, Col. Wickliffe, claims that he sent his dog by freight on the steamboat Hallette of the Red River Line and those in charge carelessly put the dog in the engine room, where he was killed by the machinery. Col. Wickliffe valued the dog at $100, which amount he sues for. He says the dog is not only valuable as an animal but as a watch dog, and that on one occasion the dog saved the life of one of his children. The dog was killed some time ago."

The most difficult part of litigation is, generally speaking, to prove that the dog is worth anything at all. I think that if Col. Wickliffe were to write to Mr. J. M. Avent, Hickory Valley, Tenn., he could get valuable information in respect to precedents and the rulings in suits for damages of a similar nature, as I was told that he had collected a large mass of evidence for use in his own suit which he won some time ago. B. WATERS.

NEW ORLEANS, La.

Hunting and Coursing.

Shall it be Speed or Nose?

Editor Forest and Stream:

I have read the FOREST AND STREAM for a long term of years, and I have not taken much of your valuable space in a controversy with the beagle men, but in an issue of your paper of Dec. 15, in a communication of Mr. Buckstaff's in "Shall it be Speed or Nose?" he struck me in a tender spot when he says, according to all reports, his Royal Rover beat my Nell R. and did it easily. Now, I wish to say to Mr. Buckstaff, that the reports say no such thing, and further, that Royal Rover cannot beat Nell R. for speed, nose or any other hunting quality, for fun or money. "Bradley," in his report to the FOREST AND STREAM, says: "Rover fairly outworked Nell, as she acted as though she was tired." This I admit in part. They ran the day before over two hours together. No part of the heat was satisfactorily seen by the judges and the dogs were ordered up. The next morning they were put down again and a few minutes after Mr. Chapman kicked out a rabbit. Rover was put on the trail immediately, and the rabbit at once left the brush and went into a mowed field and took nearly a straight line for a garden. Nell at the time the rabbit was started was a number of rods away from Rover and did not know that he had a rabbit running until I called her out of the brush. She then had to make up some twenty rods before she could get in with Rover and, I think, did not get ahead of him. The rabbit was soon lost in the garden. What dog found the trail, drove the rabbit into the rails and marked him, and was ordered to be caught by the judges as she was trying to work into the rails after her game? are the questions that I wish to ask Mr. Buckstaff, and I venture to say that if he will take the trouble to inform himself he will find that it was Nell R., and also, that the rabbit might have been in the garden now for all Rover did toward driving him out. Was there anything about that heat upon which Mr. Buckstaff can claim that Rover beat Nell so easily?

When the notice was given out of the dogs that were to be left in for the second series I was satisfied to find that Nell had been left out. I well knew that she could not get into the money, for I had not seen anything done by her or Rover that would entitle either of them to run again. Nell being only a little over one year old, and having to run in the Derby the next day, had a chance to rest up, and, I think, her heat with Lucy in the Derby was the fastest and truest heat of the entire trials, and if Rover had run against her that day it would have been "poor Rover."

Now, in the heat between Buckshot and Rover, Mr. Buckstaff says: "After a hot heat it was decided that Rover had the best nose, but Buckshot was too fast for him." Not any, please, Mr. Buckstaff, no such decision was given out by the judges, for the facts of the case are that Rover never led Buckshot, except for some few rods when he was first put on the rabbit. In the report of FOREST AND STREAM, written by Mr. Turpin, one of the judges, and he came very near having seen all the work done by the dogs that was possible for him to see, he says. "Worked into a grass field. Both began to trail, Buck in advance until Buck started his rabbit." Whose nose did this piece of work I would like to ask Mr. Buckstaff? I think the judges, handlers and spectators will all remember that drive up to the hedge row. The next rabbit was soon lost after being started by Rover. The next work done was on a trail found by Buckshot and I called judge Lewis's attention to the dog, and told him to let him work and he would start the rabbit, and he did so. Report in FOREST AND STREAM says, "Buckshot leading the way and catching most of the turns." I would like to ask Mr. Buckstaff if he can see anything in that heat that any judge should say that Rover had the best nose. I guess not. I do not own Buckshot to-day, but the beagle that has got a better nose than he has does not spell his name Royal Rover. Buckshot beat Royal Rover at both Oxford and Hempstead under four different judges. If Royal Rover was sent East as an object lesson for the benefit of the Eastern beagle men I think he was a failure. If Mr. Buckstaff had sent such a dog as Dime, Buck, Nell or Lucy we should have had something that was able to win, with nose and speed combined.

In regard to the judges' decision, any one who has ever attended a trial where Messrs. Lewis and Turpin have been judges will see how close they try to keep up and how careful they are to place the dogs right, will never kick if his dogs do not get into the money.

About a year ago Mr. Buckstaff had an article on speed against nose and wished to hear from the beagle men. I will answer him now. I want a beagle that is fast, and the faster the better, with a nose equal to his speed, and that on a loss will swing and swing at the top of his speed until he strikes the trail again; built to stand as many days' hard work as I wish to hunt, a good barker, good starter and a stayer. This is the kind of a beagle I have been trying to breed for the last fifteen years. I have not been going down the beagle ladder, but climbing up and trying to make the dogs that beat mine climb, and when those dogs get through a trial against my dogs they will not leave that field saying that they have beaten them "easily." If Mr. Buckstaff had not used the word "easily" I don't think I should have answered his article, but I could not quite stand that. In regard to those long-legged, quaint, terrier-looking beagles will say they must nearly all have been West, as I did not see any at the New England or National Beagle Club trials. I have yet to learn why a fast, true-running beagle is a handicap for a hunting beagle; I am sure on our large rabbit they are the kind we must have. It is no sport for me to shoot a rabbit sitting still or just crawling along in front of a slow beagle, simply because the dog has not nose and speed enough to drive him into a run. Did any beagle man ever see a fast, true-running beagle that did not have a good nose? Thanking you for the space this letter will take, I will step down, but not out, for I have a few beagles to run next fall, just to keep the judges from catching cold.

GEORGE F. REED.

BARTON, Vt., Dec. 21.

Editor Forest and Stream:

I like to read, in your paper, the views of others regarding beagles and their hunting qualities. In regard to the letter on speed and nose, I fully agree with Mr. Buckstaff that nose is the desirable quality in the beagle for this game. I have hunted a great deal after cottontails with beagles, in fact, have been thanked by farmers for hunting them where they were a pest (but that time is past). If you hunt with a very fast dog and put up an old rabbit where there is not much cover, away he goes, driven by your fast dog. With the slower dog, and of good nose, the rabbit will hide and dodge around, and in all probability you will soon have him. In proof I will relate what I saw on a hunt. My dog had been running a rabbit, but the dog was a long distance off, but still working out the trail. I saw the rabbit squat, so I watched his actions. He cleaned his head with his forepaws, then he brushed and cleaned his whiskers with his forelegs, all the while sitting on his haunches. But as the dog came nearer he squatted low and soon started. He seemed to be playing hide and seek. I did not shoot that rabbit.

Now, in regard to nose. One time I had my beagles taken five miles through a strange district, in a wagon to the hunting grounds. In hunting we lost one dog in the woods, and when ready to go home we found the other dog was missing. One dog arrived home about 3 P. M., the other about 8 P. M. Their only chance to find home was by following the smell of the horses' hoofs. Another example. I had taken my dogs to an Illinois village; they had never been there before, were fresh and wanted a hunt. After hunting all day, about dark I heard them giving tongue in a large field of tall weeds, and they drove four rabbits past me. I shot two, although it was too dark to shoot properly, but the dogs would not come in. I was about three miles from home and was afraid I would lose my dogs, but concluded to give them a test. I had rubber boots on, and following the path from the field into the main road, I walked the three miles, in the center of the road, to my lodgings. I was much concerned about my dogs, but about 9 P. M. I heard a whimper at the door and opening it found one of my beagles. Shortly after I heard another whimper and the other beagle was on the doorstep. Do you wonder that the hunter loves his hounds—what but good nose would have brought those dogs home? JOHN BATEMAN.

DEC. 14.

HUNTING AND COURSING NOTES.

The London (Ont.) Hunt Club is usually represented by one or two couples of good English hounds at the Toronto shows, and a little news in regard to this well-known hunt-club may not be amiss while Jack Frost holds the country in his hard embrace and horses and hounds are eating their heads off in their warm quarters at "Glenmore." An interesting account of the club's organization appears in the London (Ont.) *Daily Free Press* of Dec. 22, and is embellished with numerous pictures of the leading members, the club quarters and the pack. There is also a capital picture of a fox, but this is purely theoretical, as unfortunately these hounds are compelled to follow the lame but strong-smelling anise seed bag. The club was organized in 1885 with a membership of twenty-five; this number has so increased until the club now counts 188 names on its roster. Five years ago the club leased a beautiful old country place called "Glenmore," situated not far from London, and here are the headquarters of the Hunt. There is stabling for thirty horses, and the well appointed kennels accommodate fifteen couple of hounds. We note with pleasure that our friend Dr. J. S. Niven, president of the Canadian Kennel Club, who has been such a good fancier for years back, his name being a household word in cocker and Irish terrier circles, has almost from the first been high up in the club's official list. In 1887-88 he was second vice-president and afterward first vice-president for three years. In the season of 1889-90 he was elected M. F. H., and this argues that he must be familiar with the saddle and a straight rider, for though drag hunting lacks the exciting element of sport that sly reynard furnishes, still a drag is no mean substitute, and nerve and a good seat are required in those who wish to see the finish of a ten-mile burst. Some of the highest jumpers in the world received their schooling over the "Glenmore" fences—Rosemary, Bismark, Maud, Glenmore, Gatling, Rosebud, Dexter, etc. Rosemary, who is now dead, it will be remembered, held the world's record of 7ft. 4½in. made at Chicago in 1890.

* * *

On Dec. 26 the sport-loving inhabitants of Westchester, Pa., enjoyed an hour's run after a bagged gray fox. The event had been prepared for during the past month and there were nearly

The Maplewoods Kept Christmas.

MAPLEWOOD, N. J., Dec. 26.—It is the custom of the members of the Maplewood Gun Club to meet at their grounds each Christmas Day and indulge in sweepstake shooting. Some time during the day sides are chosen and the annual supper is contested for. The winning side pays for the targets and the losers for the supper, which is held on New Year's Eve, at which time the annual meeting of the club is held.

This year proved no exception to the rule. The boys first started in at 4 live birds, and a better and tougher lot never left the trap. No straights were made in the first sweep, as it was found out afterward that the birds had 31yds. start. This was reduced 3yds. in the next event, and as the scores will show, better work was done. The South Orange Field Club was well represented in the morning, which was appreciated by the Maplewood boys. After the live birds were disposed of, targets were next in order, and as the scores show, it was a continual bang until darkness put an end to it. The contest for the supper proved to be very interesting and well contested, as only two breaks separated the teams at the finish, President J. Warren Smith's team pulling out ahead. Scores follow:

Four live birds, $3.

W. N. DRAKE.

Boiling Springs Gun Club.

RUTHERFORD, N. J., Dec. 26.—The following scores were made at our Christmas shoot:

Sweep No. 1, 10 singles: Huck 9, Richmond 9, Laurenson 1, Welles 5.

No. 2, same: Huck 8, Richmond 7, Frank 6.

No. 3, same: Paul 7, Huck 10, James 7, Richmond 8, Lane 7, Laurenson 1.

No. 4, same: James 5, Laurenson 1, Frank 6, Huck 8, Richmond 8, Welles 7, Lain 8, Hutchinson 3.

No. 5, 25 singles: Paul 19, Huck 19, Lane 15, James 18, Laurenson 6, Richmond 19, Welles 13, Frank 15.

No. 6, 10 singles, expert rules: Huck 9, James 7, Paul 8, Jeannette 5, Lane 6.

WM. H. HUCK.

New Utrecht's Christmas Shoot.

The Members of the New Utrecht Gun Club turned out in force on Christmas Day; the weather was favorable and as a consequence a lengthy programme was disposed of, some 430 birds being trapped in the eight events shot off at Woodlawn, L. I.

The ball opened with the return match between the Furgusons and the Lohmans, the seniors having defeated their sons by one bird in a 50-bird race on Dec. 15, the score being 36 to 35. In the return match the number of birds was limited to 30 each side, 15 for each contestant; the result, which is given below, shows that the boys turned the tables on their fathers, defeating them handsomely by three birds, the score standing 21 to 18. Conny Furgueson beat his father by one bird, Danny Lohman leading E. Lohman by two.

The second event was a 50-bird race between C. Furgueson, Jr., and G. W. Coulston. In this event Furgueson handicapped himself too heavily, allowing his opponent one yard and five misses to count as no birds. At the end of the 47th round Furgueson withdrew, the score standing 41 to 40 in his favor Coulston, however, had not taken advantage of his handicap. Considering the way in which Coulston has been shooting of late, the terms ot the race were exceedingly severe. His form during the day was remarkably consistent; altogether he shot at 86, scoring 77; in the sweeps he killed 32 out of 34, with one more dead out of bounds, his average for the day being nearly 90 per cent. In addition to the match Coulston also won the Holiday Cup contest by killing 15 straight, Conny Furgueson making him shoot up to win it; out of the five sweeps he won one and divided first money in the other four. Scores:

No. 1, return match, fathers versus sons, 15 live birds each, fathers at 30yds., sons at 26yds.:

C Furgueson, 3d, 26	211220202222222—13
Danny Lohman, 26	*1002220*122200— 8—21
C Furgueson, Jr., 30	222201122002222—12
E Lohman, 30	212000120200000— 6—18

No. 2, match, 50 live birds each, Coulston receiving 5 misses as no birds:

G W Coulston, 29	0*22210220221022212122212—20

Dec. 22.—This afternoon the fourteenth and closing shoot for the handsome sterling silver cup presented to the club by C. Furgueson, Jr., was won by C. A. Sykes, secretary of the New Utrecht Gun Club, with a score of 10, making his total 95 for the ten qualifying shoots. Mr. Sykes is a class B man, his handicap allowing one miss as a no bird. His nearest opponents were T. W. Morfey, class A, with 94 per cent. for ten shoots, and Conny Furgueson, the 11-year-old champion, with a similar number of kills in the ten shoots he took part in. Conny's handicap allows him one miss as a kill and another miss as a no bird; he stands at 26yds. and shoots a Francotte 16-gauge gun. In consideration of his brilliant work on the club shoots the board of managers, on behalf of the club, have awarded him a special sterling silver cup as a memento of his excellent record at the traps in 1894.

Scores made in to-day's club contest and sweeps are as follows:

Club shoot for New Utrecht Club cup of 1894; conditions, 10 live birds, club handicaps and allowances; class A shoot at 10 birds, class B allowed one miss as a no bird, class C allowed one miss as a no bird and one miss as a dead bird:

Class A.	
Furg'son, Jr., 30	2222202222 — 9
Class B.	
C A Sykes, 29	11221202212—10
G W Coulston, 29	2121222212 —10
Class C.	
Furgueson 3d, 26	1122022202201—9
E Lohman, 26	0012002*2211—7
L Pennington, 27	1120002002001—6
D Lohman, 27	1100022*0221—7

Sweeps, with club handicaps, were shot as follows at 5 birds, $2:

C Furgueson, Jr.	11121—5	22222—5	21222—5
C Furgueson, 3d	11012—4	11202—4	02001—2

Eureka Gun Club.

CHICAGO, Ill., Dec. 27.—The Eureka Gun Club's Christmas shoot was started punctually at 9 A. M. on the morning of the 25th. A large attendance of a strictly amateur class was present, many of whom were there, not to shoot, but simply to look on. Few, however, could withstand the temptation to try their skill at 10 or 20 targets, but, unfortunately, the result of their efforts will remain to a certain extent unknown to the outside world, the reason being that some one purloined a few of the score sheets. Twelve events in all were shot, only nine of which are given below:

No. 1, 10 targets, unknown angles, $1: Morgan 7, Abel 2, Ferguson 3, Dr. Carson 5.

No. 2, same: Morgan 3, Able 2, Ferguson 5, Dr. Carson 3.

No. 3, 20 targets, unknown angles, $1.50:

Morgan	10101001101011010111—12
Abel	01000000010010001100— 5
Ferguson	11111101110000010101—12
Dr Carson	01100001100000111011— 9
Hendricks	01010100010100100110— 8
Taylor	01101000000110010101— 8
A W Hammond	00000100100100000010— 4
Maltby	00000000001111100001— 6
Glover	01010011100000010001— 7
DeWolf	10110011110100011111—13

No. 4, 10 targefs, unknown angles, $1: Morgan 7, Able 3, Ferguson 8, Carson 6, Hendricks 4, Hammond 3, Glover 5, DeWolf 2, Morton 2, Goodrich 7, Maltby 2.

No. 5, same: Morgan 8, Abel 2, Ferguson 8, Carson 6, Hendricks 1, Hammond 4, Glover 6, DeWolf 7, Morton 2, Goodrich 5, Maltby 5, Young 3.

No. 6, 20 sweeps, unknown angles, $1.50:

Morgan	10101101010110011111—13
Ferguson	11000101010001110001— 9
H Jones	00000000000000010000— 1
Glover	00001111100100001010— 8
DeWolf	01110101110111101111—15
Goodrich	10100000000100100001— 5
Maltby	11000000001011110010— 8
A M Jones	10100000010010110001— 7
Hendricks	00001010100100011110— 7

No. 7, same: Morgan 13, Abel 7, Ferguson 11, Glover 11.

No. 8, same: Morgan 13, Abel 7, Ferguson 9, Glover 10, Taylor 4, Carson 5.

No. 9, 20 targets, expert rules, $1.50: Morgan 15, Glover 14, DeWolf 17.

W. F. D.

Larchmont Club Scores.

A strong northwesterly wind on Saturday, Dec. 22, helped to make the live birds at Larchmont strong and fast. As a natural result scores did not rule high, notwithstanding the presence of such men as Fred Hoey, J. P. Knapp, L. T. Davenport and Capt. Money. J. T. Taylor and F. G. Moore were also on hand and shot in a few sweeps, the former also shooting a race at 25 birds with Knapp; that race was won by Knapp with a score of 23 to 22. Knapp's form has so materially improved that he is now placed on the 30-yard mark; his percentage on Saturday was over 88, as he killed 61 out of 69 shot at. Taking into account the conditions as to weather and birds, the percentage is a high one. Davenport killed 32 out of 38; Hoey 33 out of 40; Taylor 41 out of 50; Money 17 out of 23; Moore 15 out of 19. Exactly 239 birds were trapped, out of which 199 were scored within bounds, an average of 83 per cent. Scores:

Special match, 25 live birds, 30 yards rise, 50 yards boundary.

Cobweb Gun Club of Harlem.

WEST FARMS, N. Y., Dec. 22.—The Cobweb Gun Club of Harlem held their annual shoot at live birds on Dec. 20, at the above grounds. In the medal shoot James Looney came out ahead with a straight score of 10. Scores:

Medal shoot, 10 live birds: J. Looney 10, F. Train, T. Odel P. McKeon, Bannon and F. Hendricks 8, J. Elliott, P. Pell an E. Fay 7.

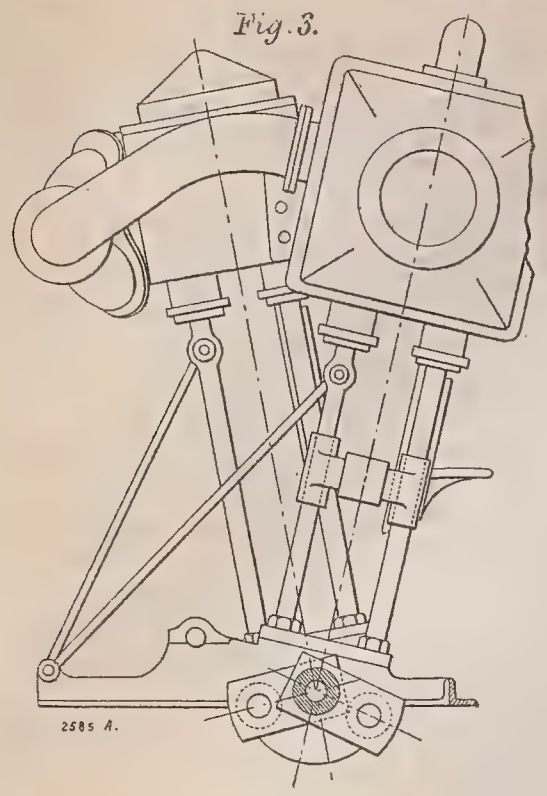
Sweep, 5 birds, $5: T. Odell 5, P. McKeon and P. Pell 4, J Elliott, J. Looney, F. Train and F. Hendricks 3.

Sweep, 5 birds, $5: J. Elliott 5, F. Train, E. Fay and P. Pell 4, F. Hendricks and P. McKeon 3, T. Odell 1.

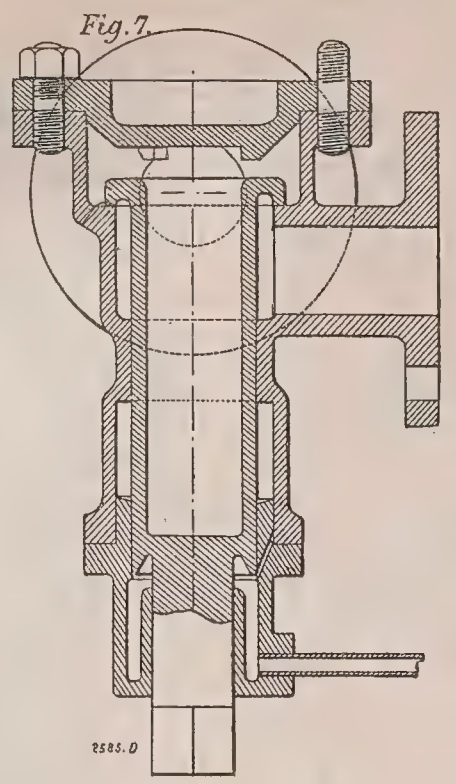
Match, miss and out, $10, Elliott vs. Train: Train 9, Elliott 8.

West Newburgh Gun and Rifle Association.

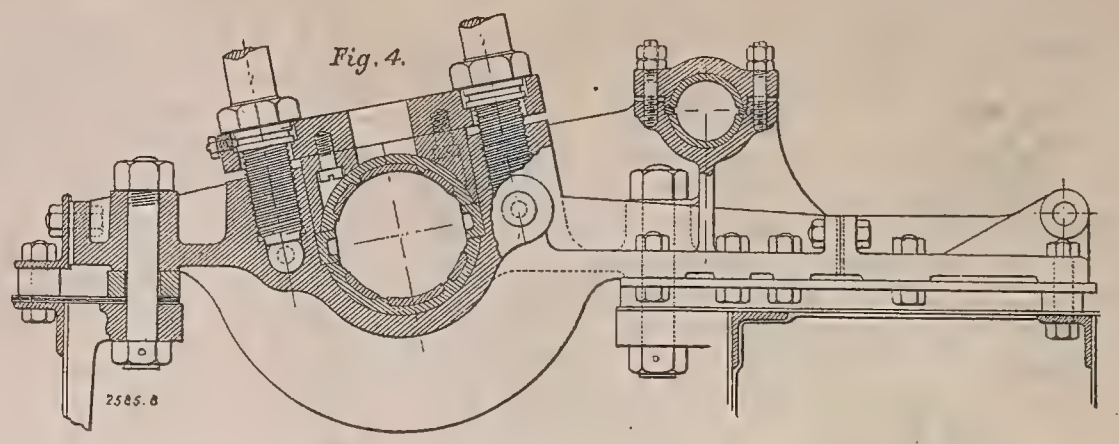
NEWBURGH, N. Y., Dec. 28.—The dates chosen by us for our tournaments to be held in 1895 are May 9, 10 and 11 and Oct. 9, 10 and 11. We expect to make them the best we have ever held. The first two days of each tournament will be devoted to clay birds and the last day of each will be devoted to live birds.



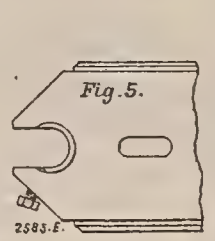
WM. C. GIBB, Sec.



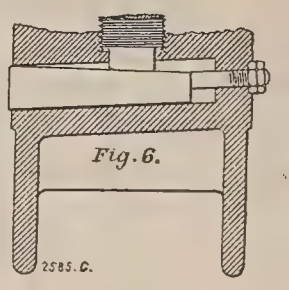
Rockaway Point Rod and Gun Club.



NEW YORK, Dec. 27.—The members of the Rockaway Point Rod and Gun Club enjoyed a good day's shooting at Rockaway Park yesterday. Each event was at targets and the weather was such that only one straight score was made during the day; that straight was made by Louis Schortemeier in the eleventh event of the day. All the events were one money, high guns dividing.



Keystone Shooting League.



PHILADELPHIA, Pa., Dec. 26.—The Christmas Day shoot of the Keystone Shooting League was well attended, and those members of the club who journeyed to the grounds at Holmesburg Junction were well repaid. Everything was well arranged, the club house was extremely comfortable and everybody got all the shooting they wanted.

be open to all recognized yacht clubs, and a close regatta on Labor Day.

The rebuilt Thetis, now a schooner with a modern bow, was launched from Lawley's yard on Dec. 22, in the presence of her owner, Mr. E. B. Baugh, of Philadelphia, who has renamed her "Mon Reve." Apropos of Thetis, the story of her race with a cutter is going the rounds of the papers in a very incorrect shape, the 45ft. cutter Maggie being named as her antagonist. It was not Maggie, but Stranger, a much larger boat, of the same length as Thetis; after the race at Newport for the citizens' cups, in Sept. 1886, the two started around the Cape for Boston, not racing, but starting at the same time to make the passage. Some very coarse weather was met with and Stranger hove to under the Cape, from all accounts making bad weather of it, while Thetis went on her way and made her port in good time.

Wadena, steam yacht, J. H. Wade, arrived at Bangkok on Nov. 25, with owner and family on board, and was to sail Dec. 2.

The Christmas number of the *Yachtsman* this year is the regular issue of the paper for Dec. 13, of the usual size page, but containing in all 60 pages. Three colored supplements are given, one of the bows of Vigilant, and two of Vigilant and Britannia. The different pages are printed in various tints which serve to bring out well the smaller illustrations, of which there are a great many. Two designs are given, one for a 40 rater of 57ft. l.w.l. of semi-fin type and with a most peculiar rig, the mast well forward and but one headsail, tacked to the stemhead. The other design is for a 2 rater with two centerplates. The reading matter is very good, the biography of Capt. John Woods, who sailed Livonia here in 1871, being specially interesting.

There has been a dearth of news this week, pending the meeting of the Royal Yacht Squadron on Jan. 7. The present status of the negotiations is discussed at length on our editorial page. While no positive action toward building a Cup defender has yet been taken, it is certain that an order will be placed with the Herreshoffs as soon as a race is decided on. Mr. George Gould, who has been nominated for Commodore of the Atlantic Y. C., will bring Vigilant home if she is needed for the trial races.

High Speed Vessels and Engines.

A great deal has been heard at times in this country of speeds of 30 knots and over by various high speed craft, but so far as thorough, authenticated tests go, all such claims must give way to the official records of the latest torpedo boat destroyers turned out by Messrs. J. I. Thornycroft & Co., of Chiswick, on the Thames. We are indebted to *Engineering*, of Nov. 2-16, for the accompanying descriptions and illustrations:

"The engines here shown possess especial interest from the fact that the Daring attained the extraordinary speed of 29¼ knots during one run on an unofficial trial. An account of this trial appeared in these columns, and it will be remembered that the fastest run on the mile was made against a tide which, though slack, certainly did nothing to accelerate the speed of the boat between the section posts. In order to prevent misconception, it should be added that the vessel was not carrying her full load, as required by Admiralty regulations. Nevertheless, the performance was an extraordinary one; and on her contract trial she made a mean speed of 28.213 knots during the six runs on the measured mile. It may be as well to state here generally that in estimating the relative speed of vessels it is important to note whether the recorded rate of steaming is that attained on the contract or taking-over trial.

"The engines illustrated are of the three-stage compound type, and have high and intermediate pressure cylinders 19in. and 27in. in diameter, while there are two low-pressure cylinders each 27in. in diameter. The stroke is 16in. The general design, as will be seen by our illustrations, is quite novel. The set of engines (there are two sets to each vessel, as the torpedo boat destroyers are twin-screw) is structurally divided in two parts, of which the high and intermediate cylinders form one, while the two low-pressure cylinders form the other. This is well shown in Fig. 1. As will be seen by our illustrations, the cylinders are inclined from the vertical, and this enables the engines to be contained in a shorter fore-and-aft space than if they were upright. The crankpin bearings are of the great length usual in fast-running engines of this type, and, the cylinders overlapping in the way they do, there is no room for main bearings between the cylinders of each pair. Each pair of cranks is therefore arranged in the following manner: There are two ordinary crank webs forged in one with the shaft in the usual manner, and from these the crankpins project. At the other end of the crankpins is a double web common to both crankpins, one pin projecting from one end of the web and the other pin from the other end. For purposes of description it might be said that there are two overhung cranks connected by an intermediate web.

"The framing of the engines is no less unusual than the crank arrangement. In place of the ordinary pillar standards placed back and front of the cylinders, there are central pillars in pairs, which extend down to the main bearings, being formed, in fact, by a prolongation upward of the keep bolts of these bearings. In this way the standards are almost directly over the crankshaft, and practically in the same fore-and-aft plane as the piston rods. They, therefore, take the thrust of the pistons directly, and it will be evident that the breastplate can thus be very much lightened. There are also diagonal stays, as shown in Fig. 3. Between each pair of these central standards, and attached to them, is a strong steel casting, plainly shown in Fig. 2. The bottom ends of the slipper guides are bolted to this casting. When it is necessary to examine or remove the main bearings, the nuts on the combined bolt and standard can be moved up on the latter, and the keeps can then be slid up, thus exposing the brasses.

"In these engines a successful attempt has been made to arrange the moving parts so that they may counterbalance each other, no weights being necessary especially for balancing purposes; naturally a point of advantage in regard to the saving of weight. The cranks, as already stated, are arranged in pairs, each crank of a pair being almost opposite to its fellow. By this means two adjacent cylinders have, at any given time, their reciprocating parts moving in opposite directions. With regard to fore-and-aft vibration, there is a couple tending to rotate the shaft in a vertical longitudinal plane round a center between any two adjacent crankpins, but the cranks being so close together—having no bearing between as already described—the effort is so small as to be inappreciable. We have said that the cranks are almost opposite to each other, and it will be seen that if they were diametrically opposed they would not pass the dead centers at the same instant, owing to the different inclinations of the cylinders. For a portion of the stroke, therefore, the pistons would both be moving in the same direction, and the engine would be unbalanced to this extent. The cranks of each pair of cylinders are, therefore, set so that the angle between them is 180 deg., less the angle corresponding to the inclination of the cylinders from each other, and in this way both pistons reach the opposite ends of their respective strokes at the same time. Another useful end attained by this arrangement of cranks is that the pressure on the bearings is relieved throughout the stroke. Were the cranks opposite, both pistons would press in the same direction during a part of the stroke. As a practical result this system of natural balancing works out excellently. During the trial of the Daring, when running at full speed, vibration of the boat was hardly felt, as stated in the account of the trial published in our issue of June 29 last; and it is said that when the boat was steaming 29¼ knots one of the Admiralty officials wrote his name on a piece of paper which was resting on the deck at the stern, and though the writing shows slight evidence of tremor it is perfectly distinct.

"Although the idea of placing the engine cylinders at a small inclination from the vertical, and the device of having the main standards over the main bearings (the latter was, we believe, first introduced by the Herreshoffs in some vedette boats built for the British Navy in 1883), are not new, the engines we now illustrate show a bold departure from recognized practice, and Messrs. Thornycroft are to be congratulated on the remarkable success that has attended their excursion into the often dangerous territory of originality in mechanical design.

"The boilers of the Daring are of the new Thornycroft water-tube type, three in number, and have a total heating surface of close upon 8,000sq. ft., the grate surface being 180sq. ft. The propellers are three-bladed, the blades being of phosphor bronze.

"On the preliminary trial above referred to, when a speed of 29.268 knots was reached on one run, the boiler pressure was 215lbs. to the square inch, and the revolutions 395 per minute. The power given off by the main engines was 4,842 indicated horse-power.

"With regard to other novel points of the design, Fig. 4 shows the details of the cross-bearers of the engine. Strictly speaking, there is no bedplate to these engines, the cross-bearers being attached to the floors and longitudinals of the hull by a single bolt at each end as shown. The bearers however, are connected together longitudinally in the front by a stout steel angle-bar, which is plainly shown in Fig. 2, and in section in Fig. 3. It should be noted that our engravings, Figs. 1 and 2, have been prepared from photographs taken when the engines were standing in the erecting shop. Our readers will distinguish between the four erecting-blocks shown on the timbers and the engines themselves. The latter end with the angle-bar shown. At the back the cross-bearers are connected by a steel plate plainly illustrated in Fig. 1, where three timber erecting-blocks are also shown. It should be stated that when complete the cylinders have coverings of sheet steel, which give them a more sightly appearance than they have in our illustrations, although as depicted a better idea is gained of the general design. Fig. 5 illustrates a device which has been introduced for facilitating the removal of the main bearing keeps. In place of the columns passing through holes, as was the case in the Daring's engines, a notch is provided, as shown, and by tilting the keeps they can be removed bodily. In order that the useful effect of the keep in tying together the two sides of the cross-girder may not be lost, the part where the nuts bed is recessed as shown. Fig. 6 illustrates the method followed of preventing end shake in the columns. There is a wedge which can be set up by the nut, thus pressing the column upward and jamming the thread of the screw. Fig. 7 shows in section a steam-reducing valve placed on the connections between the high and intermediate pressure cylinders. The chief object of this is to equalize the load on the two cranks at starting. Steam passes into the annular space shown and lifts the cylindrical valve in the center with turned-over lip as shown. This allows steam to escape through the branch at the back. As will be seen, the valve is of the differential type. Its action may be expressed as follows: If the area of the upper side of the valve is n times the area of the annular lower side, the valve will close when the steam pressure above the valve is more than $\frac{1}{n}$th of that below the valve, and will again open if the pressure falls below that limit. Thus the valve will take steam from the engine side of the main stop valve, and deliver it reduced to $\frac{1}{n}$th of its initial pressure to the intermediate steam chest (by means of the pipe shown in Figs. 1 and 2) as soon as steam is admitted to the high pressure cylinder, and will automatically close as soon as the pressure from the exhaust steam from the high-pressure cylinder is greater than $\frac{1}{n}$th that of the initial steam pressure. A similar valve was also fitted in the Daring's engines between the intermediate and the low-pressure cylinders, as shown in Fig. 1. This enabled the low-pressure pistons to start the engine if the high and intermediate cranks were on their dead centers.

We append a copy of the details of the runs on the mile made during the official contract trial; the displacement being about 240 tons on a draft of 5ft. 7⅛in. forward and 6ft. 11¼in. aft.

No. of Run.	Steam in Boilers.	Revolutions per Minute. Starboard.	Revolutions per Minute. Port.	Speed in Knots.	First Mean.	Second Mean.

"On Nov. 9 there was made a preliminary trial of the torpedo boat destroyer Ardent, the first of three sister vessels which have been built by Messrs. J. I. Thornycroft & Co., of Chiswick, to the order of the Admiralty. The torpedo-boat destroyer class, like all other types in the Royal Navy, is still growing; the new vessels, of which the Ardent is the first, are 15ft. longer than the destroyers Daring and Decoy, lately completed for the Government by this firm. The engines are similar to those of the Daring, which we recently illustrated and described. The Ardent is, therefore, 200ft. long, 19ft. wide and 14ft. deep, the latter dimensions being 1ft. greater than in the Daring and Decoy. The description of the latter vessels in our issue of June 29 last, will apply generally to the Ardent, so we need not go again into details. The vessel is twin-screw, and the engines are of the three-stage compound type, having cylinders 19in. in diameter and 27in. in diameter for the high and intermediate pressure cylinders respectively, while there are two low-pressure cylinders to each set of engines, each of which is also 27in. in diameter. The boilers are of the Thornycroft type, similar in general design to those of the Daring. In the Daring's boilers there were two close walls of tubes forming the exterior of the furnace space or combustion chamber; the products of combustion passing to a space, or uptake, in the center of the boiler between the two furnaces. In the Ardent's boilers the same outer rows of adjacent tubes are retained, but bent inward toward the furnace space is a row of other tubes, which, however, are not touching each other, so that the heating gases can pass between them to the walls of tubes at the back. In this way an addition has been made to heating surface, and, though the back tubes are somewhat masked, the arrangement has resulted in more steam being generated, with a corresponding increase in power developed by the engines.

H.M.S. ARDENT, AT THE MAPLIN, NOV. 9, 1894.

"The trial of Friday last, as stated, was of a preliminary nature, the official trial with all weights on board being yet to be made. Occasion was taken, when making the preliminary trials of the Daring, to get runs at progressive speeds, and the same course was followed with the Ardent in order to get further evidence bearing upon the performance of these vessels. Daring made 7.86 knots at 91 revolutions, 14.2 knots at 175 revolutions, 18.3 knots at 238 revolutions, 23.4 knots at 322 revolutions, and finally 28.656 knots at 334.3 revolutions, the steam pressure being 200lbs., and the power 4442 indicated horse power on the latter run. The table gives the results obtained last Friday.

"It will be seen, therefore, that the Daring's speed has been exceeded by the later and longer vessel, but it has required an

one hundred hunters present with almost as many hounds, the Westchester hunt predominating. The fox was set free at 10 A. M. and took a straight course to his old home in the Brandywine Valley. The hounds were soon in pursuit, but after running an hour somehow took the back track and brought up at the starting point, while sly reynard laughing in his brush will serve for another day when the hounds, it is to be hoped, will take a truer line.

* * *

The energetic secretary of the Dixie Red Fox Club, Mr. J. H. Wallace, Jr., of Town Creek, Ala., sends us the prospectus and constitution of the club. From this we gather that the first annual hunt will be near Rowland, Limestone county, Ala., for six days between Oct. 1 and 15, 1895. The main object will be sport, but those who wish to have trials can compete in an All-Age Pack Stake, all hounds eligible, entry fee $1; fees to go to the purse and additional money to be added by the club. The Derby is for hounds under twenty months, with same conditions as to fees and purse.

* * *

The example of the Brunswick Fur Club seems to be spreading apace, and from present indications it looks as if foxhound trials will soon become as numerous and popular as pointer and setter trials have been.

* * *

Mr. O. F. Joslin, of Oxford, Mass., has presented his well known foxhound Rock to Mr. J. E. Carr, of Holliston, Mass. As we always understood that Rock was the apple of his owner's eye as a foxhound, Mr. Carr must be congratulated on his good fortune.

* * *

A contemporary says that before the next meet of the National Fox Hunters' Association a number of foxes will be "deliberated." While this may be a deliberate truth, the success of future meets will depend more upon the deliberations of those who are responsible for the arrangements than the deliberation of the foxes.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

BRED.

☞ **Prepared Blanks sent free on application.**

Fannie Bly—Old Boy.—Dr. H. Williamson's (Detroit, Mich.) cocker spaniel bitch Fannie Bly (champion Mike—Nellie Bly) to H. F. De B. Cameron's Old Boy (champion Bendigo—Hilda), Dec. 11.

Hilda—Old Boy. H. F. De B. Cameron's (Detroit, Mich.) cocker spaniel bitch Hilda (Dandy W.—Blackie H.) to his Old Boy (champion Bendigo—Hilda), July 24.

Cliquot—Old Boy. Major Webster's (Detroit, Mich.) cocker spaniel bitch Cliquot (champion Bendigo—Maud S. II.) to H. F. De B. Cameron's Old Boy (champion Bendigo—Hilda), June 6.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Mere Summons. Mere Kennels' (Tarrytown, N. Y.) fox-terrier bitch Mere Summons (Lucifer—Wrestless), Aug. 18, five (four dogs), by their Ripon Stormer (Stipendiary—Belmont Jinny).

Dame Primrose. Mere Kennels' (Tarrytown, N. Y.) fox-terrier bitch Dame Primrose (Diplomacy—Hunton Sortly), Dec. 20, three (two dogs), by their Fijah (Dashing Duke—Boston Daisy).

Mere Cleo. Mere Kennels' (Tarrytown, N. Y.) fox-terrier bitch Mere Cleo (Despoiler—Dame Primrose), Dec. 22, three (one dog), by their Ripon Stormer (Stipendiary—Belmont Jinny).

Mere Mollie. Mere Kennels' (Tarrytown, N. Y.) fox-terrier bitch Mere Mollie (Suffolk Surprise—Mere Benson), Oct. 19, five (two dogs), by their Fijah (Dashing Duke—Boston Daisy).

Dudley Nettle. Mere Kennels' (Tarrytown, N. Y.) fox-terrier bitch Dudley Nettle (Kingcraft—Starden's Brownie), Sept. 21, four (one dog), by F. Redmond's Dominie (Pitcher—Vene).

Ray of Light. Mere Kennels' (Tarrytown, N. Y.) fox-terrier bitch Ray of Light (Ripon Thunderer—Day Dawn), Aug. 21, six (four dogs), by Raby Barrister (Stipendiary—Rhodie).

Hilda. H. F. DeB. Cameron's (Detroit, Mich.) cocker spaniel bitch Hilda (Dandy W.—Blackie H.), Sept. 23, seven (four dogs), by his Old Boy (champion Bendigo—Hilda).

SALES.

☞ **Prepared Blanks sent free on application.**

Czar. Black cocker spaniel dog, whelped Sept. 23, 1894, by Old Boy out of Hilda, by H. F. DeB. Cameron, Detroit, Mich., to Ed. Pipher, Detroit, Mich.

Old Boy—Hilda whelps. Black cocker spaniels, whelped Sept. 23, 1894, by H. F. DeB. Cameron a dog and bitch to W. C. Davis, Kalamazoo, Mich., and a dog to C. Michaelis, Detroit, Mich.

Mere Jollice—Mere Emia whelp. Fox-terrier bitch, whelped April 19, 1894, by Mere Kennels, Tarrytown, N. Y., to G. von Nimptsch, New York.

Mere Jollice—Boston Daisy whelp. Fox-terrier bitch, whelped July 10, 1894, by Mere Kennels, Tarrytown, N. Y., to H. Leeds, Jr., New York.

Fijah—Mere Mollie whelp. Fox-terrier dog, whelped Oct. 19, 1894, by Mere Kennels, Tarrytown, N. Y., to C. K. Berdan, Paterson, N. J.

Fijah—Mere Benson whelp. Fox-terrier dog, whelped April 17, 1894, by Mere Kennels, Tarrytown, N. Y., to J. M. Wallis, Altoona, Pa.

Mere Chance. Fox-terrier bitch, whelped Dec. 29, 1892, by Suffolk Surprise out of Wrestless, by Mere Kennels, Tarrytown, N. Y., to T. Martin, Tarrytown, N. Y.

Mere Apresa. Fox-terrier bitch, whelped April 17, 1894, by Fijalo out of Mere Benson, by Mere Kennels, Tarrytown, N. Y., to A. C. Coddington, New Rochelle, N. Y.

Glenwood. Fawn greyhound dog, whelped June 1893, by Glenkirk out of Gilda, by American Coursing Kennels, Huron, S. D., to C. H. Arkright, Yankton, S. D.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

1. The Irish terrier The Emerald Queen is not registered in the E. K. C. S. B. 2. There is no real cure for chorea; it will not affect the bitch's general health.

J. T. N., Philadelphia, Pa.—Antonio is by Roderigo out of Bo-Beep, by Rake out of Clara Dale; Roderigo, by Count Noble out of Twin Maud. Mark, by Rob Roy out of June, by Rake out of Fanny; Rob Roy, by Fred out of Rhœba. Princess Belton is not registered, and so we cannot carry on Bessy's pedigree.

"Forest and Stream" Fan Pedigree Blank.

FOR some time past breeders of dogs have demanded a pedigree form that would afford spaces for a more extended pedigree than those hitherto published. The difficulty has been in arranging a form that, while admitting the required extension, would be compact and not too large for mailing. This difficulty has been solved in the "FOREST AND STREAM Fan Pedigree Blank," which is so arranged that a dog's pedigree can be recorded for eight generations, and the spaces, radiating from a center the reader is enabled to trace at a glance the different strains which lead from sire and dam. Spaces are also provided for recording the name of dog, its breed, color, sex, breeder and address, dates of birth and purchase, from whom purchased, E. K. C. and A. K. C. Stud Book numbers and certification. These blanks are for sale at $2 per hundred, 30 cents per dozen, by the Forest and Stream Publishing Co., 318 Broadway, New York.

Mounted Heads.

MESSRS. W. W. HART & CO. are offering this week an unusual opportunity for sportsmen to purchase mounted game heads at low prices. In many cases the heads are sold at a less price than the cost of mounting alone.—*Adv.*

Yachting.

The *Yachting World* falls into a curious error in speaking of the chairman of the cup committee as "Mr. Smith, President of the New York Yacht Club." The New York Y. C. has no president, and Mr. Smith has no title save the honorary one of "Commodore," which he shares with a great many other prominent yachtsmen. There is no question, however, that the office which Mr. Smith has so long held, of mover of all motions relating to the America's Cup, and head of all cup committees, is deserving of suitable and formal recognition of the club. We would suggest to the club that at the coming meeting it establish a new office, that of Lord High Concessioner and Interpreter of Deeds, of which Com. Smith shall be the first incumbent.

YACHT NEWS NOTES.

A special meeting of the delegates to the Inter Lake Yachting Association was held on Dec. 6 at the Boody House, Toledo, the following gentlemen being present: Commodore G. W. Gardner, Secretary E. W. Rader and Delegate G. W. Leutkemeyer, of Cleveland; Delegate L. Lockwood, Sandusky; Delegate V. W. Dollen, Put-in-Bay; Delegate Vice-Commodore Gates, Judge A. P. Crane, Captain Roland Potter, Frank Frey and Brayley.

Secretary Rader presented a long and comprehensive report, touching on the experience of the past season and suggesting many points which demanded consideration and action. The report was discussed, and it was resolved to call a special meeting in January, prior to the annual meeting of the Association, to consider proposed changes.

Elma, schr., formerly the sloop Priscilla, designed by A. Cary Smith in 1885, has been sold to Messrs. Beeman and Worthington, of Cleveland, part owners of Wasp, schr. This latter yacht has been sold to W. S. Jones, of Buffalo.

The Pavonia Y. C., of Jersey City, has elected officers for 1895, as follows: Com., D. W. Kohn; Vice-Com., J. A. Dennin; Fleet Cap., L. W. Forbell; Meas., A. P. Curtis; Surgeon, Dr. L. Bauman; Cor. Sec., W. A. Miller; Fin. Sec., W. F. Tobin; Treas., B. H. McClain; Trustees, W. J. Kent, E. J. Smith, N. Pritchard, G. A. Skinner, W. B. Adams; Finance Committee—R. Koster, E. R. Wessels, F. A. Agens; Regatta Committee—N. L. Rowe, L. Mittelsdorf, B. H. McClain; Anchorage Committee—A. J. Kremeyer, A. F. Roe R. H. McFarland; House Committee—N. L. Rowe, L. Mittelsdorf, W. Willis, J. Leonard, J. H. Van Mater; Delegates to N. Y. Yacht Racing Association, N. L. Rowe, F. M. Randall, J. A. Dennin.

Resolutions of regret were adopted on account of the death of ex-Gov. Leon Abbett, who was an honorary member of the club.

The annual meeting of the Rochester Y. C. was held on Dec. 10, the following officers being elected: Com., A. T. Hagan; Vice-Com., F. S. Todd; Fleet Cap., J. W. Robbins; Sec. and Treas., T. B. Pritchard; Cor. Sec., Herbert Leary; Directors, R. K. Dryer, J. R. White, J. E. Burroughs, W. H. Briggs; Delegates to Lake Yacht Racing Association, J. E. Burroughs, T. B. Pritchard, W. H. Briggs; Alternates, E. N. Walbridge, D. R. Clark, B. E. Harding, Professor La Bonde, John Wood, Clarence Whittlesey, James Hudon.

Lagonda, steam yacht, has been chartered by Rev. W. L. Moore to D. E. Mantelli.

At the meeting of the Peewaukee Lake Yacht and Ice Boat Club of Peewaukee, Wisconsin, Gen. Lewis Auer was elected Com., A. Hathaway, Sec., and Chas. Kipp, Treas.

John Lee Carroll, Jr., son of ex-Gov. John Lee Carroll, and brother of Royal Phelps Carroll, has been adjudged insane by the Maryland courts. Mr. Carroll purchased Minerva from Mr. C. H. Tweed in 1891, and raced her for the season. He has been in ill health for some years.

On Dec. 21, the Bath Iron Works signed a contract with R. H. White, of Boston, for a steel steam yacht similar to Mr. Slater's Eleanor, but of smaller size; 151ft. over all, 129ft. 4in. l.w.l., 22ft. 6in. beam and 11ft. draft. The engines will be triple-expansion, 14, 21 and 34 by 24in., and the guaranteed speed will be 16 miles.

The Harlem Y. C. has elected the following officers for 1895: Com., Walter A. Brady; Vice-Com., John Wimmer, Rear Com., Lorenz Zeller; Fleet Cap., Frederick A. Wendal; Fleet Surgeon, Dr. H. M. Cox; Meas., W. D. S. Hyer; Treas., T. Charles Allen; Fin. Secty., Harmon B. McAllister; Rec. Secty., Sidney Macy; Cor. Secty., Frank W. Creegan; Steward, Michael L. Goetz; Board of Directors, James F. Lalor, Daniel Ryan, B. F. Saxton, E. F. De Levante, John A. Kipp, J. H. Andrews and Dr. F. E. Bauer; House Committee—Walter Scardefield, John Traugott, John Mooring, Samuel J. McCauley and Frank Felleman; Membership Committee, John S. Mileer, George J. Oakes and Augustus W. Warner.

The club has withdrawn from the New York Yacht Racing Association, and will probably hold two regattas next year—the regular spring regatta on Decoration Day, which this year may

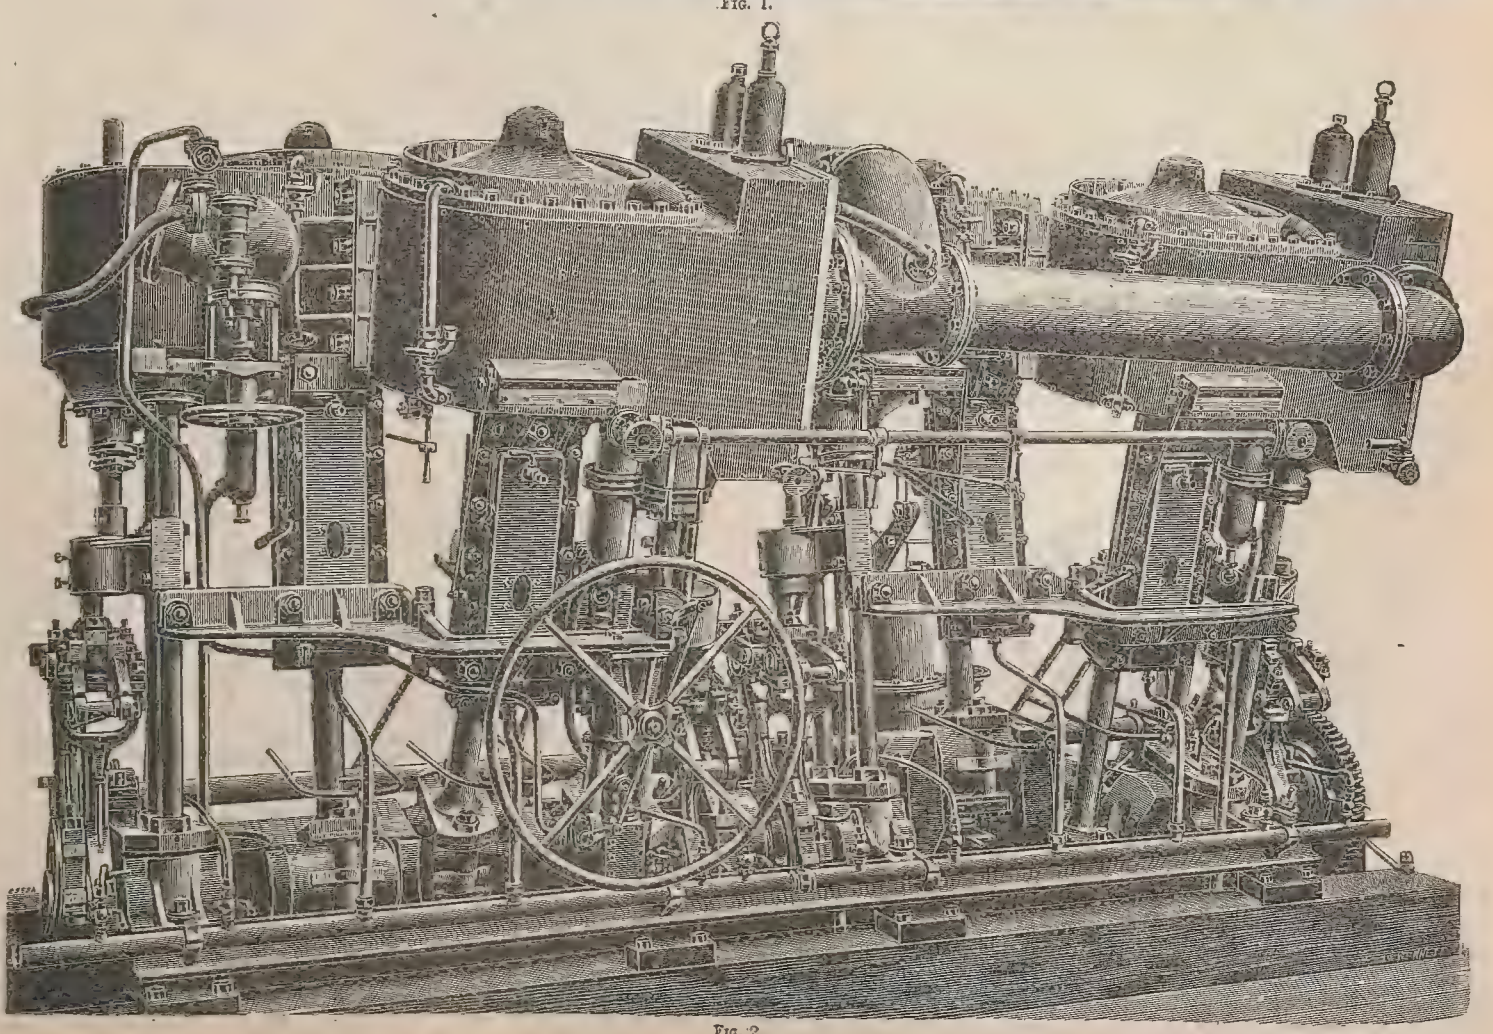

FIG. 2.

ENGINES OF TORPEDO DESTROYER "DARING."

Control of Trap-Shooting.

If the agitation against dropping for place, as evinced by the many letters published on that subject in the columns of FOREST AND STREAM, should bear no more fruit, it has at any rate placed before the trap-shooters of the United States the fact that dishonesty and crooked work at the trap must be put an end to, or else trap-shooting as a sport and a pastime must go by the board.

The December issues of FOREST AND STREAM have been, therefore, of especial interest to trap-shooters. The hearty indorsements of the scheme propounded for the control of trap-shooting have been worded in no uncertain language. The demand for some national association, some head, endowed with the government of matters pertaining to trap-shooting, has been as widespread as the evil which it shall be the part and duty of that association to combat and overcome.

But the organization of this association must be the work of the trap-shooters themselves. In their hands alone lies the redemption of the sport of trap-shooting from the level of a business, to which it has been reduced by the malpractices of a comparatively small number of consistent "droppers." On black sheep is said to spoil a whole flock. Certain it is that the actions of a single "dropper" will mar the pleasure of an otherwise successful tournament. And it has been urged that much of the dropping for place that has of late been so marked a feature of our tournaments is caused by a semi-instinct of self-preservation. It is but a poor argument at the best, and is equivalent to the claim made by many a game law violator: If I don't kill them, some one else will. The proper and the only manly way to combat this dropping for place is to organize, adopt a constitution, legislate against all crookedness at the traps, and see to it that these laws are lived up to. Then, and then only, can trap-shooting as a sport, and as a means of recreation and honest rivalry, thrive and flourish as its best friends would have it live and grow. Memphis sounded the keynote some time ago; Cleveland and Pittsburg, two great trap-shooting centers, are also well to the fore; Massachusetts has also been heard from, and there is no doubt about New York, New Jersey or Pennsylvania.

In response, therefore, to an expressed demand for the organization of a National Association of Trap-Shooters, a convention of those interested in the future welfare of the sport will be held at the Astor House, New York city, on Thursday, Jan. 24. The names of those who back this call for a convention, together with the terms of the call itself, will be given in our next week's issue.

In the time which will elapse between now and Jan. 24, it is the duty of every gun club to take action on this matter. Whenever possible delegates, one from each club, should be appointed to attend this convention; if this is impossible, some resolution indorsing the purposes of the convention should be passed, thus strengthening the hands of those who are able to attend in person. All such communications may be addressed to "Control of Trapshooting," care of Forest and Stream Publishing Company, 318 Broadway, New York.

That is the way to commence the year of 1895.

Hebbard Goes on Record.

NEW YORK, Dec. 29.—*Editor Forest and Stream:* "Would that we were any of us half so immaculate as we insist that our neighbor shall be."

Ever since this old world of ours has swung around on its axis, and its surface been trod by people, just that length of time it has been the object of man, in whatever position he has been placed, to get the best of the "other fellow," or to use the phrase from the subject we are discussing, "to drop into a better place" than any one else occupies.

And why?

Simply because it is human nature, in which is instilled a spirit of ambition, of rivalry, of trying to 'git thar," which pervades each and every one of us in more or less degree, and the more one man is blessed with this spirit the easier it is for him to "drop into the best places" in this life.

Beginning with Adam and Eve, we find them happy in the Garden of Eden, but thinking to better themselves they "dropped into a place," *i. e.* tied with the serpent and were "shot out" of Paradise, so we are told.

Old Noah had better luck and "dropped for a place" on Mt. Ararat, and was all alone for first money and everything else in sight.

And so it goes, and has gone until the present day.

It is understood that I have no sympathy with the "dropper," nor do I attempt to defend his practice in any way, but there is one point all of your correspondents, I think, have overlooked, viz.: Has he no rights in the premises under the present rules and methods of conducting tournaments?

When caught in the act or even accused of it, he will quickly ask you, what of it?

Yes, what of it?

He will also ask you if this shoot is not advertised open to all; if he has not paid as much entrance money as any other contestant; if he is not shooting strictly under American Association rules, revised by a person who never shot in a tournament in his life; and also if he has not as much right to break a certain number of targets, or miss them all if he desires, as any other shooter has to try and break them all.

His questions are pertinent, in fact unanswerable.

You will tell him that it is not sportsmanlike, and that the tournament is given for the recreation and enjoyment to be obtained from it, to gentlemen, by gentlemen and for gentlemen; but his reply will be that it is your privilege to get all the pleasure and glory possible, but he has the same right to get the cash if he can.

He will beat you in an argument on facts, under present conditions and rules, as easily as his combination can get the bulk of the purses. But there is a remedy. It is this:

Rx A few grains of caution, mixed with specific conditions, well agitated by the FOREST AND STREAM, and the patient advised that a second dose will be unnecessary, as this is guaranteed to kill or cure.

The articles that have appeared in the FOREST AND STREAM recently on this subject of dropping for places has been very interesting reading and instructive in more ways than one; while I do not think it can be at once entirely eliminated from the game of "Pull, bang and dead bird," I think it cowardly to say, that in associations and meetings of what are supposed to be composed of gentlemen, it cannot be finally controlled to such an extent as to be in time almost unknown, and to make one who attempts it ashamed to look an honest shooter in the face and cause him to be held up to ridicule by all who simply follow the sport for the recreation and pleasure they obtain from it.

Different systems of dividing the purses may to a certain extent prevent it, but to my mind the best way is the course the FOREST AND STREAM has taken. But I would go further, and when it is positively known that certain shooters are combined or dropping for place, to publish the fact in all the sporting papers, so that "he who shoots may read," and managers of tournaments can state on their programme that the pleasure of such and such parties' presence is respectfully declined.

In other words, "black list" the man who does the trick, and, my word for it, after one or two examples have been made at prominent tournaments, and the fact published that such parties had been debarred from participating, you will find all contestants striving to do their best, lest suspicion be directed against them.

CHAS. C. HEBBARD.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

At Prosser, Yakima county, Washington, a new club has been organized under the title of the Prosser Rod and Gun Club; nineteen members were enrolled at the first meeting. The club's grounds are in the immediate vicinity of Prosser; the initial shoot was expected to come off about Christmas Day.

Golden Rod and Gun Club, of Morrisania, elected these officers: President, John J. Doyle; Vice-President, Wm. Coffey; Secretary, George Halliday; Treasurer, Len Cronaker; Sergeant-at-Arms, Robert Lewis; Athletic Department—Milton Daub, Captain; Oliver Gilliland, Assistant Captain; Judge and Manager, H. A. Burdett; Scorers, Geo. Halliday and A. Robe.

The Boiling Springs Gun Club, of Rutherford, N. J., and the Maplewoods will probably shoot a match early this year for the club championship of the State of New Jersey.

In the eight wins scored to him for the Riverton Plate, R. A. Welch has made an average of 88¾ per cent. His highest score was 98, made against James Wolstencroft on Aug. 2; his lowest, 79, was scored against T. S. Dando on Dec. 6. Four matches were won by a single bird: June 2, versus George Work, 30yds. boundary, score, 84-83; June 4, versus Fred Hoey, 50yds. boundary, 91-90; Aug. 8, T. S. Dando, and on Aug. 22, L. Finletter, were each defeated at Riverton, 30yds. boundary, by similar scores of 91-90.

In the notice of the 25-bird race at Charlie Zwirlein's grounds, Yardville, N. J., on Jan. 9, which appeared in "Drivers and Twisters" of last week, the item should have read, "$50 cash added to the purse if there are 30 entries." From all accounts the 30 entries will be there or thereabouts, as Zwirlein's grounds are decidedly popular. Shooting commences at 10 A. M. sharp; lunch will be served on the grounds.

On Dec. 22 C. Furgueson, Jr., shot at 25 live birds in the various club events brought to a conclusion on the New Utrecht Gun Club's grounds; out of those 25 he is credited with 24, a score which, considering the quality of the birds, was a very marked improvement on his recent form. Mr. Furgueson has been shooting a gun recently with an extreme drop and was consequently undershooting his birds. The stock has now been straightened and he attributes to that fact his return to his old time form.

The Elizabeth Gun Club's second bi-monthly shoot is announced for Feb. 27-28. First day will be devoted as usual to targets; the second day to live bird events. Their tournaments are open to all.

WEIR CITY, Kan., Dec. 26.—The last meeting of the Business Men's Gun Club of Weir City, Kan., was well attended, and a lively interest in the present and future prosperity of the club was manifested. By a unanimous vote the club decided to increase the amount of added money offered in the "owl shoot" to be held under its auspices on May 8, 9 and 10 from $200 to $300, thus making $100 a day. The following officers were elected for 1895: Mayor Dorking, President; C. H. Calhoun, Vice-President; W. W. McIlhany, Secretary-Treasurer; T. C. Histed, Captain; J. W. McKim, Referee. The officers of the club constitute its executive committee.—MAMALUKE.

The result of the two matches between Fred Hoey and R. C. "Nathaniel" will, in all probability, lead to a third, each having won a race by two birds. Mr. Hoey's antagonist is some years his junior and his right name (Nathaniel, of course, being an assumed name) would be new to most readers of FOREST AND STREAM's trap columns. His recent work at live birds, however, guarantees that he has not been heard from for the last time.

There will be a large delegation of New York and New Jersey trap-shooters at the Hamilton, Can., tournament on Jan. 15, 16 and 17. The United States team in the live bird race will contain some well-known names on its list. The Hamilton shoot looks as if it was going to be a big success.

In the recent shoot of the Onondaga county (N. Y.) Sportsmen's Club at Maple Bay, near Syracuse, N. Y., Harvey McMurchy won the club medal for Class A with a score of 45 out of 50. Crittenden won the Class B medal with 39, while Herman took the Class C medal with a score of 32.

A new shooting club was organized on Saturday night at the Bradford Hotel, corner of Atlantic avenue and Bradford street, Brooklyn. William Ehrichs, the well-known deer hunter, was in the chair. After many suggestions, the name of the Chippewa Gun Club was finally adopted. A board of managers, including President Ehrichs, J. C. Becker, Henry Ehrichs and John A. Hatter, was chosen. The club will have its own grounds and paraphernalia, and will shoot once or twice a month at targets and live birds. The members, however, will not shoot at pigeons, but at all live bird matches sparrows will be trapped.

The monthly shoot of the Johnstown Rifle and Gun Club came off on the afternoon of Dec. 20 at the Morrellville grounds, in the presence of a large number of spectators. There was not as big a turnout of shooters as was expected, but those who did attend shot for blood, as the scores will show. It was a close and pretty race from start to finish, each man shooting at 50 targets. Following is the score: J. A. Rhoades 42, S. A. Snook 41, J. B. Holsinger 39, J. C. Condon 38, H. Felix 35. The result of this shoot places the men in the following order for the prizes for the year: J. B. Holsinger takes first prize, a cartridge loader; J. A. Rhoades, second prize, a fine leather gun case; S. A. Snook, third prize, an Ideal loading flask; J. C. Condon, fourth prize, a fine set of ducking scenes. The fourth prize was donated to the club by W. J. Copeland of Stanton's Mills, who is the champion wing-shot of Somerset county.

Louis Duryea is shooting a fast gait just now, and could make it warm for any of the club cracks around this city. On Christmas Day he shot a race at 25 live birds with B. F. Kittredge, beating him by 1 bird. Duryea conceded his opponent 2yds. and two misses as no birds. That this handicap was a severe one is proved by the fact that the winner had to kill his 25 birds from the 30yds. mark to score a victory. Kittredge scoring 24.

The midwinter shoot at Utica, N. Y., on Feb. 5-7 comes at a time when there is no shoot to clash with it. The programme will be ready about the first of the year, and can be had on application to the promoters, E. D. Fulford or H. L. Gates.

The Worcester (Mass.) Gun Club held a shoot on Christmas Day. Wonder how the "Mayor of Sutton" came out of it?

Secretaries of gun clubs should remember that shooters like to see their own and other shooters' scores in type; it all helps to keep up the interest of club members in their own club shoots, and thereby increases the attendance at the same. It takes very little time and trouble to send them to FOREST AND STREAM. Let them come.

The formation of a circuit for the Interstate's shoots for this year is now under consideration. With the exception of the Grand American Handicap at Paterson, N. J., and possibly a tournament at Pittsburgh in the latter end of April or May, and one at Grand Rapids, Mich., on May 30-31, the circuit will be wholly in the South. Lynchburg, Va., Wilmington, N. C., Lexington, Ky., Atlanta or Macon, Ga., etc., are among the places suggested at present. Clubs desiring a tournament should apply early.

The Altoona (Pa.) Rod and Gun Club will probably give a tournament at Lookout Point, Wopsononock, the latter end of June.

Since Reynal, of the Country Club, has shot his two matches with Fred. Hoey, shooting under the name of "Nathaniel," a good deal of attention has been attracted by the scores he made in those matches. At the Country Club match on Dec. 26 he broke the record for those grounds by scoring 89 out of 100, while Fred. Hoey tied the previous record with 87. Up to that day Capt. Money's 87 was the record. Hoey was fairly beaten by his 98th bird, which was a veritable hummer, just the bird that beats the best man living; he was also handicapped badly by a swollen cheek, which was discharging all the time, and by his gun, a Purdy, the rib of which came unsoldered.

The Keystone Shooting League of Philadelphia, with grounds at Holmesburg Junction, expect to have a big day on Jan. 7. Anybody who attends the shoot is sure of a warm welcome. The Pennsylvania State Sportsmen's Association tournament for 1895 will be held on the club's grounds next October.

On Dec. 28 at Oskaloosa, Ia., Dr. Carver shot a 100-bird race with Marshall, defeating him by the score of 92—90. The weather is stated to have been very cold and raw, while the birds were "tame."

In this issue will be found a table of all the principal live bird events decided in 1894. The list is bound to be of interest to trap shooters.

EDWARD BANKS.

Danger of Overloading Nitro Powders.

FOXBORO, Mass.—Believing that a stitch in time might prevent some brother sportsman from overloading nitro compounds, I wish to relate a little incident which happened to a shooting companion of mine one day recently.

While returning from partridge hunting, my friend wishing to target his gun (a $60 grade) with nitro powder, fired at a piece of paper that we had previously pinned to a telegraph pole.

The pulling of the trigger was followed by a terrific report, the gun jumped clear of the shooter but was caught before it reached the ground. Upon examination we found both locks blown off, the trigger guard twisted, the breech block broken off below the plungers and the stock broken above the grip. The shooter luckily escaped injury. One other peculiar action of the powder was the flattening of the head of the shell to the thinness of tissue paper, and this was the only piece of the shell we were able to find.

The shell, a 12-gauge, contained 3¼drs. nitro powder with two felt wads on top, and 1⅛oz. No. 8 shot covered with one cardboard wad. The distance the target was shot at would be, rough guessing, about 30yds. and the size of the target about 12x14in. Upon examining the paper we found four shot marks.

Any one used to loading nitro powders will acknowledge that although this charge is a little in excess of the usual load, it goes to show that this particular brand, at least, cannot always be relied upon, as this gun had fired upward of 700 loads identical with the one referred to and we cannot account for this particular load acting in the manner in which it did unless nitro compounds are erratic in their combustion.

Before concluding I would like to ask if there are not some FOREST AND STREAM readers in some of our adjoining towns who would be willing to put their shoulder to the wheel in helping to organize a gun club in this vicinity. We have plenty of good material and why couldn't we bring it above water in some trap shooting the coming season.

SHARPS.

Phœnix Gun Club.

PORT DOVER, Ont., Dec. 26.—Below find scores of our club shoot on Christmas Day. Live birds, 30yds. boundary:

No. 1, 6 birds; No. 2, 6 birds; No. 3, 6 birds; No. 4, 3 birds; No. 5, 3 birds.

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.
A W Lawrie	*01101—3	001210—3	10*0*1—2	111—3	002—1
J Cruickshank	10*010—2	.....	.....	...	...
J Ross	001100—2	000110—2	.....	...	...
H McQuaid	110110—4	.....	221121—6	102—2	...
C McQuaid	0*0011—2	...	.....	...	...
J B Fick	101011—4	111120—5	012111—5	010—1	110—2
C Scofield	001200—2	.....	0*00*0—0	020—1	...
C Ansley	000111—3	....	.....	...	...
E Skey	110001—3	000110—2	010101—3	111—3	000—0
R Skey	111212—6	021020—3	.....	...	220—2
H Williams	000120—2	101111—6	112111—6	111—3	000—3

J Alexander	001122—4	.....	.....	...	...
P Walker	.....	001101—3	.....	...	...

The fifth event was shot in the dark and it was impossible to locate birds shot at. The scores look very ragged, but the birds were a hard lot and required a lot to stop them, those killed being done so cleanly.

Trap at Newburgh, N. Y.

NEWBURGH, N. Y., Dec. 26.—The West Newburgh Gun and Rifle Association had a good time on Christmas Day. During the day live birds and targets were shot for practice, the scores appearing in detail below. That lunch at Gidney's was, as usual, immense. Scores:

No. 1, 25 targets, practice shoot:

C Leicht	1110011101010111010111011—17
Sneed, Jr.	0000001010101001110000001— 8

DAVID BROWN, Vice-Pres.

Dexter Park, L. I.

DEXTER PARK, L. I., Dec. 25.—There was a full day's fun at the traps here to-day. In the morning target races were all the go, while live birds occupied the attention of the shooters during the afternoon.

A start was made at 11 o'clock, Warren Thompson and his brother Fred shooting a race at 10 targets each, Fred winning with the score of 5 to 4. "Job Lotz" and C. W. Floyd next tried conclusions at 20 targets, Lotz winning with 18 to his opponent's 16. Three sweeps at 10 targets each were then decided:

No. 1: C. W. Floyd and Tom Short 8, F. A. Thompson 7, W. H. Thompson 6, Owen Bowen 5, W. J. Passmore 0.

No. 2: Floyd and W. H. Thompson 7, F. A. Thompson and Bowen 5, Short and Passmore 4.

No. 3: Floyd 8, Lyons, W. H. Thompson, F. A. Thompson and Bowen 7, Short 4.

During the afternoon five events at five live birds were decided. Jim Elliott was on hand and was very much in evidence, scoring 24 out of 25 from the 30yds. mark, his lost bird falling dead out of bounds. Full scores in live bird events follow:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.

Some Christmas Trap Meditation.

[*From a Staff Correspondent.*]

RESEMBLANCE TO OTHELLO.

CHICAGO, Ill., Dec. 25.—On this bright and happy Christmas morning, when all the world is full of pieces of things and occasionally a bit of good will, I find it difficult to harbor animosity to everybody, and can even confess to a feeling of pity for certain individuals. I pity the fellow who hasn't got a lick of sense on earth. I pity the man who breaks up his own business and the man who eats transitory goose instead of continuous egg sandwiches. I pity the man who pretty soon won't have any Christmas stocking, and who won't have any Christmas, and who will not know what it is to hear the scraping of Santa Claus as he humps himself down the steam coils.

This is indeed a hard Christmas for the dropper, the man who goes around to trap shoots and plays a crooked game, and makes a bad reputation for a good sport. It is going to be a bad time for the dropping business, and before the year is over there is going to be a lot of droppers who will resemble old man Othello in two ways—they will be black in the face, and they will be out of a job.

I can very well remember the time when old John Watson and I used to laugh at ourselves for trying to "elevate the trap," and seeking to stop the open practice of dishonest shooting. Nobody else over the country was saying a word, so far as I remember now. John the Baptist, whose voice was as of one crying in the wilderness, was right in the heart of the city compared to John Watson. FOREST AND STREAM was the only paper that dared to say a word against what was even in those early days confessed to be a general practice and a dishonest one. The practice was thought to be too strongly grounded to be successfully combated. Self-interest on the part of many shooters, and timidity on the part of all papers but FOREST AND STREAM, kept a muzzle on criticism. The dropper was king. He sat on his rocky slope and looked down on men and ships and things, and allowed he had a cinch. But when the sun set, I mean when Christmas came, where were they, and where was he at? He is still on the rocky slope, and it will get rockier and rockier for him this year. I'm sorry for him, this glorious Christmas morning. Pity the poor dropper, gentlemen. He has a wife and seven children, and he was too crooked to be straight.

THE FIRST HEAVY GUN.

The scattered writings which appeared from time to time in FOREST AND STREAM (nowhere else), voicing the John Watson beliefs as to the "elevation of the trap" were like the skirmish fire preceding the opening of a battle, and their effect was relatively light. None the less they presaged as well as preceded an actual battle, the first heavy gun of which was heard in the FOREST AND STREAM editorial headed "Control of Trap Shooting," in the issue of Dec. 1. There have been few editorials printed in sporting journalism which ever impinged more promptly and unmistakably. The responses to it came from so many good men in a way admitting of no doubt. Without doubt, the battle is now on between the honest shooters of this country and the dishonest ones, between the spirit of fair play and straight sport and that of treachery, crookedness and theft. The conclusion is foregone. I can only repeat that the sole wonder to me is that the battle has been postponed so long, and that a state of affairs so anomalous and so injurious has been so long allowed to exist and flourish, to the detriment of a sport which has in it naturally every element to commend it to gentlemen, and which should always and under all circumstances have been kept free to offer to gentlemen its own natural invitation to fearless, equal, unsuspecting, gentlemanly competition.

It is too late in the day now, after the events of the past four weeks, to go back to the threshing of old straw, and to take up a useless and absurd argument as to whether or not there is or has been any dishonesty in the prevalent practices of trap-shooting tournaments. There will always be men who for reasons of interest or ignorance will believe there never was a French Revolution nor a Reign of Terror, because they didn't see it. I do not wish for a moment to state, or to be garblingly quoted as stating, that all trap-shooters are dishonest, or that all trap tournaments have dishonest shooting in them, or that the practice of crooked shooting prevails in all clubs and associations shooting at the trap. I do not wish to say that the fifty trap-shooters at whose door we may rightly lay most of the disrepute into which tournament-shooting has fallen should be said to have instituted an actual reign of terror. The growth of the sport, the sale of targets and ammunition, the forming of new clubs, all show that the evil has not been fatal. But an evil may be not fatal and still not desirable. That the evil of dropping, in and out shooting, pooling and combining has been a general one all over the trap circuit, East and West, is known to every one not ignorant or interested.

A WELL-COVERED VICE.

It is not easy to detect, even when in full swing and under open observation, and that is the very reason why it has grown so, and that is the very reason why it should be ferreted out and exposed and made public and shameful. In the rush and swing of a tournament there may be a regularly organized gang quietly "shooting in" and saying nothing. A busy man or one not acquainted with the game could not detect the crooked work. Even those who were looking for it and who knew the ins and outs of the various shooters and their doings would be unable to prove their positive beliefs in anything like a positive manner. (There is no evidence that can be actually collected. If you tried a man you couldn't prove anything against him. The most peculiar thing about this whole question is this inability to get proof. It may look like injustice to order a man out of a squad and off the grounds because you have a suspicion that he is not shooting his best, but singularly enough this very suspicion must always be the test, and not the weighing of evidence. In the past, managements have been afraid to act on such suspicions. In the future they will not be so much afraid. They will post due legal notice in their programmes that they are reserving the right to decline the money of any man they prefer not to have in their sweeps. If the man comes there under that notice, he has no recourse. All the dropper can do will be to boycott shoots which he thinks are going to be honest.) Such being the veiled conditions of affairs, it is no wonder that the custom of dropping grew, and that it often went on unsuspected. My friend Jack Parker says there isn't so much of it as there once was. I hope not, and I have more respect for Jack Parker's judgment on shooting matters than for almost any one's I know. But I could take Jack Parker and we could pick a third man, and we could go to any big shoot of the '94 circuit, and we would not fail to find in any instance some case or cases of dropping or combining. They are there when you look for them right and nobody knows that better than Jack. In my own small experiences I have seen so much of that sort of thing that I have almost been disgusted with tournament shooting—so much that I don't mind saying all over again that these fifty men or so who do most of that dishonest work have put a stigma on the sport, so that it is as they practice it, "more dishonorable, more corrupt, rottener than ever horse racing was." This is true, and the shooting public knows it to be true. In spite of this the better features of trap-shooting grow. But how much more might they otherwise have grown? If every shooter of the land knew he would get an absolutely fair show at our big tournaments, what would not those tournaments be? But are not the common shooters wary of those tournaments? Why are they so? Any shooter can give you the answer. I say you can make rules, and handicaps, and classifications till you are gray, but you won't begin to get the confidence of the common shooters till you begin to take droppers and combiners and crooks at the trap by the back of the neck and kick them out of the grounds and out of the game. You can do this by a national association, and you can do it in the newspapers, and you can do it right at home. It is going to be done. A few dishonest men are not forever going to be allowed to injure the reputation and the success of a manly and popular sport such as that of shooting at the trap.

ALL ABOUT THE WASHERWOMAN.

If Mr. Banks will pardon me, I should like to revert to a statement of his published some weeks ago in comment on what I had tried to make a straightforward and fearless setting forth of practically these same features. Mr. Banks is good enough to say:

"Mr. Hough has evidently had but a limited acquaintance with either one or the other of the branches of the sport he names, horse-racing or trap-shooting."

Quite right. I have had a very limited acquaintance with either of them, or both of them, or any other line of sport. He, nor any one else, must not mistake me to be claiming very much of an acquaintance with anything, and I am very far from wishing to pose as an authority, for I don't feel that I am one. All that I claim to be able to do is to see a load of hay, and all I claim to be is a newspaper reporter not afraid to print the truth about said load of hay. Probably that is one of the things Mr. Banks would rather not have said, however, because it wasn't in very good form, you know, really. Besides, it has the same bearing on this case as would Mr. Banks's personal opinion as to the color of my best girl's hair, or the especial nature of the articles of bijouterie with which my washerwoman may see fit to adorn herself. I led up to this comparison by stating that horse-racing had become crooked enough to drive the Washington Park Club, of Chicago, one of the most prominent racing bodies of the land, quite out of the practice of it. I am not anxious to split hairs, or stand on comparisons, or discover too accurately which is the worse of two things, either of which is bad enough. But the best possible answer to any criticism on the accuracy and justice of my comparison is to be found over Mr. Banks's own signature, and in the very column in which he doubts the justice of my comparison. In the story of the "Public Outrage," wherein Mr. Banks fearlessly and fairly prints the disgraceful truth about the Morfey-Batsch race, he unconsciously puts on record a piece of rottenness which in quality, if not in size, it would puzzle the annals of the turf to equal. These things are much a matter of opinion. It has been the approved custom for the crooked trap-shooter to rob his associates. This custom should be changed. It is changing. It will be changed. Nothing will change it more quickly than the condemnation of the decent sporting press. That the evil in case has long had proportions sufficient to warrant such condemnation has been very fully proved by the editorial position of FOREST AND STREAM, taken since the time of publication of the matter above alluded to, and by the comment from the soundest men of the country thereon, and by the published opinion of FOREST AND STREAM thereon in the Trap department, notably where it is stated in the same issue of Dec. 22:

"The letters we continue to receive on the proposed National Association of Trap-Shooters, all have the same sound ring. There is a sentiment abroad that something must be done, and that speedily, if trap-shooting is to retain its popularity, to prevent dropping for place and pooling or combining."

If we are to have a National Association, what is it for? To control something which doesn't exist? It is going quite too far back on the trail to argue much about that. For one more good instance in point, see Col. Anthony's comment in FOREST AND STREAM of Dec. 22, where he mentions shooters on the firing line cautioning each other "not to tie." I never knew jockeys at a fixed horse-race to publicly announce their intentions of throwing a race or of fixing it up among themselves. Those who don't believe tournament trap-shooting to be openly and generally rotten had better make a hurried investigation of the facts, or they will soon be behind the time. The wave started slow, but she's rolling mighty fast now, honey.

THE REPRESENTATIVES OF THE TRADE.

It has been intimated that in some of my earlier remarks I have been too severe on "rounders" and traveling representatives of the trade who attend shoots. For the crooked rounder, who travels in the systematic trade of treacherous cheating, I can think of no word severe enough, and I shall go after him while I have my health, and spoil his business if I can. For the representative of the sporting goods trade we should have no reverence on earth except what his character as a man and a gentleman demand. I know practically all of these men personally, and few classes of men average higher. I want no better friends than some of them, and they need no better friend than FOREST AND STREAM. Yet FOREST AND STREAM is fearless and independent and wise enough to print these words of comment on these men in last week's issue:

"The principal manufacturers of shooters' supplies have traveling representatives at tournaments, to show their goods to shooters and to prove their excellence by taking part in the contests at the trap. Such representatives are the most faithful attendants at all shoots; they are usually men of agreeable personality, and among them are some of the very best shots in the land. For these and other reasons they are of great influence in the trap-shooting world. Their words and actions carry weight. Most of them, no doubt, are honest shooters, but some are open to the suspicion of now and then dropping for place. The truth is that the whole atmosphere of trap-shooting tournaments has become so vitiated that the moral sense of the most honest man may become hardened, and he may now view with indifference acts that a few years ago he would have roundly condemned."

I have known many and many a case of proved or acknowledged dropping or combining by trade representatives at tournaments. I could print names and dates and instances which would cause considerable commotion, if this were wise to do. Later on it may be wise, and for my part then I shall have no reverence for any man except that which his character as a man and gentleman inspire. A newspaper should print the news. But I believe the bulk of these men do shoot straight, and others would shoot straight if there were anywhere made a stand for a better sentiment. The best of them always have shot honestly. Almost all of them may be believed when they say they are going to shoot square. At Knoxville shoot last summer one of the very most prominent target shots of the world said to Tom Divine, who invited him to come to Memphis shoot next June:

"Mr. Divine, I admit that I have at times dropped birds for the money there was in it, and have combined with others, and I don't know of any man on the circuit who hasn't. But if I come to your shoot, and say I will shoot square, you can believe what I tell you."

Mr. Divine did believe it and so do I. What is needed is a rallying point. The change in sentiment will turn some shooters in the honest path. The fear of a disbarment or an inquiry will check many others. The establishment of a national board of control would in thirty days make a revolution in tournament matters—provided always that the members of the board were not timid or over-cautious, provided they had no axes to grind, and provided they did not look for or wait for a strictly legal class of proof against an offender. The latter they could never have. Missing the last bird or entering low down on the entry list is by no means evidence of the only crooked work going at the score. It may exist in the very first squad to enter, among high-class experts, who pay the whole day's entry in a lump. I knew of a glaring case of just this sort at a tournament I recently attended, and the fact was so open that two of the men in that very first squad, who had that same place all through that tournament, will next year be invited "not to attend." (These were not representatives of the trade.) If they once had the publicity of being summoned before a national board of control the mere publication of the fact would be notice of warning to other towns against them. They would be straight shooters after that, or would be out of a chance to shoot. This always in case that the board were composed of the right men. A few weak sisters there could do infinitely more harm than good and the battle would have to be fought all over again by the individual clubs.

I never thought that a man who was paid to shoot, who drew a salary or expense money for that, or was otherwise paid for it, ought to be allowed to shoot in on the same basis with amateurs who pay their own expenses, even where the skill of both parties is the same. About all the better class traveling men agree to this. Mr. R. B. Organ of this city suggests that such paid experts should be taxed an extra entrance fee, say $3 in a $2 sweep. At Memphis shoot last summer there were about two dozen such paid shooters, and they made the local shooters of that country feel very sore.

HARD FOR DROPPERS AT MEMPHIS.

The public blackboard is an invitation for a shooter to drop At the coming Memphis shoot the blackboard will either be abolished or put above the firing line, so that shooters cannot see it. This will help make crookedness harder. I have already spoken of Memphis tournament, often as the only one I ever attended where the management had sand enough to back up its published warning that dropping for place would not be permitted. There have been so many pitiable examples of managements who have hung up that warning and then weakly ignored it. It has always been like hanging a card on a stone dog, saying, "Beware the dog." The shooters have always known the dog was dead. At Memphis next June the dog is going to be alive and wideawake, and ready to do business. There has at last been discovered one town with a gun club willing to make the risky experiment of holding an honest shoot—one which will be placarded as honest and which will be kept honest at any cost of money. These Memphis men are not afraid, and they mean what they say. They will really give a square shoot. For it I bespeak the support of all men who love fair play and a day of gentlemanly sport at the traps. If there is any jockeying tried at that shoot we are likely to hear of some fun. The Memphis Gun Club will reserve the right to accept only such entries as it chooses. Should it lose money on this novel experiment of holding a shoot absolutely fearless and honest, would it not be an odd commentary on the status of tournament shooting in America? Let us see whether or not Memphis is boycotted by the "gang," and if so, how much! All honor, I say, to the Southern city which has been first of all the land to take the stand against dishonesty in shooting, and all shame to the North, where the stand has been so long needed and so long delayed.

FOREST AND STREAM'S PLAN.

But the stand has been taken now, and the banner set, wisely, calmly, dispassionately and fearlessly, as has always been the custom with the actions of FOREST AND STREAM. The paper deserves the congratulations of the fraternity of shooters at the trap, and of those who would like to shoot at the trap. Nowhere does it deserve heartier congratulations than from the great trade interests lying back of an industry whose best interests have been injured only too long and seriously. The trade and the representatives of the trade will be among the first to show their satisfaction with a new order of things. As to any enemies that may be made by a policy such as that laid down by FOREST AND STREAM, I don't imagine that cuts much figure. If there are any, they can be picked out from about fifty shooters, East and West, who shoot for business and not for sport, and who shoot dishonestly, who are treacherous, who steal. These fifty men have kept, so far as we know to the contrary, 500 other men away from the trap who would like to shoot for sport, not for business. Which body would be better for the life and growth and perpetuity of the sport? For my part, if I were to pick enemies, I would choose them from among men who rob their friends. That's the sort of enemies FOREST AND STREAM can afford to have. It won't have even those very long.

ORGANIZE IT.

Certainly then, form the national board of control. Do it quickly. Organise it at once. The season of 1895 will soon be upon us. It will be a red-letter season for the sport if it sees a systematic organized effort to set that right which has so long been wrong.

Thus far I have wandered, on this bright and cheerful Christmas day, when I ought to be eating apples and sliding down the cellar door, from my original purpose of wishing his late majesty, the Dropper, a merry Christmas and a happy New Year. He'll do well here. He'll lay up money. I know he'll like the place.

E. HOUGH.

909 SECURITY BUILDING, Chicago, Christmas, 1894.

Fred Hoey Defeats Nathaniel.

On Friday, Dec. 21, an interesting pigeon match was decided at the Westminster Kennel Club's grounds, Babylon, L. I. Fred Hoey was booked to concede two yards to R. C. Nathaniel, a member of the Westchester (N. Y.) Country Club. Nathaniel's record is not nearly as well known as Fred Hoey's, but he has made a name for himself on his own club's grounds, winning the Westchester Cup twice and scoring a run of 53 straight on Saturday, Dec. 15. When the match was made it was decided to toss for choice of grounds; as Hoey won he chose the Kennel Club's grounds. The day was decidedly favorable to high scores, but little breeze blowing during the first half of the match. The largest run was made by Nathaniel, who killed his first 20 straight; Hoey had runs of 19 and 16. George de Forest Grant acted as referee. Score:

Fred Hoey (30)	2222222221112112*22222222	24
	0222122222222222*22222221	23

Mechanicville's New Gun Club.

MECHANICVILLE, N. Y., Dec. 25.—We have recently organized a Rod and Gun Club in this village. The club has 27 members and has elected as its officers for 1895 the following: President, A. C. Johnson; Vice-President, Fred Hayner; Secretary, W. L. Howland; Treasurer, A. J. Harvey; Captain, F. C. Vernon; Directors, T. L. Pratt, S. J. Moore and Chas Brothers. The club's grounds are south of the Paper Mill, on North Main street. Our regular shooting days are every second Friday. To-day we had a practice shoot in the morning; during the afternoon we shot for a club championship medal, E. S. Moore winning with 20 out of 25. Score:

Club championship, 25 targets per man:

A C Johnson	1110101111011100010100011	—15
E S Moore	1011110111111111011010111	—20

W. L. HOWLAND, Secretary.

The Anderson Brothers Won.

PITTSBURG, Pa., Dec. 22.—An interesting live-bird event took place yesterday on the private shooting grounds of J. S. McIntosh, Spring Hill, Pa. Among the contestants were several of the best live-bird shots in Western Pennsylvania. The main event at 25 pigeons, the scores of which are given below, was really a match between the Anderson brothers and Messrs. McIntosh, McCance, Boyd and McNaughter As will be seen, the Anderson brothers won easily by the score of 83—73. Scores in detail:

G B Anderson	2012220122211212220222122	—22
W M C Jones	2011211211010222120222222	—21

Christmas Day at Flushing.

Flushing, L. I., Dec. 26.—The attendance at the Flushing Shooting Club's grounds yesterday was very satisfactory. In the club shoot for averages C. M. Donnelly won with a straight score of 10. The other club races have resulted as follows: C. Hance won the first shoot with 9 out of 10; J. H. J. Stewart won the second shoot with 9 out of 10. The next club shoot takes place on Jan. 1, New Year's Day. Scores:

No. 1, third contest for club average prize, 10 live birds per man, club handicaps. No. 2, 5 birds, $2.

Live Birds at Weir City.

Weir City, Kan., Dec. 26.—A friendly team race between W. W. McIlhany, of the Business Men's Gun Club, and B. C. Best, of the Columbus (Kan.) Club, on the one side and Messrs. Calhoun and Blackett, of the Business Men's Club, on the other, was shot on the grounds of the Business Men's Club on Monday, Dec. 24. A strong north wind was blowing, which, with a selected lot of birds, made it very hard to run high scores. The match was shot under American Association rules, the losers to pay for the birds. The race was close enough throughout to be quite interesting. Scores:

Team race, 50 birds a side, losers to pay for the birds:

McIlhany....1*1121120112111111121101101—21
Best....1101112210112020112121212—21—42

Blackett....2011200122111 1*1210112111—20—40

Mamaluke.

Nathaniel Defeats Hoey.

On Friday last, Dec. 21, Fred. Hoey shot a 100-bird race with R. C. Nathaniel, and defeated him by 2 birds, the contest taking place on the Westminster Kennel Club's grounds, Babylon, L. I. Notwithstanding this victory, the friends of Nathaniel had every confidence in his ability to defeat Hoey on the terms of the handicap, 2yds. A return match was quickly arranged, the date and place named being Dec. 26 and the Country Club's grounds, West Chester, N. Y.

The race was a very exciting one throughout, Nathaniel eventually winning by 2 birds, when Hoey lost his 98th and 100th pigeons. The start was not a propitious one for Nathaniel, his 1st and 3d birds getting away from him, and the score at the end of the 19th round standing 16—13 in favor of Hoey. Then Nathaniel did some great work, killing his next 55 birds straight, entering the last quarter of a century one bird to the good. Dropping his 80th bird, the score was a tie, with only 20 more to shoot at. Hoey, however, dropped his 83d, 87th and 90th birds in quick succession, whereas Nathaniel lost but one, his 89th, during that time. This gave Nathaniel the big lead (at that stage of the match) of 2 birds. His 91st and 92d then got away from him, the score again being tied at the close of the 92d round. Each killed 5 more straight, the score being still a tie at the close of the 97th round with only 3 more birds to shoot at! Then came the surprise of the match. Hoey missed 2 out of those 3 birds, and Nathaniel killing straight won by just the same margin he lost by on Friday, Dec. 21. Score:

Nathaniel vs. Hoey, 100 live birds, Hoey at 30yds., Nathaniel at 28:

R C Nathaniel (28)....0202222201022220120122221—19

Rifle Range and Gallery.

St. Louis vs. Rochester.

Missouri Rifle and Pistol Club, St. Louis, Mo., Dec. 22 — *Editor Forest and Stream:* In your issue of Dec. 22, under the heading of "Rifle Notes," we find the following paragraph: "The St. Louis riflemen have issued a challenge to any club who [*sic*] desires to accept its conditions. This reminds us of the youth who dared the other fellow to come over into his yard and fight."

The imputation is that our conditions are such as no respectable club would think of accepting. This is a slur which the open and clean record of our club does not deserve. It is also a reflection upon the good sense of the Columbia Rifle and Pistol Club of Rochester, which promptly accepted our challenge, and with which we hope to engage in a friendly and honorable test of skill on Jan. 10 next. As your statement was not accompanied by any explanation, although the terms of the match accompanied the challenge, we believe the fair-minded riflemen of this country would rather hear the facts and judge for themselves than trust the dictum of an irresponsible paragrapher. We ask, therefore, in the spirit of fair play, and in justice to the team with which we will shortly have the honor to compete, that you publish the rules which we have forwarded for their acceptance. They are as follows:

"The match is to be shot on Thursday, Jan. 10, 1895, beginning at 7:30 P.M., Eastern standard time, and 8:30 P.M. Central standard time, so as to be practically simultaneous. The distance is to be 75ft. The shooting is to be off-hand, without the use of palm rests, sashes, rods or other artificial aids in holding. Telescope sights are not allowed. Any rifle of .22cal. to be used, the ammunition to be the ordinary .22cal. rim-fire cartridges. The target to be the Missouri Rifle and Pistol Club target of which samples are inclosed, it being the German 25-ring target reduced to 75ft.

"Each team is to consist of ten men, who are to be regular members of the respective clubs. Twenty shots are to be fired by each man, ten shots on each of his two targets.

"Our captain will send you forty targets like the sample inclosed, which will be signed by him. Your shooting master will countersign twenty of them and return them to us for our use in the match, and will keep the other twenty for your use. The match must be shot on these forty signed and countersigned targets, which are to be exchanged by first mail after the shoot.

"The shooting is to begin promptly on time; the total scores to be telegraphed each other as soon as the tenth man has finished his score. Each club is to mail its targets, with referee's signature attached, to the other club immediately after the shoot.

"The rules governing the valuation of shots are to be the regular German rules (same as Creedmoor). A bullet must not merely bend or break a line to count on that line, but must cut it.

"When a shooter is at the stand with rifle at his shoulder, any shot fired by him counts, whether intentionally or accidentally fired.

"As regards details not specified above, the shoot is to be governed by the official rules of the German 25-ring target.

"The referee should have this letter in his possession."

It will be seen that our challenge was to shoot what is called a telegraph match—this being the only kind that we can shoot with outside clubs during the winter season. We are not aware that any code has ever been officially established for the conduct of such matches, and since the conditions differ essentially from those where two teams meet and shoot over the same range, it is necessary that some definite rule should be specially framed and agreed upon by the respective clubs. Now, is there anything in the above rules that discriminates unfairly against our competitors? We have asked that our targets be used rather than theirs. But why? Because ours are the regular 200-yard targets reduced to 25yds. (save that the bullseye begins with the 20-ring, making it the same size as the one at which our Rochester friends have been accustomed to shoot), and because our targets are printed on stiff cardboard through which a bullet will cut cleanly, thus helping the referee to avoid mistakes in scoring. If this be a discrimination, then we are ready to shoot on any target offered by the other club. In our challenge we offered them their choice between the standard American and the 25-ring targets. In the matter of referees, we have practically left the choice of our referee to our competitors. We believe them to be gentlemen. We have suggested to them the name of a prominent newspaper man of this city to serve as their referee, but only because in him they would get a man who knows a bullseye from a bullet hole, and can be depended on for accuracy. The suggestion was merely a courtesy, and they are in nowise bound to accept him.

Now, why should we be judged in advance as seeking an unfair advantage, or as indulging in a cowardly bit of bragadocio? Is it impertinence on the part of a young club to challenge all comers? You may have mistaken your men. It is true that our club, as such, is young; but its members were not born yesterday. We do not underrate the skill of Eastern riflemen, nor brag about our own. We simply ask to be met with powder and lead at the targets—not with abusive words. Our club is made up of gentlemen, who will take victory or defeat with composure, gentlemanlike. Horace Kephart, Secretary.

New Orleans Rifle Shooting.

New Orleans, Dec. 21.—The rifle contest between teams of the Jackson Rifle Club and the Eureka Rifle Club took place on Friday evening, Dec. 21, at the rifle range of the Young Men's Gymnastic Club, New Orleans. Each team numbered 6 men. Following are the scores: Jackson Club—P. Carvers 288, R. Fletshinger 284, D. Fletshinger 278, P. Perez 289, G. E. Hauk 272, A. Buissan 277. Eureka Club—H. S. Keelt 252, W. Corcrant 291, H. Callien 300, R. G. Sampers 304, F. R. Kaure 293, F. Orfica 297.

The Jackson Club elected officers as follows: President, H. S. Mindkins; Vice-President, G. Hauck, Jr.; Financial Secretary, J. Hug; Recording Secretary, G. Wolfe, Jr.; Treasurer, G. F. Campson; Captain, E. Herman; First Lieutenant, J. H. Beonsel; Second Lieutenant, A. Campson; Third Lieutenant, F. Rockel, Jr.; delegates to Louisiana State Rifle League, L. A. Jackson and C. F. Campson; Grand Marshal, C. Hurley; Collector, C. H. Davenmuller; Board of Directors, L. H. Jackson, H. S. Minaken, G. Houk, Jr., C. F. Campson, H. S. Beonsel, M. Walz, T. Emke and J. Hug.

The Rifle at Hartford.

Hartford, Conn., Dec. 22.—I inclose you scores of the Hartford Rifle Club, shot at their regular shoot this afternoon, German ring target, 200yds. off-hand. There was a two-point wind blowing from 6 to 9 o'clock, and at the close it was so dark that it was impossible to see the marker except through the telescope.

Bad weather and hard work (14 hours a day) have kept our attendance very low, there not having been more than two members present for several shoots. H. M. Pope, Sec'y.

Prize Shoot at Zettlers.

New York, Dec. 22.—A prize shoot was held at the Zettler gallery last week for five fine prizes. The following parties received the same, three best bullseyes to count by measurement:

	Class I.				Class III.			
M Engel	13	15½	18	—46½	H Muller	14½	19	20½—54
	Class II.				Class IV.			
Rosenbaum	12	15½	25	—52½	C Zettler, Jr	21	24	25½—70½

Prizes—M. Engel, fine statue; Rosenbaum, dozen silver knives and forks; H. D. Muller, handsome silver goblet; C. Zettler, Jr., handsome silver caster; H. D. Muller also received a fine cigar holder with some very fine cigars for making the most red flags.

H. D. Muller.

New York Rifle Club.

The New York Rifle Club opened its gallery practice on the Zettler range Dec. 19. Eight men participated in the competition for club prizes. M. Herrington and A. H. Isbell had a close race for first position. Herrington was first by one point. Scores:

Herrington	245	245	Th Lloyd	241	240
A H Isbell	244	245	Maj Crocker	238	237
Dr Cantrell	233	230	C C King	241	240
R J Young	238	241	E B Barker	239	235

Miller Rifle Club.

Hoboken, N. J., Dec. 20.—The Miller Club held its weekly shoot at headquarters last night. Meyns was high with 241. Scores: Meyns 241, Miller 236, Stadler 235, Scott 232, Follon 230, Dewey 225, Taylor 224, Rogers 221, Nelson 220, Vanderheyden 218, Kemme 209.

Dec. 27.—At the weekly shoot of the Miller Club last night David Miller shot himself into first place and won the first class trophy. His score was 242 Capt. Dewey was a good second with 239. Scores: D. Miller 242, Capt. Dewey 239, G. W. Rogers 233, A. Meyns 232, Sohn 228, Vanderheyden 227, Stadler 225, Sanders 224, Wilson 224, Hardy 223.

Schlicht Rifle Club.

West New York, N. J., Dec. 18.—The Schlicht Club held its weekly gallery shoot at headquarters last night. Geo. Schlicht won the champion medal on the good score of 245. Scores: George Dorr 239, Charley Meyer 238, George Schlicht 245, Gus Tribout 213, Jacob Diehl 234, Fred. Lambrix 227, George Reichert 229, Jacob Schlicht 222, William Schlicht 236, Peter Mau 212, George Lautenberger 233, C. Schlicht 214, Henry Aufdertheide 233.

Medal winners: George Schlicht, champion medal, 245; Jack Diehl, first class, 234; George Lautenberger, second class, 233; Henry Aufderheide, third class, 233.

Greenville Rifle Club.

Greenville, N. J., Dec. 22.—The Greenville Rifle Club opened its new series for the coming three months at its headquarters last evening. The club shoots under the class handicap system. The good judgment of the shooting committee in the pastin fixing the handicap upon the members in the several classes has resulted in bringing the members very close together in their totals at the close of each series. As a consequence there is a lively interest in the result of the coming series. The prize winners in the series which closed last week are appended, 13 scores to count:

First Class—Geo. Purkess, 3 points per score, 3,154, first; W. C. Collins, 4 points per score, 3,153, second; J. Boag, 4 points per score, 3,143, third; M. Dorrler, scratch, 3,132, fourth.

Second Class—C. W. Agneau, scratch, 3,034, first; W. Charlock, 2 points, 3,027, second; C. H. Chavant, scratch, 3,021, third; H. Gotthardt, 5 points, 3,005, fourth.

Third Class—E. Wuestner, Sr., 50 points, 3,034, first; V. Holzapfel, 2 points, 2,932, second; Geo. Renker, 6 points, 2,924, third; E. A. Graef, scratch, 2,898, fourth.

The scores for the opening of the current series are appended:

First Class.

M Dorrler	245	Collins	238
J Boag	243	Scheeline	237
Purkess	242	Agneau	235
Plaisted	240	C Boag	234

Second Class.

Dodds	236	Spahn	220
Charlock	234		

Third Class.

Renker	234	Hill	219
F Wuestner	224	E Wuestner	202

Dec. 28.—Weekly shoot. Scores: First Class: J. Boag 241, Collins 234, Purkess 236, C. Boag 238, Dorrler 242, Robidoux 238, Scheeline 239. Second Class: Chavant 235, Dodds 237, Spahn 221, Charlock 228. Third Class: Hill 215, Graef 231, E. Wuestner, Jr. 229, F. Wuestner 204, Holzapfel 226, Renker 232.

RIFLE NOTES.

The Glendale Schuetzen Park, Glendale, L. I., was the center of interest to New York's great army of riflemen on Wednesday of last week. It was the occasion of the laying of the cornerstone for the new shooting house for the new range, which will be used next July during the great international festival which opens at this park on June 30. Representative riflemen from New York, Brooklyn and New Jersey, to the number of 500, assembled in the park in the early part of the afternoon. William B. Weber, the president of the Bund, assisted by Capt. Henry Offerman of the New York Corps, Capt. L. Zeller of the Harlem Independent Corps, Capt. D. Meerse of the New York Central Corps, B. Walther, president of the Zettler Rifle Club, Capt. Theo Walters of the Elite Corps, Capt. Christ. D. Rehm of the New York City Corps, had charge of the ceremony incident to the laying of the initial foundation of the coming festival. President Weber made an eloquent and earnest discourse upon the coming festival, its object and its undoubted success. He exhorted all present to enter into the work of building upon the foundation before them a structure in the interest of rifle shooting whose arch should be capped with the keystone of concord. Capt. Zeller of the Harlem Independent Corps, and Capt. Offerman of the New York Corps, followed President Weber in remarks that were in harmony with the occasion.

The lady rifle shooters of Hoboken are making a record for their sex in handling the rifle. The *Observer* says: "The shooting done thus far by the members of the Our Own Ladies' Rifle Club is of the high class order. Mrs. Seymour, in particular, is distinguishing herself. Although her first shot was fired two months ago, a few evenings since she rolled up a total of 221 points. The proposed match between herself and husband, the captain of the Our Own Rifle Club, is off, as the captain now realizes that his wife is the best shot."

The New York Schuetzen Corps will hold its fourth bi-monthly gallery shoot on the Zettler ranges on Jan. 4.

The Freitag Rifle Club held a successful Christmas shoot on its gallery ranges on the 22d and 23d. There was a large gathering of local marksmen. The Greenville contingent turned out strong, thirteen men being present and participating, eleven of whom came in for a division of the spoils. John Rohhan of the Hudsons was one of the fortunate marksmen who went home loaded with pork.

The match between Plaisted and Dorrler is off for the present.

The Empire Rifle Club team will meet the Greenville Club team on its home range the first week in January. A return match will be shot off on the Zettler range later on.

From Hoboken comes the following query: Wouldn't it be a good plan to arrange a tournament for local rifle clubs for the championship of the city? With the Millers, Friday Nights, Young Men's and Moltka rifle clubs entering teams, a lively tourney, to be decided at the winter's close, could be gotten up. The teams would be of say five men from each organization. What do they think about it?

Louis G. Mertz, No. 943 Broadway, Brooklyn, which, by the way, is at the junction formed by Broadway, Myrtle avenue and Jefferson street (Five Corners), has fitted up two fine gallery ranges on his premises. The Elite Schuetzen Corps, Capt. Theo. Walters, has made these ranges its shooting headquarters for the winter. The fact that these ranges are located at the junction of two elevated roads make them easy of access from all parts of Brooklyn. Good management on the part of mine host Mertz should bring its reward in the form of liberal patronage from Brooklyn German-American riflemen.

Zettler Rifle Club.

The weekly shoot of the Zettler Club, which was held at head quarters Dec. 19, brought the usual number of experts and lay members into the competition for honors and other prizes incident to the regular programme. For the past two weeks Flach has had rather the best of the argument. Last night Fred Ross and Philip Feigel had a turn for the honors for high scores. Ross captured the champion medal and also made the highest total for the five best scores. Philip Feigel carried away the honors for the best 10-shot score, making 249. Best 10-shot score: P. Feigel 249, F. C. Ross 247, L. Flach 247, M. Dorrler 246, H. Holges 246, H. D. Muller 246, R. Busse 244, F. Schmitt 243, G. Nowak 243, C. G. Zettler 243, B. Zettler 243, S. Buzini 237, H. Manz 234, G. W. Downs 232.

Five best scores:

F C Ross	245	247	246	246	247	—1231
L Flach	244	243	245	247	245	—1224
H Holges	241	246	245	246	241	—1219
M Dorrler	241	244	246	244	245	—1220

Champion medal: F. C. Ross 245, L. Flach 244, M. B. Engel 244, B. Zettler 243, P. Feigel 242, H. Holges 241, M. Dorrler 241, C. G. Zettler 241, F. Schmitt 239, R. Busse 237, H. D. Muller 336, G. Nowak 234, H. Munz 234, S. Buzzini 222, G. W. Downs 220.

Dec. 25.—Weekly shoot. Scores: Champion medal; C. G. Zettler 245, H. Holges 244, M. B. Engel 244, F. C. Ross 243, L. Flach 243, M. Dorrler 243, B. Zettler 241, P. Feigel 240, R. Busse 243, H. D. Muller 239, S. Buzzini 229.

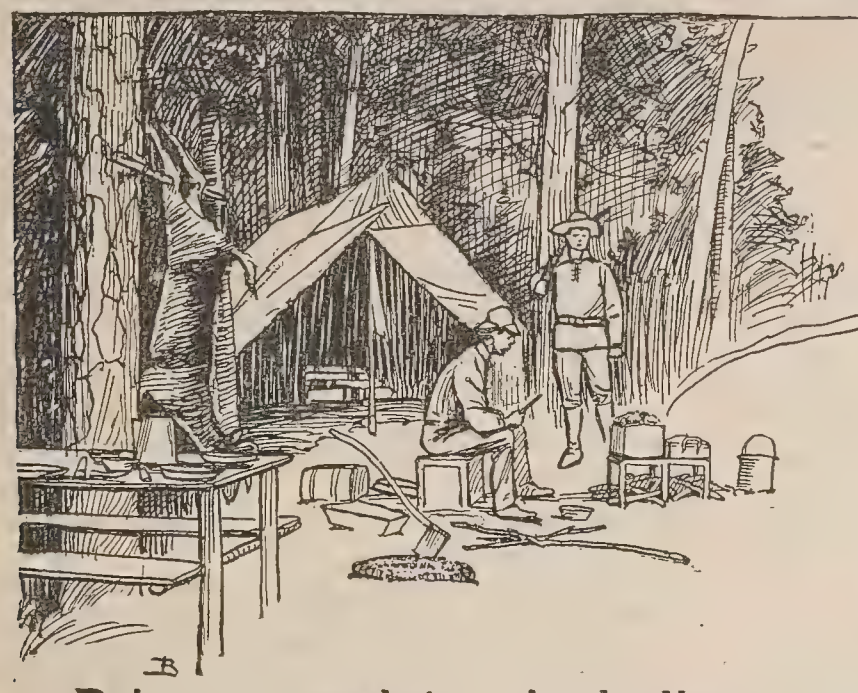
Best five scores:

F C Ross	243	248	247	247	248	—1233
H Holges	244	244	246	242	245	—1221
L Flach	243	245	240	245	245	—1216
M Dorrler	243	243	245	241	246	—1218

Best 10-shot score: F. C. Ross 248, H. Holges 246, M. Dorrler 246, L. Flach 246, C. G. Zettler 245, R. Busse 246, B. Zettler 244, M. B. Engel 244, H. D. Muller 243, P. Fiegel 240, S. Buzzini 229.

Ross vs. Martin.

Brooklyn, N. Y., Dec. 28.—There was an interested group of riflemen assembled in the headquarters of the Elite Schutzen Corps, No. 943 Broadway, last night, to witness a 100-shot gallery match between Fred. C. Ross and Ignatz Martin. Ross granted Martin a handicap of 75 points. Ross won by the small margin of 2 points. Scores:



Ross	239	244	240	243	246	243	243	241	248	245	—2432
Martin (75)	217	230	235	239	233	239	242	240	242	238	—2430

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

ANGLING.

The American Angler's Book.

Combining the natural history of sporting fish, the art of taking them, with instructions in fly-fishing, fly-making and rod-making, and directions for fish breeding. Description of salmon runs, inland trout fishing, etc. By THAD. NORRIS. 80 illustrations. Cloth. Price, $5.50.

American Fishes.

A popular treatise upon the game and food fishes of North America, with especial reference to habits and methods of capture. By G. BROWN GOODE. With numerous illustrations. Cloth, 496 pages Price, $3.50. This is, by far, the most popular work which has ever been published on the fishes of America, and is the book that no angler who takes pleasure in knowing the fishes which afford him sport, can afford to miss.

Book of the Black Bass.

Comprising its complete scientific and life history, together with a practical treatise on angling and fly-fishing, and a full description of tools, tackle and implements. By JAMES A. HENSHALL, M.D. Illustrated. Cloth, 470 pages. Price, $3.00. Dr. Henshall's monograph is the standard work.

More About the Black Bass.

Being a supplement to the "Book of the Black Bass." By JAMES A. HENSHALL, M.D. Fully illustrated. Cloth, 204 pages. Price, $1.50. This is a supplement or sequel of Dr. Henshall's first volume, in which the author's aim is to bring the subject matter down to date.

Fly-Fishing and Fly-Making for Trout, etc.

By J HARRINGTON KEENE. With plates of the actual material for making flies of every variety. Illustrated. Cloth, 160 pages. Price, $1.50. The matter of the book embraces everything which the fly-fisherman wants to know about the senses of fish, practical fly-fishing, casting and fly-making; with list of standard flies and their dressings; the feathers, silk and other material used in fly-making, there are samples of all, attached to blank sheets like pictures by way of illustration.

Fishing Tackle.

Its Materials and Manufacture. A practical guide to the best modes and methods of making every kind of appliance necessary for taking fresh-water fish and for the equipment of the angler and fly-fisher. With 454 illustrations and explanatory diagrams. By J. HARRINGTON KEENE. Price, $1.50.

With Fly-Rod and Camera.

By EDWARD A. SAMUELS, President of the Massachusetts Fish and Game Protective Association, author of "The Ornithology and Oölogy of New England and Adjacent States and Provinces," "Among the Birds," Associate Editor of "The Living World," etc., etc. Cloth, 480 pages (7×9½in.), 147 illustrations. Price, $5.00. The author is known as one of the most devoted and expert salmon fishermen of America. The volume is likewise noteworthy as an example of the rare possibilities of amateur photography.

Fly-Rods and Fly-Tackle.

Suggestions as to their Manufacture and Use. By HENRY P. WELLS. Illustrated. Cloth, 364 pages. Price, $2.50. The most exhaustive work on the subject in print.

MANUALS.

Game Laws in Brief.

Laws of the United States and Canada Relating to Game and Fish Seasons. For the guidance of sportsmen and anglers. Compiled by CHARLES B. REYNOLDS, Editor of *Forest and Stream*. Paper. Price, 25 cents. Gives all sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for the practical guidance of sportsmen and anglers. Carefully compiled, and shorn of verbiage. Handsomely illustrated with numerous half-tone engravings from *Forest and Stream*.

Woodcraft.

By NESSMUK. Cloth, 160 pages. Illustrated. Price $1.00. A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain English.

Tricks of Trapping.

Camp Life in the Woods, and the Tricks of Trapping and Trap Making. Containing hints on camp shelter, all the tricks and bait receipts of the trapper, the use of the traps with instructions for the capture of all fur-bearing animals. By W. HAMILTON GIBSON. Illustrated. Cloth, 300 pages. Price, $1.00.

Log Cabins.

How to Build and Furnish Them. By WILLIAM S. WICKS. New and enlarged edition. Price, $1 50. Mr. Wicks might have called his book "Every Man His Own Log Cabin Builder," for he has set out to describe fully and particularly each detail in the process of construction. Plans are given for cabins, large and small, with details of exterior and interior.

Hints and Points for Sportsmen.

Compiled by "SENECA." Cloth. Illustrated, 224 pages. Price, $1.50. This compilation comprises six hundred and odd hints, helps, kinks, wrinkles, points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer, in short for the field sportsman in all the varied phases of his activity.

SHOOTING.

Names and Portraits of Birds

Which Interest Gunners, with Descriptions in Language Understanded of the People. By GURDON TRUMBULL. Cloth, 222 pages. Price, $2.50. The average gunner with this work at hand would have little difficulty in identifying the contents of his bag from the text alone. Identification is further facilitated by portraits of the birds.

Antelope and Deer of America.

A comprehensive scientific treatise upon the natural history, including the characteristics, habits, affinities and capacity for domestication, of the Antilocapra and Cervidæ of North America. Second edition. By JOHN DEAN CATON, LL.D. Cloth, 426 pages, 50 illustrations; steel portrait. Price, $2.50.

The Gun and Its Development.

With Notes on Shooting. By W. W. GREENER. Breechloading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Chokeboring, Gun Trials, Theories and Experiments. Fully illustrated. Cloth, 770 pages. New edition. Price, $2 50.

The Art of Shooting.

An Illustrated Treatise on the Art of Shooting. With Extracts from the Best Authorities. By CHARLES LANCASTER. Illustrated with numerous drawings from instantaneous photographs. Price, $3.00. New edition.

Field, Cover and Trap-Shooting.

By CAPTAIN ADAM H. BOGARDUS, Champion Wing Shot of the World. Embracing Hints for Skilled Marksmen; Instructions for Young Sportsmen; Haunts and Habits of Game Birds; Flight and Resorts of Waterfowl; Breeding and Breaking of Dogs. With an appendix. Cloth, 493 pages. Price, $2.00. There is no other man in this country—or in any other, for that matter—better fitted to teach a novice the art.

The Still-Hunter.

A Practical Treatise on Deer-Stalking. By T. S. VAN DYKE. The information contained in "The Still-Hunter" is as exhaustive as it is possible to make it. 390 pages. Price, $2.

The Breech-Loader and How to Use It.

288 pages. Price, $1.00 A book for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study.

CAMP AND HOME.

Uncle Lisha's Shop.

Life in a Corner of Yankeeland. By ROWLAND E. ROBINSON. Cloth, 187 pages. Price, $1.00. "Uncle Lisha's Shop" is brimful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact in all the other characters introduced.

Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop," by ROWLAND E. ROBINSON. Cloth. Price, $1. When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living creatures.

Pawnee Hero Stories and Folk-Tales,

With Notes on the Origin, Customs and Character of the Pawnee People. By GEORGE BIRD GRINNELL. Cloth, 417 pages. Illustrated. Price, $1.75. New edition, revised. Like most Indian tribes, the Pawnees are story tellers. They have a vast fund of folk-tales and traditions, which have been handed down from father to son, and transmitted from generation to generation. Years ago, when the tribe lived in Nebraska, the author of the present volume camped and hunted with them, and joined in their village life. The nights were given up to story telling, and many of the tales told in the lodge and by the flickering camp-fire were carefully translated and written down. When published they excited great interest. They are tales of daring and adventure, weird accounts of magic, mystery and the supernatural; relations of the ways of life in the old, wild days; stories of war and the craft of war parties, the history of the tribe as treasured by the very old men. There is mother-wit in these stories, they are full of humor, sentiment, pathos and human nature.

Blackfoot Lodge Tales.

The Story of a Prairie People. By GEORGE BIRD GRINNELL. Cr. 8vo., $1.75. In this volume the story of the Blackfoot tribe is told by a friend, one who has hunted with them on the prairies, slept in their lodges, lived in their camps, and shared their daily life. The stories which constitute this history have been taken down by the author from the lips of the narrators, and are given without change as told to him. There is a singular and charming freshness about the stories, which give the history of renowned warriors of ancient and modern times, show how ancient customs arose, and explain natural phenomena. The account of the daily life, customs, and history of the Blackfeet presents a series of graphic pictures of savage life in peace and in war.

Our New Alaska;

Or, The Seward Purchase Vindicated. By CHARLES HALLOCK. Cloth, 209 pages, illustrated. Price, $1.50. Mr. Hallock's writings are always vivid and full of life.

THE KENNEL.

Dogs: Their Management and Treatment

IN DISEASE. A Study of the Theory and Practice of Canine Medicine. By ASHMONT. Cloth, 208 pages. Price, $2.00. The *Forest and Stream* says that this is one of the most valuable treatises on canine management and therapeutics that has appeared on this side of the water.

Kennel Record and Account Book.

Boards, $3. An indexed volume of 180 pages, consisting of a series of carefully prepared blank entry forms suited to the registration of all kennel events and transactions.

Dog Points and Standards.

First Lessons in Dog Training, with the Points and Standards of all Breeds of Dogs. Paper, new edition, 106 pages, revised to date. Price, 50 cents.

Training vs. Breaking.

Practical Dog Training; or Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of *Forest and Stream*. Revised and re-written. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, $1. A book for dog owners, who, by the instructions here plainly given, can successfully train their hunting dogs.

Modern Training;

Handling and Kennel Management. By B. WATERS. Illustrated. Cloth, 373 pages. Price, $2. This treatise is after the modern professional system of training. It combines the excellence of both the suasive and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

House and Pet Dogs;

Their Selection, Care and Training. Paper, price 50 cents.

Lee's Modern Dogs.

History and Description of the Modern Dogs (Sporting Division) of Great Britain and Ireland. By RAWDON B. LEE, kennel editor London *Field*. Illustrated, 584 pages. Price, $6. This is a standard work by an acknowledged authority, and is up to date. It treats all sporting breeds exhaustively. The illustrations are idealized portraits of typical specimens.

Kennel Secrets.

How to breed, exhibit and manage dogs. By ASHMONT. The dog from the time he is conceived to the time he curls himself up for his last long sleep is treated from every standpoint that could possibly occur to a man of wide experience with dogs. Every important subject that has engaged attention has been fully discussed, generalities being held practically valueless and misleading. Illustrated, 344 pages. Price, $3.00.

The Spaniel and Its Training.

By F. H. F. MERCER. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, $1.

Scientific Education of Dogs for the Gun.

By H. H. Cloth. Price, $2.50. The instructions are the result of the author's amateur practical experience of 37 years. *Forest and Stream* says: "This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study."

YACHT AND CANOE.

Small Yachts.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice. With numerous plates and illustrations. By C. P. KUNHARDT. New ed., 470 pp. of type and illustrations and 87 plates. Size of page, 14½×12½. Price, $10. This book is intended to cover the field of small yachts, with special regard to their design, construction, equipment and keep.

Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. New ed., 267 pp. Price, $3.00. A complete review of the development and present status of the marine engine and boiler as applied to steam yachting.

Canoe and Boat Building.

A Complete Manual for Amateurs. Containing plain and comprehensive directions for the construction of Canoes, Rowing and Sailing Boats and Hunting Craft. By W. P. STEPHENS, Canoeing Editor of *Forest and Stream*. Cloth. Fourth and enlarged edition, 264 pages, numerous illustrations, and fifty plates in envelope. Price, $2.00.

Canoe Handling.

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. BOWYER VAUX ("Dot"). Illustrated. Cloth, 168 pages. Price, $1.00.

Yacht Architecture.

By DIXON KEMP, Associate of the Institute of Naval Architects and Member of Council. Second edition. Super-royal 8vo., 530 pages, numerous plans and designs. Price, $16.80.

A Manual of Yacht and Boat Sailing.

By DIXON KEMP, Associate Institute of Naval Architects (Member of the Council). 750 pages, with numerous plans and designs. Price, $10.

THE ILLUSTRATED CATALOGUE OF FOREST AND STREAM BOOKS WILL BE SENT FREE.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JANUARY 12, 1895.

VOL. XLIV.—No. 2. No. 318 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page iii.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

THE FOREST RESERVATION BILL.

Attention is again called to the neglect of Congress to provide any system of protection for the forest preserves set apart within the last few years by Presidential proclamation. As we have frequently shown, these are reservations in name only. They exist on paper, but there is no law governing their care or providing for their protection. Any one is at liberty to go within their boundaries, and there commit any act of depredation, and there is no federal law that can be enforced to punish him.

The singular apathy with regard to forest preservation which has long been manifested at Washington has at length been broken by the passage of Mr. McRae's bill, H. R. 119, entitled, An Act to Protect Public Forest Reservations. The best that can be said of the measure is that it is perhaps better than no bill at all. Its passage at least establishes a precedent for forestry legislation and indicates that Congress is willing to take some slight interest in a matter which is vital to the nation's welfare. In its best form the measure was not a very strong one, and during its passage through the House it has been burdened with amendments, which, in large degree, render nugatory the benefits which it might otherwise have conferred.

The measure places these forest reservations under the charge of the Secretary of the Interior, and directs him to make provision for their protection against fire and depredations, and to make such rules and regulations and establish such service as will insure their object. He is authorized under certain restrictions to sell dead or matured timber, and the proceeds of such sales are to be held as a special fund to be expended in the care and management of the reservations under the direction of the Secretary of the Interior, or as Congress may provide. But it is provided that nothing in the act shall be construed to prevent the Secretary of the Interior from permitting, under regulations, the use of the timber and stone free of charge to setters, miners, residents and prospectors.

The Secretary of War is authorized to furnish troops to act as a police for protecting these reservations on the requisition of the Secretary of the Interior.

The Secretary of the Interior is authorizd to restore to the public domain any public lands embraced within the limits of any forest reservation which shall be found better adapted to agriculture than to forest uses and any lands which may be shown to carry mineral. Further, prospectors are given full liberty to prospect for mineral on such forest reservations.

So long as the Secretary of the Interior is interested in the preservation of our forests this bill will be a useful measure. It throws the whole responsibiity of their care on that officer and will enable the present Secretary to set on foot a system of protection, which his successor may or may not feel inclined to carry out. On the other hand, any such system of protection is very much hampered by the invitation which the bill extends to settlers, miners and prospectors to go and come at will over the reservation, and to make free use of the timber for their purposes.

The provision authorizing the return to the public domain of any lands that, on examination, may be found to be agricultural opens large opportunity fo revil, and its practical effect may be the absolute ruin of these forest reservations. One result of such a provision is likely to be an influx of settlers along the stream valleys in all the reservations, in some cases cutting them up into small strips, and everywhere increasing a hundredfold the difficulties of forest administration. Thus, the bill, while professing to protect the forest reservations, really threatens their very existence by leaving the question of their integrity to depend not on the law but on the judgment of a single individual.

The section of the bill which authorizes the employment of troops to protect these reserves is a wise one, and practically this is all the bill gives to the friends of forest preservation. On the other hand, the bad features of the bill are very obvious.

A Secretary of the Interior who cares little for the preservation of the forests may, in accordance with the provisions of this bill, practically destroy the forest reservations, which the wisdom of Secretaries Noble and Smith have set apart.

In its present shape the bill can arouse no enthusiasm on any hand, and its inadequacy is apparent.

A FLORIDA SILVER MINE.

Those who have followed the fishing reports sent to us from Texas cannot have failed to note the warm but good natured rivalry between Texas and Florida as to which shall be esteemed to hold out superior attractions to tarpon fishermen Florida and tarpon have come to be synonymous. If one says that he is going South for fishing it is assumed quite as a matter of course that he is bound for Florida; and in these times going to Florida for fishing means an expedition to the West Coast for tarpon. Texas is a tardy claimant for tarpon custom; she has only her innate modesty to blame, that she has permitted Florida to take the lead and obtain the dollars of Northern and Western anglers.

For this tarpon fishing is business, just as truly as orange growing or phosphate mining is business. Florida transportation managers and hotel men have long been alive to the financial profit of exploiting this big fish, and they have made the most of him. Tarpon angling is, from their point of view, commercial fishing. If the history of the name "silver king" were investigated probably we should find that the cognomen arose not from the splendor of his scales, but from some shrewd hotel man's recognition that if properly worked the fish was as good as a silver mine. If we had the data to compute the amount of money expended by tarpon fisherman in Florida for railroad and steamboat fares, board at hotels, hire of guides and boats, sums paid for tackle and to taxidermists for mounting the fish, the aggregate would atonish people who have given little thought to the dollars and cents view of pleasure fishing. In Florida sport with the tarpon is confined to the West Coast. The fish are occasionally seen on the East Coast and are taken there after the tourist season, but they are not among the trophies entered on the hotel score books. The East Coast people would like nothing better in the way of fisherman's luck than occasion to proclaim to the world that a few tarpon had been taken in the waters of the Mananzas, Halifax, Indian River or Lake Worth.

THE CUP CHALLENGE.

In default of more detailed and positive information than that furnished in the brief cable report of the R. Y. S. meeting, it is impossible to say just yet what action the Squadron has taken, or how much further negotiation may be necessary before a race is finally arranged for 1895. The recognition of the new deed is qualified by Sec'y Grant's telegram, "Having regard to the construction * * * by the New York Y. C.," and just what this may mean is yet to be seen.

Thus far the Squadron has only the unofficial statement of Commodore Smith that the onerous demands of the new deed are a dead letter, and may all be disregarded under the mutual agreement clause. We doubt very much whether even the Royal Yacht Squadron will be satisfied with such an unofficial statement, which may be repudiated at any time in the future by the New York Y. C.

It is probable that a race will not be assured until the New York Y. C. shall have made an official and binding statement of its interpretaiton of the new deed.

The basis of the present agreement may be briefly stated thus: If the New York Yacht Club will declare invalid all of the distinctive parts of the new deed, the Royal Yacht Squadron will recognize the deed as valid. Such an agreement, if finally ratified, must obliterate the dimension cause, the ten months limit, the limitation of all races to dates between May 1 and Nov. 1, the limits of over 65 and not over 90 feet, and the requirement that vessels must sail to the site of the races on their own bottoms. If the present interpretation of the new deed, under which the R. Y. S. has agreed to recognize it, be indorsed by the New York Y. C., a future holder of the Cup can agree to a challenge from any club and in any size of yacht.

In an interview on Jan. 7, Gen. Paine is quoted a saying: "The fairness of the new deed has now been acknowledged." Apart from the question of the right of the New York Y. C. to make any change of the trust conditions, and of the action of the club in hurriedly making such a change after it had received a challenge, the charges of unfairness in the conditions of the new deed rest first of all on the demand for the four dimensions. This demand was largely the work of Gen. Paine, a member of the famous committee of 1887. For five years it put a bar to all racing, and a challenge was only obtained by the distinct repudiation of th's demand by the New York Y. C.

It was through Gen. Paine as much as any other member of the commitee that Clause 5 was formed, compelling a challenger to place himself absolutely in the hands of the holder ten months before a race, compelling him to reveal the beam and draft of his vessel, and binding him to the dimensions registered in the challenge; before he could ask for a mutual agreement "as to dates, courses, number of trials, rules and sailing regulations."

In order to obtain a challenge, the New York Y. C. has been forced to abandon the demand for the dimensions and for ten months' notice, and to recognize fully and completely that right of a challenger to a mutual agreement as to any and all conditions, which it has denied to every challenger, and in particuar to the Royal Clyde Y. C.

In making the new deed of gift Commodore Smith and the committee sought to surround the America's Cup with such safeguards and restrictions as would make the winning of it by a challenger almost an impossibility. After seven years these same gentlemen have been forced to abandon every restriction, and to throw the Cup open to competition on fairer terms than they have ever granted in the past.

If this is a victory for them, and a vindication of the new deed, they are welcome to it. In the face of Gen. Paine's assertion, as quoted above, we maintain most emphatically that the present position of the America's Cup committee, as represented by its chairman, in abandoning all the requirements of the new deed, is an open admission of the charges of unfairness made against them.

THE CAUSE OF PROTECTION.

The year 1895 promises to be an important one for game and fish protection. The cause is one that is growing rapidly in popular appreciation, and this will be a year of activity. We mean to make The Forest and Stream more than ever a journal of protection. With this issue we have instituted a special department devoted to the subject.

It will be a department of news, of suggestion, of practical helps and hints for club and association and individual effort. Secretaries and other members of clubs are invited to communicate to us for publication reports of the progress of their work, with its failures and its successes. By such an interchange of practical experience one may learn from one another.

There is promise of much legislation as to fish and game this year. New Jersey sportsmen are asking for numerous changes. The Michigan Game and Fish League met in Lansing the other day and determined to ask the Legislature to make the open season for deer throughout the State from Oct. 10 to 31 inclusive; to forbid the transportation of venison unaccompanied by the owner, and to limit each hunter to two deer in a season.

The New York law has been codified by the Senate Committee and the proposed form will shortly be submitted at Albany. It is understood that as to the fish commission a reduction in the number will be recommended from the present five to three or one. The draft of the new law was to be discussed at the Syracuse meeting of the State Association at Syracuse last Thursday. A report of the convention will be given in our next issue.

Does it cost money to go fishing? One might think so form the $500 price mark on a rod in a Broadway show window. But some rods do not cost so much as that, one may get off much more cheaply. Fishing is like most other necessities—or luxuries—costly or inexpensive as one may care to make it.

The Sportsman Tourist.

THE TURKEY I DIDN'T GET.

It was 3.30 o'clock in the morning in the fall. I had not been brought up standing in bed with every hair on end and gooseflesh all over me by an alarm clock going off with clangor of four pair of cymbals and a triangle, because there wasn't any alarm clock on the premises. I have an alarm clock in my head when I am going hunting. The only objection I have to my clock is that it sometimes wakes me up two or three times before the appointed hour, so as to be sure I don't get left. Better that than the store affairs that slip a cog now and then and keep quiet, allowing the sleeper to do likewise until broad daylight, when he should have been in the woods an hour before.

On that patricular morning when I had jumped out of bed and consulted my watch, I slipped into my hunting togs and opened the door of my cabin to see how the weather fitted me. To my delight there wasn't a tremor of a leaf in the oaks that spread their broad arms above me. Not a pianissimo zephyr kissed my modest cheek, much as I like to be kissed. All the stars twinkled cheerfully in a sky as clear as a baby's conscience, and, altogether, it was a morning calculated to make the mountains hop like rams, and the little hills skip like lambs. At any rate, I hopped—into the house, after abluting, and prepared my frugal meal. "A short horse is soon curried." There wasn't much to get, and it didn't take long to get it. That safely stowed away, I took my gun from its case and, locking the door behind me, strode into the morning.

I was going after turkeys. I had shot several near home, but had heard of a larger gang about four miles away that had not been so much molested, and that would probably afford more sport. Something just ahead in new territory attracts the sportsmen as much as it does people in other pursuits.

It was pretty dark. In going across the corn field my toes found a good many stones they had never met before, and some of them came perilously near giving pride a fall, but I got into the road all right and opened the throttle, for I had but an hour to make the distance, and before it was light I must be sitting in the shadowy wood, quietly listening. So I paddled along with heart so light I could scarcely keep it down, until I came to a trail leading through a large piece of woods, which I entered. Here it was darker than ever, and the trail was partly obliterated by fallen leaves, so that two or three times I ran off at a tangent, losing the trail entirely, but I managed to pick it up again, and so, in alternate clearing and woods, awaking the bark of the watchful dog that had heard the rapid footsteps along the road, skirting thickets where the momentary rustle of the leaves betrayed the scampering rabbit, in a road for a bit and out of it, again descending into hollows where the air was damp and cool, crossing little streams and mounting the ridges again, following which the trail led deviously through the silent forest, I came at last, just as the dash lamps of Phœbus' turnout had projected the first faint flush upon the dark curtains of the east, to the fence bordering the isolated clearing of a farmer, near which the turkeys had been repeatedly seen during the summer and early fall, and where, among the springing wheat, shocked corn and uncut buckwheat, they ventured occasionally to watchfully glean in the early morning hours.

I had been out one morning previously and had heard some turkeys fly down from their roost in some trees that stood a few rods from the edge of the woods, and hoping that they might be there or thereabout, I tiptoed down the fence until opposite the spot, when I crept in among the shadows, choosing each step carefully, and when I judged I had gone far enough I sat down with my back to a tree and awaited developments.

Silently the forest awaited the coming of the day. Half an hour passed without a sound. Slowly the gray of the morning rose in the east, permeated the darkness and revealed bit by bit the recesses of the wood.

Then I heard the farmer bang the door behind him a hundred rods away as he came forth from sleep to feed his stock, while a chanticleer from his harem sung out lustily.

In my front the east reddened perceptibly through the branches, for the ground fell away in that direction for a half mile toward a creek in the valley, and only the nearer trees obstructed my view. I searched the trees carefully near by and farther and farther as the light increased for dark feathered forms, but in vain. A chipmunk came out of his hole near the foot of a tree and made his toilet, with interruptions of vigorous scratching, and suddenly, seeing me wink or catching some motion from me, sat upright, drooping his little paws and endeavoring to satisfy himself as to this unwonted appearance. I made a quick motion with my foot, and the way he dove into his hole was laughable.

It was time for turkeys to leave their roosts. The sun would soon appear, and they would be on the move. While I debated what move I ought to make, I heard, away on my right, the sound of wings, then another and another, and another and another, and the debate was closed. Of course I did not know they would feed in my direction, but I hoped they would, and determined to meet them at least half way, and if they did not I should be that far on my stalk, so, stooping low, I trotted down into a little ravine, one of several running at right angles to my course and which united to form a large ravine below. Then I crawled cautiously up to the top of the little rise and carefully peered over. Nothing in sight and no sound. As noiselessly and as rapidly as possible I crawled down into the next hollow, took a breath, and with my hat in my pocket crept up the slope and inch by inch let my eye uncover the territory beyond. There were some scattered low bushes in my front, and looking long enough to satisfy myself that there was nothing moving in sight, I made another spurt into the cover of the next hollow. I saw that a I had gone far enough then to be near a meeting point, if those turkeys had fed my way, and so my movements up the next rise were made with redoubled caution, but nothing rewarded my search. Slowly, almost imperceptibly, I rose on my knees, gun at a ready, and looked over into the next hollow as far as I could. Nothing there. Then I slowly turned my head to the right and searched in that direction up the slope. Nothing there. But just as I turned my head to look to the left down the hill my eye caught a movement among some low bushes, and in a second I saw a number of heads appear near the ground whose owners were feeding along unconscious of danger about fifty yards away.

I raised my gun very slowly so as to be ready for the most opportune moment, but the ever watchful eye of a young gobbler caught the slight movement, and as my gun touched my shoulder stretched his neck inquiringly and alarmedly, and by a queer coincidence just at that moment the gun went off just as it covered that outstretched neck. The smoke hung heavy in the damp air and the other turkeys went off down hill on the wing, thus gaining quick headway, while my gobbler was making a big noise with his powerful wings as he beat the earth in his death struggles, but soon lay quietly, a fine last year's bird in fine feather.

Inserting another shell I picked him up, noting that he was heavy and very fat and hoping that his companions would get scattered and would want to get together again. I went down the hill into the large ravine, and seeing a large tree blown over about thirty yards up one side from the bottom, I sat down beside it took out my call, and waiting about fifteen minutes tuned up gently, but got no response. In a moment or two I tried again and a welcome "kronk" came down from the top of the hill on my side, but the bird was out of sight. Then I called again, and this time in addition to the first call which was made by a bird of that season, an old gobbler with a voice like a fog horn tuned up. "Aha," said I to myself, "the racket thickens. Oh! ye brave come down and see me and I'll save—one or two of you for the pot." Cautiously I kept their interest and anxiety alive, and for quite a while my calls went up and theirs came down, but their bodies did not, when all at once I saw in the air far above me two turkeys flying across to the hilltop on the other side, to see what they could see from that point of vantage. As I turned my head to watch their fight, one of them alighted on the dead top of a big oak, but his sharp eye, even as he flew, had caught the movement of my head, and he was off like a shot again. The other alighted in the leafy tops of a smaller tree and failed to see me. The big gobbler had not moved and kept calling anxiously, but would not come down.

I soon started a conversation with the newcomer, and we had quite a dialogue, during which or just previous to which it flew to the ground, though I did not hear it, but though I did my best to convince it that there was an awfully lonesome turkey down my way, I could not coax it any nearer.

Finally the old gobbler drew out of the conversation and either wandered off to find some more sociably inclined turkey or was stealthily picking his way down towards me. I shall never know which (for turkeys often cease calling when they begin to approach), for just about that time, as I had begun to think I was going to lose both, I heard from the other side the ravine under cover of the bushes and limbs a pat, pat, pat, that told me my persuaded turkey was coming down the hill, betraying its whereabouts at every step by the rustling of the leaves. Then it stopped, but a faint call from me started it again, and I pocketed my call and pointed my gun about where I thought the bird would appear.

It was a very interesting moment, and if that turkey had known what was waiting for it up there on the hillside, the interest wouldn't have been confined to me. But down the hill those steps continued to come, and I said to myself, "two turkeys will make a pretty good load to back four miles," when the glossy, black-breasted creature came into view, but not exactly in line with my gun. I had to swing the muzzle some six or seven inches to cover it, but that was enough to catch the eye of the wondrously wary bird, and it stopped instanter, with its head and neck covered by a little brush. A few feet in my front stood a sapling and almost in line of aim. I leaned over to the left the better to cover the bird and pulled quickly, the turkey standing as it stopped broadside to me, a very bad position for a shot, being protected by the heavy wing, but I was as certain of that turkey as though I had it under my arm, for the distance was not over thirty yards. The roar of the gun rolled from side to side of the ravine, and away down into the bottom and up the other side, as I jumped to my feet to see the turkey—not in its death flurry, as I fully expected, but after a few preliminary flaps set its wings and sail away, away down the ravine just as easy as though there had not been a gun within forty miles.

At first I thought there had been another turkey near by, and looked closely to see if my bird wasn't lying dead, but there was no bird that I could with any degree of confidence or propriety call mine anywhere around. To say that I was surprised wouldn't be telling anything about it. I was simply dumfounded. To have a great big turkey as big as a calf, pretty near, get away like that was just dazing.

I walked down the hill and up the other side to where the bird stood and couldn't find a single shot mark on stone or bush, nor a single feather, and stood there apostrophizing the shooter and the situation in divers and sundry ways, endeavoring to work out a solution of this extraordinary puzzle, but it wouldn't work worth a cent. It was one more of the unfathomable mysteries connected with turkey hunting, to lay away and harrow a man's feelings as long as he lives. There was just one thing I could understand, viz., the turkey was gone, but it was surely hard hit and must be that moment lying wounded or dead down the ravine—of course it must, and I would find it. So I hung my dead turkey in the dead limbs of a tree and went down to where I last saw the turkey and searched the side hill up and down, back and forth among the bushes, round and round, down into the creek bottom and back again, but to no purpose, except to make me leg-weary, and as I finally stood revolving things in my mind, like a flash the solution of the matter was revealed to me, and I could have propeled myself with severe rearward castigations all over that region.

During the fall I had carried turkey cartridges in my right coat pocket, and small shot cartridges for quail and rabbits in my left. A week previous to this hunt I used the last of the small cartridges and couldn't conveniently get more, so I carried turkey cartridges in both pockets to balance. The day previous I got some small shot cartridges and put them in my left pocket as of yore, and when I shot the gobbler I hastily shoved a cartridge from that left pocket into the gun as I ran up to the bird, and now I had been trying to kill the king of American game birds with quail shot, and through its wing, too. What would you do with such a man as that? Why didn't I shoot the other barrel that had No. 1's in it? Well, somebody guess.

The idea of that turkey lying around there wounded or dead suddenly became very, very ludicrous, and I ascended the hill, seized my gobbler and before noon laid it down at my domicile with a sigh of relief that it wasn't two.

O. O. S.

"Scantogrease."

I am very glad that my friend Judge Greene gave us that etymological treatise on Scantogrease, for that word bothered me a heap, and I feared I should have to tackle it myself. I thought it was some Molalla or Crockamilk Indian word signifying "plenty rain" or "heap fish," that the Judge or Billy had run across in the brush somewhere in some of their fishing trips. I would rather choose that derivation than that from the Piker. The Judge has got off easily on this, but when he hitches on to words like Squawlickitawickyup or Smilkamooleyakum he'll get into trouble.

Speaking of fish, though, prompts me to say that there have been some pretty tough fish and other stories in The Forest and Stream during the past few years, stories hard to swallow even with all the accompanying lubricants, but what are they all to that story of the Judge's about Billy and the club and bull dog catching more salmon than a horse could pull. Why, that's a huckleberry above the Keosu bull head story. I have read stories about men killing cougars and bears with a club, and they seemed reasonable enough, yet the authors where hooted down the ages so far, but this story is swallowed as slick as though none of the readers were Scantogrease. Not a choke or a protest. I tell you, that great West is a terror of a country.

I see friend Belnap is somewhat exercised about the tales of "derring do" that he has read in your paper. I should hardly have expected this of him, living as he does in the State of wondrous possibilities. I'm sorry I stimulated his salivary glands and envy to such a degree in the relation of the pawpaw incident, but I couldn't help it. I don't blame him a bit for longing for "the fleshpots of Egypt." He ought to live in a State where delicious fruit grows. And as far as the cougar is concerned, if the cougar could only have had just one ripe pawpaw to hold under the animal's nose his fangs would have been drawn that instant, so to speak, and he would have followed the hunter like a lamb. There would have been no need of a club. If friend B. will live in Washington his penchant for horticultural delicacies will have to be gratified through correspondence, but he'll never suffer as long as he reads Forest and Stream.

O. O. S.

ROUND ABOUT NEW ORLEANS.

[From a Staff Correspondent.]

NEW ORLEANS, Jan. 4.—Christmas day in New Orleans was of the summer time in respect to weather, delightfully warm and clear. There was no jingle of sleigh bells, crisp air and muffled figures striding swiftly and vigorously about to keep warm, all of which give so pleasant a surface aspect to a Northern Christmas time, though underlying it all is the suffering of the poor, for weather which is simply bracing to the well fed and clothed is a pain to the poverty stricken.

Heavy rains set in on Christmas night, followed by a severe cold snap, some of the overflow from the great cold wave of the North, that is, it was cold for this section, the thermometer on Friday night last indicating 28 degrees above zero, an extraordinary low temperature for this section, cold enough to kill many of the tenderer forms of vegetation. While the cold is more favorable to general shooting, the dry marshes and low water still remain and are unfavorable conditions.

While calling recently on Mr. R. W. Foster, a sportsman who has been for many years actively interested in promoting field trial matters, and who is connected with the firm of J. U. Payne & Co., I had the pleasure of an introduction to Mr. Payne. Of course, the conversation turned soon on matters of shooting. Mr. Payne referred pleasantly to some business trip he made years ago in the North and West. He mentioned particularly the vast herds of deer and prairie chickens innumerable, which he had seen many years ago in Illinois and Indiana, also of the abundance of game in Missouri and Nebraska. Apparently Mr. Payne was a hale man of about 65 years, vigorous and clear in intellect, with a wonderfully retentive memory, for he would give the dates of circumstances which happened in the dim past, as if they were of yesterday. He mentioned a trip he took in 1835. I must have unconsciously betrayed some wonderment, for Mr. Foster remarked: "You must consider that you are talking to a gentleman who is 92 years old, and who therefore was born near the year 1800." In the North such an advanced age, with clear-cut thought, clear-cut memory and vigorous powers accompanying it, would be extraordinary, but here it is not at all uncommon. This section contains a greater number of aged people in ratio to the population than does the colder climates—aged, too, without the infirmities of age which obtain in the colder climates. They ride horseback, attend to business, go shooting, enjoy life; in short, while their physical powers may be somewhat diminished as compared with those of youth, their intellect remains clear and active, with the improvement which comes from broad experience and accumulated knowledge. Aged men in active business life are numerous. Longevity in the South is far greater than it is in the North.

In this connection it may not be amiss to correct some prevalent errors of belief concerning the climate and healthfulness of this section, and which are quite common in the North It is generally supposed that

Louisana is largely composed of swamps, and that intense heat, malarial fevers and general unhealthfulness prevail all the year round. Nothing could be more erroneous. The greater part of the State is dry. In the parishes along the Mississippi River and the Gulf, a small area comparatively, there are much swamp and marsh. It is hardly necessary to add that in the swamp region it is not healthy, though not so unhealthy as one might imagine. The State as a whole is remarkably healthy. There are none of the violent extremes of heat and cold which so sap the energies of the dwellers in the North, and which bring so much hardship to the poor and aged, the ones least able to stand the rigors of an exceedingly cold or warm climate. Life is much easier here, for the mild climate dispenses with the necessity of heavy clothing; expensive homes built with a view to withstand the cold; abundance of fuel and all the necessities enforced by six months of winter weather and barrenness. Neediness comes here only from prolonged negligence and shiftlessness, although the low price of cotton and the repeal of the sugar bounty have caused temporarily much financial distress. But financial distress here does not imply the domestic distress which comes from an empty pocketbook in the great agricultural districts above the snow belt. Wheat or corn may sell below the cost of produciton and destitution may follow, but who ever heard of a famine in the South? The same effort of the wheat or corn growers applied in this country would produce far greater results. The winters are so mild that work can be carried on the year round. The growing season is so long that two crop of potatoes can be grown in one season, and the hardier vegetables can be grown all winter. Sugar growing requires a lot of capital, as at present conducted, but there is a tendency to smaller holdings of land and greater economy in the production of the cane. Much of the land is alluvial and wonderfully fertile.

But, above all, for the sportsman it is a paradise. There are many varieties of game and abundance of each. Wild turkeys, deer, bear, ducks, geese and prairie chickens, the latter in the western part of the State, on the great prairies, once numerous, but now almost destroyed by the market shooters. Mr. A. Cardona, Jr., a famous sportsman of New Orleans, whose business requires several trips through the State each year, assured me that he did not think there were 500 chickens left in the State, the market shooting causing the destruction. Quail are in abundance at all times and snipe and woodcock are in still greater abundance in the winter months. Here they avoid the cold of the North, and, as the snipe family congregate in the Southern coast country, some faint idea can be found of their number. They can be found plentiful in October and November, after which the most of them go still further Southwest, though a few stragglers remain during the winter. In February and March they are abundant again. Last week a gentleman who shot near Abbeville bagged over one hundred, which is not poor for a mid-winter day.

Early in the present week, through the kindness of Mr. Foster, I had the pleasure of a shooting trip to Tangipahoa, situated on the Illinois Central Railroad, about eighty miles from New Orleans, in Tangipahoa Parish.

A parish in Louisiana corresponds to a county in other States. The outlying country about Tangipahoa is covered with pine woods, and has a poor soil with its consequent returns for the farmer's effort, but the pine woods of Louisiana is a favorite habitat of the quail, though they are in but moderate numbers about Tangipahoa. The straight, clean trunks of the pines, with no limbs lower than thirty or forty feet from the ground, and with abundance of opening between the trees which is entirely free of undergrowth, makes no destruction to good shooting. The flight of the birds can be marked so well that it is but little trouble to find them again after the first flush.

We took the evening train so as to be ready for a good start in the morning. The indications were for pleasant weather, indications which proved disappointing, for a cold rain set in early in the morning, which, after about two hours' cessation, settled into a steady downfall. By Mr. Foster's prearrangeemnt we were met by Mr. R. S. Nicholson, who combines agriculture and dog training as an occupation, and he has a good patronage from Southern sportsmen, having in charge a number of dogs, some in training and others in condition for shooting. A drive to his home on the outskirts of the town, a quick rearrangement of the trip, three of us mounting horses, the "hack" filled with a relay of dogs and we were soon started for the pine woods close by. Mr. Nicholson had four dogs at heel, where they remained steadily, showing remarkable discipline. It is no small matter to train dogs to remain at heel behind a horse. When ready for work he sent them out one at a time, working all four at once. I had some apprehension that there might be trouble in the way of a mix-up when birds were found, but, on the contrary, Mr. Nicholson had them so well trained that the work was quite finished. One would point and the rest would back. When searching for bevies they ranged independently and to the gun.

The steady, cold rain became heavier, making most unfavorable conditions for finding birds, though three bevies were found by the dogs. Mr. Foster had his Antonio-Daisy hunter bitch Charlie along, giving her commencement outing for the season's work. Notwithstanding her well rounded form, a product of good living, she ranged fast and well. She was left with Mr. Nicholson for further education. He handles quietly and skilfully, having learned the secret of training the dog to work intelligently to the gun without the offensive whistling and bawling so often heard, particulary at field trials. In his string was a dog owned by Mr. Omer Villere, who once was an active supporter of field trials. Another was owned by Mr. Pringle of Franklin, the famous snipe shot of Louisiana. The rain at last drove us to cover. We took the train in the evening for New Orleans. While we did not a have a big day from a shooter's standpoint, we had a pleasant one from any standpoint.

A most remarkable feature of the return trip was the great number of shooters on the train. From Tangipahoa, more or less of the city shooters got aboard the train in twos and threes and small squads at every station. Some were deer hunters, some were duck shooters and a few were returning from a quail shoot. None had any success, but all were pleasant and satisfied. The smoking car was filled, two men with two guns in each seat, and the shooting costumes were as various as were the shooters. The next car had a lot of shooters also. I was told that nearly every road centering in New Orleans had a similar patronage. B. WATERS.

A BLUENOSE BEAR FIGHT.

Gideon Perkins of Hartland, Carleton County, had a controversy with a bear in haying time that discounts any episode that ever occurred to Gideon before. It was one of the longest and toughest bear fights on record. It bids fair to immortalize Gideon. No matter where Gideon goes now his reputation travels in the same train. He is obliged to stop at every way station and water tank and explain the whole business. The facts related by Gideon are here given in Gideon's own words:

"I claim that I had one of the most faithful dogs on earth. There was nothin' on dry ground he wouldn't tackle when I told him to. He was a sandy colored dog and I guess he was sand clean through. He was none of your milyun-doller peddigrees, but jist a regular, common, every-day dog. Likewise he was the most serious, solem' lookin' dog I ever see. He was skeered o' nothin', and he was never knowed to bark, even at the full of the moon.

"On Sunday, 'bout hayin' time, my little girl, Emerenzy, she was over to ole Jeff Slocomb's house and one of the young wimmin sings out: 'Emerenzy, what's that critter comin' down the line fence over on your alder flat?'

"Sez Emerenzy, 'I don't know.'

"'Well,' says she, 'better go tell your ma 'bout it.'

"So over she comes and hollers to her ma, and her ma 'lowed it was a bear. So Sybil, that's my wife, she runs down the hill on to our flat and the bear was makin' for the brook then, but the dog tackled him and drove him over the fence into Laskey's medder. So when she was goin' down one side of the fence the bear was comin' up tother, and there was bushes all along, and she couldn't see him, and the fust thing she rightly knowed the bear hops over the fence jist about foninst her, but mebbe a leetle slashways. Laskey's wimmin see the bear and hollered across the flat for her to run. I guess the bear cal'lated to grab her, meetin' her so sudden like, but jist then the dog jumps over the fence and nips him in a tender pint and the bear wheels and makes a swipe at him and then heads into a clump of bushes and hardhack on my front.

"Then Sybil, that's my wife, she makes a beeline for the cow yard, where I was, and sez she: 'Gid, the biggest bear I ever see sence I was raised is down on our flat!'

"I sez to the boys: 'Git the axe and we'll go down and have some fun.'

"There was young Beniah Slote and Charlie Callop and Ben Laskey, and the women came along, too, and the hull passel of us went down together. I stationed 'em all along the brow of the hill to head off the bear while I went into the bushes with the dog to drive him out. In two shakes of a lamb's tail the dog rout the bear, and the fust I knowed he came tearin' by me, crashin' through the hard rack and growlin' like mad. I had no axe nor nothin', but I made straight for him. He went smash through the alders and up the hill, and the dog after him and me after the dog. When he comes to the clearin' the dog nails him agin. Ben Laseky said every hair on the bear was standin' on end and Lish Wilson said he see the bear chuck the dog over the top of the alders seven feet in the air! Then young Beniah and this here Laskey makes across and heads the bear off and fetches him with a rock 'bout as big as my head. With that the bear turns tail for the woods agin.' He come right on to me makin' fifteen foot a spring and the dog nippin' him near about every spring. I stepped behind an ole rampike that was there, and the bear was so rattled that he ran agin the rampike full split and canted over on his back. He riz up quick and started for the brook, but the dog kep' orderin' steak all the time and the fust I knowed down they went in the mud, bear on top, dog underneath. I thought the dog was a goner, but he wiggled out under the pie somehow and nipped the bear close to the gamble jint. With that the bear fetches the dog a regular stinger and knocks him clean off the lot, and tacks up an ole road that made through the bushes right into my medder.

"Now, Sybil, that's my wife, she was standin' right there to see which way he'd go, and the bear went tearin' by her so close that she declared if she'd only had the broomstick she could have knocked him cold! By this time the dog and the bear was gittin' pretty well played. Howsomever, the bear started to get over the line fence into Laskey's foller and the dog pulled him back. He tried agin, and the dog pinned him agin. The third hitch he got over. That kep' him back some and when I came along the bear was makin' for the high land across the plowed field, but Lish Whalen's boys hammered him with a fence rail, and he turned back agin and made for the brook. Ole Nige Whalen set the dog on, but the bear ketched he dog where Mary wore the beads and chucked him over the bank into the brook. Then I started across a kind of ox-bow to head the bear off. It was gittin' 'bout sundown and Lish Whalen's boys and Ole Nige hung back and said it was no use folerin' the bear any furder. Sez I: 'I'm goin' to have that bear or know the reason why.' I had no weapon in my hand, but I jist cal'lated he was my bear and nobody else's.

"When I cut across the ox bow and came up to the bear he was gittin' mighty tired. I told the dog to take hold of him, and he did, and with that the bear wheeled and rolled clean over him and I thought my dog was gone, sure. He was out of sight so long that I cal'lated for a spell that he must be inside the bear. Howsomever, I picked up a big rock and pounded the bear in the head, and that took his 'tention so the dog climbed out from under and off he goes agin straight for the woods. I guess when landed in the woods he got his dander up and cal'lated to have it out right here. He came rollin' and wallerin' down a little piece of swaley ground that was there, straight for me, and when he got about ten feet away he sot up on his hind legs and snapped his teeth at me like's if I was very unpopular.

"Howsomever, when I see the ole feller headin' this way there was a club 'bout as big round as my wrist layin' round in the road and I picks it up and prepares fer battle. The club was all dotey, but I didn't have time to see whether it was good or bad. I didn't run a mite, but stood my ground. When he come within range I whacked him over the head as tight as I could lick, but I broke the club the first whack, and it took no effect on him whatsomever. Thinks sez I: Ole feller, you're bound to make a meal off me this time sure. I backs up a step or two and then he didn't come quite so rash. Still he kep' movin' my way and he was jist goin' to clinch me when I hollered fer the dog, and the dog ran in and ordered more steak and the ole feller reached for him, and then tumbled right over backwards. But he was on his feet in a jiffy, and fer quite a spell the dog and him had it nip and tuck, and there was enuff hair flew to stuff a pillow case. Acorse the dog went under and I went in and pounded the bear to make him let up on the dog. I really 'magined then I was never goin' to see that dog agin alive. I laid over him so hard that he left the dog and made a pass at me and when I jumped back the bear started to run. He was so tired then his tongue was hangin' out 'bout a yard. I told the dog to take hold of him, and the bear faced round and showed fight.

"There was an ole pine root right there, and the bear backed up agin the root and faced us. I could see he was sparrin' fer wind, and I guess fer a fact the dog and me was pretty much as badly blowed as he was. I kept hollerin' all the time fer help and quite a crowd got round outside, but they 'peared a little bashful 'bout comin' in. The bear got uneasy 'bout so much holllerin',—he cal'lated this was jist a private scrap I guess, and off he starts agin. I told the dog to clinch him, and as I did the bear made a bolt and clinched the dog. That was a signal for me ter sail in, and I did sail in and walloped him till I made his head ache. With that he drops the dog and makes off agin. There was a little brook run down there through a kind of ole cedar swamp and the bear got over the brook, but on tother side the bank was pretty steep. As the bear went up the bank the dog nabbed him and hauled him back. He fetched the dog a winder in the bread room and tried it once more. But the dog meant business jist the same as I did. He took a mouthful out of the bear and then both bear and the dog keeled over in the brook. There they both sot within a yard of each other, the bear lookin' at the dog and the dog lookin' at the bear, and their tongues hangin' out, like's if they was jist havin' a nice little sociable bath together on a hot day.

"Then I thought it was about time to close the agryment. I fetched the bear on the nose with the club, but as I did he made a glom for my leg and ketched my foot. I sprung back to clear myself, but my foot was fast and I went over on the broad of my back. I sposed the bear would be on top of me that minnit, but the dog took another sample out of him and he wheeled and grappled with the dog. When I got up the bear and dog was havin' a tussle in the brook, and the water was flyin' in all directions. I sailed in with club and pounded him three or four times across the small of the back, and when the dog clim from under him, there sot the three of us in the water, him as innocent and friendly as you please and the dog on one side and me on the other. We didn't move for quite a spell, but every feller yarded out his tongue fer all he was worth.

"I hollered fer help as soon as I could ketch my breath, and bimeby Melkisedek Sloat came in with the axe. He made a blow at the bear when he was mor'n twenty feet away I sez: 'Melky, don't be scared, come up close and hit him in the head.' I guess Melky was afeared he'd overreach him. Second time he struck he was only 'bout six feet from the bear. I sez: 'Melky, come up and hit the bear or else gimme the axe.' With that his prejudis agin the bear 'peared to wear off, and he come up and hit him a corker with the pole of the axe. The bear reached fer Melky, but jist then he got another clout, and rolled over on his side and that was the end of him.

"I never did see sich a whopper of a bear in all my life. He was jist rollin', swimmin', you might say, in fat. It took eight or ten of us to haul him out of the swamp, and when we hitched ole May and the drag onto him the horse couldn't haul him mor'n three or four rod till he had to stop and rest. I had a set of scales in my barn that would lift four hundred pounds, and another that would lift three hundred, and we jacked the bear up to both pair of stilyards and then we couldn't weigh him. I cal'late the heft of that bear was about 800 pounds.

"So I really think I had one of the most faithfullest dogs that any man ever had. Howsomever, that fight 'bout finished him. Fust he took to barkin' in his sleep. Then he took to howling all night long. Bimeby he 'peared to have the agoo or 'stericks or somethin', and never stopped shiverin.' But last Sunday morning he stopped barkin' and shiverin' forever, so Lish Whalen's boys and me carried the mortal remains of the ole feller over in the cedar swamp and berried him by the brook where he nipped the bear for the last time."

FREDERICTTON, N. B. PROWLER.

TRAVELING IN LUXURY.

Southern Railway (Piedmont Air Line) New Florida Short Line Limited.

Ever ready to provide everything for the accommodation of the patrons, the Southern Railway Company has added to their service a new train to the South known as the New York and Florida Short Line, Limited, which is, beyond doubt, one of the finest trains in the world. The Dining and Sleeping Cars are all of the Pullman Company's most modern make and are but a few weeks from the shops, the Southern Railway and the Pennsylvania Railway being the only lines who have as yet received any of the new Pullman Compartment Sleeping Cars.

The New York and Florida Short Line Limited leaves the Pennsylvania depot daily at 3.20 p. m. It is a solid Pullman Vestibule train and runs between New York and St. Augustine, carrying also through sleeper New York to Tampa and Augusta; the train is composed of dining car, compartment, drawing room and stateroom sleeping cars. The stateroom sleeping cars enable one to enjoy perfect seclusion, the same as a drawing room, cost being little more than a section in ordinary sleeper, each stateroom being provided with two berths, wash basin, lavatory, etc. Passengers on this train go through to St. Augustine and Tampa without changes, dinner being served at Jacksonville at seven o'clock, St. Augustine 8.15 p. m., on the evening of the day after leaving New York.—*Adv.*

AN ENGLISHMAN'S EXPERIENCE OF FLORIDA FISHING.—II.

BY ALFRED C. HARMSWORTH.

It had been our intention from the start to see some of the wilder life of Florida, and I may here say for the enfit of some Boston or New York knownothings of their own country of Florida unmapped and indeed, unexplored. A very small portion is inhabited by the Seminole Indians—inoffensive creatures enough, and still adhering in places to their picturesque costume.

Punta Gorda is about as far south as most people go on the Gulf of Mexico coast. A few may visit Punta Rassa; others St. James City on Pine Island; and a few, very few, our own destination, Naples. We left Punta Gorda very early one morning on one of the quaint, old-fashioned American tugboats plying in those parts.

In some 25,000 miles of sea travelling I remember no more delightful voyage than that perfect February day's trip, in which we glided past the fairylike palm-covered islands and down into the treacherous Gulf. Like the Mediterranean, the Gulf of Mexico is often perfection; equally often its bad temper displays itself in sudden squalls, known as "Northers," in one of which our little party, some weeks afterwards, was to have a narrow escape of death. At sundown we came to Naples—not the Naples of Byron and Shelley, but a newer, sweeter, if less interesting spot, and one destined, I think, to form a great winter resort of our American cousins within the next few years.

The township of Naples belongs to a certain charming old American gentleman, Colonel W. N. Haldeman. Outside these extremely comic, if hospitable, folk, the "400," most of the people in America seem to me to be presidents of some corporation or another, or connected with newspapers. Colonel Haldeman is both. He is the president of that well-known Kentucky publication, the Louisville Courier-Journal. At Naples he answers to our English notions of a squire, and does it remarkably well. Far away down there, on the shores of the great Gulf, miles from civilization (I forget how many scores of leagues from the railway train or telegraph wire), he has built for himself a comfortable little home—not the ordinary American frame building, but just such a house as one would see between Genoa and Mentone. Close by he has put a hotel, wooden, it is true, but comfortable nevertheless.

The hotel stands back some three hundred yards from the sea, and from the verandah—or the piazza, as you are fond of calling it over there—of the little hostelry there runs a wooden tramway, which extends from the door to the wooden pier that juts out perhaps one hundred yards into the Gulf.

A little company of daintily attired maids and matrons was gathered at the head of the pier as we arrived, and without any of the inexplicable aping of last year's Anglicisms we encountered when they knew we were English, a particularly warm welcome awaited us. Indeed the warmth of the welcome extended by the Americans to the English folk all over the United States is most puzzling to me. That your people as a rule dislike us there cannot be the least doubt in the world One rarely sees an American newspaper without reading some attack on the old country. Candid American friends will tell us that we are not loved. Canadians told me over and over again that the Americans were always in a state of irritation against England. I asked the reason of numberless people over there. A distinguished Presbyterian minister of New York, on our way down from Naples, told me that it was envy. There is obviously some truth in it, but "John Bull" is, I fear, overbearing and purse-proud in a manner that does not go down with people of our stock like you, though it works profitably if unpleasantly enough with inferior races.

"While we spend months of time on the acquisition of Hawaii," remarked the clergyman in question, "you grab half a continent and say nothing about it." A very distinguished banker in New York told me that the reason can be directly attributed to our vast investments in the United States, more especially to our great holdings of American railway bonds. "You are denuding the country of gold, and our people do not like it," he observed.

Whatever may be the cause, there can be no doubt as to the fact, and it is a pity. The Americans as a nation and individually are so popular with us that one feels sorry to think that the feeling is not returned. Perhaps it is between the Americans and the English as it is between the English and the Russians. We regard the Russians as our enemies, they, on the other hand, seem to know nothing of such a feeling.

But to Naples again. There are practically only two houses, Mr. Haldeman's and the hotel. A few wooden cottages are dotted about, but within fifty yards of the hotel door you can lose yourself in the palmettos. Quite close to the hotel they found panther tracks one day. The gardener coming out of his cottage killed a rattlesnake on the threshold, and deer have been shot at the very doors. For sport, therefore, Naples is distinctly the place. For health, sleep, and appetite I have found nothing to equal it outside my own little sea girt home in Kent.

Between ten and fifteen miles south of Naples is Marco. At Marco is the only shop or store in a couple of hundred of miles of coast, and in the creeks thereabouts are thousands of tarpon.

Mind you, Marco is not a fashionable tarpon resort at present. It is at Fort Myers that most fish are killed, and as I write this I learn from an English friend there that the tarpon record has been beaten this year by a fish weighing over 220 lbs. Sometimes, as I thrash a Kent or Hertfordshire stream in the endeavor to master the art of dry fly-fishing, and in the hope of perhaps killing a two-pounder, I look back regretfully at one particular day in Florida when I was surrounded by hundreds, I believe I might say thousands, of finny gentlemen weighing anything between fifty and a couple of hundred pounds. On my next visit to Florida I shall make Naples my headquarters, and do most of my tarpon fishing at Marco, for, though arrangments are primitive there, the fish are innumerable.

All the people staying at the Naples hotel had come for sport, and before we retired that night we knew what to do and where to go. There were four guides in the neighborhood, two negroes, who did not prove satisfactory, two Americans, one a Georgia man. Hart by name, and a well known character, "Everglade Ned," who originally hailed I believe from Pennsylvania The party divided itself into two portions. My wife and I formed the fishing contingent, our companion shot most of the time.

My first day's fishing at Naples took place in the Gordon river, and it was a distinctly successful beginning. I tried English tackle at the start. An ordinary phantom minnow attached to a light gut cast was my first idea. I had scarcely thrown the minnow from the boat, which was being pulled up the stream, when a fine fish rose. I struck him hard and the line came back at my face. Friend Hart—and I say friend advisedly, because he and I grew great chums before I left Florida—smiled a smile as who should say, "British tackle is not much good for a free-born, independent, 'bully for G. Washington' American fish," but I had other phantom minnows with me, and in a few moments I had altered the gut trace to one of wire. Then I cast diligently from side to side of the boat for half an hour, and presently my reel gave a great scream of delight, and I had something at the other end churning the water like a screw propeller. Of a sudden a beautiful silvery fish leapt out of the water, not such a leap as one would see at home in a fish of this size, but a distinct jump into the air of at least three feet.

"A lady fish," remarked Hart. "I guess you will see some sport."

He was right. I was fishing with a light fly rod that had been rather smiled at by the people at the hotel, a plain, rather short greenheart. We were in the middle of the river where it widened out into a small lake, and my victim went away at a tremendous pace. It is characteristic of Florida fish to require more line than I have ususally found necessary in our own waters. For tarpon fishing, as I have pointed out, six hundred feet is usual, and it is often not enough. This particular fish required all the line at my disposal, for I feared to give it too much butt. A light greenheart top is, as I daresay most anglers know, occasionally treacherous. When all my line ran out, the fish was apparently at bay. It amused itself by leaping out of the water at intervals. Presently I began to tire it. My first Florida fish took twenty minutes to kill. With heavier tackle, of course, I could have settled it at once.

I have hardly ever seen prettier fish than those "lady," or "bone" fish, as they are called. They are not good to eat, but are most beautiful in appearance. The bright silvery sheen of their scales is equalled only by those of the tarpon. My pocket scale pointed to six and three-quarter pounds, the best lady fish I caught in Florida. though I heard of them running up to sixteen and eighteen pounds.

Immediately after I hooked a cavallio, sometimes known as the jack fish, and also, I believe, called the horse fish. In shape they are not unlike our bream, of a dainty yellow color, and game as one could wish. With heaiver tackle I could have landed twenty or thirty in an hour sometimes.

It was hot work I can assure you, standing up under a blazing sun, with the temperature at ninety, and the glare off the water hot enough to take, as it did, the skin completely off the face and hands.

And such thirsts as those at Florida! It is well that the wisdom of the inhabitants has, in a great portion of the State, prohibited the consumption of alcohol, or the consequences might otherwise be too terrible to contemplate.

It seemed to me that Belfast ginger ale is the great temperance drink throughout the general part of the State. The boatmen and I occasionally got through a dozen bottles between us on a fishing expedition.

Playing a big fish on a light line in that weather became no joke after five or six hours' sport, and, but for the novelty of the thing, I doubt whether I could have kept it up as patiently as I did.

The variety of the fishing in Florida is one's great incentive to regular work with the rod. That morning, in the Gordon river, my wife remarked that all the first five fish were of entirely different kinds.

After I had brought to creel my jack fish there came at my phantom minnow something that looked remarkably like a pike, and a big one. I confess I am not one of those who are able to tell the weight of fish by its amount of pull. Had I guessed the weight of No. 3 when I struck him I should have said that he scaled considerably over 20 pounds. He fought doggedly and brilliantly. Many times in my tussle with him did I tremble for my rod; many times was my guide prepared for the "I told you so" as the light greenheart doubled and strained. After a time he came in easily and stupidly, as a grayling will occasionally; but, when I thought I had him, he, like the grayling, made his best rush of all. He was off and away, and I thought it best to let him work his wicked will. As he slowed down I wound the line against him, and gave him all the butt I could. Hart backed the boat towards him; I reeled up rapidly, and, before he knew where he was, he was gaffed. As a rule, I do not think it fair to gaff a fish under 10 pounds; this gentleman weighed barely 8 pounds.

"Rovallio," remarked Hart.

"That is what you called the other," I replied.

"No, that was cavallio."

Though the names are similar the fish are quite different. He was indeed a beauty. On closer inspection he still maintained his resemblance to a pike.

My phantom minnow was played out, and so was I. We resolved to row further up the river and take lunch in the shade of some mangrove trees.

"Perhaps if you trail a spoon bait behind the boat you might pick up something going along," observed Hart.

Happy thought! Trailing, as a rule, is poor sport, but in this climate a rest was very welcome. I was not however, to rest long. I attached a mother-of-pearl spinner, purchased in New York, to my trace, and trailed it about thirty yards behind the boat. We had barely started when a splendidly joyous song from my reel (is there sweeter music in the world?) told of something good. What it was I could not tell yet.

He had his own method of fighting, and a determined one at that. Occasionally I wound in a little, but he seemed to fear the boat, and was apparently able to see us better than most fish, for directly Hart began to row toward it he was off again. We finally determined to stop still and play it. With three previous fish I had fought rather nervously. I had not been quite sure of my tackle, despite my patriotic assertion that an English reel will stand anything. I felt confident now, and I thought I would be able to kill him in a minute or two, but it was no good, he was able to travel against all the butt I could give him and did so. I gained on that fish nine or ten times. On one occasion I had him within three yards of the boat, but it was no good it was not until Hart rowed against stream for a quarter of a mile or so that I drowned him. As we drew him in, we found him to be a channel bass, pronounced by all to be the best small game fish in Southern waters. For his size, I believe him to be as good as the tarpon. He runs from 11 pounds (when he is known as a school bass) up to 40 pounds, I think. I give all these extreme sizes on hearsay, I did not see a 40 pound bass, but I heard of them, and I am bound to say that I did not find much exaggeration among Florida anglers. With game fish scaling up to 200 pounds, it is unnecessary and difficult for them to exaggerate.

Black bass fishing I have not tried, but was assured by those who had caught most of the basses that the channel bass is as active as any of them. In color it is a dark coppery red. The changes in its tints when dying are most beautiful. Presently our guide, Hart, rowed us under a mangrove tree, where, in the intervals of killing mosquitoes, we consumed vast quantities of grape fruit, bananas, Florida oranges and venison. We grew rather tired of venison, by the way, at Naples. The local steamer broke down twice, the wind would not permit sailing boats to approach, and we were cut off from civilization for nine or ten days, and only an occasional wild turkey varied our diet.

After lunch, Hart proposed we should pull slowly down to the mouth of the Gordon river and try for tarpon. We had brought some mullet with us for bait, and truly, as he suggested, playing game fish on a light rod was a good deal too hot for a day of that kind. As we glided gently down stream we found that the only way of keeping cool was to sprinkle ourselves and the boat with water. Every now and then we dipped our wide felt hats in and soaked them thoroughly. A very few minutes of the hot sun was sufficient to completely dry them.

In pulling down we passed a school of young tarpon. Their dark fins appeared every now and again on the top of the water and told us they had arrived in full force. I was greatly tempted to troll for them with a minnow, but my guide did not think it good enough.

"It is much easier," he said, "to catch a large tarpon than a small one."

That seemed a curious statement. Most fish, I think, are captured more readily when young than when fully grown. Colonel Haldeman says in American Game Fish: "I should not forget to mention one remarkable characteristic of the tarpon. Comparatively few of the smaller ones are caught with rod and line. The young fish seem, contrary to the general rule, to be more wise and wary than the older ones. In my experience ten fish weighing 75 pounds are caught to one weighing less."

After making this quotation I need scarcely say that it was a young tarpon I caught on the following day. I should not have reproduced Colonel Haldeman's words had I killed a 100 pounder. That, however, as Mr. Kipling says, is "another story." Suffice it to say that I marked those tarpon down, and resolved to try for them on the next morning after a method of my own.

(*To be continued.*)

THE MEAT OF THE COCOANUT.

We townspeople who take to the brush only now and hen are a little prone to write all round the story when we come to write about it. We see so many things along the path that the life and action of the scene loiters and is left behind, at times, simply because the by-play is so novel and strange to us.

And yet if we write about what we have actually experienced, despite the slight tendency to self consciousness, the life and reality is there and sufficiently apparent at all times to stamp the tale as genuine, in contradistinction to the elaborate compilation of the gushy space writer of the newspaper syndicates. In the internal evidence of truth consists the whole charm of the tales of Forest and Stream, whether written with or without the capitalization. Lots of the gentlemen of the gun have read with absorbing interest the tale of a warrior bold who never fought a fight; but there is the hunter who will waste his time reading of a hunt that never was hunted, written by a sportsman who never chased anything but a Faber lead pencil.

Our dear friend Hough knows this, hence, when he would write us out a little entertainment, he first hies him down out of the Security Building, Chicago, Ill., to the woods, circumambient or otherwise, even if he has to travel on snowshoes to get there, and then, when the thing has happened, Bismillah! it has happened. And now and then he gets a line from one of the fellows who live in the midst of the fun all the time, it is brief and sometimes it is misspelled, but when you read it you can smell the damp odor of the forest and you can feel in your bones the vigorous sparkle of the frontier, and with his good literary perception he sees that "we all" will be pleased to read it, and he pops it into his letter.

All of which is by way of preamble to Blanton's letter to the Colonel, which follows.

GEORGE KENNEDY.

"Our boys went hunting yesterday out where we made our first drive. Ran two old bucks off of that mountain, one red fox, one large gobbler. Tims was too fast with his drive. Ran the biggest deer, so Bennie says, he ever saw out before he got to his stand, that is where Mr. Kennedy stood down by the field. Well, I came along after awhile with the hounds, bringing a red fox to the first stander he stopped him. I blowed a few blasts on my old horn and thought, "here's to you and Kennedy

"Then I dropped back a little and started up the

mountain, then I saw one of my hounds Rare up and smell a bush and start off switching his tail. I knew what that meant. I put spurs to my pony, the hill being steep and them little dogs striking ahead. I just got to the point in time to see my old buck start down the other side. I knew from the way he was jumping and the music behind him there was no use of me trying to head him, so I stopped to listen. So, pretty soon I heard a shot ring out; then another and another, until I counted nine shots. I made up my mind the magazine had blone up, for I Knew Bennie was down there with a good .38 and plenty of shells. I could hear the dogs go out of hearing. I hustled down there. Couldn't find anybody and began to hunt for tracks. Pretty soon I found Bennie's mule's track coming out in the road. He had fled to the creek, where the dogs had him dead. He had shot 8 shots at him while running across the field. Two balls passed through his body, one cutting his melt half in two, then ran a mile and a half to the creek. Tims had shot the first shot at an old gobbler that couldn't stand the music of the hounds. The deer and the turkey had both put for the creek. When we all got there the fun commenced again. They put the deer on Bennie's mule, and tied it on tight and then the mule bucked everything off but his hide and ran off home, so my pony had to pack it in, as Tims had to go clear back on the mountain after his horse and gobbler. You see there is a little game here yet. Dr. S. went down to Mr. J.'s last week. He says there is a deer to every acre of land. Tims says if you all cant come down we will go down and camp a week ourselves.

"Yours truly,
J. F. BLANTON.

Natural History.

Kingbird and Hawk.

LOCKPORT, N. Y., Jan. 4.—While hunting grouse in September last I was passing from one piece of woods to another when I saw a kingbird chasing a hawk of some species for a long distance, and from the motions of the hawk I thought that the kingbird was not having its own way in the fight. Finally, and just before they reached the piece of woods that was my objective point, the hawk made a sudden dive and both birds disappeared from view across a rise in the ground, and I supposed that the hawk had reached the woods in safety, and the kingbird had given up the fight. The sequel showed that such was the case.

When I was about ten rods from the woods, I saw sitting on a log what I supposed was a grouse, and prepared to take it in as it flew up on my approaching nearer, but I failed to do so, and then I saw that instead of a grouse it was a hawk. As I shot it dropped something, which, on securing, found to be a kingbird as neatly decapitated as if done with a knife. From the nearer view I had of the hawk I saw it was the Cooper's hawk. This is the first instance I have known a hawk to get the best of Tyrannus tyrannus.

J. L. DAVIDSON.

Herding with Buffalo.

NEW MEXICO, Dec. 1.—*Editor Forest and Stream:* Old buffalo hunters will remember that in the early days it was not uncommon to find domestic cattle and even horses runnng wild with the buffalo herds and apparently accepted by them as welcome associates.

I remember well an old Texas cow that I often used to see ranging with the buffalo on the north fork of the Arekaree Fort of the Republican river about where the line between Kansas and Nebraska now runs. I have many a time crept within a short distance of the bunch of buffalo with which she ranged and have taken notes of the actions of the animals. Many a "scrap" have I seen for her favor, and often a buffalo on either side kicking her. She was fat, sleek and in the best of condition, and she seemed to recognize that she was one of the elect and accepted her honors with the air of an aristocrat. I think that very likely her color accounted for the partiality which the buffalo manifested for her. Although I have before and since seen cattle and even horses in buffalo herds, I never observed the same attention paid them as in this case.

I have been asked whether I supposed that the feelings of the buffalo toward this cow were different from those which a mule feels for a colt. I am inclined to think that they were. The mule is swayed by the same emotions that govern the human being when he looks upon the helpless infant. These are awe, love, or it may be the instincts of protection or maternity. In the other case the controlling sentiment is admiration such as we would feel for a beautiful woman or a type of beauty altogether different from anything we have ever seen.

The Deer of Druid Hill Park.

Baltimore's greatest park is Druid Hill, and it has a present interest because a sharp contest has been started by wealthy men of the city against the park commissioners allowing deer to range at large.

In 1867 Thomas Winans presented to the park fifty-two deer, which had been tamed on his Baltimore County farm. Many have been killed and sold since then, but the herd now numbers 140, ranging at will throughout the 700 acres. It is claimed by these gentlemen, who are owners of fine horses, that the deer cause driving accidents and are general nuisances. An instance is given where an infant lost its life in a runaway caused by one of the animals. The allegation is: "The maintenance by the Park Board of this large herd of wild, mischievous and dangerous animals, not confined to a certain part of the park, is illegal; and the city is liable for any injuries done directly by them to the person or property of the citizen, and for damages occasioned by runaways caused by them. It is a misuse of their powers by the Park Board to maintain this herd of deer to the detriment of the trees and shrubbery—the principal ornaments of the park—to the disfigurement of the park by unsightly devices resorted to to prevent the ravages of these animals, and to lavish such an enormous expenditure as is spent on such a worthless object." They further point out that the interest on a principle of $400,000 is expended substantially to preserve these animals.

The park officials stand faithfully by the deer, and the general population seem to want them to remain, but those who have fine horses are opposed to them. It is true that it is not always pleasant, when taking a quiet drive in the wooded section of the park, to have a skittish stag spring like a bolt of lightning across the road; but then the thousands who use the park most do not drive, and the tricks of the deer constitute a large part of their interest in the park grounds. Druid Hill is the only park in the United States where such a herd would be allowed; that is to say, in other words, it is the only park of its kind that we have in this country. Its unique points always repay the attention of the visitor.

If you come to Druid Hill looking for landscape gardening you will go away disappointed. It is no more like Central Park in New York than the forest is like a conservatory; it is no more like Fairmount Park in Philadelphia than a good country road is like a speedway. Long ago nature claimed it as her own, and in spite of many imperfections in the way of modern improvements nature still holds sway in a goodly proportion of its 700 acres. It is the only forest park in the country.—[Correspondence New York Evening Post].

Cormorant Caught in a Steel Trap.

LOCKPORT, N. Y., Dec. 22—*Editor Forest and Stream:* While I was stopping at Theresa, N. Y., the past season Mr. Fred Rodenhurst, a prominent hardware dealer and sportsman, informed me that last April he noticed at different times a pair of large birds flying about Red Lake, a few miles from the village, and often saw them sitting in the top of a dead tree, but could not get within shooting distance of them, and concluded to set a steel trap for them, which he did, and secured one of them, and it proved to be a cormorant. This is the first instance to my knowledge that this species occurred so far inland from the great lakes. Mr. Rodenhurst kept this bird about the store for a week, to the terror of the dog, which it would attack on sight. Finding that it was unhurt he gave it its freedom thinking it might rejoin its mate and breed in the vicinity But nothing was seen of them after its release.

A few days after this was related to me I was entering the lake from the Indian river and just as I had left the outlet two large birds came flying over the boat. My gun lay beside me, but as I had my wife and daughter with me I did not have any shell in the gun having them on the seat. It was but the work of an instant to drop the oars, pick up the gun and slip in a No. 4 shell. The next moment one of the birds dropped in the water with a broken wing. My first thought was that it was Mr. Rodenhurst's cormorant, but on securing it I found it was an American osprey. At that time the water at the outlet was very shallow and often in passing in and out mullet and pickerel could be seen, and these were probably what the ospreys or fish hawks were after. On passing out of the lake within an hour I shot a marsh hawk, which fell within ten rods of where the osprey had. While the stomach of the osprey was empty that of the hawk contained the remains of two birds—one of which was that of a white crowned sparrow, which at that time was very plenty along the river and lake shores.

J. L. DAVISON.

Range of the Blackfooted Ferret.

NEW YORK, Dec. 17.—*Editor Forest and Stream:* The range of the blackfooted ferret (Putorius Nigripes) is known to cover Nebraska, Kansas, Wyoming and perhaps other parts of the West, but I do not know how far North it goes.

Recently while at Blackfoot, a station on the Great Northern Railroad in Northern Montana, just east of the mountains a half breed Indian named Francois Monroe presented me with the dressed skin of what he called a "spotted mink." He evidently thought it a partial albino of Putorius vison, but it is a black-footed ferret. On inquiry I learned that it had been taken in a steel trap on Willow Creek, and that another "spotted mink just like it." had been killed a short time before by an Indian on Milch River about twenty miles further north, and not far south of the 49th parallel.

On writing to Dr. C. Hart Merriam to learn what is the northernmost locality recorded for this species, I learned from him that he knew of none so far north as Blackfoot. That the animal is not common in this locality seems probable from the fact that the Blackfoot Indians do not know it as a species. Further south—say in Nebraska—the Pawnees know this animal well. With them it goes under the name "ground dog," and certain curious beliefs are held about it. It is an animal rarely seen, and when not abundant might well escape observation for a long time. The early history of the species and the fact that for some years it was "lost" show this

GEO. BIRD GRINNELL.

A White Crow.

I enclose a photograph of a white crow which I shot last September in Connecticut, eight miles below Hartford. I had hunted him off and on since June without getting a shot, but finally came upon him while I was paddling in a canoe after ducks. His bill and legs are perfectly black. He was always in company with half a dozen other crows and never was seen far from a grove of willows on the banks of the Connecticut River, where he was shot.

December Robins in Pennsylvania.

CHESTNUT HILL, PHILA., Pa., Dec 31.—Dear Sir—Yesterday (Dec. 30), while taking a short stroll near the border of a wood I was surprised to hear the call of a robin, and on close inspection discovered a flock of at least 25 birds. What do you think they are doing here at this time of the year? Had they just come North? Or were they going South? They were very disconsolate looking. They had evidently been feeding upon the sumach berries, of which there were a great many in the neighborhood.

A READER.

[Belated birds or possibly winter residents.]

A Connecticut Wildcat.

PORTLAND, Conn., Jan. 1.—A willdcat (Lynx rufus was taken here Dec. 12, 1894, and through the kindness of Mr. J. C. Reeves is in my collection. It is a half-grown kitten, and weighed ten pounds. So far as I know, this is the only specimen killed within the limits of the town for more than sixty years. As rattlesnakes have heretofore been the principal "game" for our citizens, it is a pleasure to state that at least one wildcat has come to stay.

JOHN H. SAGE.

Linnæan Society Meeting.

A regular meeting of the Society will be held at the American Museum of Natural History, Seventy-seventh street and Eighth avenue, on Tuesday evening, Jan. 22, at 8 o'clock. Dr. Allen will read a paper on the Mammals of Southern Arizona.

Old Mexican Dogs.

Editor Forest and Stream:

In looking over an old Mexican history, published in 1817, I find the following regarding dogs, which may interest some of your readers:

"The Itzcuintepotzotli and Xoloitzcuintli are two species of quadrupeds similar to dogs. The Itzcuintepotzotli are hunch-backed dogs, as large as a Maltesan dog, the skin of which is varied with white, tawney and black. Its head is small in proportion to its body, and appears to be joined directly to it on account of the shortness and greatness of its neck; its eyes are pleasing, its ears loose, its nose has a considerable prominence in the middle, and its tail so small that it hardly reaches half way down its leg; but the characteristic of it is a great hunch which it bears from its neck to its rump. The place where this quadruped most abounds is the Kingdom of Michuacan, where it is called Abora.

"The Tepitzcuintli, that is, the mountain dog, is a wild beast so small that it appears a little dog, but it is so daring that it attacks deer and sometimes kills them. Its hair and tail are long, its body black, but its head, neck and breast are white. The Xoloitzcuintli is larger than the two preceding, there being some of them whose bodies are even 4ft. long. Its face is like a dog, but its tusks like the wolf, its ears erect, its neck gross and tail long. The greatest singularity about this animal is its being totally destitute of hair, except upon its snout, where it has some thick, crooked bristles. Its whole body is covered with a smooth, soft, ash-colored skin, but spotted in part with black and tawny. These species are almost totally extinct, or at least very few of them remain."

In a footnote to the above is added: "Giovanni Fabri, a Lincean academician, published at Rome a long and learned dissertation, in which he endeavored to prove that the Xoloitzcuintli is the same with the wolf of Mexico; having without doubt been deceived by the original drawing of Xoloitzcuintli which was sent to Rome with other pictures of Hernandez; but if he had read the description which this eminent naturalist gives that animal in the book of the 'Quadrupeds of New Spain,' he would have spared himself the labor of writing that dissertation and the expenses of publishing it."

The illustrations of the Itzcuintepotzotli which accompany the above, are strange-looking canine specimens, but are said to be taken of drawings from the original.

SHARON, Pa.

Camp-Fire Flickerings.

Knowing that you, your readers and every true angler seek to gather data pertaining to the gentle art, I beg leave to call attention to the facts narrated herein, only vouching for the truth thereof and modestly leaving to each to determine for himself the exact significance and scientific value of the things set forth. At the noon hour, on a day in August last, we met on the banks of a trout stream for lunch. In the party were B. and L., brothers-in-law; B. distinguished by a nose most decidedly hooked. After lunch the fishing of the morning was discussed, as we rested and smoked, under the shade of an old oak. Gradually the conversation drifted into reminiscences of former exploits and adventures. An experience had by B., often hinted at but never told in detail, was called for. Finally, after much urging, he was induced to unfold his tale. "No, sir, I don't tell that story, for I know you will all say it is a yarn, but it's true—every word, and there isn't anything funny about it." More urging brought the story. "Well, I was fishing this stream one hot day, and becoming thirsty I kneeled down to drink from the stream. Just as my lips touched the water a trout seized me by the nose and gave it a strong yank. Yes, sir! he just held on and shook my head from side to side. I could have landed him, but I was so astonished and scared that he got away."

A profound silence followed, which was finally broken by L., who, after a long, deep sigh, said in a tone of remonstrance: "B., that can't be true—no trout in the world that once got hold of that nose could ever get away, there is too much hook in it."

SEVENTY.

The Buffalo of North Carolina.

Editor Forest and Stream: In criticising the menu of a game dinner given at the Hotel Chattawka in Newbern on Christmas day you sententiously ask, 'Where that buffalo tongue came from."

Now, that tongue was all right. I anticipated that exception would be taken to that item in the menu on account of the scarcity of buffalo in the West. I beg to assure you, however, that these viands are a staple article in this State and that buffalo, so called, can be found all along the North Carolina coast. The breed first came to notice during the war, and representatives are even seen to this day. Quite a number of them were present in Newbern on the occasion of the reception of the veterans of the Connecticut 15th Regiment last November, and the tongue referred to in the menu was probably procured by the enterprising proprietor at that time. I hope, sir, that you will be satisfied with this explanation and grant the landlord immunity from the operation of the game laws, governing the slaughter of Bos americanus.

Game Bag and Gun.

A CONNECTICUT WILD GOOSE HUNT.

My Western brethren, who are in the habit of killing geese by the hundreds, perhaps, will probably ridicule this little affair of mine in which I became so deeply interested. Not so, however, with my Eastern fellow sportsmen, especially those who live in my own State.

For ten days or so previous to March 14th, 1894, a small flock of wild geese had been making its headquarters at Shaw's Lake, about two miles distant from my place. The geese were, in all probability, on their journey north and presumably waiting for milder weather to resume their trip. The fact of their being in the lake and remaining for such a length of time created no little excitement among our local sportsmen; but the extreme wariness of the geese kept them well out of range, at least for shot guns. I could not rest content without making an effort to secure one or more of them, although I knew it would be a very difficult task. On Wednesday, March 14th, I visited the lake to reconnoiter. The geese, fifteen in number, were there. The sight of the lusty fellows stirred the sporting instincts within me to the utmost. It was useless, however, to attempt anything that day, as they kept well in the center of the lake. I returned home with the intention of visiting the spot early the next morning, surmising that they would come in near shore to feed.

At 3.30 Thursday morning I was up and made ready for a start to the lake, taking my light weight gun. A brisk walk of half an hour brought me there at the vicinity known as "Blackbird Swamp," where I intended to secrete myself and trust to luck for the rest. Judge, then, of my surprise when on arriving at the swamp, I found the geese already there, within seventy-five yards of me, in a small spot of open water, as most of the swamp was covered with ice. Not that I saw them, for the moon had dropped behind the woods and hills at the west, which of course cast a shadow on the west inside of the lake where I was. But I heard them very distinctly. It was at that time approaching daylight. I supposed everything was in my favor and dropped on all fours to creep, or crawl, to within good shooting range. In less than a minute, I was most woefully disappointed to hear a great flapping of wings and honking of geese. I listened and heard them swish into the water again, nearly opposite me, about midway of the lake. I also concluded that the geese had seen me (even though it was dark) and that had occasioned their flight. I felt that I had occasioned their flight. I felt that I was out-generaled in handsome shape, but decided to make one more trial. Leaving my position I secreted myself thirty or forty rods further up the shore, where the land jutted well out into the water. This position left the geese below me. It was now light enough to distinguish objects at quite a distance, and I very soon located the geese about 200 yards below me but well out in the lake. I decided to wait as long as I could withstand the bitter cold without freezing

I had been lying prone upon the ground for about half an hour when I saw seven black ducks approaching, swimming. I allowed them to pass within easy range unmolested; I also discovered some shell ducks above me. All this I concluded was in my favor, as I hoped it might decoy the geese. I was right. In a short time I had the satisfaction of seeing the geese coming toward me, a long way off, but surely coming. Up to this time I had suffered intensely with the cold; but the sight of those noble fellows steadily approaching seemed to stimulate my circulation into wonderful activity. The geese were now within a hundred yards of me, swinging in shore, and also up the lake. If they keep their course, I will surely get a shot, at long range, however. Still they come, only eighty yards away, a moment later, seventy-five yards; a moment or two more of terrible suspense, from sixty to sixty-five yards away. They are drawing past me in single file, from two to six feet apart. It is now or never. I draw a bead on the leader, and send some No. 4 shot in that direction. The geese all rise from the water, including the one shot at. I yet have the second barrel which is loaded with TT shot. The second goose is shot just as it is rising from the water and falls handsomely. "Shades of Jupiter!" Have I shot a wild goose? I rush down to the beach to give it another shot as it goes flapping and paddling away from me. What do I see yonder? The first goose which I had shot at is tumbling from quite a height and strikes the water, apparently dead. It is and begins to drift toward the shore and will come in below me, but on my side of the lake.

My second goose is able to get out of range, although desperately wounded. The flock has again taken to the water in the center of the lake, and my wounded goose is putting in his best licks to join them. In due time the dead goose drifts ashore. Did any one with his uncounted millions ever feel as happy as I did at that moment, when I drew the lusty fellow from the bright, sparkling water?

I started for home with my prize, and also resolved to visit the lake later in the day and secure the wounded goose, if possible. There are no boats on the lake during the winter time. I was obliged therefore to procure one of Mr John Brown, whose boat had been stored all winter, and was so shrunken as to be unseaworthy. With the help of Mr. Brown and a young man we had the boat in readiness to launch about 1.30 P. M.; but so far as the range of our vision extended, not a goose, dead or alive, was to be seen. I took the oars, however, with the view of making a survey of the lake. The young man went with me.

After pulling half way across the lake, I discovered three geese away below me, on the east shore. I turned in that direction, and when we had approached to within 200 yards of them the entire flock took wing. We counted them and made out thirteen. There was a missing goose. Evidently the wounded bird was somewhere in the lake. Two moments later, and there he goes, right out from under an old snag near the shore, and on the wing. I am completely nonplussed at this, and made a grab for my gun, which is in the stern of the boat. Too late He is out of range before I can insert a shell and fire at him. He flies very low and drops into the water half a mile above me. The prow of the boat is headed for him, and now begins a regular "wild goose chase." I was certainly gaining on the goose after a pull of five or ten minutes. This encouraged me to make an effort to overtake him. The goose was on to this sort of thing, however, and made a spurt headed for the beach. I called on all the reserve force in bone, muscle and sinew, but in spite of all I could do that goose beached himself two minutes ahead of the boat, and marched off around a curve of the same, out of sight.

The trail was a warm one, however, and in less than another moment I came up to him.

He offered no resistance whatever, and seeemed to be completely exhausted from his recent efforts in trying to escape. It proved to be a larger specimen than the one I took home in the morning, and weighed 10½ lbs., measuring six feet from tip to tip of wings.

The smaller of the two geese I presented to Mr. Brown for his kindness and assistance in capturing the wounded one. The weight of the smaller goose was 9 lbs., spread of wings five and one-quarter feet.

Thus ended my first and, probably, my last wild goose hunt, as such occasions are of very rare occurrence in old Connecticut. WM. L. CONE, JR.

MILLINGTON, Conn.

NOTES FROM THE PLAINS.

OMAHA, Neb., Jan. 1, 1895.—So far as field shooting is concerned Nebraska sportsmen have pretty generally encased their fowling pieces for the winter. The close season for both quail and chicken began yesterday, and there is not sufficient inducement in jack rabbit shooting or the uncertain pursuit of the clumsy fox squirrel to warrant the loss of time and incident exertion. Chicken shooting the past season was possibly the poorest we have experienced out this way in a decade. The drought was so severe and wide-spread that the best grounds in the State were found absolutely barren this fall. That the birds had been forced by lack of feed to temporarily leave the country, however, is made certain by the large influx of both chicken and grouse since the cool days of early December in almost all of their former haunts. I met Mr. Hardin, who owns a large ranch north of Paxton in the western sandhills, yesterday, and he told me that the spectacle of a bunch of several hundred birds was almost a daily occurrence now, where a month ago it was next to impossible to jump a single one. With abundant crops the coming season, I have but little fears that we will have our full quantum of sport again next fall. The quail shooting during the past season has been just the opposite. Everywhere there has been an unprecedented supply of birds, and good bags were the rule. Quail shooting in Nebraska, however, at its very best is laborious sport on account of the dense vegetation to be encountered wherever the birds are to be found, which is largely in the tangly bottoms and impenetrable grape and plum thickets. There is little or no field or stubble shooting here, and the gunner who bags his two or three dozen birds—and that is plenty—only does so after a hard and industrious day's work.

And this reminds me of a little story. Two weeks ago E. S. Dundy, Jr., United States Commissioner, and Lawyer Myron Learned and myself were out at Clark's, goose shooting. We did most of our work on the bars on the Platte, and while the birds were off feeding in the fields we devoted our attention to the quail, which were found by the hundreds amidst the network of brushwood on the numerous small, oblong islands with which the old stream is filled at this point. In fact. I never saw birds more plentiful in the old days back in Ohio than they were here. As winter sets in all the birds in the country seem to leave wooded arrayos and creek bottoms and assemble within the mazy depths of these islands for protection from the advancing cold. Their retreat, too, is a wise one, for there is plenty of feed here, the shield from the steely winds the very best, and the dangers from hunter, hawk and coyote at its minimum. Of course, all shooting to be had on these islands is of the "snap order," and it is generally about five or six shells to the bird. Once in a while an open shot is obtained, if the gunner happens to be on the very outer edge of the island, and a bird flushes and attempts to cross the river. As a usual thing they are extremely hard to flush until they have all been driven to one end or other of the island. They will run along before dog and hunter, beneath the reticulated vines and shrubbery, until they can go no further, when they flush together and shoot one of the numerous channels to a neighboring island or the mainland. Dundy and I were making one of these drives, he in the middle of the island, while I skirted the edge. He could hear the birds pattering along on the dead leaves and hear them dipping as they ran along under the matted brushwood, but seldom caught sight of one. Suddenly Dundy called me to come where he was standing. I made my way through the thicket to the spot, and pointing to a small hole at the foot of a good sized tree, he said he saw a quail go in there. I knelt down, thinking to catch the bird alive, but the hole extended back further than I could reach and was evidently a hollow rot. Dundy tried his luck with no better success, and determined to catch Bob after this failure we finally concluded to dig him out. With a couple of stout sticks we soon reached the root, which we found too green and too bulky to cut into with our pocket knives, and were again nonplussed. We were about to give the job up when Dundy asked what was the matter with shooting a hole into it, and as I could see nothing the matter with it, we located the quail so that he would not be injured, and with a half dozen shots a hole sufficientiy large to admit a hand was blown into the green root; and reaching in I pulled out the bird alive. He was a handsome cock, and after a laugh over the peculiar method of catching quail, I told Dundy we must give him a chance for his life. So, pulling up our hip boots we waded out some twenty-five yards into the rushing Platte. I was to throw him up and Dundy was to do the shooting, and at a given signal up he went The first barrel was a miss, but the second tumbled him neatly into the floating ice.

But speaking about goose shooting reminds me that this royal sport has been magnificent here since the middle of October up to date. Even the late sub-zero weather was not enough to drive away all the Canadas and they yet linger in considerable numbers along both the Platte and the upper Missouri. On the trip above alluded to the three guns netted twenty-nine big Canadas and a half dozen canvasback in two days. The white and Hutchins geese all have been gone for a full month.

There has been better antelope shooting in this State than for a long series of years. I met Jack O'Hern, superintendent of the Union Pacific shops, at Cheyenne the other day, while en route to Clarke, and he told me that he had just returned from an antelope hunt at Bushnell, Kimball County, this State, and had met with great success. He said the last morning his party was there they saw three bands of antelope, from the top of a high knoll, at one time, and there wasn't less than twenty head in each band. SANDY GRISWOLD.

WITH THE GREENE RABBITS.

A few days since S. invited me to go down to his cousin's at Greene for a day's rabbit shooting, so the other afternoon we packed up our duds, took the train and bumped along toward the hunting ground. S. had advised them a few days before that we were coming, but there was no one at the little station, and upon going to the post office we found there the letter, which we took along with us through the woods and delivered in person to the rather surprised good people. As we came in sight of the big, old fashioned house we ran across B., who, after looking after the guns, said he guessed we had come down for a hunt, and that he would shut the hounds up so that we would know where they were in the morning.

We received a jolly, old fashioned welcome indoors, and spent a pleasant evening talking shooting lore and in anticipation of the next day's hunt. S. brought along a supply of "dynamite" shells (nitro powder) at which the local shooters looked rather dubiously.

We rolled over in the big feather bed next morning early, but could see nothing through the window. Scraping the frost from the glass we beheld rather a poor outlook. It was a raw, cold morning, and the ground was half covered with frost and sleet. After a light breakfast we went down to the barn, let out the hounds and started for the fifty acre wood lot, where there is good shooting.

As we walked along toward the edge I heard a rustling behind me, and turning quickly saw a little gray scurrying form rapidly disappearing in the brush. The little 12 gauge came up in a hurry and cracked, but "Bre'r Rabbit" got along, and I scored the first miss. It started the hounds, however, and in a few minutes there was sweet music. We now strung out and drove through the east end of the wood. A partridge sprang through the brush ahead, too far for a snap shot. In a few minutes we heard old trim and Stubb yelping down toward the left, and found they had holed the rabbit. Calling off the dogs, B. started them again on a new track. Now, about this time there is a little joke on me. I lost track of dogs and men, and after beating around for a time, yelling and hearing nothing of either, I concluded to make back tracks for the house, as I had no idea of getting down in that swamp when I knew absolutely nothing of the country, and must confess had some doubts about being able to even find the house. However, I found the trail, came in sight of the house, and thinking the boys would come later, started for an inviting looking piece of squirrel timber and sat down to watch for a chance gray. None came, so back I went, and was met by two of the hounds. S and B. said they reckoned they had better keep a string tied to me after that, but I assured them they had no need, for I should keep a pretty close watch on them both.

Well, started out again, and as the ground was getting in better condition, the dogs soon had another jumped. Now comes the joke on S. He and I were listening to the dogs, and as he started to go forward a rabbit jumped from behind him, running straight away. S. pulled on the gray bunch, missed and pulled again. From the rear I could watch the proceedings, and wondered why the second barrel did not speak. Come to find out, S. was pulling the right hand trigger for the left barrel. He looked rather sheepish, and said he and I were quits for the miss I made. I felt a trifle encouraged.

By this time we could hear the hounds off to the right and driving our way. We again spread out, S. going down a side hill, B. toward the starting point and I remaining near an inviting looking opening. Directly I saw S. bring his gun to his shoulder and waited for the report of the nitro. None came, and S. ducked his head one side and then the other, then started forward a few steps and looked up with a puzzled expression. "Art, where in the deuce did that rabbit go? I saw him coming straight for that stump and pulled up, expecting to let drive as he came out the other side, but he didn't come and I'd like to know where he went. He was a white one, too." We went down to the stump, and found what looked to be a hole, and when the hounds came up put one of them in, but old Trim started off again, yellling in his peculiar manner with the rest of the pack at his heels, echoing in good style.

"Hello," came from over the hill. "That's B.," said S. "Trim's started a white one I reckon, from the way he runs," came from over the hill again.

"Yes," answered B. "He drove him down here, but the rascal has slipped us."

We could now hear the hounds driving directly back toward us, and again taking up our positions, waited for a glimpse of the runner. Farther and farther away came the voices of the hounds, until they were lost in the distance. S. left his place and came over to have a smoke and a talk. We were taking it easy, when a rustle through the brush away over towards the position S. has left told us that something was passing, and a few moments the hounds came crashing through, almost in the very track of the sociable S. "Oh, what a chump I am. Why in blazes didn't I stay there."

About this time B. came rushing through. "Didn't either of you blind-eyed Indians see that rabbit?" was his salute. "No," we replied, but we didn't let on why. "Well, keep your eyes peeled. He's a white one

and will keep the dogs running all day if somebody don't get a crack at him."

Back we went again, and when our fingers grew stiff with the cold gun barrels and arms cramped from the constrained position of "ready," our ears were gladdened by the faint sound of old Trim's whining yelp, echoed by Rover and the bark of Stub. They were circling towards B., and in a few moments later came the heavy bang! bang! from his gun. We knew that meant business.

We then headed toward the house, when the dogs started another gray, and there was more lively music and the usual excitement. Then striking into the cart path towards the barns we walked slowly along, each telling of what he had seen, why he had missed, etc.

Up at the big house a good old fashioned dinner was waiting, and three hungry fellows were soon storing away the good folk's eatables. TODE.

RHODE ISLAND.

CENTRAL NEW YORK NOTES.

ITHACA, N. Y., Jan. 3.—*Editor Forest and Stream:* Perhaps it may be nothing out of the common for wild geese to remain on Northern lakes during the entire winter, but prior to last winter I don't happen to know of a flock of these wary birds wintering on Cayuga Lake. Stroud Bush of Lansing tells me that a flock containing at the beginning of winter nineteen geese, passed the entire winter of '93 and '94 along the east shore of the lake some eight or ten miles north of Ithaca. The birds made daily trips to the bleak, wind-swept buckwheat fields of South Lansing for several months without mishap, but finally a couple of gunners chanced that way and secured five of the gray honkers. The remaining fourteen birds lingered until the soft south winds brought a cheering message from warmer climes, when they wheeled into line and joined the northern flight.

So far as such papers as the Elmira Sunday Telegram represent public opinion, the presumption may be accepted in good faith that a good many wild fowl gunners located adjacent to Cayuga Lake are bound to have spring shooting on ducks if possible. The fact that the open season on these birds expires the last day of February is gall and wormwood to the gentlemen afflicted with microbe of discontent. They claim it to be an impossible feat to score decently on ducks during the full flight owing to certain local drawbacks which are not sufficiently noteworthy to call for discussion here, and consequently they clamor for the right to shoot the lean and cadaverous birds on their northward journey. I haven't any smypathy for this class of shooters. Their contention finds its inception in the slaughter yard and reads like the wail of the market shooter. March 1 to September 1 as a close season on ducks for the seven central New York counties is good and effective enough to be left severely alone. Prithee, gentlemen, let it stand shorn of not a single vestige of protective benefits.

Anent the question of the increase of the quail supply arising from a protracted close season, I am pleased to say that so far as Tompkins County is concerned the prolonged close season is a saving factor. There is not merely a perceptible increase, but, according to John McCormick, a thoroughly well posted sportsman, there is a pronounced and clearly defined increase. Up the valley south of Ithaca farmers report quail more numerours than for years past. Finding the birds protected by an adequate enactment the farmers have adopted the practice of feeding the birds when necessary, and the supply has steadily increased. From the western part of the country I have lately received encouraging reports, so that I am glad to pin my faith to the beneficial results brought about through an extended close season. The stock of quail in Tompkins County at one time so nearly resembled the little end of nothing whittled down to a point and the width of a hair punched out, that it affords me a lot of pleasure to report the above satisfactory condition of affairs.

M. CHILL.

QUAIL IN MICHIGAN.

HOLLAND, Mich., Jan. 1.—*Editor Forest and Stream:* I notice some of our Michigan sportsmen are again agitating making a close season on quail for a term of years. I cannot see that this will secure the desired result. True, quail are scarce in one State, but what is the cause? I think all must admit that overshooting is not the cause. Bob White is fully able to take care of himself with the average gunner.

As I understand game protection, the idea is to so limit the taking of the game that there will be enough for an occasional shooting and to leave enough for future breeding, that those who come after us may have a taste of the sport.

Now, as to the cause of the present scarcity. I submit that it was the severe winter of 1892-93. During that winter I was afield twice each week with my pointer to see how the birds were getting along. From December 15 (when the season closed) to Jan. 10, I found large numbers of birds, some bevies which had apparently not been shot at. Then we had the severe cold and deep snows which covered the field. After that I saw very few quail and no evidence of illegal shooting. Many farmers and others reported having found entire bevies under brush piles, frozen to death Surely overshooting is not the cause of the scarcity.

It is true that we had fine shooting after the three years' close season which expired four years ago. But during those three years we had no winter so severe as that of '92 and '93. If we had there would have been no more quail than we have to-day.

Suppose we do make a close season for, say, four years, and the first three winters are mild. There will, no doubt, be an increase of birds. Then suppose the fourth year we have a severe winter. The result will be the same as in '93—no birds. Have we benefited ourselves or the quail by that close season? It is plain to everyone that we might just as well have a little shooting each year, and would have just as many birds left in the covert in the end.

If it is deemed necessary to give the quail more protection I would favor making the open season shorter, limiting it to the month of November, for instance. Usually we have no snow in that month, the birds are full grown, as they are not in October, and those who find "sport" in raking a bevy on the ground get no chance.

Fellow sportsmen, we should pay more attention to enforcing the laws we have. We all do a great deal of talking aobut what laws we would like, and how much better if it were this way or that. This is all right in its way, but how many of us are doing anything toward real, practical protection? Our Game Protective Association here is doing much toward protecting the game and fish. Some of the oldest and worst offenders have been caught and punished. One man paid $50 fine for killing four quail and three partridge. Do you not think he will have more respect for the game laws hereafter?

For the various kinds of game the season should be as nearly uniform, as to date, as possible to make protection easier. Quail and ruffled groose the month of November; woodcock, Sept. 1 to Dec. 1. Ducks, geese, snipe, plover, rail and all the different shore birds, Sept. 1 to Jan. 1. Deer to be killed only by still hunting, and then only bucks.

Forbid the sale of game.

Make good appropriations for enfocrcing the laws. Prohibit the use of ferrets in hunting rabbits.

Personally, I do not care much for "Molly Cottontail," but many do. Then it is a good thing for the birds to have rabbits plentiful, for many hunt birds when there are no rabbits. Make a close season on rabbits, say, from Jan. 1 to Sept. 1, and there will be no excuse to be afield with a gun after Jan. 1.

ARTHUR G. BAUMGARTEL.

TEXAS AND THE SOUTHWEST.

An Exaggeration.

A San Antonio paper spreads itself in a grandiloquent effort to advertise Mr. Joe George, postmaster of that city, as having killed 200 ducks in one day on the coast on the 31st ult.

There is nothing very remarkable in the report, because such exaggerations are in perfect accord with the usual manner in which such alleged killings are chronicled. As a matter of fact, Mr. George brought exactly 75 birds with him, the result of three guns for two days at Gum Holllow—no more, no less. The shooting was honest, straight flight shooting, and every bird was earned. This is written in order to take the sting out of anything which might emanate from the slanderous pen of the few individuals in this city who never go hunting, but sit in their offices and endeavor to injure the good reputation of sportsmen whose success afield is roughly exaggerated by a well meaning but erratic local press.

* * *

News comes from Galveston that his Excellency, Governor Hogg, accompanied by the erstwhile banker but now the close associate of market hunters and canvasback butchers, and a few others were caught in the norther of last week upon their return from Lake Surprise, Moody's rice duck preserve, where the market hunters had loaded them down with game. The party was driven upon the shoals, the boat run aground and partially filled with water. They passed the entire night in this pitiable plight, and were rescued in the morning by a passing oyster sloop. "By Gatlins, we had a narrow escape!"

* * *

From along the line of the Arkansas Pass Railway to the coast comes the word that the quail have been returning to their old haunts this winter. There is fine shooting at Marcellina, Floresville and all the way down to Sniton. There is also some very good turkey shooting at the last named place.

* * *

One of the most noted duck hunters in San Antonio tells this. He is a crack shot with the gun and a straight one with his tongue, and the story will pass for the exact truth.

The scene is laid on one of General Felton's dams, built at heavy expense to hold sweet water for cattle raising purposes. The blue bills, canvasbacks and redheads feeding on the bay become very thirsty, their coppers become very hot and they go to the sweet water pond to slack their thirst. On this occasion our friend the duck hunter was perched on the dam in question along with his hunting partner. On their left were two fair samples of the coast butcher, armed with a villainous face and a ten gauge Richards or Moore gun that had seen long service in the bottom of a duck hunting sloop, in the chambers of which reposed two large Peters Prize shells (5 drams of powder and God knows how much shot).

A flock of blue bills came skipping by and the coast hunter shook the dam with a double detonation without any other result than making the birds scatter a little. Our hunters neatly dropped a bird each, and as they slipped another shell in place of the empty one the C. H. deliberately picked up one of the dead birds and resumed his place on the dam. The robbery was so flagrant and plain that notwithstanding the fact that a blue bill does not "cut very much ice" in point of value, it aroused the ire of our Nimrods. But the C. H. stood pat and refused to believe that he had not killed the bird and resumed his ten gauge pounding, shooting at the rate of 20 shots per dead bird.

One of our Nimrods then took a stand a little closer to the C H., and directly a pair of swifters came whizzing toward the dam. Two ten gauge loads were belched at the birds with no result; two little reports and one bird fell dead and the other winged.

"Did you kill either of these birds, Mr. Hunter?" derisively inquired he of the little gun.

"Naw! I know when I kill a duck," said the ten gauger.

"Thanks," replied the small gun. "I thought that you had hit one hard and that the bird simply died when I fired."

A look of withering scorn was shot, coast fashion, at the small fry and then he squatted as a single blue bill came right at him. He aimed a long time, but when the bird came within 30 yards, the little gun had him, and the dead bird came like a bullet, and had not the C. H. dodged it would have plinked him right in the middle.

As he arose and shouldered his fusee he remarked: "Guess youse fellers think youse mighty smart. But eff you wait till termorrer I'll bring brother Bill and he'll make ye tired shootin' ducks."

As he left a pair of redheads flew over him, but he did not even look up. He trundled his gun in a two-wheeled cart, cut his yellow dog across the back with a whip and he was off. TEXAS FIELD.

BOSTON AND MAINE.

One of the best hunting parties of the season left Boston on Thursday, Dec. 27 for the Maine woods. This party was made up of something like a dozen of the family and guests of J. Parker Whitney. In the party were Mr. Whitney, wife and daughter and two sons; Mr. Gilbert E. Jones of New York, wife and son; Miss Dillon, daughter of Judge Dillon of Colorado, and Mr. George F. Whitney, nephew of Mr. Whitney, and a Harvard sophomore. Mr. Jones was one of the former owners of the New York Times, and Mr. Whitney is well known for his articles last year on the taking of salmon from the waters of the Pacific coast by trolling. Mr. Whitney has, in fact, conferred a boon upon fisherman, for the reason that he is the originator of taking out salmon in that way. Other articles have appeared from Mr. Whitney's pen, and more partitculaly on the trout of the Rangeleys. The party went directly to Mr. Whitney's beautiful camps at Mosquito Brook, Lake Molechunkamunk, and will remain till near the middle of the month. But they are up there without roads, and much will depend upon the state of the weather. The ladies and baggage will be taken in and out by teams on the ice, but the boys propose to make at least one trip, some 20 miles, through the woods. Mr. Whitney remarked that they had seen enough of warm weather in California and New Mexico, where he has een of late, and that they were going into the woods for some Maine cold weather that is genuine. Hunting, snowshoeing with toboggan slides and possible ice boats, will make up the sports of the day. Mr. Whitney's daughter Helen was born at the camp at Mosquito Brook, and Mr. Whitney fondly considers the camp his home, though owning thousands of acres and almost entire blocks in the cities of the Pacific coast. He went to Maine first in his boyhood, with nothing but the most primitive camping outfits, but he has clung to the spot ever since, beautifying it and visiting it nearly every year, and sometimes spending a good part of the year there. He is a sportsman of long experience, and an observer of the habits of fish and game. He never allows the killing of game or the taking of fish out of season.

The members of the Ragged Island Club, with club house and headquarters at the upper end of Currituc Sound, are evidently enjoying duck shooting this winter. Mr. Walter L. Hill is just back from his annual shooting trip to that happy spot, where he goes as the guest of Mr. C. A. Woodward, one of the prime movers of the club, and for some time its president. The shoot was a very enjoyable one, as it always is to Mr. Hill, than whom there is not a more active business man in Boston, nor one who better loves his annual fishing and shooting trips. He still hopes to introduce Mr. Woodward to Maine trout fishing, and probaby deer hunting. On this trip the ducks were plenty. The preventing of night shooting, once suggested in The Forest and Stream, after talking with Mr. Hill and the "rest days"—three in a week—on which no shooting is done, are among the good works of the Ragged Island and other clubs on the sound. On this trip Mr. Hill shot canvasbacks, black ducks, red heads, ruddy ducks, mallards, and almost every other sort of a duck, as well as geese. Last, but not among the warmest of his receptions, he got into the water.

Mr. G. L. Wakefield, a Harvard student, is just back from a Maine hunting trip, where he took two deer. On Saturday evening he gave a venison supper to his many friends at his home in Wakefield.

Dr. Heber Bishop is back in Boston again, after another successful moose hunt in Maine. On the last days of the season the doctor killed an enormous bull, weighing some 1,400 pounds, and one of the largest he has ever taken. He went in via King and Bartlett, and around into the Moose River region. He also took a handsome caribou.

Captain Fred C. Barker was in Boston the other day on a hurried trip. Later in the season he hopes to spend some time in Boston, and possibly New York. He is greatly pleased with the increase in big game that is noted around the Rangeleys. He has had many years of experience as a guide, and later as a steamboat proprietor on those lakes, and the increase in deer is almost a surprise to him. No amount of fair hunting, in his opinion, can destroy them nor prevent a healthy increase. In proof that he is right he quotes from the Forest and Stream in several recent articles. He believes that there are good and sufficient laws enough in Maine, if they are enforced, and thinks that it would be a stumbling block to enact some of the laws proposed. The railroad through from Rumford Falls to Bemis is being pushed. It is graded as far as Houghtons, in Byron, and some nine miles from Bemis. But Captain B. scarcely expects it to be pushed on to his place for a year at least, though it will make a complete change in the routes of hunting and fishing travel to the Rangeleys.

There is a great deal of interest among Boston sportsmen as to what is to be done in the Maine Legisature in regard to fish and game. What may be done in Massachusetts cuts a very small figure beside the interest in regard to Maine. A number of gentlemen are in correspondence with prominent fish and game protectors in Maine. Mr. David H. Blanchard of Boston has prepared a letter of recommendation and forwarded it to the commissioners and the Maine Game and Fish Protective Club. The letter recommends the greater conservation of moose, urging that the killing of cow and calf moose be prohibited at all times; recommending the cutting down of the number of deer a hunter may take to two, and one caribou or one bull moose; that the close time on partridges be continued till October 1, when it shall be legal to hunt all game, and commencing the close time on moose, caribou and deer to Decem-

ber 1, instead of January 1, as under the present law. His paper is thoroughly indorsed by the best sportsmen in this vicinity, but recent advices suggest little will be done to the laws this winter. Mr. Blanchard also earnestly urges that the better class of guides be made game wardens, for the reason that they can do more toward the enforcement of the laws than anybody else, and because they are beginning to see that the enforcement of the game laws is for their benefit.

Mr. Blanchard has just received a letter from E. C. Farrington, secretary of the Maine Game and Fish Protective Association, stating that matters had been changed a good deal at the last meeting at Augusta. The letter expressed the idea that not much special legislation would be asked for by the association, but rather, a general law would be preferred, giving the commissioners power to regulate fishing and shooting in certain sections, on petition of a given number of citizens and the publication of due notice. The association does not expect to change the law on partridges, unless woodcock can be included, and that is likely to be opposed. A law preventing the killing of cow moose will be asked for, but no attempt to restrict the amount of game to be taken further than the existing law is recommended. To reduce the amount of trust or land-locked salmon to 25 pounds instead of 50 pounds, as under the present law, will not be attempted. An attempt to prevent the taking of deer with jacklights will be made. SPECIAL.

CHICAGO AND THE WEST.

Fox River Fishing.

CHICAGO, Ill., Dec. 28.—There is a howl from the mackerel fishermen of Wisconsin against the passage of a law which is before the Legislature of that State and which is very likely a good law. Here is what the fisherman's side says:

"GREEN BAY, WIS., Dec. 25.—The Wisconsin Fishermen's Association will hold a mass convention here Dec. 28 for the purpose of discussing the question of stopping net fishing in the Fox River. This matter is of vital importance to the fishermen in this section of the State, as the passage of the proposed law would mean practically the ruin of hundreds of men engaged in this industry. The fishermen oppose the law which is proposed by the gamesters of the State who fish for pleasure, as fully one-half of the fish which are sold from this market come from inside of Long Tail Point, the limit which the proposed law prescribes for fishing. One firm in the fish business here for the last year did a business of $345,000, which was all spent in this city in wages. Some idea of the extent of the business which the sportsmen propose to ruin may be gathered from this. The convention will take vigorous action against the bill and will ask instead that a law be passed prohibiting fishing altogether during the spawning season."

Other Side.

There will be a meeting of sportsmen at the Sherman House, Chicago, to-morrow, Dec. 29, to revive the old Fox River Association of anglers. The laws are being violated to the worst extent and it is sought to again wipe out the illegal and destructive fishing, as was done under the vigorous administration of President George E. Cole. Mr. Cole I have always held to be the brainiest and best executive and foremost and most practical organizer ever connected with protection of fish in this entire Western country. Lukewarm support drove him out of the work and his loss has never been overcome.

Warden Kills an Indian.

Dispatches of Dec. 14 from Rice Lake, Wis., had an account of the killing of an Indian who resisted arrest by a warden. I think wardens can find plenty of white men to arrest, and they are more destructive of game than the Indians.

Case Didn't Stick.

Advices from Milwaukee, Wis., Dec. 23, state that Judge Wallber refused a continuance in the Duke case to allow the District Attorney an opportunity to secure necessary evidence and dismissed the case. Duke was charged with selling game out of season contrary to the game laws. A. W. Friese, representing the National Association for the Protection of Fish and Game appearing as prosecuting witness. Mr. Friese testified to purchasing one dozen quail from Dukes' store on Grand avenue a few days ago.

Off For Texas.

Mr. A. W. Adams of Chicago has started for San Antonio, Texas, where it is his custom to winter. He says there is no place like it on earth, and he is right.

Mr. Harry R. Laning of Chicago starts to-morrow for San Antonio, Texas, and will spend the winter there. He goes on the strength of the "Dixie Land" stories of last season in Forest and Stream, and the additional testimony which I could give him after the long trip south from which I have just returned.

Mr. C. E. Willard, Western representative of the Colt's Patent Fire Arms Co., starts on Jan. 12 for Texas, and will go to Rockport and will look up the yacht Novice, covering much of territory from which our party has just returned. He will go with the special car of Marvin Hughitt, Jr., of Chicago. Mark Cummings of this city also goes. I trust they will have all the sport gentlemen could ask.

Mr. Thomas A. Divine of Memphis and Mr. Randolph W. Foster of New Orleans entertained Mr. R. B. Organ of this city and myself in Louisiana, Tennessee and Mississippi last month, and of this I shall write at length with pleasure.

Mr. W. W. Peabody, Jr., assistant general manager of the B. and O. Southwestern Railroad, was the host of our party west of New Orleans. He brought with him his good friends, Mr. Wilbur Dubois and Mr. Robert Burton, also of Cincinnati, and Mr. Richard Merrill of Milwaukee. The latter was met last winter in Texas, but the Cincinnati gentlemen were new in that country, and they were charmed to a degree and vow they will return next year. We had a great trip, of which I also shall write at better leisure and at length. Mr. Merrill remained behind in Texas and is much to be envied. He meets two Milwaukee friends—the brothers Schmidt—at San Antonio, and will, no doubt, see many more Northern friends before the winter is over. All the gentlemen above named went to Texas because Forest and Stream had told about Texas. I fear a Southern boom has been started, and I don't know whether to be glad of it or not, looking ahead to what that may mean in the future. Next year there will be more yet going South. Among all these there will be all sorts. I suppose I have sent twenty or thirty men to Texas points, and how many have gone who have never heard from, wiled by the pen of Oscar Guessaz of "Texas and the Southwest" no one knows. All the Northern tarpon fishers of the season past at Rockport went there through the Forest and Stream reports of that country

Off For Egypt.

Within the next ten days Mr. Carter H. Harrison, son of the lamented Mayor Harrison of Chicago, will start for a long and delightful journey among other lands. He and his wife first go to Egypt, with friends. The ladies of the party then return to Rome, Mr. Harrison and friends going on to India for some big game shooting, tiger, if posible. Returning thence they join their party at Rome and all sail for Havana, Cuba. They go thence to Mexico, and will come North from Mexico to Chicago sometime next winter, being absent about a year. No one deserves a glorious time like this more than Mr. Harrison, who is an unostentatious but keen and thorough-going sportsman and lover of out-door things and places.

Off For the South Seas.

Mr. Preston Harrison, brother of Mr. Carter Harrison, leaves also shortly for a long trip, but goes in the opposite direction. He leaves San Francisco for a long cruise around the South Sea Islands. He will go as far South as he feels like and stop where he likes in that delightful country. His absence may extend over nearly a year. Both of these gentlemen were recently in active management of the daily newspaper, The Times of Chicago.

Christmas Fox

Daily despatches say: "Batavia, O., Dec. 25.—The initial race of the Fox Hunters' Club resulted in the capture alive of a ten pound fox in two hours and forty-eight minutes. Fourteen hounds were entered. Two hundred horsemen participated. The second run takes place to-morrow."

Dec. 29.—The meeting of the Fox Lake Fish Protective Association at the Sherman House this afternoon brought out about twenty members, gentlemen belonging to the various sportsmen's clubs located along the Fox Lake system. Ex-Alderman John W. Lyke was in the chair. Mr. D. S. Daly acting secretary. The gentlemen raised $55 cash and will add $200 more to stop the illegal fishing which has been going on there so disastrously during the present season of low waters. A working committee of three was appointed, Mr. John Wilkinson, L. M. Milander and C. J. Paterson. A committee on legislation was also appointed, Messrs. Henry C. Hertz, Clarence Knight and M. R. Bostree.

A warden will be secured and sent up to Fox Lake soon, and in about two days he can stop the illegal fishing if he looks sharp. The Stanley outfit of guides, boatmen, etc., are the worst. They are always breaking the laws, but will be easy to corral.

From Dakota.

Mr. C. E. Robbins of Fargo, N. D., sends me the following account, as given by the local press, of a meeting of the sportsmen of that vicinity for the purpose of furthering the interests of game protection, and for the organization of a North Dakota State Sportsmen's Association. The cutting reads:

The sportsmen's meeting held in Scofield's gun store Thursday evening was attended by the following gentlemen: Hon. Augustus Roberts, Dr. Henning, W. W. Smith B. D. Scofield, E. G. Bowers, Dr. Carpenter, S. S. Lyon, G. W. Garrett, Dr. Hinebauch, John Rentschler, C. E. Robbins and others. Among those present from a distance were: Dr. J. A. Rankin and Hon. Andrew Blewett of Jamestown, who gave the meeting valuable assistance and advice with respect to game law legislation.

S. S. Lyon was elected chairman and C. E. Robbins secretary. Mr. Robbins called attention to the fact that the game law of Minnesota was framed from a bill adopted at a conference of the game and fish commissioners of the States of Minnesota, Wisconsin, Iowa, North and South Dakota, held in Minneapolis in December, 1892, and it was suggested that a similar law would be good for our State.

The sentiment was unanimous that another meeting should be held prior to the convening of the Legislature, at which the sportsemn of the entire State should be repersented.

Dr. Hinebauch moved that a committee of three be appointed to prepare a fair apportionment of representation for the next adjourned meetng from all the counties in North Dakota. Carried. Motion was made by Mr. Bowers that a committee of five, the chairman included, be appointed to draft a bill for protection of game and fish in North Dakota, the same to be presented at our next adjourned meeting. Carried.

W. W. Smith moved that the delegates to the next adjourned meeting use every effort to organize a North Dakota State Sportsmen's Association. Carried.

The committee on preparing a game law is, S. S. Lyon, chairman; Andrew Blewett of Jamestown, F. B. Morrill, W. W. Smith and W. L. Wilder of Grand Forks. The committee on apportionment is Dr. Hinebauch, chairman; A. B. Guptill and E. G. Bowers. There is some feeling at last beginning to arise among Daokta shooters against the ruthless destruction of game by non-resident shooters. Mr. Robbins inquired for precedents on non-resident license laws. The organization of a State Asociation could have no worthier object than the agitation of game law and game protection matter, and we must hope that the meeting of Jan. 7 at Fargo will be a large and earnest one, with a strictly business" on its banner. Trap shooting and talk are not among the sole possibilities of an organization of that kind. It can do actual good, and I hope this one will.

He Is Good Natured.

Jan. 4.—Often in the past I have had occasion to speak of Mr. A. Hirth, or "Papa" Hirth, as the boys all affectionately call the enthusiast who presides over the Spaldings' tackle counter. I believe he is the best natured man on earth. Once a robber knocked him down and took about all he had, but when he came to he woke up laughing. "Such a joke on that fellow," he said, "here's a pearl collar button he overlooked. Which way did he go?" You can't rile or rattle Papa and he is one of the attractions of Chicago. He has dyspepsia, rheumatism and neuralgia, though you wouldn't think it to look at him—but no one ever heard him complain, or saw him out of humor. "There's only about half of me left now," he says, "but it's the best half. No one ever got the best of me yet." And I guess that's true, too. Well, what I was going to say is, awhile ago Mr. Hirth felt that he must lay off from work for a time or else get sick. So he knocked off and went down to Hot Springs, Ark., for a rest. He has just returned, and is as frisky as a yearling colt, his improvement being in no wise more notable than in the vigor and elasticity of his imagination. "I killed 9 bear, 17 deer and 28 turkeys while I was gone," said he. "Billy, go and bring out those bears skins—but I didn't hunt very much because I was busy working on a volume of memoirs I am going to bring out before long—all about the kind of fishing talk Napoleon Bonaparte used. But that's a great country. Billy, fetch out some of those deer heads." Everybody abuses Papa and everybody loves him, except Billy Morgan, who accuses him of getting gay and threatens darkly to lay for him some dark day after business hours. Even Billy is secretly glad that Papa is back, and with health far better for his trip to a kinder climate than this horrible one.

A Man From Corpus Christi.

Mr. Grant R. Bennett, now of Corpus Christi, Texas, who was one of the many kind hosts our party had during our trip to that country last month, turned up in Chicago this week en route to his old home, Portage City, Wis. I met him swapping lies with Pa Hirth and there was a good Chicago blizzard blowing outside at the time. Mr. Bennett was the coldest man in Chicago, and the most discontented. "I surely will never come into this country again in winter," he said. "This is awful, and I'm going to get out of here as soon as I can." Mr. Bennett will, soon after his return to Corpus Christi, start for a trip into Honduras, where he expects some novel experiences.

Many Going South.

Both of the gentlemen above mentioned commented on the unusually large number of gentlemen who are going South this winter. It is astonishing how much the winter fishing tackle trade in Chicago amounts to, much of it in the form of tarpon gear. Hon. Hemstead Washbourne, ex-Mayor of Chicago, has just outfitted for a tarpon trip to Florida, and there are many anglers and non-anglers who will avail themselves of the chance to get away from Chicago in the winter within the next ten days. It certainly seems that the new tide of sportsmen travel to the South is getting in strongly and unmistakably. I hope that neither side will ever come to regret this.

Mr. Fred Badger of Dorchester, Mass., who asked directions of me for a trip to Corpus Christi, writes me from Galveston that he concluded to stop there, and that he is engaged in skirmishing around the edges of the famous Moody preserve on Lake Surprise. He says that there "must be six or seven hundred thousand canvasbacks on those waters," and that "when they rise it abounds like a cyclone." That's a good many ducks, but that is really the best canvasback country I know of.

Mr. John J. Mott of Michigan City, Ind., and Mr. Jos. Winterbotham of Joliet, Ill., came up the other day to make inquiries about Texas tarpon and Texas climate, being in hesitation between that country and Florida for a pleasure trip this month. I could not tell them much about Florida, but if Florida is any better than Texas it must be a James bird of a place.

From Nebraska.

Mr. W. C. La Tourette of McCook, Red Willow County, Nebraska, and his young son George, came to the Forest and Stream office here yesterday, and I am glad he did. Mr. La Tourette says that for some reason they have had very few prairie chickens in his country latey, though quails are very abundant. He says there is no market shooting, but that the farmers trap large numbers of quail all the winter, more especially if snow falls.

Mr. La Tourette and I were speaking of our old friend Buffalo Jones, who used to live at McCook, but he could not give me his present address. Singularly enough, Buffalo Jones himself came into my office this morning, though at the time I happened to be out. He came and departed mysteriously as usual, and I cannot say where he came from or what his present abode, though I would like to see him.

Off For the Arctic Circle.

Dec. 29.—The following word comes down from a Winnipeg paper, showing that Mr. Casper W. Whitney of New York is rapidly getting to the edge of railway travel on his journey to the far North:

W. H. Heming, Hamilton, and Casper W. Whitney, New York, were two signatures found on the Manitoba register last evening. The gentlemen who inscribed their names proved to be associated with an enterprising journalistic venture and also to be possessed of interesting personalities. Both are connected with *Harper's Magazine*, and are on their way to the haunts of the musk ox and wood buffalo in the far North, for the purpose of studying the habits and characteristics of those interesting members of the Canadian fauna. They have mapped out a route northward from Edmonton to Fort Rae on the Mackenzie River, which follows generally the waterways used by the H. B. Co., making the company's posts their sources of supply. This will enable them to travel "light," a sort of flying column, and they hope to accomplish the object of their trip and return to civilization by April next. They will travel on snowshoes and transport their equipment and provisions on dog sleighs. Their larder will be meagre, stocked only sufficiently to serve them from one post to another. They will sleep in Eskimo bags in the

open air, using a canvas windbreak when necessary. They intended to carry with them a quantity of alcohol for fuel, but have decided to depend on the forests and scrub along the route for their fires. Arriving at Fort Rae they will penetrate the Barren Lands until they encounter the musk ox, and after securing data for sketches and letter press will retrace their steps southward and invade the territory inhabited by the remnants of the wood buffalo and will then hurry back to Edmonton.

This is certainly a remarkable undertaking, and if the Messrs. Homing and Whitney succeed they will have achieved a feat that will stand unparalleled in the records of Northwest travel. The journey involves elements of danger, but the young travelers are not daunted by the difficulties that face them, and rather enjoy the expectation of living on a frozen diet. They will continue their journey to Edmonton this afternoon.

The Adirondack Deer.

BINGHAMTON, N. Y.—*Editor Forest and Stream:* I am delighted to see that Forest and Stream is right in its position on the Deer law, as it usually is on all such questions.

The hounding of deer as practiced in our North Woods in nothing but butchery. To my own knowledge there were parties in the woods this last fall who, for the time being, forgot that they were civilized. One party of ten went in there with a pack of dogs, and in a short time killed eighteen or nineteen deer, the dogs driving them to water and the "hunters" (so called) working their magazines till they butchered hem. I believe that there were more deer killed with the use of dogs in a single week then during the entire first six weeks of the open season. I mean to supplement Forest and Stream in its efforts to have proper legislation on the subject this winter.

While it is true that deer are in much better condition in September than in August, yet I am not in favor of changing the date of the open season, for two reasons, namely: First, but very few deer are killed in August; this fall a great many parties who went in coming out without any; secondly, because such a change in the law would entirely cut off the opportunity of many who are obliged to take their vacations before September 1. Every sportsman knows that we get health and sport even if we are not successful in bagging much game.

F.

The Views of a Well Known Guide.

INLET, BENSON MINES.—*Editor Forest and Stream:* I, for one, am glad to see that the people are getting their eyes open and are preparing to put a stop to the hounding of deer. I think it should be a State law, and the sooner the practice is entirely stopped the better. The hounding of deer will certainly use up twice the number of deer, or drive them out of the country. I wish to be understood as being in favor of entirely stopping the hounding of deer, and there are but very few guides in this section of the woods who are not opposed to hounding. I hope that everything will work all right, and that a bill will go through this winter.

The hounding of deer in St. Lawrence County was stopped entirely some time ago, and as a result we have got more deer than any other section of the woods.

GEORGE NUNN.

Catching a Deer by Hand.

GLENCOE, Minn.—The deer season in this State closed with a less number of deer being killed as compared with last season. Good tracking snows did not arrive until the season was well advanced, rendering it difficult to approach or track deer to any advantage. Moose are doing well and are increasing under the present law. There have been more bears shot in Northern Minnesota than for a long time heretofore; it is probably owing to the forest fires driving them from their secluded abodes. An old deer hunter up in the Red Lake country, Oly Dolburg, came as near dropping a buck without making a scar or drawing blood while hunting last season as anyone I ever heard. He got a running shot at a buck one day, and with the third shot the deer fell. Dolburg dropped his rifle to stick the deer, when to his surprise the buck he supposed dead sprang to his feet. Dolburg, fearing that the wounded animal would offer battle, sprang and caught him by the antlers. After a hard struggle all round, Dolburg managed to cut the deer's throat. On examining his victim he found that his shot had struck at the base of one of the antlers, leaving a slight lead mark. Aside from this shot, there was no other bullet marks to be found.

REMAC.

The Maine Game Season.

EUSTIS, ME., Dec. 30.—As the shooting season is now closed we will give you a true statement of the game taken at our ranch this season: Four moose, three caribou, one bear, twenty-six deer, 318 partridges, five foxes. This amount brought to camps shows the marked increase of game in our section of Maine, to say nothing of over a hundred outright misses caused by buck fever and the inexpertness of amateur hunters. The reliable guides of this country state that moose, caribou and deer, especially the latter, are on the increase.

DOUGLASS & WITHAM.

A New Choke Bore.

While in the Catskills last summer I came across an old muzzle-loader which for years had been the favorite toy of my host's youngsters. Their method of loading and firing had been to ram in some dirt and pebbles, and then shout "bang" in the direction of the enemy. My diagnosis showed that the barrel was nearly two-thirds full of these loads, packed in too tightly to remove easily. I took off the nipple and dug enough of the dirt, etc., to get in 5drs. powder; then inserted a piece of blasting fuse, and after removing the stock, took the gun to the orchard and, lighting the fuse, skipped.

When I next viewed that gun the stock prongs were buried some four inches deep in an apple tree, and a foot from the muzzle was a swelling, exactly like a wipe joint on a lead pipe. I was satisfied that the gun was done for, so imagine my surprise when after a good deal of work, I got it away from the apple tree and found that at 35 yards, with a load of 3½-1¼-8 it put more shot in a 12-inch circle than my own gun could in a 24-inch circle, at the same distance, and my gun is no mean shooter, either. I used the gun several times on the only available thing there—woodchucks—and found it a remarkably strong and close shooter.

B. H.

Protection.

NEW JERSEY ASSOCIATION.

There was an unusual meeting in the State House at Trenton yesterday, and it was none other than a gathering of the State Fish and Game Commission and the fish and game wardens, with representatives of the various gun clubs in the State. Until this year the Fish Commission has been almost a mythical part of the State government, and its operations altogether hidden by its inactivity. The rarity of the event inspired enthusiasm which continued during the five hours' session of the commission. There were present thirty fish and game wardens and representatives of the gun clubs, as delegates from the New Jersey Game and Fish Protective Association, which was recently formed at New Brunswick. Ex-Senator, but now United States Marshall, George Pfeiffer presided. He was a member of the old commission, which did nothing worth mentioning, and he blushed profusely when he alluded to the fact during the course of the session. Commissioner Frothingham was the secretary. He stated that the wardens in the State had done well for a beginning, having made 290 arrests for violation of the Game and Fish law and collected over $800 in fines up to date.

A. G. Stroud then gave some specific information about the conclusions and recommendations of the representatives of the gun clubs at New Brunswick. At this meeting W. R. Hobart of Newark presided. The committee appointed at this meeting resolved that the season for quails, rabbit, squirrels, ruffled grouse, woodcock, male European pheasants and wild turkeys should be from October 14 to December 1. Wilson snipe, reed and rail birds, marsh hens and woodcock from August 31 to December 1. Upland plover and doves, August and September. Deer, October 14 to 26. Wild geese, duck and other webfooted wild fowl except woodduck between August 3 and March 1.

This schedule was made the basis of discussion. The first move made was to get an expression of opinion as to a general open season for all kinds of game. J. L. Smith of Warren County read several letters from Warren County sportsmen, who favored a general season, during the period from October 1 to December 15; both those from South Jersey objected because of the coast shooting coming earlier.

The result of a free and easy expression was some changes in existing laws as follows: Deer to be killed during the first ten days of the season only. Squirrels, rabbits, ruffled grouse, and woodcock from October 15 to December 16. Wilson snipe, reedbirds, rails, marsh hens and upland plover, August 31 to December 16. Pinnated grouse and European partridge from October 15 to December 15.

The section covering English partridges and pheasants is to be amended by striking out the word hen wherever it occurs in the section.

There was considerable discussion on the section that imposes a penalty for hunting rabbits with ferrets. A. G. Stroud stated he had learned that in Sussex County there were a number of farmers who kept ferrets for running down rabbits. No attempt was made to conceal the fact, and reports came from Warren County that they were being generally used there. He suggested that the law should be amended so that the owners of ferrets would be obliged to register ferrets, and in this way the game warden would know who had them and could watch the owners. J. L. Smith said that in Warren the owners of ferrets were regarded as suspicious persons and cordially disliked by all sportsmen. Commissioner Page did not think it would be fair to enact any special legislation that would impose a hardship on the owners of ferrets, because they had a legitimate use, and in some cases were needful. The game wardens have a law which prevents their use for running down game, and if they are watchful the owners can be caught and punished.

Sunday hunting was discussed at some length, but the law will not be changed. President Pfeiffer said that in Camden County the violation of the Sunday law had become general, and he had instructed the warden to break it up by a thorough policing of the localities where the Sunday law is violated, and the commission would expect considerable activity in this direction.

Secretary Frothingham was short and emphatic in his criticisms of that part of the law which sanctions the issuing of permits to shoot birds for scientific purposes. He did not think it wise to put permits in the hands of young boys for such a license, and it was not the right way to study birds. More information could be obtained by going to the museums, where they are classified and described.

Shooting by night has the effect of driving birds from their nesting place, and it was the general expression of the commission that section 20 should remain as it is.

President Pfeiffer delivered an address in which he advised the wardens to put themselves in communication with all sportsmen in their locaities and have all of them become interested in the work. All violations of the law could in that way be brought to their notice, and some spirited prosecutions would have a wholesome effect.

A. G. Stroud announced the formation of the State Game and Fish Protective Association, which had held a meeting the night before and elected J. L. Smith of Hackettston, president; A. G. Stroud of Hunterdon, secretary; W. R. R. Hobart of Newark, treasurer; G. Viehme, of New Brunswick, and R. C. Griscom of Atlantic City, the vice presidents. He said that it desired the co-operation of all the sportsmen in the State to assist in restocking the State with game and protecting the existing game and fish. President Peiffer announced that the Commissioners would join the association and assist it.

B. B. Morris made the motion that all favorable to giving the State Commissioners all the assistance in their power should arise, and the motion was unanimously carried. Before adjourning Secretary Frothingham announced that all suggestions that had been advanced during the conference should be reduced to writing and forwarded to him at once.

The report of the Commisioner to the State and Governor has been prepared and filed. The reports of all the fish wardens are appended. The facts contained in it briefly stated, are that the Commissioners have held regular meetings and kept an office at 1 Exchange place, Jersey City. Their predecessor left them no legacy in the shape of records or minutes. The existing laws from 1808 had been codified. There are thirty-three wardens, but legislation is needed to better regulate their compensation and their powers to employ help. They are allowed $3 per diem, and up to December, 1894, $12,000 had been expended. The Commission recommends the appointment of twenty Fish and Game wardens, who should have jurisdiction in all counties and shall get $50 a month, and not exceed $200 per annum for expenses. There should also be a Fish and Game Protector who should receive $100 a month and an allowance of $300 for expense to have a general supervision over all the wardens. The wardens shall have no right to employ deputies without the consent of the Commissioners, who will appoint on receiving a petition from ten freeholders that a deputy is needed.

Special mention is made of the good work of Commissioners Ricardo, Shriner of Passaic and Terhune of Bergen, Schneider of Atlantic and Dore of Cumberland.

—Newark Call, Jan. 6.

Proposed Nebraska Law.

OMAHA, Neb., Jan. 1.—*Editor Forest and Stream:* The presen agitation in the interests of our fish and game gives promise o glorious fruition. The meeting at Parmelee's gun store Satur day evening was large and enthusiastic. Those present were John S. Collins, George A. Hoagland, John M. Thurston, Judges B. E. B. Kennedy and G. W. Tunnecliffe, W. H. S. Hughes, Frederick Lewis, Frank Parmelee, A. C. Claflin, M. C. Peters, Fred Montmorency, H. A. Dupont, Will Townsend, John J. Hardin, J. C. Knowles, Will Simeral, Stockton Heth, J. E. Shepherd, H. B. Kennedy, J. C. Read, G. W. Loomis, J. C. Day, J. C. Morrison, and in fact all the prominent sportsmen of the city. Judge B. E. Kennedy was in the chair, while S. G. V. Griswold acted as secretary. The committee, J. B. Meikle, Judge Kennedy, Fred Montmorency and S. G. V. Griswold, appointed at a previous meeting to draft a law for the preservation, propagation and protection of Nebraska's fish and game, submitted a synopsis of the same, which was discussed thoroughly by sections, but finally adopted as a whole.

This proposed law provides for a State game and fish warden at a salary of $1,500 per annum and expenses not to exceed $1,000. Also a clerk at $800, office at State Capitol, and to be appointed by the Board of Game and Fish Commissioners.

2. Insectivorous and song birds, excepting English sparrow crow, raven, crow blackbird and kingfishers.
3. Prairie chicken and grouse, open season Sept. 1 to Nov. 1.
4. Quail and wild turkey Oct. 1 to Dec. 1.
5. Woodcock, upland plover and turtle doves, July 15 to Dec. 1.
6. Geese, ducks, all wildfowl, Sept. 1 to April 15.
7. Wilson snipe, rail and the waders, April 1 to Oct. 1.
8. Squirrels, all kinds, Sept. 1 to Jan. 1.
9. Deer, elk and antelope killing in any manner prohibited for five years.
10. Violations of law on birds, $5 fine each bird killed, and not more than $100 in all, and imprisonment for 10 to 30 days.
11. Killing squirrels the same. Elk, deer or antelope from $50 to $100, 10 to 30 days, costs of proposition.
12. Possession of game in close season, misdemeanor, punishable same as for killing.
13. Shooting wildfowl before sunrise or after sunset prohibited; penalty same as for killing out of season.
14. Non-residents must pay a license of $50 a year to shoot in Nebraska.
15. No one will be allowed to employ parties to shoot for the market or any other purpose.
16. Ice house or cold storage plants for freezing game for market will not be tolerated.
17. That a close season for game fish be provided from May 15 to Nov. 15, to be protected on their spawning beds, etc., etc.

After considerable more interesting discussion upon the proposed bill, on motion of Mr. Hughes the same committee was instructed to draft the law complete and present it to a meeting to be held next Saturday evening at the same place.

SANDY GRISWOLD.

Massachusetts Association.

The nominating committee of the Massachusetts Fish and Game Protective Association presented the following list to be acted upon at the January meeting, Jan. 9: For President, Benjamin Cutler Clark; for Vice-Presidents, George W. Wiggin, C. J. H. Woodbury, Edward E. Hardy, Dr. John T. Stetson, Ivers W. Adams, Edward J. Brown, Edward E. Allen, of Watertown; for Secretary and Treasurer, Henry H. Kimball; for Librarian, John Fottler, Jr.; for Executive Committee, Herbert Bishop, Sidney Chase, Dr. W. G. Kendall, W. B. Hastings, Chas. G. Gibson, Hon. W. F. Ray, Chas. A. Allen, of Worcester, Loring Crocker, Jr., W. B. Smart, Rollin Jones, Henry J. Thayer, Edward E. Small; Membership Committee, Edward T. Barker, Arthur W. Robinson, Walter C. Prescott; Fund Committee, Dr. J. W. Ball, W. Hapgood, Edward Brooks.

The annual dinner will be given on Wednesday evening, Jan. 30, at Young's Hotel.

New York Forestry and the Deer.

From Gov. Morton's Message.

The preservation of the forest domain of the State is a subject of deep concern to the whole community, involving as it does the preservation of the natural sources of water supply. Peculiar significance was given to this question in the recent Constitutional Convention by the fact that the amendment providing for the keeping of the forest reservations for ever as wild forest lands was urged by important commercial interests and was the only amendment that was adopted without dissent. Due attention should be given to the necessary legislation to carry the will of the people into effect.

The carrying out of these provisions will also tend to the preservation of game birds and animals on the public lands, a subject worthy of legislative attention, especially with respect to the advisability of prohibiting the use of dogs in the hunting of deer. The decimation of herds does not result from killing by the dogs, but the hunted animals almost invariably take refuge in the numerous lakes, ponds and brooks, where they are so helpless that they fall victims to other hunters who lie in wait for easy captures.

Megantic Club Dinner.

The annual dinner of the Megantic Fish and Game Club was held at the Vendome, Boston, on Thursday evening of this week. A report of the occasion will be given in our next issue.

Sea and River Fishing.

ANGLING NOTES.

Fly Fishers and Duffers.

Since my first note was printed in Forest and Stream about the proposal to organize a Fly Fishers' Club in this country a number of letters relating to the subject have been sent to me. Some of them contain queries that I have not been able to answer because other matters have demanded my time and attention, and some contain queries which only the club or a committee appointed to organize the club can answer. I will say here that I will later acknowledge all letters as soon as it is possible for me to do so, and answer such questions as it may be possible for me to answer. Two gentlemen have asked, to put it briefly, who would and who would not be eligible for memberhsip in a Fly Fishers' Club. Naturally, this is one of the matters for the club itself to determine, but the London Fly Fishers' Club held its annual dinner on Dec. 14, and the last issue of The Fishery Gazette devotes over three pages to a description of it, with an illustration of the members and guests seated at the tables, and portraits of "John Bickerdyke," (Mr C. H. Cook), the chairman, Mr. Marston, the honorary treasurer, and Mr. David Wilson, honorary secretary.

The London club is so prosperous and has been growing so steadily in membership that it has been proposed to have a club house of its own, instead of renting rooms, as at present, and the chairman referred to this subject in his speech, from which I take an extract: "It has been the dream of my boyhood, the hope of my middle age and the consolation of my declining years that we should some day have a clubhouse of our own. But we cannot have a clubhouse of our own on 300 members, and yet I don't see how we can have more than 300 members if we do not have a clubhouse of our own. So that it cuts both ways. If I tell you a story it will illustrate my meaning. In the rural parts of France it is the custom for the parish priest to go round at certain seasons of the year, accompanied by the peasants, to bless the fields, and the fields are supposed to yield more produce because the priest has blessed them. Well, there was one very wise old priest who was going round blessing the fields. At last he stopped at one which he refused to bless. 'Why, father,' asked his people, 'why don't you bless this field?' 'My children,' he replied, 'it will do no good whatever to bless it; the field wants manure.' Now, that is my point. Mere blessing won't make our club grow. The club wants a fertilizer, and how are we going to get it? The enricher that I propose is—Duffers. We, gentlemen, are the finest fly fishers in the world. There is no one in the whole of Great Britain who is a good fly fisher who is not a member of the club. It would be mock modesty on my part to say that we are not the best fly fishers in the world. We glory in it. Except ourselves, there are really no great fly fishers left. So, when we ask a gentleman to become a member of our club he says: 'Oh, but I am a duffer; I would only be a duffer in the Fly Fishers' Club.'

"Well, I think we should welcome duffers, because if we don't have duffers in the club there is no one to whom we can tell our fishing stories with effect. The question is: What is a duffer and where shall we draw the line Of course, a man may be so great a duffer that he should not be eligible for election. * *

"What I would suggest as the requisite qualification is that everyone who has caught three trout, each over 3½ ounces and is in possession of five flies and a fishing rod, should be eligible to become a member of the club."

While Mr. Cook's proposed qualifications may not serve as an answer to my correspondents, or be accepted by the committee on rules of the American Fly Fishers' Club, they may be taken as pointers. A nice, patient, long-suffering duffer is one of the noblest works of his Creator. Somewhere in his composition, down deep and very faint, perhaps, there is secreted a love of fishing. It may be only a spark, but susceptible of being fanned into a living flame. He may not freely understand that he possesses it, and certainly he does not know how to cultivate it. It is like the facial memory of a song to which he cannot fit words, nor even make sense of the music.

When the fly fisherman strikes the duffer with the undeveloped love of angling in his soul he treats him accordingly as he may be a fly fisherman of high or low degree. If the former, he treats the duffer tenderly and gently, discovering the spark and fanning it into a gentle flame until the duffer becomes a full fledged fly fisherman. If a fisherman of low degree hooks a duffer the duffer has my deepest sympathy should he stay hooked. In such a case my memory usually goes back to my schoolboy days. A fisherman of low degree was in the habit of hooking a duffer in the lower part of the city of New York and leading him into a Fourth avenue car at City Hall Park, and then he would take him up to Twenty-sixth street and into one of the steam cars that the horses hauled up to Forty-second street, where the train was made up; and when the engine was coupled to the train the fisherman took his duffer somewhere into the upper part of Westchester County. It was always the same duffer, and as near as I could judge he was hooked and played daily. As a boy I named the fisherman the "horse car fisherman," for though he had acquired the newspaper habit I in some way got the idea that he did the greater part of his fishing in the horse cars and in the articles he wrote for the papers. I did not then recognize the duffer as a duffer, but I called him the "victim." Time and again have I heard the horse car fisherman pour (that's the proper term) his impossible, to say nothing of improbable, fishing stories into the ear of the duffer. For a time I was fooled myself, because I thought a man who had acquired the newspaper habit could not lie about fishing. This was before Forest and Stream was born and before men had been made better by its influence, but I finally dropped to the game and then, at any time, I would not have been surprised to see a halo appear—a rich and rare halo—midway between the top of the silk hat on the duffer's head and the advertisements of "444 Broadway" in the deck of the car above it. He was such a good natured duffer, and had such a pleasant face and laughed so heartily, though gently, as if he enjoyed the catching of every fish from Spruce street to Twenty-sixth. He was a rare bird even for a duffer, for he never even attempted to do any of the talking, and his laugh was so low that the horse car fisherman did not have to raise his voice much above an ordinary tone to make all the people in the car hear. I suppose that over and over the horse car fisherman was, in fact, must have been, voted an ass by the other and older passengers, but I came to think chiefly about the long-suffering duffers, and from that time to this I have been his friend. By all means vote into membership all the happy-face duffers, and while about it vote out the horse car fisherman.

Fishing Changes with Changed Conditions.

It is to be presumed that nearly every angler who has fished waters widely separated in this broad land has observed that the habits of fish may change as they are found in one water or another. Rules which govern fishing in one lake for one species of fish may be of no avail to bring success when applied to the same species of fish in another lake. As an example, I know of one lake in which it would be comparatively useless to fish for black bass during the day in the month of August except in water 20 to 25 feet deep having a grass bottom. True, in this lake a few bass may be caught morning or evening in shallow water on the shoals, but the fishing is not at all certain to bring fish to the angler, and it is not practised to any extent. This lake has an utlet into au other and larger lake, and there in August the best fishing is on the shoals, and at high noon one may catch big bass in water that little more than floats the boat from which the angler fishes.

Ordinarily the black bass in New York have retired to the rocks in water 30 to 40 feet deep by the time October comes around, although there are exceptions; but one long to be remembered fishing which I made to Canadian waters in October I found the best of black bass fishing in water 8 to 10 feet deep, and on one very rough day caught bass in water not over three feet deep. Such examples might be extended indefinitely if that were the purpose of this note, and I shall not attempt here to give reasons for the change of habits of the fish in different waters.

Last spring I mentioned in this column that apparently the habits of lake trout in Lake George were changing from what they had been so long as any one could remember, and promised to refer to the matter again.

Originally the chief food of lake trout in this lake was the round whitefish or "frost fish." When the ice left the lake in the spring the frostfish appeared at the surface and the trout with them, both remaining at or near the top of the water for about ten days or two weeks, after which both retired again to the depths.

Surface trolling for trout extended over the period during which the trout and its food remained "up." Lately it has been observed that the trout remained "up" for a longer time than formerly; even six weeks after they first came to the surface some were caught near the top of the water by fishing in the early morning hours. What has occasioned the change of habit? In 1887 whitefish from the Great Lakes were planted in Lake George, and while these big whitefish come to the surface with the trout and frostfish they do not go down again when the frostfish do, and therefore offer an inducement for the trout also to remain up as they did not before the big whitefish were introduced. Fish culturists will say that if one wishes to have trout that will take the artificial fly readily they should have food for which they will have to look up to the surface, rather than down at the bottom. The food question is one that fishermen think little about as a rule, but it is fully as important as the fish question if one is to have good fishing. A gentleman came to see me yesterday and asked about planting a small spring pond with trout, and when he asked if they should have food and I said yes, and among other things suggested May flies, he looked up from his memorandum and over his glasses at me and exclaimed: "May flies!" in a tone of voice that he might have used had I said bull pups. But it is an easy matter to plant May flies, and they are excellent food. Trout in ponds that contain no other fish life are the best trout in the world, and yet the first thing which suggests itself to the average man who is forced to plant fish food is "minnows." But this is subject matter for a book instead of a note.

Cut.

A letter just at hand from Mr. Alfred C. Harmsworth of London tells me something of his recent experience in France, where he has been for some time past each year for many years. One thing he learned which was new to him and it is also new to me. He says: "While the best gut in the world comes from Murcia in Spain, it is a curious fact that this silk worm gut can only be produced in a district not more than two miles in area. In this district a certain kind of mulberry leaf grows, and it is from this small place that all the best gut in the world comes." I say this was new to me, and by this I mean that it was new that the district which produces the best gut is so small, but the next sentence is the one which made the greatest impression upon me. "A certain kind of mulberry leaf." To me that opens vast possibilities. We have in this country a native silk worm which will produce gut nine feet long, round and smooth, and when a certain kind of leaf is found on which to feed the worms we will have the finest, longest and best gut in the world. This long gut—each length long enough and thick enough for a salmon leader—possesses every necessary quality except strength. That lack of strength in the gut is due to lack of proper food for the worm (that "certain kind of leaf") is established from the fact that when the gut has been drawn in Ohio it is as strong as the gut from the Chinese worm, but when drawn in Vermont it lacks strength.

In the light of Mr. Harmsworth's statement it is more than likely that it requires a certain kind of soil to grow the food for the silk worm to produce gut of the required strength for leaders. To the best of my recollection the native worms from which Dr. Garlick in Ohio drew the long, strong gut, each strain a perfect nine feet leader, were fed on the cotton ball bush, while the worms from which Mr. Orvis drew equally long gut, but lacking in strength, were fed in Vermont on plum and apple leaves. We have four native silk worms, the Attacus cecropia having the larger cocoon, and it is the one from which the largest gut has been drawn. The A. prometheus is nearly as large, and Mr. Orvis cultivated both, I think, although it may have been the cecropia and the polyphemus. The fourth, Attacus luna, is a rare moth, so rare that I certainly know nothing about the worms (larvæ). Mr. Orvis found no trouble in cultivating the larvæ of the two moths and the cocoons were gathered easily, but he gave up the cultivation of the larvæ because, and for this reason only, he did not find that certain kind of leaf necessary to the worm to produce strong gut.

A. N. CHENEY.

A Taut Line on Bass.

Will you excuse me if I dance a pigeon wing after reading Mr. Cheney's advice to a correspondent anent slack or taut line and leaping bass. We have been told to believe by high and mighty authorities for generations that the object bass had in leaping was to hunt up a slack line and leader and then wrapping themselves all round these things and tying knots in them, to cast themselves with mighty impetus into their native element, snapping line and leader, also their tails in derision. But somehow in all my bass fishing, when one leaped, instinct always seemed to impel me to keep a taut line, and I almost always managed to keep my fish with it. How can a bass fall on a taut line. If he falls on a line at all, it will have to be in a position so that he can fall on it, which is slack. Why is advice given to keep a taut line while the fish is in the water? So that the fish can't shake the hook out. And when the fish is in the air we must give him slack so that he can shake it out, eh? If you have a proper rod and common sense a taut line on a leaping fish will never help the fish escape or break your line or leader. Thanks, Mr. Cheney.

Fishculture

Fishculture in Europe and in America.

In *Science Progress* for December Prof. W. C. McIntosh contrasts the support given to the Scottish Fishery Board for scientific investigations and fishcultural operations with the appropriations for the same objects in North America. The Board receives only $15,000 annually for all branches of its work, while Canada expends $500,000 per annum, of which $50,000 is devoted to fishculture, and the United States appropriates $350,000 a year for its Fish Commission, besides supporting two steamers, a schooner and a large number of smaller craft. The State of New York alone expends nearly three times as much annually for fishculture and protection as the entire grant to the Scottish Board.

Europe does very little to encourage public fishculture, four-fifths of its hatching establishments belonging to private parties. Norway is the only European country worthy of mention for its work in that direction. It begun the hatching of cod nearly a quarter of a century ago.

T. H. B.

New Hampshire Trout Season.

CLAREMONT, N. H., Jan. 4.—In my article on brook trout you made me say that I had never failed to find brook trout after April 15 that were not filled with spawn. It should read "Aug. 15" instead of April 15. We ought to have a law forbidding brook trout fishing after Aug. 15 in the State of New Hampshire.

COLUMBIA.

A Travelers' Opinion.

I had been told that the scenery on the Chesapeake and Ohio Railroad was fine, that its grandeur was varied in scores of unexpected combinations of mountains and rivers and clouds and forests. I had learned from others who had been over it that whereas there are roads in America and Europe with points on their route of as great picturesqueness as these hills afford, nowhere is there a line having such constant interest for hundreds of miles—and, notwithstanding that I had heard and read these things, I was totally amazed at the reality.

The service is worthy of the road. The famous F. F. V. Limited—the most celebrated train in the world to-day—runs solid between New York and Cincinnati via Philadelphia, Baltimore and Washington, and carries a Pullman sleeper from Washington to Louisville, Ky., without change.

Another vestibuled limited train runs solid between Washington and Cincinnati. This train carries a Pullman sleeper between Washington, Indianapolis and St. Louis without change, and makes close connection with the Pennsylvania Railroad at Washington in both directions.

Both trains are vestibuled, electric lighted, steam heated and strictly up to date.

Observation cars run on the F. F. V. through the most picturesque regions of America, and there are no flaws in either the cuisine or appointment of the dining cars, which serve meals on all through trains.—*Adv.*

Dictionary of United States History—1492-1894.

The Dictionary of United States History from the press of the Puritan Publishing Co., Boston, Mass., is a valuable work of reference. The facts of our history from 1492 to the present time are concisely stated, and arranged alphabetically for ready reference. Utility has been the foremost consideration in the preparation of this book, and great pains have been taken to make it both comprehensive and accurate.

The book covers a wide range of subjects, and is handsomely illustrated.—*Adv.*

1895 Outlook.

Straws show which way the wind blows, and the number of large orders already placed for sundries indicate that the production of wheels next year will be fully as large as anticipated by the most sanguine. Cushman & Denison, who make oilers for the leading manufacturers and jobbers of bicycles, are very much rushed on their '95 orders and will make a larger stock than ever before.

The "Perfect" Pocket Oiler is being made even better than at present. In spite of the reduced price of wheels and the consequent tendency to use cheaper material, the "Perfect" Oiler will be used with almost all the really high grade wheels.—*Adv.*

"Forest and Stream" Fan Pedigree Blank.

FOR some time past breeders of dogs have demanded a pedigree form that would afford spaces for a more extended pedigree than those hitherto published. The difficulty has been in arranging a form that, while admitting the required extension, would be compact and not too large for mailing. This difficulty has been solved in the "FOREST AND STREAM Fan Pedigree Blank," which is so arranged that a dog's pedigree can be recorded for eight generations, and the spaces, radiating from a center the reader is enabled to trace at a glance the different strains which lead from sire and dam. Spaces are also provided for recording the name of dog, its breed, color, sex, breeder and address; dates of birth and purchase, from whom purchased, E. K. C. and A. K. C. Stud Book numbers and certification. These blanks are for sale at $2 per hundred, 30 cents per dozen, by the Forest and Stream Publishing Co., 318 Broadway, New York.

Shall it be Speed or Nose?

Editor Forest and Stream:

Having read the opinion of our various beagle friends on speed versus nose, I would like to give my opinion if you deem what I shall say of sufficient interest to the many readers of your valuable paper.

I claim speed and nose constitute only a small portion of the necessary requirements of a good beagle. He may have both, and of the very best, and still be as useless for rabbit hunting as a collie. A good beagle must be bred and broken to the work; must have an inherent love of the chase; must be sagacious (better known as level headed); must have persistence to follow the trail when at a loss, staying till he works it out, running only as fast as his intelligence tells him by his scenting powers he is right, following true and steady, giving deep, melodious tongue.

Scent and intelligence must be paramount, otherwise he will over run the track, pick up his losses indifferently and without courage and persistence, quit. He is not required to catch the game for this very reason, the beagle is used for rabbit hunting and the standard for height has wisely been placed at 15in. Small, true, slow-running dogs are better for rabbit hunting for the reason that as a rabbit runs in a circle the slower he is run the less he is scared and the smaller he makes his circle; thus the slow, true-running dog brings the game most quickly to the gun, for it stands to reason the larger the circle the less chance the hunter has of shooting.

Now if a fast-running dog is preferable, why use beagles, and if you do use beagles, why not 15in. beagles, as they can outrun their smaller companions and would certainly be the better rabbit dog of the two, all else being equal providing speed is required? Now no hound is worth hunting with who is a quitter or cannot last the hunt out if ended in one day. He ought certainly to last as long as a man, and my experience with both beagles and foxhounds is that no hound can stand it to run all day who runs faster than his strength will hold out. Therefore a steady, true-running dog is much preferable to one whose pond is run out before the hunt is half over. Give me a true, sure trailer, a sticker and laster, one who works his ground not madly and frantically, but carefully, eagerly, judiciously and persistently; who goes to work as soon as the brush is reached and holds his own till the hunters are ready to go home, be it in one hour or ten. And day in and week out I can kill more rabbits with him than the fastest-running dog that ever lived.

Yours for work, J. F. STODDARD.

GEORGETOWN, N. Y.

Work for Terriers.

Editor Forest and Stream:

The letters in your last issue on "Work for Terriers" will have, I know, been read with interest by many who, like myself, have always kept terriers for work and not for show, killing barn or Norwegian rats along the hedges and ditches in England with four or five well-trained terriers is first rate sport. But to my mind, the place where the best work is got out of terriers is along the rocky shores of northwest Scotland and the Isles, where we used Skye terriers to bolt the otters from the cairns and the foxes from the rocks on the higher ground. I have tried all sorts of terriers for this work, but have never seen any that could equal the old-fashioned Skyes. It takes a very good dog to bolt big, strong otters. The modern fox-terrier is too much given to fighting, and when two are to ground together they will often fight each other in the earth, when greatly excited. There are a few good strains in England, notably the terriers of the Duke of Beaufort, who has bred them for years to go to ground for otter and fox. In Skye, where it is impossible to hunt foxes with hounds, terriers are used to bolt the foxes, which are then shot. I have a little bitch here now that I lately brought over that bolted over thirty foxes last year.

It is of course very hard to get a good dog, as not one in twenty are really first class; it seems to me that there is plenty of work for terriers here, for men who hunt foxes in the big rocky hills of the East. Last Saturday my hounds ran a fox to ground in a very large earth, I took the hounds back, coupled them up, and tieing them 100yds. off put the terrier in. Although she worked for an hour she could not move the fox, who must have been out of her reach in some very small corner. A run is so often cut short by the fox slipping into the rocks that my advice is to have a good terrier, get your hounds off, and after bolting your fox, give him a fair start and put your hounds on again. That fox will run much better and probably will not go to ground again. Never use a terrier that will seriously hurt your fox in the earth. NOEL E. MONEY.

OAKLAND, N. J.

Work for Terriers.

Editor Forest and Stream:

"H. W. L.'s" letter in your current issue, under the heading of "Work for Terriers," shows him to "have been there;" yet I think that in the latter part of the summer and early fall the terrier men could work their terriers on muskrats where they were plentiful, as usually at that time many of the holes that were under water when the stream was in a normal condition would be open to view when the water is low at the season mentioned. Of course I refer to the slow-running streams that nearly dry up during the early fall. There is also another time when the dogs might be used on muskrats, the same as I have used the fox-terrier many times on the English water rat, and that is when there is a sharp rise or freshet on the stream. Then the rats will be entirely driven from their holes and seek refuge in a stump or bush out in the water, or even on a floating rail or piece of driftwood. When this is the case a boat is generally required to have good fun; then let the dog do all the work, and it is about as interesting as catching a winged wild duck. The dog that is used to the game will be ready to jump from the bow of the boat at the first appearance of a rose. I have had good sport with the ordinary barn rat by having the professional rat catcher bring me a cageful of live rats, once or twice a week, when a few of us would retire to the mill dam with two or three dogs and there turn in the rats one at a time; being in strange water they could not find any hole, so they kept going until they were nearly drowned, provided the dogs did not catch them first.

Of course the common barn rat is not so much at home in this work as the water rat, yet he will dive a long way the first time and come up all right, but each succeeding dive will play sad havoc with his appearance. If any one should attempt to use a cage of rats in this way let him put a few handfuls of short refuse hay or rubbish in the cage with the rats and then he can take them out one by one with his hand with impunity, until the last rat or two, when it will not be advisable to put in one's hand again. It is necessary when the rat is handled to take hold the same way as in handling a ferret so that the rat cannot turn his head; all the body to the back of the head should be inclosed in a fair grasp of the hand, the head should not be grasped nor should the body of the rat be squeezed. In putting the rat down let go at once and the rat reaches the ground. Rats may be caught in the same manner when they are at liberty by those having a good eye, quick hand and lots of confidence. I have even taken a rat away from the ferret, alive, when he was easy of access and there was a possibility of the two getting back into the hole again to finish the battle. It is easy enough to kill the rat with a quick grip of the hand, but it needs some practice to take up the rat and let him go again with so little injury that he can run nimbly away.

That there are lots of rat-infested buildings where the owners and occupiers would be glad to have some one come now and again and run their ferrets through for the sake of the sport, there is little doubt, in fact in close proximity to most water courses rats are to be found in the majority of old buildings and in some of the new. While the quantity of rats killed would not be as large as what one might procure from a bean stack such as "H. W. L." speaks of, and which from personal experience I can report as not being more than would be likely to be found in such a stack, yet there would be a chance to see if this terrier shakes his rat or if that one just grips and drops it ready for the next one; whether Nettle will mark a hole or Bristles is steady on ferret; or if the puppy "cried" when that big rat got a-hold of him. My suggestion to the ferreter in the buildings, when he has once got his crew and dogs all placed, is to say once only, "Look out!" and not speak again until he gives the order to catch ferrets, or else he will have his terriers so demoralized and excited that all the rats will get away while the dogs will take it out of each other in fight and there will be a general fuss all round. Above everything keep cool and quiet; fox-terriers soon learn what "Here he is" means and all rush to one spot. Never use a stick or a gun only when there is a good, clear way; better not at all than endanger a human or a dog's life. I can kill more rats with one ferret, one dog and my feet and hands, than six active men or boys with sticks and guns, shooting, striking and banging away. COMEDY.

MELROSE, Mass., Dec. 30.

Cheaper Stud Fees.

Editor Forest and Stream:

Has it ever occurred to any of your readers that are possibly interested in the advance of some particular breed of dog in this country, the effect the present rate of stud fees has upon such advancement?

It is fair to admit that for the best results, as to quality of stock and the strong support of specialty clubs and dog shows, a large number of competitors is necessary, and the larger the number the better the result in each case. Let the present condition of the dog fancy in England be taken as an example of the result of such competition. One cannot help but note that instead of three or four large kennels owning all the best specimens of any one or even two breeds, as is generally the case here, such specimens are distributed among many owners and number many more. A proportionally strong support is given to specialty clubs and dog shows as a result.

Now, let your careful reader glance over the stud advertisements as they appear in any English kennel paper and compare the fees with those charged in this country. If he is fortunate in possessing some files two or three years old, he can note the stud fees of dogs that are now in this country and compare them with the fees of the same dogs as advertised by their present owners here. Then he will see for himself that the stud fees here are twice and even three times higher than those of England; and in consequence, making all due allowance for the youth of our fancy here, we are doubly weaker in the support of our clubs and shows, even when we take into consideration the greater expanse of territory and the less dense population.

Naturally, it is of course to be supposed that the higher the stud fees of our best dogs the more readily will the small owner be induced to make use of them, and thus improve his stock. Surely nothing could be more convincing. We should all insist on having them even higher; the higher the better. Yes, the better and sooner the extermination of clubs and shows for want of support and entries.

But we are Americans, we are a progressive people, and my brothers of the Fancy show it even in small (?) things—even in stud fees. AMERICUS.

NEW YORK.

Notes from the Northwest.

THE circuit of shows comprising the Puget Sound and British Columbia towns of Seattle, Tacoma, Portland and Victoria appears to have been abandoned the present year. This is to be regretted, as the doggy interests have been much neglected in the territory named. They are also in an embryo state and require development.

The circuit of 1892 and 1893 was very successful; great interest was displayed, the classes all filled well and the losses to management was nothing or very slight.

The Irish setter, English setter and pointer have had considerable attention. Fine specimens are plentiful and the classes for Irish setters at the Seattle show of 1893 were really excellent and very large.

Irish water spaniels, Chesapeake Bays and collies are the most neglected of any; the two former would be in the greatest demand among the many hundred duck hunters of the country, and would bring fair prices, while the latter would take well with the many farmers who are at present using very inferior dogs on their stock ranches. A good kennel of these three breeds, properly bred, advertised and handled, would in this district pay better than at any other point the writer knows of.

Portland, Ore., has several good kennels, Seattle has a few, and Tacoma and Victoria are well represented. Many valuable individual Irish and English setters, and several high-class pointers are owned in these cities.

The Mongolian pheasant has bred rapidly in Oregon and is found in large numbers in some sections. Many sportsmen think them equal to prairie chickens for work with a dog. It is doubtful, however, if they will supply the lack of Bob White and pinnated grouse. With a fair supply of the two latter scattered over the country and properly protected a few years would see some excellent specimens of pointers and setters, and a boom in the doggy world. J. C. N.

Kent Elgin.

In our last issue we were unable to more than allude to the fact that the noted pointer Kent Elgin had been bitten by a supposed mad dog at his home in Birmingham, Ala. Kent's owner, Mr. T. T. Ashford, at once telegraphed FOREST AND STREAM to arrange for the dog's treatment at the Pasteur Institute in New York city. Arrangements were immediately made and the results telegraphed to Mr. Ashford, who shipped his dog on Tuesday morning, Jan. 1, the dog arriving in this city on Thursday morning. He was at once delivered to the Institute and in the afternoon received his first injection under the Pasteur method for prevention of hydrophobia by inoculation. He now receives four injections daily, the strength of the virus being increased daily. This will continue until Jan. 15, when the treatment is completed.

It seems that on Dec. 28 and 29 a mad dog ran amuck through Birmingham, Ala., and did not fail to bite everything in his path—both men and dogs. The dog was killed and a post mortem examination held by Drs. French and Drummond, veterinarians, showed a very suspicious case. Mr. Ashford is not easily scared on the subject of mad dogs, but as his dog was bitten by this animal on the ears his love for Kent Elgin prompted him to take every precaution and incur the heavy expense that is charged for the Pasteur treatment.

On Saturday last we visited Kent Elgin to see how he was getting along. Dr. Gibier, to whose untiring efforts is due the standing of the Institute at the present time, conducted us to Kent's quarters on the roof of the large Pasteur building. Here, in a large room fitted along one side with large double-decked compartments, about 3ft. square, with wire doors in front, we found Kent occupying one of them. His compartment is darkened to keep him quiet. On opening the door of the cage Kent welcomed us and responded to our pat as a dog of good disposition will do.

He is a handsome black and white dog and is evidently in excellent condition. While under treatment he is fed twice a day on soup. Several dogs are undergoing treatment and seemed happy enough; one was a very fair ginger-faced mastiff whose boisterous welcome made one feel pretty qualmish considering he had been well primed with the virus that produces the dread disease. A box full of sleepy-looking nondescript puppies are being experimented with in the interest of the cure of another disease no less horrible than hydrophobia in its results. In answer to our question as to how long the period of incubation extends from the time the dog is bitten, Dr. Gibier said three weeks.

This unfortunate mishap to Kent Elgin will probably interfere with his field engagements, as we understand he had been doing little work lately, and in the event of the Strideaway challenge being accepted, would have been put into training at once.

DOG CHAT.

The great Dane fancy seems to be spreading. We are told that there is a good demand for puppies, harlequins especially, and the prices received must be very gratifying to the fortunate breeders. As an instance, the white-faced harlequin bitch Irene, that Mr. Schultz showed at Danbury last year, winning second in open and first in puppy classes, was sold lately to a New York man for $200. Mr. Thiman sold four recently for $450. Several gentlemen who have not been identified with the breed in a public way are thinking of forming a new great Dane club, membership in which will be confined to active breeders only. Dr. Kleine, of New York, has lately imported a very fair dog that, we understand, has done some winning in Germany. This dog is said to stand fully 34½in. at shoulder and is well built in every way.

The members of the pet dog fancy will regret to hear of the death of Mr. E. H. Morris's King Charles spaniel Rob Roy (30,359), that died Dec. 28, 1894, after a series of epileptic fits. Rob Roy, had he lived, would have appeared at New York show in the challenge class. Good King Charles spaniels are scarce enough in this country, and the fancy can ill afford to lose such a good dog. His late owner, however, is still in the ring, for he has at present six stud dogs in his kennel.

We regret to hear that Mr. H. S. Pitkin's St. Bernard Prince Barry, a picture of whose head had long adorned the business columns of FOREST AND STREAM in Mr. Pitkin's advertising space. Prince Barry in his early career won several prizes, and was a dog that showed a great deal of true St. Bernard character. He was by champion Merchant Prince out of Bernie V. and was born April 23, 1886. His first appearances in public were at Boston and Hartford, 1887, when he won firsts in the puppy classes.

The fault that lies at the door of "fancy" is that in the perpetuation of certain types and desirable points breeders have resorted to inbreeding, and thus weakened the dog's constitution and possibly in some cases its intelligence. Intelligent breeders then seek an outcross that will restore to the strain its original virility. The correspondence now going on in our columns regarding "Work for Terriers" is evidence that some of our breeders are awakening to a sense of their responsibilities, and while none the less anxious for bench show honors, are still considering the best interests of their dogs in seeking to indulge them in the work and sport they were originally bred for.

Indications point to a successful show at Cincinnati, O., to be held in connection with the Poultry Association. The premium list is out, but did not reach us in time for notice last week, and the entries closing Jan. 7 it is not necessary to give particulars, the prizes being on the percentage plan. One hundred and fifty entries have been received already. The South Bend Kennels, of South Bend, Ind., will send champion Major McKinley. W. L. Washington, of the Kildare Kennels, who is down to judge Irish setters, will bring champion Ruby Glenmore, the noted Finglas and four others for exhibition only. Chas. A. Robinson, of St. Louis, has entered four greyhounds; J. Taylor Williams, the English setter breeder, enters six for exhibition, as he is to judge setters and pointers. About twenty-five St. Bernards are already entered. Dr. F. H. Hoyt, the "dago" man of Sharon, Pa., writes he will enter six Italian greyhounds and is coming on himself "just to see Eberhardt, Mack and Rockwell judge." Roger D. Williams enters a bloodhound, barzoi and foxhound. The dogs will be directly under Al Eberhart's care and will be properly attended to. The express companies will carry dogs at the usual show rates and Mr. Eberhart will see that the dogs are shipped home promptly after the show. All dogs should be sent addressed to him at Music Hall, Cincinnati, O., and must not arrive later than Friday morning, Jan. 11.

In his article on "The Dog" in the June *Scribner*, Prof. Shaler says: "So long as our dogs were employed in the labor or the organized recreations of man, the tendency of the association with the superior being was in a high measure educative. They were constantly submitted to a more or less critical but always effective selection which tended ever to develop a higher grade of intelligence. With the advance in the organization of society the dog is ever losing something of his utility, even in the way of sport. He is fast becoming a mere idle favorite, prized for unimportant peculiarities of form. The effort in the main is not now to make creatures which can help in the employments of man, but to breed for show alone, demanding no more intelligence than is necessary to make the creature a well-behaved denizen of a house. The result is the institution of a wonderful variety in the size, shape and special peculiarities of different breeds with what appears to me to be a concomitant loss in their intelligence. It appears to me, in a word, that our treatment of this noble animal, where he is bred for ornament, is, in effect, degrading." This is true in a great measure, but while dog shows have been the means of improving the appearance of our dogs, they have also led to a greater demand for all kinds of dogs. We do not believe that there is really much decadence in intelligence; it is merely a matter of circumstance and environment. The cur dog is apt to display more intelligence than his more carefully nurtured brother, but this probably arises from the fact that in his battle for existence his wits are sharpened by necessity and contact with the world.

The list of judges selected by the W. K. C. for its nineteenth annual dog show has been the one subject for discussion in local kennel circles during the past week, and the opinion seems to be general that it is about the strongest and most practical one that has so far been arranged. With one exception thes e judges have been tried before. Miss Whitney has headed the list for several years, and we trust the St. Bernard breeders who have disagreed in the past year or two with some of Miss Whitney's decisions will consider the interests of the breed rather than personal differences of opinion and again accord our only lady judge a bumper entry. Mr. James Taylor, who takes a number of breeds always difficult to find good judges for at this show, is known to few exhibitors on this side of the water, but his connection with the English *Stock-Keeper* as reporter-in-chief, and the fact that he is one of the best all round judges in England, should secure for him a fanciers' welcome, and his decisions in several of the breeds will, no doubt, be looked forward to with no little interest. Mr. John Davidson requires no introduction; he is the oldest judge we have and, though more at home with the setters, his judgment may be depended upon in the other breeds he adjudicates upon. O

course, he cannot please every one, but he will let the losers down as lightly as possible. Mr. Oldham has the confidence of the spaniel men and women, for he is a consistent as well as a conservative judge, and while he leans rather to the "parlor" cocker he is not so bigoted but that, if opportunity affords, he will "raise them up" a little provided they have the requisite type. Dr. Sauveur made his debut last year and acquitted himself so well that it was almost a foregone conclusion that he would again don the ermine. Mr. Charles Heath is an out and out pointer man, clean cut in his opinions and, moreover, has the confidence of the pointer fraternity. Mr. John H. Matthews, the bulldog judge, we have reason to believe, is not in love with the position half so much as he is with the breed, but as a breeder for years past his experience with the breed and the study he has made of the bulldog should serve him in good stead, and in pleasing himself he should place them about right. Mr. Mayhew is an old hand at the game, still his task is not an enviable one, for he will have, in awarding the specials between wires and smooths, some very delicate and difficult questions to decide, and, no doubt, he will be thankful when it is all over and the bobtails are called in. Mr. Leland is an enthusiast in that much-abused breed the Boston terrier, and his selection is a good one, for we believe he knows as much about the breed as any one else—and perhaps a little more, for he is, at least, consistent. Mr. Joe Lewis is at home with the beagles in the field, and this fact combined with a good idea of type makes his selection a judicious one. It is a pleasant task to be able to write in such a vein, for while the judges at a New York show do not influence the entries to the extent of those in our lesser shows, still the club deserves to be congratulated on its judgment and success in securing so good a list. The entry of last year was a record one and the management will be sorely tried to accommodate a greater number.

Mr. T. A. Carson, of Kingston, Ont., has purchased the noted Irish water spaniel Biddy Malone. This addition gives him about the strongest kennel in this breed.

Mr. "Dick" Morgan, who has been located at Humboldt, Tenn., since October, in sending us a "Kennel Special" and the compliments of the season, calls our attention to a circular which he encloses, entitled "How I Manage My Dogs A-Field," that gives the sportsman a few hints in the way he should train up his dog, and from which we gather that Mr. Morgan's maxims are to go slow, keep your powder dry and your temper cool; don't defer till to-morrow the punishment or correction that should be given to-day, and make a companion of your dog whenever it is possible.

Mr. Morgan's experience with field dogs extends over a period of thirty years, and this fact, as he aptly remarks, argues that he is no "chicken" at the game. It is not often that one can get trainers to "give away" their kennel secrets, but "Dick" Morgan is an exception, and a few of his simple directions for dogs at work in the field will no doubt prove of practical benefit to the rising generation.

"1. At night remove every burr or foreign substance in dog's coat before he sleeps. Examine between his toes for burrs and briers and remove them.

"2. To toughen or harden a dog's feet, the bottoms, pour some common pine tar in a pan and put the dog's feet in it, so that the ball and bottom of foot is thoroughly covered. If there is any dust in the road just simply walk the dog along in it two or three times and that will be sufficient to harden his feet good. If dust is not available dry some road dirt before the fire and use it. This remedy is used for hardening dog's feet for the prairie, and is good and sure.

"For canker in the ear take one pint cider vinegar, 16 grains of iodine and 32 grains of iodide of potassium. Mix, wash out ear well and apply daily. Two or three applications will cure any case I have ever seen.

"4. Wash for dog's eyes. Cold tea is very beneficial.

"5. Purgative. To move a dog's bowels I use castor oil.

"6. Emetic. I use common table salt dissolved in warm water.

"7. Tonic. Every week or ten days I put a handful of lac sulphur in my mess of feed; about a teaspoonful to each dog.

"8. To keep skin in good condition. First keep him in a clean place, warm and dry. Change his bedding at least once a week, and see that at no time he fouls it. By giving your dog a run night and morning he will keep his quarters clean. This applies, of course, when the dog is not being hunted. I feed once a day only, except when I am working my dog hard, then a light breakfast is in order.

"9. Sore ears; the leathers. I use vaseline.

"10. Chafing. Under his arms and around his stern, where there is any friction to his working parts, I use the following, rubbed in with a sponge or paint brush, going over every part thoroughly: Oil of tar 2 ounces, sulphuric acid 1 ounce, fish oil 1 pint. Mix. This is also a good mange remedy.

"Feed. Where table scraps can be had in sufficient quantities I prefer them if they are not spiced up. My feed in the South consists of old corn meal two-thirds, and wheat bran one-third. Beef boiled until in pieces, thickened, and then put in cooling box and fed cold. Never be afraid to give your dog fresh meat. Some every day would be good, and a dog will relish it after a day's hunt. In confinement fresh meat is not so essential, still a little will not hurt him at any time."

These are the common complaints that all dogs at work in the field are subject to, and their remedy, according to the above, has this advantage, that it does not require a whole pharmacopœia to accomplish.

A quarterly meeting of the New England Kennel Club was held in the club rooms on Tremont street, Boston, Jan. 3. The members present were President Brooks, James L. Little, Geo A. Fletcher, A. B. Cobb, Samuel Hammond, Jr., O. W. Donner, C. S. Hanks, W. B. Atherton, D. E. Loveland. There was little business transacted, the committee on constitution and by-laws making their report, which was accepted. Preparations are being made for the show in April next, which is expected to excel all previous efforts. A very enjoyable smoking concert was held by the club, and as "Work for Terriers" seems to be the main topic of conversation among the New England terrier men just at present, President Brooks gave a dissertation on Dandies with one of his terriers as an object lesson. Where several New England dog men are gathered together there is usually a lunch not far off, and this occasion was not an exception. An enjoyable evening was spent and it is expected that the experiment will be repeated. What a funny thing it is that New York fanciers cannot start a semi-social club! Surely it would not require much preliminary outlay and would be the means of affording dog men an opportunity to discuss the merits and demerits of their favorites, and contribute to a general good feeling among the fanciers of the city.

It is reported that the well-known bulldog Handsome Dan has joined the majority. Probably there was no bulldog in the country better known to the general public than Mr. Graves's Yale mascot. In 1892, we believe it was, Dan, decked out in Yale blue, was paraded round the football field before the memorable match with Princeton; and again on the occasion of a late Yale-Harvard boat race, Handsome Dan occupied the post of honor in the bow of the Yale launch. Handsome Dan was whelped Nov. 6, 1887, and during his career had won several prizes. Though never in the front rank as a show dog, he occupied first place in the hearts of all contemporary Yale men, and they at least will be sorry to hear of his death. His owner, A. D. Graves, was a prominent football player, and also rowed in the winning boat during his college term.

Mr. E. D. Damon, owner of the pointer Strideaway, has sold the well-known brace of English setters, Rod's Chaff and Rod's Mirth, by Roderigo—Gladstone's Girl, to Mr. George Crocker. These two, it will be remembered, were of the same litter as the noted field trialers, Rod's Sue and Dot Rogers. Mr. Crocker also purchased Jilt, a daughter of Strideaway, and Ightfield Tegie. She will be trained for future Derbys. Mr. Damon has purchased the English setter dog Cash Boy by Vanguard—Georgia Belle, to breed to his Count Noble bitches. He believes he is the only dog that represents the Gleam line of blood in the East, and thinks this is a line of blood breeders must look to in the future.

We are surprised to learn that Dr. Griffin, of Hamilton, Ont., has disposed of his noted Wentworth Kennels of bull-terriers. Champion Principio, Edgewood Robin, White Rose and White Star are now owned by Mr. F. T. Miller, of Toronto. Barton goes to N. N. Taylor, of Kingston, Ont., and Mr. R. Kay, of Detroit, bought Wentworth County and Wentworth Prince, and J. D. Bruce, Northwestern Territory, purchased Murray. Wentworth Thelma finds a home with Mr. Miles Hunting, and Dr. Griffin presented Wentworth Beau to Mr. John Hendrie, of Hamilton.

Simonian, the noted greyhound, was received at Elsham from Russia in such an emaciated condition that Col. North refused to take him. Only the greatest veterinary skill succeeded in keeping the dog alive. He is better now, but will be useless at stud. Word has been received from Russia to sell him at auction for what he will bring, and the crack will probably be put up at auction at Rymill's sale at the Barbican Repository on Jan. 26.

A movement is on foot to organize a Bedlington terrier club. The promoters are Messrs. W. H. Russell, Thomas Pearsall, H. R. Childs and M. A. Theiberg, to whom communications in regard to the proposed club should be addressed. A meeting will be called this month and the first annual meeting may be held during the W. K. C. show. The Bedlington terrier has languished somewhat in late years and a specialty club to look after its interests will, no doubt, help to make this game terrier better known.

National Beagle Club Meeting.

A quarterly meeting of the National Beagle Club of America was held at the A. K. C. rooms, 44 Broadway, New York, Jan. 4, J. W. Appleton in the chair. The other members present were H. F. Schellhass, George W. Rogers, George Laick, John Bateman and N. A. Baldwin.

The new officers for this year were installed and are as follows: President, H. L. Kreuder; First Vice-President, T. W. Appleton; Second Vice-President, Herrman F. Schellhass; Third Vice-President, George B. Post, Jr.; Treasurer, George Laick; Secretary, George W. Rogers. Executive Committe, with the above officers: A. D. Lewis, N. A. Baldwin, J. B. Loxier.

Mr. J. W. Appleton resumed the chair in the absence of the president. On motion the chairman appointed a committee to audit the accounts of the secretary-treasurer for the year 1894.

In the matter of alleged fraudulent beagle pedigrees issued by Mr. John Jarvis, it was voted that Mr. Best be advised that the case was brought before the A. K. C., which recommended the following, "That charge be dismissed, but that Mr. John Jarvis be reprimanded for carelessness in the issuing of the pedigrees and warned that any future errors of a similar nature will be severely dealt with, and the A. K. C. requests the privilege of retaining the correspondence."

After considerable discussion it was voted that the club claim the date Nov. 11 for their next field trials, and the A. K. C. will be notified of such claim.

In the case of the killing of Mr. John Bateman's two beagles, Mr. Bateman said that he personally did not wish to prosecute the man for certain reasons which he stated, but would appear as a witness and state his case before the Society for the Prevention of Cruelty to animals. It was voted that the chairman appoint a committee to confer with the Society and lay the evidence before them, and try and have the man punished. Mr. H. L. Kreuder and H. W. Lacy were appointed.

The following new members were elected: Daniel F. Summers, Thorndale, Pa.; A. D. Heald, Westchester, Pa.

It was voted that Mr. Pottinger Dorsey's name be stricken from the list of the club's official judges and that the American Kennel Club be notified to that effect.

It is proposed by the club to offer at the coming Westminster Kennel Club show a special prize of a piece of silver plate for the best beagle bred by a member of the club, to be competed for by members of the National Beagle Club of America.

The meeting then adjourned. GEO. W. ROGERS, Sec'y.

NEW YORK CITY.

HUNTING AND COURSING NOTES.

Mr. H. A. P. Smith, Digby, Nova Scotia, has been having a sad time with distemper in his kennels, and has lost seven foxhounds and three beagles. The death of the beagles was particularly unfortunate, as they were by Louie—Fitz Lee, and the only ones of his get which Mr. Smith possessed. Louie, it will be remembered, made a wonderful record at the first New England beagle trials, and was lost this year just previous to running in the second trials. Mr. Smith has just added to his pack the foxhound Joe Forester, winner of the highest honors at the second field trials of the Brunswick Fur Club.

* * *

Mr. R. D. Perry has closed Popple Camp, so well-known to New England fox hunters, and taken up his residence at Freeport, Me.

ANSWERS TO CORRESPONDENTS.

F. A. O., Oswego, N. Y.—My setter dog is so lame in one hind leg that he will not touch it to the ground. It has been most thoroughly examined. No reasonable amount of pinching or twisting will make him flinch. It came on rather gradually. After each hunt he would be more lame, and then would improve with rest; but now has become chronic. He will scratch himself with that foot as vigorously as with the other. Is it weakness, paralysis or rheumatism, or something of that sort? Ans. Probably disease of some of the joints. Take him to a veterinarian.

W. B. W., Chatham, Ont.—Pontiac, by Pride of the Border out of Petrel. Lovelette and Breeze are not registered.

S., Oxford, Mass.—Are the following beagles registered in the A. K. C. S. B.: Col. Lee (27,459), champion Tricotrin (20,780), Lee Dorsey (32,829)? Ans. Yes, Lee Dorsey was registered March, 1894; but the Stud Book for last year has not yet been issued.

J. T., Carolina, R. I.—The English setter Royal George is by Royal Prince II. out of Nina Laverack, by Prince Napoleon II. out of Nellie Laverack, by Perfection, out of Lit Laverack; Prince Napoleon out of Belle of Bryn Mawr; Royal Prince II. by champion Sir Alister out of champion Novelty, by Royal IV., out of Novel; Sir Alister by Tam O'Shanter, out of Daisy. Probably you mean Countess C. She was registered by John Kennedy, Providence, R. I., and is by Rowdy Rod, out of Celeste C., by King's Dan, out of M'Liss, by Sportsman out of Gath Lit; King's Dan by King Noble, out of Elsie Belton; Rowdy Rod by Roderigo, out of Juno A.

A. P. V., Mariner's Harbor, S. I.—If the building is tight and you provide plenty of dry bedding and change it often, you you should be able to keep the puppies without artificial heat unless the weather is more than ordinarily severe. Feed the bitch good broth, made from lean beef or mutton and vegetables, mixed with stale bread, boiled rice, oatmeal or dog biscuits—alternately. In the morning you might give new milk and whatever table scraps you can spare.

MORRISTOWN.—Unless you have the pedigrees of the stud dogs for three generations back you cannot register your toy spaniels; the same applies to the dam's side. Not being eligible to registration, you can "list" them with the American Kennel Club, 44 Broadway, New York, by paying 25 cents on each dog. If you can give the breeding do so. Listing confers the privilege of showing the dog at any show held under A. K. C. rules.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

BRED.

☞ **Prepared Blanks sent free on application.**

Waldine—Diamond Joe. A. Beckman's (Milwaukee, Wis.) dachshund bitch Waldine to W. Loeffler's Diamond Joe (Hundesport's Bergman—Polly), Dec. 30.

Adelina—Hillside Royal. Wawaset Kennels' (Wilmington, Del.) fox-terrier bitch Adelina (Ford Veni—Dusky Beauty) to their Hillside Royal (Starden's King—Hillside Freda), Aug. 26.

Hill Hurst Pansy—Cribbage. Wawaset Kennels' (Wilmington, Del.) fox-terrier bitch Hill Hurst Pansy (Brittle—Petition) to Hill Hurst Kennels' Cribbage, Oct. 23.

Columbia—Raby Prince. Wawaset Kennels' (Wilmington, Del.) fox-terrier bitch Columbia (Declare—Winning Hand) to their Raby Prince (Raby Palissy—Richmond Jessamine), July 21.

Red Riding Hood—Hundesport's Bergman. J. Wedekind's (Chicago, Ill.) dachshund bitch Red Riding Hood (Hundesport's Zaenker—Lina L.) to W. Loeffler's Hundesport's Bergman, Dec. 18.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Lina K. W. Loeffler's (Milwaukee, Wis.) dachshund bitch Lina K. (Feldman K.—Lina L.), Dec. 8, six (three dogs), by his Hundesport's Bergman.

Columbia. Wawaset Kennels' (Wilmington, Del.) fox-terrier bitch Columbia (Declare—Winning Hand), Sept. 21, six (three dogs), by their Raby Prince (Raby Palissy—Richmond Jessamine).

Adelina. Wawaset Kennels' (Wilmington, Del.) fox-terrier bitch Adelina (Ford Veni—Dusky Beauty), Oct. 30, five (two dogs), by their Hillside Royal (Starden's King—Hillside Freda).

Hill Hurst Pansy. Wawaset Kennels' (Wilmington, Del.) fox-terrier bitch Hill Hurst Pansy (Brittle—Petition), Dec. 26, four dogs), by Hill Hurst Kennels' Cribbage; one puppy since dead.

SALES.

☞ **Prepared Blanks sent free on application.**

Raby Prince. Fox-terrier dog, by Raby Palissy out of Richmond Jessamine, by Wawaset Kennels, Wilmington, Del., to G. L. Townsend, Odessa, Del.

Wawaset Scrap. Fox-terrier dog, whelped Oct. 30, 1894, by Hillside Royal out of Adelina, by Wawaset Kennels, Wilmington, Del., to D. W. Hulburd, Wilmington, Del.

Wawaset Prince. Fox-terrier dog, whelped Sept. 21, 1894, by Raby Prince out of Columbia, by Wawaset Kennels, Wilmington, Del., to G. R. Allen, Philadelphia, Pa.

Raby Prince—Columbia whelps. Fox-terrier dogs, whelped Sept. 21, 1894, by Wawaset Kennels, Wilmington, Del., one to Dr. Frank Belville, Delaware City, Del., and one to Dr. J. A. Ellegood, Wilmington, Del.

Hunting and Coursing.

The Cup Correspondence.

The following letters were made public on Jan. 2 by Com. Smith:

NEW YORK, Dec. 24, 1894.

Richard Grant, Esq., Secretary Royal Yacht Squadron, Cowes, Isle of Wight.

DEAR SIR: We write to confirm our last cables. On Dec. 10 we cabled Lord Dunraven: "Can agree to no conditions as to holding Cup. If the challenging club will sign a receipt for the Cup as provided in the deed of 1887 we will accept the challenge. We must adhere to the ten months' notice from Dec. 6, but will advance date later if possible. We think best to leave all other unsettled questions until your arrival. SMITH, Chairman."

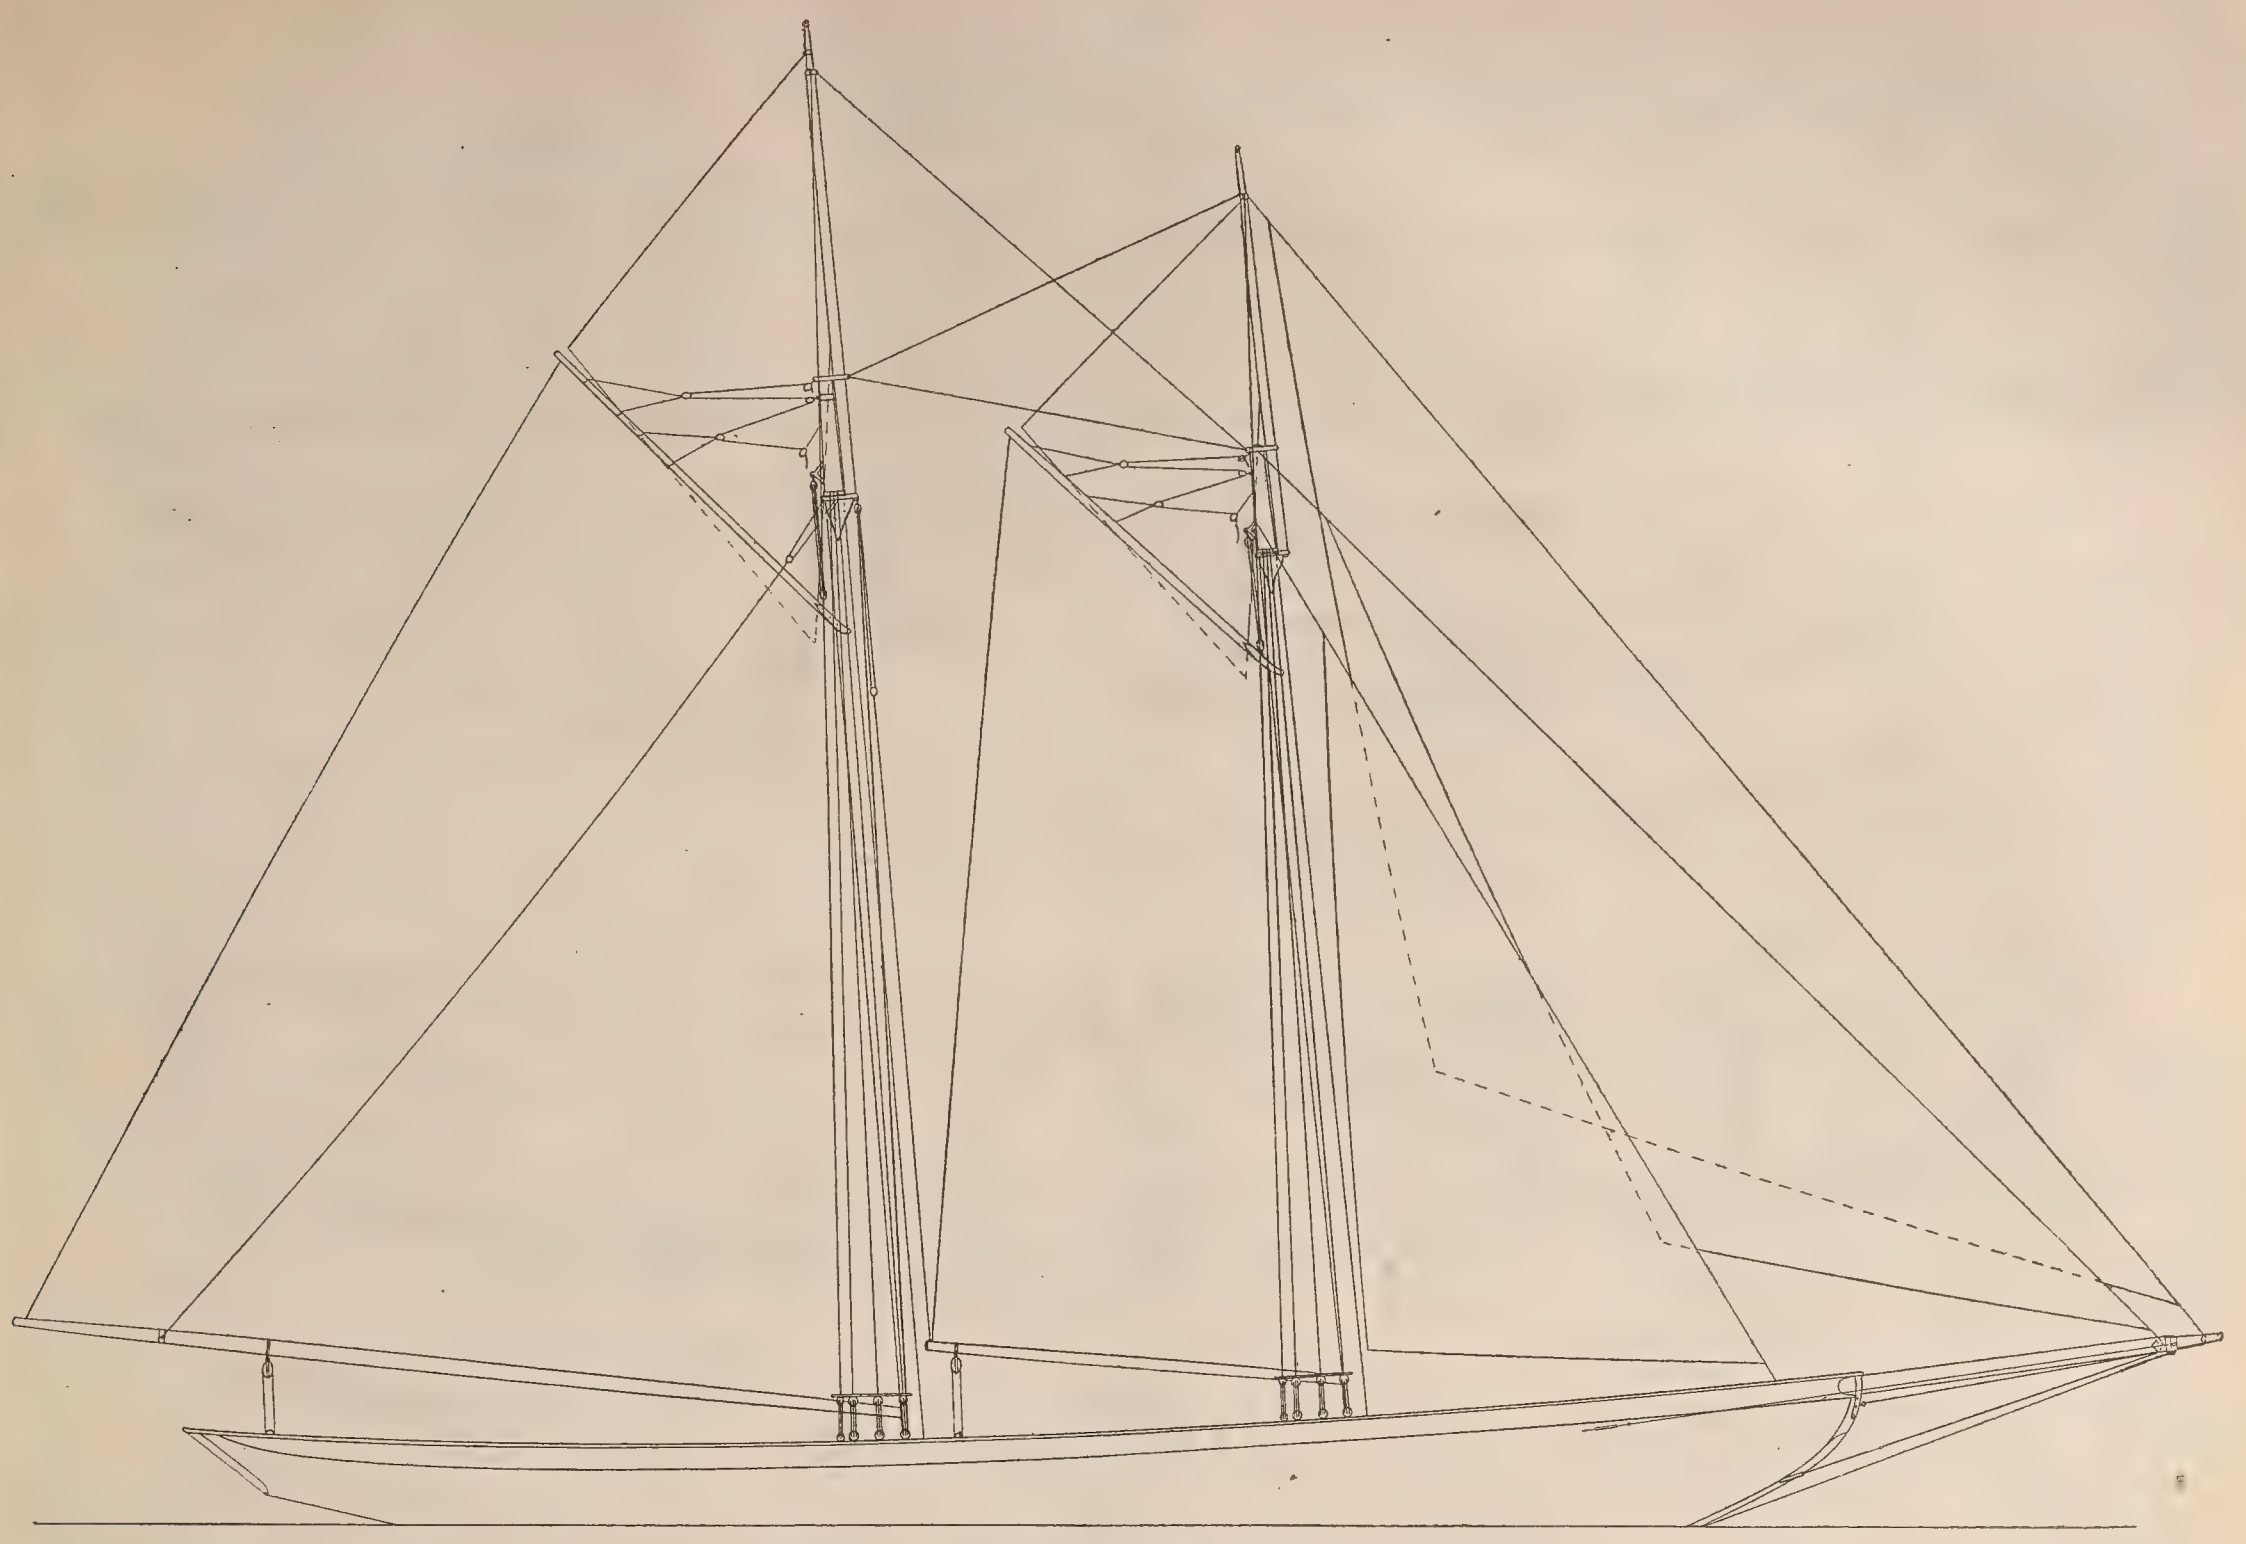
On Dec. 17 we cabled you: "As the America's Cup is purely a challenge trophy, and only valuable as such, we cannot agree that squadron, after having won a match for it, may reject the custody of it." By cable of Dec. 19 we agreed to accept challenge on condition that squadron would receipt for Cup on terms of deed without conditions. We will wait until Jan. 15 for official reply from squadron, and fix first race ten months from receipt of their answer, and will advance date if possible later on. SMITH, Chairman."

On Dec. 20 we cabled you: "Will fix first race eight months from receipt of advice from squadron that terms of ours, 17th, are officially agreed to, and Dunraven's request for three weeks to fit out after arrival is granted. SMITH, Chairman."

We repeat these cables to prevent any error in transmission or from lack of punctuation, and to point out that the question requiring the squadron's action is fully stated in our despatch of Dec. 10, to which the others respectfully refer.

In respect to your last cable of Dec. 19, and our reply, a few words of explanation seem proper. Your expression, "or within three weeks of arrival," we interpreted to mean that, in case Lord Dunraven's vessel arrived less than three weeks before the date set for the first race, we should shift the date so that he could have the three weeks to fit out.

We were unable to understand your repetition of the proposal already submitted in your message of Dec. 15, viz.: That "the matter of receipting satisfactorily to the New York Yacht Club for the Cup should be left until after the race." As we had already declined this in our message of Dec. 17, we think a disagreement as to terms and a refusal to take and defend the Cup after having sailed a match for it would have been a most deplorable state of affairs for both parties. We were also entirely in doubt as to what portion of Lord Dunraven's letter of June 24, 1889, you alluded to or what the force of this reference was. For the above reasons these portions of your despatch were not specifically replied to. We remain, your obedient servants.



A. CASS CANFIELD, Sec'y. JAMES D. SMITH, Chairman.

27 NORFOLK STREET, PARK LANE, LONDON, Dec. 21, 1894.

DEAR SIR: I beg to acknowledge the receipt to-day of your letter of the 11th inst. As the question of the nature of the receipt which the New York Yacht Club require the Royal Yacht Squadron to give in the event of their representative winning the Cup will be brought before a special meeting of the squadron on Jan. 7, it is unnecessary for me to trouble you with my personal views on the matter.

It will be within your recollection that the committee appointed by the squadron in 1889 declined, for certain reasons mentioned in their letter of June 27 to you, to agree to confirm my challenge with the condition attached that "if the Cup is won by the club challenging, it shall be held under and subject to the full term of the new deed." Obviously that opinion cannot be amended nor in any way altered save by the authority of the Royal Yacht Squadron, and therefore I demur to the assumption in your letter that I personally have any power, or have had any power in the matter. I regret that I was not able to announce my intention of challenging earlier than I did, but as I had never received the slightest intimation that the challenge accepted in 1892 was considered unsatisfactory in any way by the New York Yacht Club, it never entered into my head that a similar challenge would be refused in 1894, and that any controversy on that subject could possibly arise. In my letter of Dec. 1 I gave my reasons for not wishing to race in October, or even late in September, and asked for a modification of the ten months' notice. The challenge was cabled out and was received on Dec. 6, and I would point out that had the question of the terms on which the Cup should be held in the future not been raised, a very slight modification of the ten months' notice would have met my views. I much regret that we are somewhat driven into a corner as to time, but as I could not possibly foresee that a challenge accepted in 1892 would be refused in 1894, I do not think I can blame myself for it. I am, dear sir, yours faithfully, DUNRAVEN.

JAMES D. SMITH.

SAIL PLAN OF PILOT BOAT, DESIGNED BY A. CARY SMITH, 1894.

The New Smith Pilot Boat.

There was a time when New York could hold her own in all that pertained to shipbuilding and naval science with any port in the world, when from her shipyards were launched the fastest yachts and clippers, the finest passenger steamers for both river and coast work; and when foreign powers were glad to buy their warships of the great American builders, the Webbs, the Berghs, Bell, Eckford and Steers. After the magnificent record of the first half of this century, it is sad to think that progress has been backward instead of forward, that not only has the shipwright's art died out, but improvement has wellnigh stopped. For many a year past, progress has been supplanted by conservatism, until her oldtime glory has departed.

No other city in the country offers the same support to wildcat schemes of a nautical nature; squirtboats, gasboats, air and water ballast, four-day steamers and other impossible or fraudulent craft all flourish in the great metropolis; but when it comes to the commonplace effort to keep ahead of or even abreast of the times in all that pertains to ships, New York hangs back and contents herself with boasting of the glories of the past.

One of the striking examples of this conservatism is found in the pilot boat fleet, one of the important adjuncts of the immense commerce of the port of New York. There was a time, just fifty years back, when the New York pilot boats, especially those of the talented Steers, were known all over the world. It is almost that length of time, however, since all improvement stopped, and the models of to-day are no better, if as good, as those of forty years since. Highly as they are held in the estimation of their owners and of the general public, it is a fact that they are years astern of the times. In each new boat the old models are reproduced by the old methods, a block model is chopped out, the lines taken off and laid down more or less faithfully, and the frames got out. Boston discovered the defects of her pilot and fishing fleet years ago, and availed herself of the skill and genius of such men as the late D. J. Lawlor to remedy them, the result being such craft as the well-known pilot boat Hesper, and later the fine fleet of modern fishermen, such as the Fredonia, turned out by the late Mr. Burgess. The professional designer long since secured a deserved recognition among the pilots and fishermen of Boston, but it would be a strange sight to see a New York pilot in conference with a designer over a new craft.

That a pilot should come all the way from Florida to order a pilot boat from a yacht designer, is something that the pilots of New York may well lay to heart; but such an unheard of event has lately happened, the pilot being Capt. T. B. Laserre of Fernandina, and the designer Mr. A. Cary Smith of New York. The reputation of Mr. Smith's cruising yachts is widespread along the coast, such craft as Iroquois, Intrepid, Fortuna, Lasca, Norna and the little Whim; and it was this that suggested to Capt. Laserre the idea of a pilot boat from the same designer. The new craft, which, by the way, will be laid down to the outside instead of the inside of the planking, the thickness of the planking being taken off on the floor, thus insuring a perfect reproduction of the design, will be 93ft. over all, 72ft. l.w.l., 20ft. beam and 10ft. 10in. draft. The latest theories of the yacht designers are represented in her long ends, giving life and buoyency in a sea, and a combination of power and easy form through the full waterline and fair diagonals. The stern may be condemned by some as too long for a rough-water craft, but it must be considered that it is not the length but the shape of the counter which makes trouble in a sea; and the modern round sections are very different from the old flat floor carried out over the water in a "fantail." The keel has a strong drag and the forefoot is well out away, balanced by a raking sternpost, all in order that the craft may work surely and quickly, as is required in her special service. The good work of Iroquois in her many offshore cruises suggested the placing of the mainmast and the center of buoyancy of the new boat in the same relative positions, and she will lay to under main trysail. By cutting away the forefoot, a proportionate reduction of bowsprit and headsails was made possible, a great gain in sea work. The masts were raked on account of the difficulty of carrying runners. The short foretopmast will be used to carry a large jibtopsail when free in light weather, and a small one to windward.

The vessel will be built in Florida, the keel of live oak, sided 16in. amidships and tapering to the siding of the stem and sternpost, 7 and 8in. respectively. The deadwoods and keelsons will be of yellow pine, the latter sided 7in. and moulded 10in. The frames will be of live oak, single, as far as possible, sided 3¾in., moulded 6in. at heel and 3⅝in. at head, spaced 16in.; floors also of live oak, sided 4½in., arms 3ft. 6in. long. The shelf will be of yellow pine, 4x5in.; the clamps, three on each side, of yellow pine, 2x8in. amidships and tapering at ends, the planking of yellow pine, fastened below water with copper. The sails, spars and ironwork will be made in New York. We have no doubt that the vessel will prove successful, and lead to others of her type.

The Value of the Alva.

The report of Commissioner Frederick Cunningham, who was appointed by the United States Court to assess damages in the case arising as a result of the collision between W. K. Vanderbilt's yacht Alva and the H. M. Dimock, was made public on Jan. 4 in Boston. Mr. Cunningham finds that the yacht was five years and five months old, cost $388,291, but that she could not at the time of collision have been sold probably for more than $125,000. He concludes that a fair value of the yacht was $190,000, to which should be added $5,000, the value of Mr. Vanderbilt's personal effects. From this total should be deducted $3,500, the amount received from the sale of the yacht, making the total value $191,500, with interest from July 24, 1892. The grand total found due Mr. Vanderbilt is $220,000.

Mr. Cunningham finds further that the amount due the seamen on board the yacht for loss of personal effects is $4,827.35, with interest from the time of the collision. In the present case it is claimed by the owner of the Alva that she could not be replaced in the market; that she was always kept in the best condition; that there had been no deterioration, and that he is, therefore, entitled to recover substantially what the yacht cost him.

The Commissioner says: "This proposition I cannot accede to. The courts have never gone so far as to give a new boat for an old one. It was shown that the Alva was a vessel of its own kind, one which could not be used to any advantage for commercial purposes, of a sort very rarely bought and sold, whose market value bore such a small proportion to her actual value to the owner that she could not in any just sense be said to have a market value. To hold that the measure of damages for the loss such a vessel is her market value would be, as the Supreme Court of Massachusetts has said in a case involving somewhat similar principles, 'merely delusive.' To give the owner of the Alva what she would have fetched in the market would be to give him much less than full restitution."

It now looks as though the case will be bitterly contested in the courts, although the Master has found that Mr. Vanderbilt and his seamen have suffered a loss of $225,000. Counsel for the steamship company say that there can be no recovery of any such sum in any event for the reason that the liability of the Metropolitan Steamship Company has been limited to the value of the Dimock, and the value of the latter has been appraised at $95,395.33.

Mr. Vanderbilt did not want the case tried in Boston. He began his suit in New York, but the lawyers for the company filed in the Federal Court a petition to limit the liability in the case to the value of the Dimock, and the New York court decided that this gave the Massachusetts court jurisdiction, and abated the suit in New York.

The R. Y. S. Meeting.

The special meeting of the Royal Yacht Squadron called to consider the question of indorsing Lord Dunraven's challenge for the America's Cup under the new deed of gift was held on Jan. 7 at the Boodles Club, London, with the Prince of Wales, as Commodore, presiding. Among the forty members present were the Vice-Commodore, the Marquis of Ormonde, Admiral Montague, Lord Lonsdale and Lord Dunraven. The latter gentleman spoke in favor of the Squadron accepting the America's Cup under the new deed, and a motion was made by the Vice-Commodore, seconded by the Earl of Coledon, to the effect that the Squadron would accept the Cup in the event of winning it. The cable reports give no details of the discussion and motion further than was intimated in the following cable, which was at once sent to Commodore James D. Smith:

"Having regard to the construction placed upon the deed of gift of 1887 by the New York Yacht Club, the Royal Yacht Squadron is willing to give a receipt on the terms contained in the deed of gift. GRANT, Cowes."

A motion was then made and carried to appoint a special "America's Cup committee," including the Prince of Wales, the Marquis of Ormonde, Sir Charles Hall, Q. C.; Sir Allan Young and Justice Sir Gainsford Bruce.

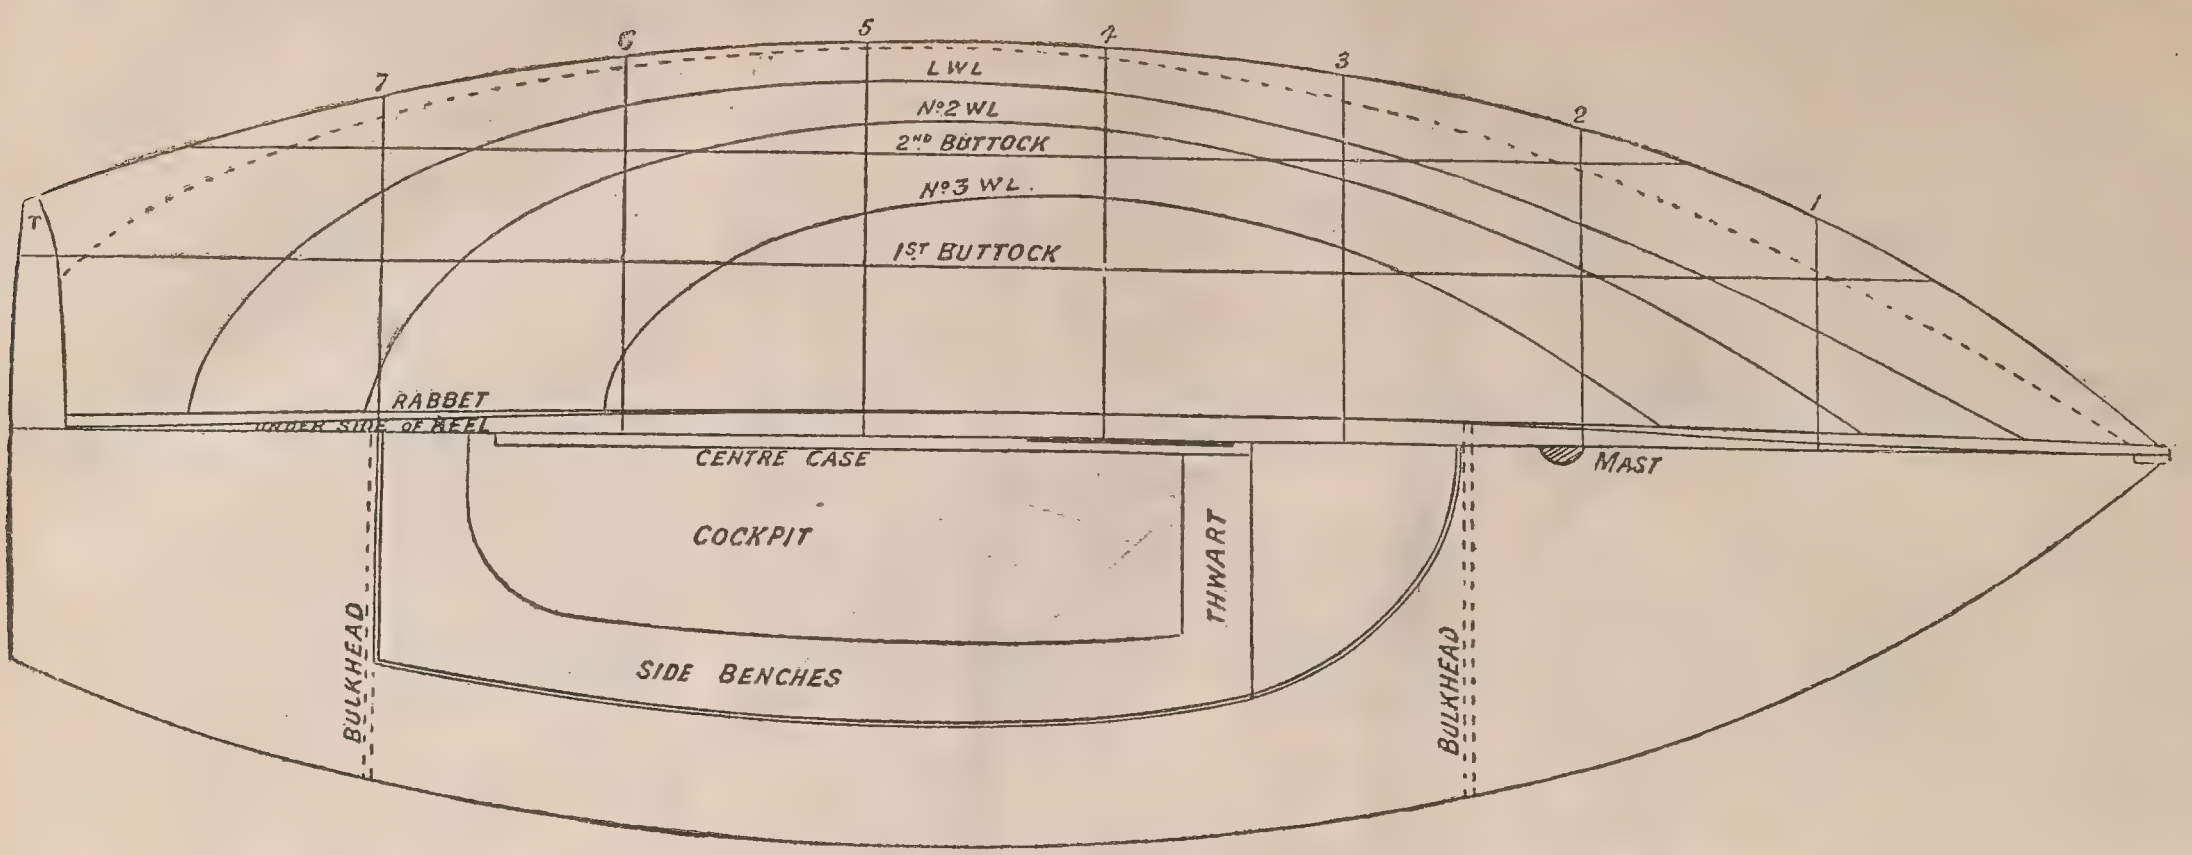
After the meeting the following cable was sent to Commodore Smith;

"We cable you to-day the result of a special meeting of the Royal Yacht Squadron, and conclude that the challenge is definitely settled. GRANT."

The statement that the challenging yacht, Valkyrie III., was already well under way has been positively denied by Lord Dunraven, and in the matter of construction, in the event of a race being finally arranged, the two sides will probably start on an even basis. Mr. Watson has doubtless completed the design, and has everything in readiness to begin at once the actual work of construction at Henderson's yard. On this side there is a general reluctance to take stock in Cup defending syndicates, but at the same time the necessities of the case make it certain that the money will be forthcoming from the New York Y. C. for the construction of one yacht. Mr. Herreshoff is prepared, so far as the design goes, to begin work at very short notice, and to carry it forward without delay, so that the yacht may be afloat early in the spring. This will give an advantage of about two months to the New York Y. C., as the challenger must lose that time in making the ocean voyage and fitting out at New York. If the challenger is ready by that date, Com. Smith will hold the races about Sept. 7. It is reported that Lord Dunraven will have Capt. O'Neil and some of his crew to help Capt. Cranfield, and also that in place of Capt. Cranfield he will have Capt. Sycamore, Admiral Montague's skipper. Our editorial comments will be found on the first page.

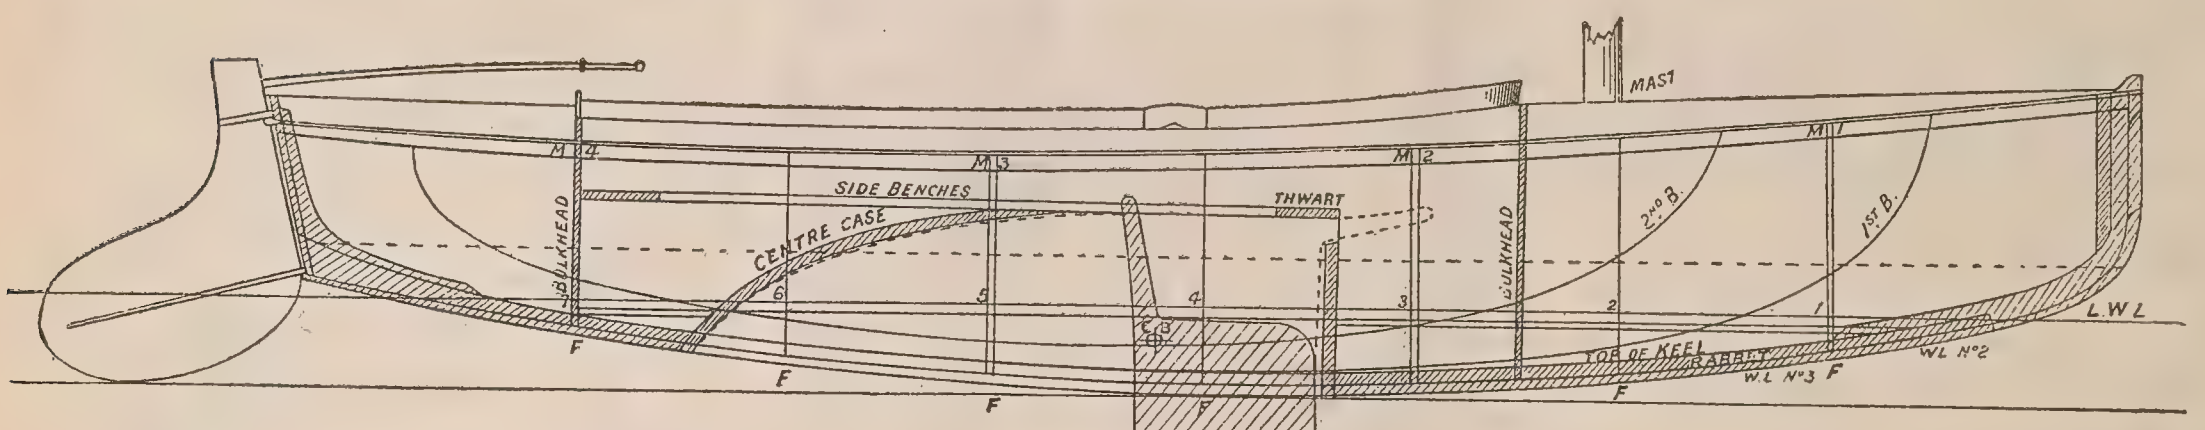
The New York Y. C. cabled on Tuesday, Jan. 8, to Sec'y Grant: "Terms of challenge, as modified by your cable of 7th, are accepted. SMITH, Chairman."

The Satanita—Valkyrie Collision.



[*From the Field.*]

(Before Mr. Justice Bruce, with Trinity Masters.)



This was an action for damages arising out of a collision between Lord Dunraven's yacht Valkyrie and Mr. A. D. Clarke's yacht Satanita. The collision occurred in the Clyde, near Hunter's Quay, on July 5 last, and resulted in the sinking of the Valkyrie.

Sir Walter Phillimore, Mr. Joseph Walton, Q.C., and Mr. L. Batten appeared for Lord Dunraven, and Mr. Fitzroy Cowper for the master and crew of the Valkyrie; Sir Richard Webster, Q.C., Mr. Edwin Pollard and Mr. Stuart Moore for the defendant.

The two vessels were preparing, in company with the Britannia and the Vigilant, to take part in the fifty-mile race at the regatta of the Mudhook Yacht Club. The race was held under the rules of the Yacht Racing Association, there was a fresh breeze from the southwest and the tide was flood of no appreciable force. According to the Valkyrie's story, she was off Hunter's Quay at 10:30 A. M. ready to start, under single-reefed mainsail, jib-headed topsail, staysail and jib, close hauled on the starboard tack, heading about south, and making from seven to eight knots. The five-minutes gun had been fired and the Blue

18FT. CLYDE SAILING BOAT.

DESIGNED BY MR LINTON HOPE
FOR MR A. W. STEVENS.

BODY PLAN.

SAIL PLAN

Peter hoisted, and the Valkyrie, with other yachts, was cruising about and waiting for the second gun to cross the starting line between the commodore's steam yacht Lutra and the markboat, the former on her weather bow, and both at some distance. The Satanita was then seen approaching on the port tack at about 500yds. distance and broad on the port bow of the Valkyrie about three points. She was sailing fast, ramping full and heading across the bows of the Valkyrie. The latter kept her course, close-hauled on the starboard tack, until it was seen that a collision was imminent, when she put her helm down and luffed up to ease the blow. The Satanita then struck the Valkyrie amidships on the port side abaft her rigging, doing such damage that she sank in a few minutes. The plaintiffs charged the defendant with improperly failing to keep out of the way of the Valkyrie, and also with neglect of Article 14 of the regulations for preventing collisions at sea and of the 18th sailing rule of the Yacht Racing Association. The Satanita alleged that she was hampered by a small sailing boat as she approached the Valkyrie and so failed, or was unable, to keep clear of her. The defendant paid £952 7s. 4d. into court, being the amount of damages for which he was answerable under the statute, calculated at the rate of £8 per ton, with the admission for the purposes of this action that if the collision was caused by the improper navigation of the Satanita it occurred without his own actual fault or privity.

Mr. Clarke, owner of the Satanita, said that the vessels entered had to be steered by amateurs and members of certain Scotch clubs. He was not a member of any of these and had never steered. Mr. Robert Ure steered on this occasion and was assisted by Dr. Robertson. Diaper, the skipper, was in charge, and the only order he had given him was that he (Clarke) took no risk at all and if there was any danger he was to take the helm. He took time on the companion.

Cross-examined by Sir Walter Phillimore.—They were close hauled and there was a nice breeze, but it was quite easy for one strong man to steer. There was a third amateur standing near and ready to help. There might have been a sudden puff just before the collision, but it could not have been avoided by having more hands at the helm. He did not see the Valkyrie until after he had seen the small boat. He knew no navigation, and never interfered with the management of his boats.

The master of the Satanita said it was rather puffy, but they had plenty of power at the helm. He had first stated that she had run off her helm, but afterward contradicted it.

Sir Walter Phillimore said that after the evidence which had been given he did not propose to call any evidence in rebuttal.

Sir Richard Webster then said that the only point now would be whether the defendant was liable to pay any portion of the amount claimed.

Sir Walter Phillimore said that, although it could not be said that the collision occurred with the defendant's privity, there was clearly a contract between those who entered for this race that they would obey the sailing rules, and that those who failed to obey them would pay in full for any damage so caused. In other words, the common law, which was specially excluded in Admiralty causes, should here apply—"Gray *v.* Pearson" (L.R., 5 C.P., 568).

Mr. Joseph Walton, Q.C., further pointed out that in a race like this there were risks which were not usually present in cases of ordinary merchant shipping.

Sir Richard Webster, for the defendant, argued that the reasonable and proper construction of the rules was that breach of them involved liability to pay damages which were by law recoverable. The statute had for nearly a century limited the liability of owners where the accident did not occur through their fault or privity, and it would require express language to provide that it was not to apply to a collision of this nature.

Mr. Justice Bruce said he thought that the owner of the Satanita was entitled to have his liability limited under the statute, as the damage was admittedly caused without his fault or privity. Then there was the question whether Mr. Clarke, by entering his yacht for this race under the Mudhook and Yacht Racing Association rules, had abandoned his right to limitation of liability under the statute. Although he was not prepared to say there was not a good contract, he thought it most improbable that Mr. Clarke did intend to waive his rights. He was evidently aware of the risks attending the use of an amateur helmsman from what he said to his skipper, showing also that he appreciated the latter's experience and skill. Then, if there was a contract, he thought the reasonable construction of the words was that the owner should not be liable for any damages over and above those for which the law provided. There, therefore, would be judgment for the defendant.

The Clyde Restricted Class.

We are indebted to the *Field* for the accompanying design made by Mr. Linton Hope for the new sailing club, established last November on the Clyde. The boats will all be built to the one design by Allister of Dumbarton, the cost, as stated, being about $165 for hull and spars. The dimensions are: Length over all 18ft., l.w.l. 16ft., beam 7ft., draft 10in., with plate 6ft., displacement 1,818lbs., sail area, actual, 275sq. ft., by Y. R. A. rule, 261sq. ft., rating 0.7; no ballast being carried and the crew limited to three. Two watertight bulkheads make the boats unsinkable. They will be used for afternoon sailing and for races. A movement is now on foot for a restricted class of small craft on the Thames; and this sort of boat sailing is growing very rapidly in Great Britain.

The Yokohama Sailing Club.

We have at various times had the pleasure of noting the successful progress of the flourishing little club maintained by the European and American residents of Yokohama, and of publishing the very full and exhaustive annual reports of the club's racing. We have lately received a very pleasant reminder of the club's continued existence in the shape of a handsome and unique volume of portraits of the yachts of the club, sent us by the compiler, Mr. Alan Owston, one of the leading members. The book, which is published in Japan and bound in a very attractive and striking cover, contains twenty large collotype plates, from photos by Messrs. O. E. Poole, W. K. Burton and C. D. West, the reproductions being made by K. Ogawa, of Tokio, while Mr. Owston has furnished the descriptive text. The twenty-seven yachts and boats illustrated are of various sizes and types, many of them built in Japan by native builders, from designs by members of the club or from various published designs. Some of the yachts were designed or built in the United States, but the sails are mostly made by Lapthorne & Ratsey. In spite of the great variation in size and type, the club has managed to keep up a good deal of keen racing. The book is not only interesting, but is artistically a most creditable production.

The St. Johns and Indian River.

Editor Forest and Stream:

I have a 30ft. cabin steam launch which I expect to ship to Jacksonville, Fla., in January, and after making the trip up the St. Johns wish to take her across to the Indian River by the easiest route. A suitable truck for handling her will go with her to Jacksonville. Any one who has made this trip or

who possesses information as to the most available point and best means of getting such a boat across from one river to the other will confer a great favor by addressing me either through the FOREST AND STREAM or direct to E. F. C., Box 465, Lansing, Mich.

The Challenge for the Cup.

From the Yachtsman.

One has long since become accustomed to the marvellous amount of correspondence that must pass between a would-be challenger for the America Cup before the aspirant can obtain the honor of being permitted to race for a trophy which was originally given to the N. Y. Y. C. as a perpetual challenge cup, open for competition to the yachts of all foreign yacht clubs. "Histories" galore have been written of the Cup, and it has been illustrated *ad lib.* in countless journals, and it may be doubted whether its celebrity is so much due to the actual contests for it which have taken place on water, as to the wonderful amount of ink that has been shed for it on paper. It is the best advertised cup in existence, and its fame is at the present moment growing apace.

It is to the New York Y. C. that the trophy owes the greater part of its distinguished status, and the club has ably proved its compatriotism with him who boldly proclaims his pills to be "worth a guinea a box," although he kindly sells them for less.

The New Deed is the price the New York Y. C. has placed upon the Cup, and they are willing to follow in the pillman's steps, and make a slight reduction. Everybody knows that the intrinsic value of the pills is far below even the philanthropic consideration for which they may be obtained by suffering humanity, but then the pillman has a patient for his pills, and the New York Y. C. has no patient for the Cup. It is not their absolute property, and never has been. Yet they have twice given it away absolutely, and the donees were so much struck with their generosity that they actually gave it back, each time with increasing benevolence toward the N. Y. Y. C. expressed in legal phraseology indeed, but plainly intimating their desire that the price should be raised. When bidders came along then the N. Y. Y. C. always kept this guinea-a-box wish in mind, and although they did not stick to the outside figure, they were enabled not only to make a fairly satisfactory deal, but, from the amazing quantity of higgling, to advertise the article still more and more; and Lord Dunraven's latest effort to attract their attention to his coat-tails has materially assisted in the great work.

But it must have been discouraging for the New York Y. C. to hear that the Earl has expressed his willingness to leave the Cup out of the question altogether, if the New York Y. C. will only arrange matches similar to those which he hoped to sail before the "receipt" clause blocked the way. He actually means that he is content to play at racing for the America's Cup. This is a dreadful blow to the prestige of the trophy, and yet, after all, it is the only reasonable thing to do unless the New York Y. C. consent to make a flare-up of the new deed, and this is our reason for thinking so: The R. Y. S. issued Lord Dunraven's challenge in 1892 with this proviso—that in the event of winning the Cup, it, the R. Y. S., should hold it subject to challenge under precisely similar conditions to those contained in Lord Dunraven's challenge, provided always that the R. Y. S. should not refuse any challenge according to the terms of the New Deed. The New York Y. C. accepted that challenge, and now it is sought by them to show that the above condition was not a contracting out of the "receipt" clause of the new deed, which entails the execution by the winner of a legal agreement to recognize all the terms of that deed; and they insist that in the present case this "receipt" clause must be observed.

Now the R. Y. S. have repeatedly declined to recognize the validity of the New Deed, and it is not likely that any honorable body of men will ever be brought to say that the document is binding, for it must be remembered that by doing so the club would deliberately place itself in the same relation to all foreign yacht clubs as the New York Y. C. did in 1887, and confess that they were wrong in uplifting their voice against what was the most unsportsmanly piece of trickery ever indulged in by any club.

But even supposing that the R. Y. S. were content to indorse the new deed, and that the Cup should come into their possession, there would be nothing to prevent any of our big raters from immediately challenging the R. Y. S. under the terms of the original assignment, and compelling the club to defend the Cup under its conditions. It must be remembered that every yacht club has an interest in the Cup, and that the holders for the time being are merely their trustees; and, therefore, an agreement made by the R. Y. S. with the New York Y. C., to recognize the conditions of the New Deed is absolutely worthless, because the new deed varies the terms of the trust. Lord Dunraven's idea of playing at racing for the America's Cup is the best: it is, in fact, what he did in 1893, for he would not have got the Cup even if he had won it.

YACHT NEWS NOTES.

The *Yachting World* is laboring under a curious misapprehension as to the nature of the dispute over the new deed, which it describes in the following words: "The present hitch is about the custody of the Cup. The New York Y. C. decline to hand it over, if won, to a private individual. They maintain that it is a challenge trophy, and that this characteristic should be preserved. We are inclined to think that this is by no means an exorbitant demand." This is quite as wide of the truth as the statements of the New York papers. In discussing the new deed in another article, the *Yachting World* quotes the mutual agreement and the receipt clauses as the material ones, omitting all mention of the real grounds of objection—the arbitrary and unfair exactions of the dimension clause.

On Dec. 28 Col. David E. Austen, secretary of the Atlantic Y. C., gave a dinner at the Democratic Club, New York, to Mr. George Gould, the officers and some of the members of the club being invited. In the course of the evening Com. Banks proposed the nomination of Mr. Gould for the office of commodore in 1895. The annual election takes place on Feb. 11.

The Chicago women who enjoy yachting at Fox Lake in the summer have thus early started arrangements for holding women's regattas there the coming season. They have formed the Ladies' Cascalver Y. C. and appointed Miss Marion Mason, Miss Jennie Brophy and Miss Jessie Waters as regatta committee. The first regatta is set for July 4, to start from Mineola Bay. About twenty-five entries have been made.—*Chicago Tribune.*

The shoal yawl designed by Wintringham and recently built at Mumm's yard for H. M. Billings, has been named Wantauga.

The nominating committee of the New York Yacht Racing Association, comprising Charles E. Simms, Jr., F. M. Randall and William Ross, have made the following nominations for the coming year: Pres., Alanson J. Prime, Com. Yonkers Cor. Y. C.; Vice-Pres., Norman L. Rowe, Pavonia Y. C.; Sec'y, George Parkhill, Columbia Y. C.; Treas., Robert K. McMurray, Staten Island A. C.; Executive Committee, E. Langerfeld, Com. Harlem River Y. C.; Dr. E. N. Brandt, Tower Ridge Y. C.; A. C. Longyear, Newark Bay B. C., and Alexander F. Roe, Jersey City Y. C.

Congressman-elect Philip B. Low has disposed of his rigging business to his foreman, John F. Byno, for whom he vouches that all work intrusted to the latter's supervision will be promptly and well done. Capt. Low is one of the foremost and best known riggers in the United States, and it is to be regretted that he has concluded to abandon the profession he has so long and ably filled. Let us hope, however, that in his new calling, that of assisting in law-making for the nation, he will make as great a name for himself as he has in the less conspicuous business of rigging.—*Marine Journal.*

Heika, centerboard sloop, has been sold by E. H. Converse, Brooklyn Y. C., to Chester W. Chapin, who will use her on the Florida rivers. Capt. Eldredge is now refitting her, and she will soon be shipped South by steamer.

The Chelsea (Mass.) Y. C. has elected the following officers: Com., W. H. Wedger; Vice-Com., T. G. Hughen; Sec'y., J. W. Pool; Fin. Sec'y., L. B. Butler; Treas., F. V. Prior; Directors, Amos W. Kincaid, H. E. Fowle, F. T. Clayton, J. F. O'Kelley, S. C. Gleason.

By a purchase of one-sixth interest from Mr. Governeur Kortright, and one-sixth interest from W. K. Vanderbilt, Messrs. Robert and Ogden Goelet are now the owners of all of the wharf property at Newport occupied by the New York Y. C. The property is practically in the hands of the New York Y. C., and will be improved to meet the club's requirements.

Taurus, steam yacht, has been chartered by Hugh Andrews, an English yachtsman, to William Salomon, of the New York Y. C., for a Mediterranean cruise.

Mr. F. P. Sands, one of the best known of the Newport contingent of the New York Y. C., owner of the cutter Uvira, has purchased Crowley's yard and ways at Newport.

We have received from the Royal Hamilton Y. C., of Hamilton, Ont., a handsome New Year's card, in colors, with the compliments of the commodore and officers, and wishing fair winds and a prosperous voyage through the year.

The indestructible nature of teak is an old story with the mariner. It grows only in India and Burmah, and no one save a shipwright knows just how many parts of a ship are built from this muscle of nature, but every one who has walked the deck of bark or steamer has a consciousness that no amount of holystoning, or dragging of cargo over, or wear and tear of feet and traffic can in an ordinary sense affect a teakwood floor. The Burmese wood-carver knows that his art is almost hewn in stone when he coaxes leaf and flower, sacred cow and festival cart, grotesque sprites and elves, gods and Buddhas, out of rugged trunks. The little prow of the sampan shaped like a wishbone, the stern of the paddy boat as brown with age as the naked figure upon it is with the elements, the strange plinths of stranger pillars, the embellishments of the temples, the playthings of the children—all these are carved from teak.—*Exchange.*

On Jan. 1 the Lynn (Mass.) Y.C. elected the following officers: Com., W. H. Russell; Vice-Com., James A. Clough; Clerk, F. E. Newhall; Treas., W. A. Estes; Meas., A. H. Larrabee; Directors, J. G. Jones, J. W. Haines, F. E. Baker, F. L. Ingalls, J. A. Clough; Regatta Committee, A. H. Larrabee, C. J. Blethen, A. Putnam, W. M. Pingree, T. B. Howe; Membership Committee, H. P. Armstead, W. A. Estes, W. H. Russell.

Messrs. Seabury & Co. are building a mahogany flyer for Mr. Alfred Marshall, of the Larchmont Y. C., 48ft. long, 7ft. 5in. beam, 4ft. deep, 2ft. 6in. draft, and will be fitted with a triple expansion engine and a water-tube boiler. The firm also have an order for a 35ft. launch for Mr. H. G. Seguine, of Rossville, S. I., to be 35ft. long, 6ft. 9in. beam, 3ft. 3½in. depth, 2ft. 6in. draft. This boat will be cedar planked and be fitted with a standing roof top and canvas side curtains. The interior trimmings such as seats, coaming, etc., will be of ash and oak.

Huguenot Y. C.

On the lower harbor of New Rochelle, just a few feet away from the landing for the chain ferryboat to Glen Island, is located the new house of the Huguenot Y. C. The site is happily situated; in fact, a more cosy berth for the little fellows could hardly be wished for than that offered by the long, narrow stretch of water, with its many little coves, that is dignified by the name of New Rochelle Harbor.

On New Year's Day the Huguenots broke out their handsome burgee, and a reception and collation followed the formal baptism of the club.

The ceremonies, which were in charge of Vice-Com. Connolly, were very well attended. Among those who graced the occasion by their presence were Com. Chas. Whann, Vice-Com. Chas. M. Connolly, Rear-Com. Sands Gorham, Sec'y Robert T. Badgley, Treas. Arthur F. Townsend, Trustees McArthur and Ketchum, Fleet Captain Clifford. Messrs. Hazen Morse, J. D. Sparkman, Lieut. V. L. Cottman, U. S. N., T. F. Day, Thomas Webber, T. B. Aldrich and Lyons.

The Huguenots have furnished their house and will hold a series of lectures on yachting during the winter months.

The anchorage and the waters lying adjacent to the house will be sounded, and a chart prepared for the use of members. It is the intention of the officers to make the Huguenot Y. C. a thoroughly practical yachting organization.

The Boston Knockabouts.

On Dec. 2 a meeting was held in Boston at which the following definition of a knockabout was adopted:

A knockabout boat is a seaworthy keel boat (not to include fin-keels) decked or half decked, of fair accommodations, rigged simply, without bowsprit, and with only mainsail and one head sail.

The load waterline length shall not exceed 21ft.

The beam at the load waterline shall be at least 7 and not more than 8ft.

The freeboard shall be not less than 20in.

The forward side of mast at the deck shall not be less than 5ft. from the forward end of the load waterline.

The planking, including deck, shall be not less ¾in. thick, finished.

The frames shall be not less than 1in. square and spaced not more than 12in. on centers.

The deadwood shall be filled in.

The rudder shall be hung on sternpost.

The outside ballast not less than 3,500lbs.

The limits of the freeboard, beam, planking, frames, deadwood, rudder and place of mast shall not exclude any existing knockabout boats which otherwise come within the restrictions.

The sail area shall be limited to 500sq. ft., measured by the formula, viz.: Multiply 85 per cent. of the base by half of the sum of the gaff and the distance from the top of the sheave of the upper throat halliard block to the stern head.

Shoal Draft Cruisers.

The little skipjack recently illustrated in the FOREST AND STREAM has struck the fancy of several of our readers; a friend informed us the other day that he was having one built of about 10ft. l.w.l. with iron keel for his wife to sail, the boat being easily handled and non-capsizable. A correspondent in Maine writes us: "Though I have read the FOREST AND STREAM quite regularly for some time, I have not been a subscriber prior to last fall. Desiring to build a small sailboat, I felt that it would pay me to subscribe to the paper; in the first issue, Nov. 3, was a design which just suited me, that of the Myra, from which I am now building." Another correspondent in Michigan writes for additional information prior to building from the design.

John MacGregor's Philanthropy.

John MacGregor ("Rob Roy") was a very Low and Broad Churchman; officially he fought the battle of the Protestant faith as secretary of the Protestant Alliance. He has all the credit of originating the Shoeblack Brigade, in spite of the sneers and horseplay of the ragged street arabs, and the unfriendly indifference of the police. The brigade gradually grew from insignificant beginnings till it earned an income of something like £70,000. With his amphibious temperament and seagoing tastes, he took an immense interest in the boys in the training ships, and followed them anxiously in their subsequent careers. He was concerned with his friend Laurence Oliphant in the various schemes for the restoration of the Jews to their land and the revival of the prosperity of Palestine, and, during the absence in America of his eccentric chief and ally, he used to act as Oliphant's secretary and representative.

For many years he contributed to *Punch*, and once, in Palestine, he showed not only his humor, but his presence of mind, by persuading an Arab chief to commit himself with a pinch of salt; when slapping the Bedouin pleasantly on the shoulder, he made a sign equivalent to "sold." He saved his property and possibly his life, for the man who had eaten salt with the Sheikh was inviolable. His generosity was extraordinary. His books sold well, and we believe that the profits were invariably handed over to charitable purposes.

Finally, when "Rob Roy" came up as a lion of the day from the swellings of Jordan, he intimated his intention of giving a course of lectures, and, fixing a minimum price, he drove rather hard bargains. He actually realized £10,000 at the cost of extreme personal exertion, but not one penny did he pocket himself. John MacGregor had his foibles, but there are very few men who have acted so consistently up to their principles or who have done so much practical good.—*The Saturday Review.*

Canoeing.

The Field of Dec. 29 states, "on good authority," that Mr. William Willard Howard intends to challenge again for the R. C. C. cup. Nothing is known in New York of this rumored intention, and no notice has thus far been received by the New York C. C.

Handicap in Canoe Sailing.

ROCHESTER, N. Y., Jan. 6.—*Editor Forest and Stream:* I have been trying to figure out some plan for handicapping canoes for next season, but can think of nothing better than two which I suggested to the chairman of the regatta committee, as published by you some three or four weeks ago. If canoe sailors must be handicapped I should be in favor of the second suggestion, that of using a well-known canoe as a basis and allowing a canoe of her weight a certain amount of canvas, then adding or deducting a certain amount of canvas for each pound of weight—weight to include all fittings and not to go over or fall below a certain figure.

I do not wish to take up too much space, but I would like to quote some notes that I have at hand in regard to handicapping. The first is an editorial in the *American Canoeist* for July, 1893.

"The handicap matter is a problem never yet solved for the canoeist. It has always to be given up. * * * So our advice would be to allow no time, * * * but start all at scratch."

The second is from the same paper and is a letter from W. Baden-Powell, published in August, 1885, wherein he suggests that in classifying or handicapping size, weight and sail area should be considered.

In the same journal of February, 1887, the editor favors the handicapping of the Canadian paddling canoes by restricting them to the use of the single blade, and in March, 1887, appears a wail and a protest from W. G. MacKendrick, in which occurs the following:

"*Editor Canoeist:* I notice that in your February issue you state that it is the idea of the regatta committee to handicap open Canadian canoes, and these only. Is it because they are too fast or because they are Canadian? If it is the former I have a few words to say on the subject. I will just copy from my letter to Mr. Gibson on the same subject:

"With reference to the open canoe question, I would say that the single blade was the legitimate paddle of the open canoe before the A. C. A. was established, but since then in paddling, as well as in sailing, a great many legitimate things have been ruthlessly discarded for the sake of speed, and the single blade is one of them. In '83 all of the open canoes but two used the single blade. Now, go to the '86 meet and count them; you'll not find a single one in the races there.

"You see the chickens are coming home to roost. When the A. C. A. should have given races for open canoes and single blades to encourage that kind of craft they did not do it, and the open craft were compelled to use the double to keep up with the times.

"Now, as one who has tried them, * * * and because they are light and fast you want to handicap them.

"I will have to twit you with inconsistency, for when writing about 'Pecowsic' in the FOREST AND STREAM you say:

"'It is provoking, but if a rival will not go as slow as we do we must try to even up by going as fast as he does. We don't want to hold him back, that is not the way at all, and what you were preaching on Oct. 28 you go back on now and say we do want to hold the men with fast open canoes back, they are too fast, *i. e.*, you want to so fix the races that the slow canoe wins. * * *"

Now, I agree with Mr. McKendrick in a great many particulars. Of course, his was a plea for a special canoe, and would differ in a great many respects from the present intention. But, first, don't you think a whole lot of chickens are coming home to roost? Haven't you put a large and valuable premium on special appliances and large sail area, and the sacrificing of everything to speed? And if you handicap by limiting sail area or any kind of handicap are you not putting a further premium on light, unseaworthy canoes, cut away to nothing and fit for nothing but to sail one season to win the A. C. A. trophy with?

Does not a handicap bring you right back to the thing that "Snake" so emphatically declared on Oct. 28, 1886, he didn't want to do? to the fact that you are trying to hold back the fast man and let the slow one win?

Why not for a starter try the suggestion of "Mab," in the last issue of FOREST AND STREAM, and throw away the sliding seat? I guess that would be handicap enough for most of us and we would not carry over a thousand feet of sail.

Why try to handicap a canoe anyway? You all know you can't do it and what's the use of trying the impossible?

For my feeling in the matter I would refer you to my words quoted in the last issue of FOREST AND STREAM. No. 1511.

Editor Forest and Stream:

The proposal made by "Lieda" in your issue of December 29 amounts to this. Having already got too much canvas on our canoes, let us now invent more devices to hold them up, and the device he proposes is a 6ft. draft centerboard; imagine 6ft. draft for a canoe.

This is traveling in the wrong way, it is working in a vicious circle. Having got one evil—excessive canvas—other evils are proposed to balance it.

Once you begin scheming on "devices" to hold up a boat to its canvas there is no knowing where to stop, and you are inevitably led to such monstrosities as the "bulb-fin," etc.

The only legitimate outcome of the sliding seat, if it is carried far enough, is to convert every canoe into a "catamaran." Why not prolong the sliding seat a dozen feet or so and hang another canoe to the end of it?

The only possible way out of this mess is to abolish once and for all everything in the nature of a "device" aiming to make a hull carry more canvas than it can naturally and rightly carry, not to propose new devices as "Lieda" does.

As suggested in my letter printed in the same issue, if the sliding seat is abolished and a large practical open well insisted upon, those measures alone will go very far to abolish the sailing machine and place canoe racing on a natural and rational footing.

A slight misprint (or was it a slip of my pen?) in my letter I may here correct, though it is sufficiently obvious. The last paragraph but one should begin "If points 3 and 4 are admitted, etc."

If canoes are open and the sliding seat abolished there will be no need to limit sail area. It will limit itself. BASSILLE.

BOSTON.—*Editor Forest and Stream:* It seems to me, from my experience in these waters, that the falling off in the interest in

canoeing is due to several conditions, which I will enumerate as follows, viz.:

First—The rules have allowed the modern canoe to develop into an extreme racing machine, carrying too much sail and too long a sliding seat, and thus making it so much work and also so dangerous that most people, and good canoeists too, don't care to keep it up.

Second—For the above-mentioned reasons canoeing is now a much more expensive amusement than it was or should be. It costs considerably more to build and rig a canoe of to-day than it did ten, or even five years ago, when canoeing was "rushing."

Third—It is now impossible to go out even for a short spin, if there is a good sailing breeze, without getting wet through. And it was very often the case, when we had moderate rigs, that we could have good, comfortable sails and enjoyable times without having to work for them; and it is hard work, too.

Fourth—A man has got to be an expert gymnast, above the average, to sail a racing canoe in a race, and where there is one expert, there are a great many who are not, and who would never be, let them practice as long and as hard as they want, as it has got to be born in one, etc., etc., etc.

Now, Mr. Editor, I contend that if the rules were amended so that a canoe could be sailed by the average man and not an expert gymnast or monkey, that there would be more entries in the races and more general all-round canoeing than there has been the last two or three seasons.

I would respectfully suggest the following, viz.:

1. No canoe or canoe-yawl allowed to carry over 130ft. of sail.

2. No canoe or canoe-yawl allowed to carry over one-third of the total sail area in the dandy.

3. Length of sliding seat outboard limited to four-fifths of the beam of canoe or canoe-yawl.

4. At any point of canoe or canoe-yawl and half way from the top of gunwale to the center of keel, measured outside, said canoe or canoe-yawl must measure whatever proportion to the overall beam (as found by experiment) at that said any point that would prevent the canoe or canoe-yawl from being built with an extreme V section.

5. No canoe or canoe-yawl allowed to have a cockpit less than 5½ft. in length, measured on the under side of the coamings.

CANOE NEWS NOTES.

Having in the autumn rushed at the idea that handicap racing would revive the stagnant state of sailing racing in the American Canoe Association, our cousins are just awakening to the fact that, apart from the miserable nature and surrounding atmosphere of the idea "handicap," there is grave difficulty in designing a scheme of handicap. If it is a true "handicap," it is unfair to everything except ignorance, indolence or vice; the "good boy" ought to die; but to make such a true handicap entails that the handicap makers shall know all men's secrets; know, in short, all the qualities of a stranger man's new boat, which he keeps out of possible public sight until the race. As we have said before, it cannot be seriously taken as sport. No Englishman would go across to America to race there under arbitrary handicap. Of course the trophy race may be left fair and square open, but suppose a foreign representative did go to America and succeed in the trophy race, in fair sport he would go into all races he could enter, but handicapping might put him out of race after race, and these "losses" might be totted up against him in the reports. More surely, even in America than in England, is the intermediate useful cruising or general purpose class of sailing canoe wanted. Scarecrows, Glorianas, Tomboys and a dozen more, are only doing the same in America against fair canoeing as Nautilus, led away in England by designing Mona, Jennie, Deva, Humbug, and there were a dozen more of other men's designs, drawing canoe men out of canoes into mere small yachts. But where ignorance is bliss it may be wise to follow: ignorance can have no purpose, but its leader may have; and the object of the leader may have been to attract away from the useless racing machine sailing canoe gradually by the golden valley of the canoe yawl, small at first, but surely larger until too large and costly, and then back by an easy slide to real canoe nature into the cruising class now accepted by the Royal Canoe Club. Why not rest content there and race cruiser versus cruiser for sport? A "racing canoe" is very like a share in a gold mine—very nice to read about, nothing more.—*The Field.*

The 1895 catalogue of the St. Lawrence River Skiff, Canoe and Steam Launch Co. of Clayton N. Y., is similar to that of last year, but altered and improved to keep pace with the times. The cover design is displayed to much better advantage on a yellow paper, making a handsomer book, and the list of boats of all kinds has been revised and improved. The two types, La Gloria and Scarecrow, still retain an important place, the firm having built a great number of them, of various sizes, and fitted with fin-keels and heavy center-plates, during the past year. In canoes nothing has been produced of late to supercede the two standard designs of the racer, Avis, and the cruiser, Bat. In answer to the desire so often expressed of late for a wider canoe of modern type, the company is now prepared to build a canoe-yawl of 16ft. over all, 14ft. 6in. l.w.l., 3ft. 4in. beam, 6in. draft, with cruising arrangements, watertight bulkheads, sleeping space, etc. The boat will be small and light enough to be easily handled afloat or ashore by one man, but will give ample room for two with their duffle. The other lines, of St. Lawrence River skiffs, rowboats, steam launches, shell and club boats, are all well represented by modern designs. The company is now handling the Layman Pneumatic Sporting Boat, and reports a very large demand. As in the past, they are ready to furnish special designs for all sorts of pleasure craft, in addition to those listed.

At the annual election of the Oakland Navy, on Dec. 23, our old friend George A. Warder was elected secretary, having recently returned to the Pacific from a visit to Ohio.

Mr. Harry N. Cole, 22 West Twentieth street, Erie, Pa., writes that he is desirous of making a canoe cruise next season and wants a companion, and that he would be glad to correspond with the canoeist who proposes to cruise from Dunkirk to James Bay.

We have constant inquiries as to the manner of joining the A. C. A. Blank forms of application may be had of the pursers of each division, whose addresses are published from time to time in our columns.

The Irondequoit C. C. held its annual meeting and election of officers on Jan. 3: Com., H. M. Tease: Vice-Com., F. L. Smith; Purser, Geo. J. French. The officers constitute the managing committee of the club. The commodore appointed S. D. Enoch clerk of the course for the season of 1895, who will announce the other regatta officers at the February meeting. Several applicants for membership were received and laid over under the rule until the next meeting. The Irondequoit C. C. is one of the few clubs whose members are all practical canoeists and are all A. C. A. members.

At the annual meeting of the Hoboken C. C. on Jan. 2 the following officers were elected: Com., Chas. Ahrnke: Vice-Com., Theo Forst: Sec'y. P. Muller; Treas., L. Kretzmer; Captain, J. Warnecke; Lieut. P. C. Gottschalk.

"Trap-Shooter's Ready-Reckoner."

AN extremely useful pocket reference book for trap-shooters. Its full title reads: "Trap-Shooter's Ready Reckoner. A series of tables showing at a glance the division of purses under all conditions, simple and complex, with entries from one to fifty. For use by individuals, clubs and tournaments. Compiled by G. C. Clark, Secretary Kansas State Sportsmen's Association." Price 25 cents, postpaid by Forest and Stream Pub. Co.

Trap-Shooting.

FIXTURES.

All ties divided unless otherwise reported.

Send notice of your shoot like the following:

Jan. 15-17.—HAMILTON, Canada.—Hamilton Gun Club's annual tournament; $1,000 added money. J. W. Bowman, Sec'y.

Jan. 17.—FLUSHING, L. I.—Flushing Shooting Club's 50-bird handicap for the championship of Queen's county, N. Y., $25 entrance, half forfeit, entries close Jan. 15. Open to members of any organized gun club. Wm. T. Wilcox, Sec'y.

Feb. 5-7.—UTICA, N. Y.—Two first days, targets; last day, live birds. Open to all. Send for programmes to E. D. Fulford or H. L. Gates.

Jan. 24.—NEWARK, N. J.—Newark City handicap, 25 live birds, $10 entrance, birds extra, under the auspices of the Newark Gun Club. Shoot to take place at Erb's grounds.

Feb. 22.—ALBANY, N. Y.—First tournament of the Eastern New York Trap-Shooters' League, of the series of 1895, under the auspices of the West End Gun Club. Henry A. Kratz, Sec'y.

Feb. 27-28.—ELIZABETH, N. J.—Second bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds. Events open to all.

April 3-5.—WILLARD PARK, Paterson, N. J.—Interstate Manufacturers' and Dealers' Association's third annual grand American handicap at live birds, at New York; $1,000 guaranteed, all surplus added.

May 8-10.—WEIR CITY, Kas.—Ninth annual owl shoot of the Amateur Trap-Shooters' Association of Missouri and Kansas; $300 in cash added. W. W. McIlhany, Sec'y.

May 9-11.—NEWBURGH, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec'y.

May 14-16.—DAYTON, O.—Ohio Trap-Shooters' League annual meeting and tournament under the auspices of the Buckeye Gun Club, of Dayton, O. Ed. Taylor, Sec'y, 8 West Third street, Cincinnati.

May 21-24.—Knoxville (Tenn.) Gun Club's fourteenth annual tournament; $1,500 added to the purses.

May 29-30.—CANAJOHARIE, N. Y.—Two-day's tournament of the Canajoharie Gun Club; targets. Chas. Weeks, Sec'y.

May 30-31.—GRAND RAPIDS, Mich.—Valley City Gun Club's annual tournament; targets; added money announced later. C. F. Rood, Sec'y.

June 4-7.—MEMPHIS, Tenn.—Memphis Gun Club's annual tournament; $2,000 added money.

June 19-21.—CLEVELAND, O.—Chamberlain Cartridge and Targe Company's second annual tournament; $1,200 in bash added.

CONTROL OF TRAP-SHOOTING.

If there still remains in the mind of any trap-shooter a vestige of a doubt as to the desire of his fellow sportsmen as a whole for the purification of the sport, let him look below, and read carefully the call for a convention of trap-shooters signed by sixteen good men and true. Each of these men is well-known in shooting circles; each one is above suspicion of any conduct unbecoming a sportsman, and each one is in earnest when he issues that call in his name and in that of his fifteen fellow shooters.

It is a cause for regret that more time could not be spared for the purpose of obtaining the names of some Western men to back the call. But they are for it, and have signified by their hearty good wishes, that they are in favor of a central body for the control of trap-shooting.

It is extremely important that *each* gun club or kindred association should, wherever possible, send a delegate to attend this convention. If for any reason such action is impossible, the next best thing to do is to call a meeting of the club, discuss the question and indorse by resolution the purposes for which the convention is called. Such action on the part of a gun club will not only strengthen the hands of the delegates present, but will also place that club on record as favoring honest and square work at the traps. All such resolutions should be addressed, "Control of Trap-Shooting," care of Forest and Stream Publishing Company, 318 Broadway, New York. This will insure their being delivered to the proper officials at the convention of Jan. 24.

It is for trap-shooters themselves by the voice of their delegates in the convention, or by the wording of, or suggestions contained in, their resolutions, to decide what steps shall be taken to place the sport of trap-shooting on the high plane to which it rightly belongs.

One other thing must not be forgotten. It is now or never; the opportunity is presented by the invitation given below.

Let it be now.

THE HANDWRITING ON THE WALL.

War has been declared! It is now merely a question of survival.

Straightforward, honest work at the traps is to prevail in the future, or— Dropper, Pooler & Co. are to run things to suit themselves. Which is it to be?

Here's the call for the convention. Look at it! Study the signatures at its foot, and decide quickly whether you are with them or against them.

THE CALL.

"In view of the fact that there is unquestionably much crooked work indulged in at the trap tournaments throughout this country, and being certain of the fact that such cannot but be prejudicial to the best interests of this sport, we, the undersigned, do hereby issue a call for a convention of those interested in the future welfare of trap-shooting to meet at the Astor House, New York city, on Thursday, Jan. 24, at 2 P. M. The purposes of this convention will be the organization of a governing body for the trap-shooters of the United States, and the consideration of the best and surest method of combating the evil referred to. We ask all gun clubs and kindred organizations to elect a delegate to attend this meeting, or in default of so doing, to send to the convention a resolution indorsing the purposes thereof.

J. T. ANTHONY, Charlotte G. C., Charlotte, N. C.

B. H. BREINTNALL, South Side G. C., Newark, N. J.

DAVID BROWN, West Newburgh G. & R. A., Newburgh, N. Y.

WM. L. DAVIS, Worcester (Mass.) Sportsmen's Association.

T. A. DIVINE, Memphis G. C., Memphis, Tenn.

CHAS. FEHRENBACH ("Bilderbach"), Wilmington R. & G. C., Wilmington, Del.

W. S. GUMMERE, New Brunswick (N. J.) G. C., Trenton, N. J.

J. B. HALSTED, Peekskill G. C., Peekskill, N. Y.

C. M. HOSTETTER ("Old Hoss"), Pittsburgh G.C., Pittsburgh, Pa.

G. V. HUDSON, M.D., Emerald G. C., New York city.

N. A. HUGHES, Williamsport (Pa.), G. & R. A.

T. J. JACKSON, M.D., Union G. C., Springfield, N. J.

P. A. JEANNERET, Boiling Springs G. C., Rutherford, N. J.

J. T. MASCROFT, Worcester Sportsmen's Association, Sutton, Mass.

D. J. O'CONNELL, Chattanooga G. C., Chattanooga, Tenn.

GEO. H. TAGGERT, West Newburgh G. & R. A., Newburgh, N. Y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

The programme for the Chamberlin Cartridge and Target Company's second annual tournament is to hand. Owing to the demand made upon the trap columns of FOREST AND STREAM by the rush of Christmas and New Year's tournaments, an extended notice of the programme is reserved until next week. For the present it is sufficient to say that the present programme is a perfect specimen of the high class work gotten out now by the printers of the United States; it is also full of interesting reading matter as well as being profusely illustrated.

RUTHERFORD, N. J., Jan. 1.—Arrangements have been made for a series of five shoots between the Passaic City and Boiling Springs gun clubs; the conditions are twelve men to a team, 25 targets per man. The first of the series will be decided on the grounds of the Boiling Springs Club, Rutherford, N. J., on Saturday afternoon, Jan. 12.

The annual meeting of the Union Gun Club, Springfield, N. J., took place on Saturday last, Jan. 5, at the residence of Dr. Jackson. The club will hold a tournament the latter part of this month.

The Flushing (L. I.) Shooting Club will hold a live bird shoot on their grounds near Murry Hill Station, Long Island R.R., on Jan. 17. The main event will be a handicap at 50 live birds per man, entrance $25 and cost of birds; purse divided into four moneys, 40, 25, 15 and 10 per cent., high guns to take the money, the club donating a $100 silver trophy provided there are ten shooters. Entries, which should be made to Wm. T. Wilcox, secretary, Flushing, L. I., not later than Tuesday, Jan. 15, must be accompanied by 50 per cent. of entrance fee as forfeit.

The Climax Gun Club's two-days' tournament on Jan. 10 and 11 is bound to be a thorough success if fine weather prevails. Philadelphia and southern New Jersey will have representatives present on both days, while the New England contingent will be there in full force. Targets first day and live birds the second is the programme, details of which were given in FOREST AND STREAM of Dec. 29.

The main live bird event of the season, as far as amateur circles are concerned, will be the $100 sweep at 100 birds per man, which commences on Friday, Jan 11. The shoot will take place on the grounds of the Larchmont Club, and will take two days to decide, in all probability.

The boys are all talking about the Hamilton shoot on Jan. 15-17; it's going to be a big thing in the way of tournaments.

Details are being arranged for a live bird match between W. G. Clark of Altoona, Pa., and W. M. C. (better known as "Alphabetical") Jones of Pittsburgh, Pa. The match is to be at 100 birds each, $100 a side; date and place have not been decided as yet; it will probably come off this month.

RIVERTON, N. J., Jan. 1.—John C. Jones, treasurer of the Riverton Gun Club won the New Year's Cup in the sweepstake shoot on the club's grounds to-day by killing 16 straight. The contest was at 15 birds each, with bird allowance and club handicap. Jones and Sterling each killed 15, but in the shoot off, Jones killed his bird, while Sterling missed.

At a special meeting of the John F. Weiller Gun Club held on Dec. 27 the following officers were elected to serve for the ensuing year: President, W. LaMonte Gillette; Vice-President, A. W. Beatty; Recording Secretary, E. F. Miller; Financial Secretary, Charles Kramlich; Treasurer, John F. Weiler; Trustees, Charles Hohe, Walter Biery; Captain, Oscar H. Acker; Assistant Captain, John F. Weiller; Tranper, Frank Moyer; Sergeant-at-Arms, Arch Lester; Collector, W. LaMonte Gillette.

The Hackettstown (N. J.) Gun Club has elected the following officers: President, Nelson Mitchell; Secretary and Treasurer, L. L. Ayers; Field Captain, J. L. Smith.

The Wampa Gun Club, White Plains, N. Y., held a live bird shoot on Christmas Day. The main event was a sweep at pigeons $25 entrance. There were nine entries, Frank Fowler taking first money, W. W. Banks second and Henry Travis third.

The Maplewood Gun Club, of South Orange, N. J., held their annual meeting for the election of officers at the South Orange Hotel on the last night of the year 1894. The following were elected: President, J. Warren Smith; Treasurer, T. B. Smith; Secretary, Walter G. Laidlaw; Corresponding Secretary, O. T. Yeomans; Manager, D. W. Van Iderstine; Field Captain, W. N. Drake; Governing Committee, Samuel B. Lillon, J. Higgins, W. J. Smith, William N. Drake, A. Parry, Dr. J. W. Fisher, D. W. Van Iderstine, O. T. Yeomans, G. H. Smith, Water G. Laidlaw.

Many Northerners, as well as Southern trap-shooters, know Abe Frank of Memphis, Tenn.; there is no more popular member of the Memphis Gun Club than he, and his boundless good nature and ready wit have made him many friends outside of his own city. Latterly he has had two extremely close calls of crossing the Great Divide, having had a very severe attack of typhoid fever. Just when he was well on his way to recovery he experienced a relapse which once more laid him at death's door. Latest advices from Memphis state that he is now almost convalescent and will in all probability be on hand at the tournament in June.

Enoch D. Miller of Springfield, N. J., was present at the South Side Gun Club's New Year's tournament. Enoch's scores don't show up as well as usual but it must be remembered that he was using a Winchester "pump" for the first time: his 25 straight, however, showed that he was catching on very fast.

Jim Elliott has made a proposition to Frank Class in answer to Class's offer of backing the birds against Elliott on 45 kills out of 50 birds. Elliott will take him up on the bet if Class will agree to the following: He will bet $50 he can kill 43 birds, $50 he can kill 44, $50 on 45 and a fourth $50 on 46. Class to pay for the birds. The races can all be shot off at one lot of 50 birds on any day Class may fix; or may be shot off on four different days at four different lots of birds. This is a fair proposition, save that perhaps the loser should pay for the birds. On the other hand, Elliott says Class would have gate money, if any, and all the other emoluments that would attend such a match.

The Reading (Pa.) *Telegram* of Dec. 27 contains the following: "Yesterday the South End Gun Club held their shoot at their grounds, south of the Lancaster bridge. The shoot for a gold club badge, suitably inscribed, was won by Edward Rhoads. Following were the scores made at 25 bluerocks, under regular prescribed rules: Brooke Harrison 21, Francis Yost 20, John Shaaber 23, M. R. Eshelman 21, William Moore 12, Heber Yost 22, Frank Gearhart 22, Edward Rhoads 25, George Ganster 23, Peter Texter 20, Charles Miles 17, Charles Keever 20, George Miller 23. The club will hold another shoot on Washington's Birthday.

The Union Metallic Cartridge Company of Bridgeport, Conn., has issued a very taking calendar for 1894; the picture represents two little children, veritable babes in the wood, asleep under a tree, with a timid fawn peering round the bole of the tree at what it deems are intruders upon its domain. They are positively "three little dears."

At the annual meeting of the Central Gun Club of Long Branch, N. J., the following officers were elected: President, A. P. Cubberley; Vice-President, H. B. Wallack; Secretary, Arthur Sussman; Treasurer, Japhia Van Dyke; Field Captain, John J. Price; Club Surveyor, Elisha W. Price; Board of Directors, C. Morris, W. A. Seaman Wm. R. Joline, J. V. Emmons and B. Drummond Woolley. The Centrals will shoot a team match at live birds with the Riverside Gun Club of Red Bank on Washington's Birthday.

Dr. Van Ord won the Pfaender diamond badge at the Coney Island Rod and Gun Club's shoot at Dexter Park on Jan. 2. Jas. Orr forced the doctor to kill 13 out of 14 to win the medal, while W. Lair was close up with 11 out of 13.

The members of the Bronx River Gun Club, with grounds at West Farms, N. Y., will hold live bird shoots on the second Saturday in each month. The chief event on these occasions will

be a 10-bird race for gold medals donated by E. P. Miller, the medals going to the best shots in class A and class B. The club will also have regular club shoots on the last Saturday in each month at targets, 25 to a man; three gold medals will be hung up as prizes in these shoots.

W. "Tramp" Irwin of Peoria, Ill., and Deterline of Keithsburg, Ill., will shoot a 100-target match at Kewanee, Ill., on Jan. 11, $50 a side, expert rules.

The Philadelphia (Pa.) *Public Ledger* of Dec. 27 is answerable for the following item: "The Keystone Shooting League decided yesterday to accept the challenge recently received from the Cosmopolitan Gun Club of New York, for a series of three live-bird team matches, 10 men to a team and 15 birds per man, at 30yds. rise, 50yds. boundary and under Association rules. Though the dates of the contests have not yet been decided upon, it has been arranged, however, that the first match shall take place on the grounds of the local team at Holmesburg Junction, the second at Yardville, Pa., and the final match at a time and place to be agreed upon later on by the two captains. The contests will be for a purse and the Interstate championship." The Keystone Shooting League won the team championship of Pennsylvania at live birds at Altoona last August.

Irby Bennett was in town last week and was naturally very full of the Memphis tournament next June. The plan or programme of the tournament is not quite ready for publication, but it is breaking no confidence to state that the $2,000 added money will be cut in half; one-half will be hung up for those who averaged last year 85 per cent. or better, the other half being split up among those whose percentages are below 85. The tournament will be under the personal supervision each day of either Mr. Divine, president of the club, or of Mr. Bennett, each taking charge of two days. All manufacturers' or dealers' representatives will be classed as experts, whether they are 85 per cent. men or not. Irby held up his right hand and swore that there would be 65 shooters in the "below 85 per cent" class, for the southern portion of the States below Memphis. It should be added that the entrance fees in each class belong to that class alone; the experts cannot get any of the amateur's money. As for "droppers," "poolers," etc., Irby says they'll get the good, swift kick we read about.

Jack Brewer and Sim Glover of Rochester, N. Y., are booked to shoot a race at 100 live birds, $100 a side, both on the 30yds. mark, Glover using a 10-gauge gun. The date set is Jan. 1, the day previous to the opening of the Hamilton, Can., three-days' tournament.

Fred Hoey sailed for Europe on Wednesday last aboard the Majestic. He will soon get down to work at Monte Carlo preparatory to the big events early in February. Should Hoey strike his gait his opponents on the Monaco grounds will find him decidedly dangerous, the short boundary being no stranger to him. The general conditions, birds, etc., are so totally different to what he has been accustomed to in America that it is hardly fair to expect too much of him, although he is undoubtedly one of the best shots, amateur or professional, in this country.

EDWARD BANKS.

Not So Black As It's Painted.

NEW YORK, Jan. 7.—"Some Christmas Trap Meditation," in last week's issue, was good reading, excellent reading, as all the articles from Mr. Hough's pen invariably are. But Mr. Hough seems to be a pessimist so far as his opinion of trap-shooting as at present conducted is concerned, and, despite the letters of Irby Bennett, Jack Parker, etc., etc., sticks to his opinion, and fearlessly brands trap-shooting in latter-day tournaments as corrupt as a sport which has added to the English language such words as "tout," "welsher," "ringer," "blackleg," and which has also given to the word "jockeying" a meaning totally at variance with its original one. Worst of all, Mr. Hough charges me with proving his own case, simply because I called attention to a single instance. I was always taught, and still firmly believe, that it is the exception that proves the rule; and I maintain that the case referred to was one of those exceptions.

The strongest argument against such pessimistic views is the identification with trap-shooting of such gentlemen and sportsmen as have signed the call for the convention on Jan. 24. Were the sport as corrupt and rotten as claimed, would such men as they be identified with it? Nay, Mr. Hough, trap-shooting is unquestionably cancerously inclined through the actions of a few, very few, men, but the bow-wows have not got hold of it yet; the prompt and fearless use of the knife in the hands of a national organization will make that body in a healthy condition once more. The evils of dropping, pooling or combining, etc., exist: no one has denied that fact. But it has been denied, and not by myself alone, that it does not exist to such an extent as our Western friend would have us believe.

As for the traveling representatives of sporting goods dealers, I want to say something in regard to them. My intimate acquaintance with them is far more limited than Mr. Hough's: I have known them well for a little less than two years, but feel that those months of acquaintanceship entitle me to say a few words in regard to their actions at tournaments. The men I refer to particularly are R. O. Heikes, F. Van Dyke, Irby Bennett and W. R. Hobart, of the Winchester Repeating Arms Co.; Paul North, of the Cleveland Target Co.: B. A. Bartlett, of the Burgess Gun Co.; "U. M. C." Thomas, of the U. M. C. Co.: T. H. Keller, of the U. S. Cartridge Co.: A. W. DuBray, of Parker Bros., and several others with whom I am not personally so well acquainted. Of the above men I can say without fear of contradiction, that I have never seen either one of them guilty of dropping a single target in any one event. Of course, I don't argue from this that they have never done it; but I have seen it done by others many times, and it is those "others" that we must hunt. The paid representatives are after percentages and may be trusted to break all they can. Handicap them if you like: they risk next door to nothing and should be treated accordingly, but don't be always looking after them, as they are not the men who are causing all this trouble.

EDWARD BANKS.

Wilmington Won the Deciding Match.

WILMINGTON, Del., Jan. 5.—The Wilmington Rod and Gun Club went to Charleston, Md., to decide the question of supremacy as between it and the Riverside Gun Club, of Charlestown. The match was made for fifteen-men teams, but Wilmington could only muster ten men when her representatives arrived on the grounds; to make up the specified number five Charlestown men were pressed into service, whose names will be found marked with an asterisk in the scores given below. The shoot was at 25 targets per man, 375 to a team. Wilmington won by 31 breaks, scoring 271 to 270: the substitutes led the last five of their brother members by 9 targets. Scores:

Wilmington R. and G. Club.—A. H. Stout 19, Bilderback 19, Palmer 14, Clark 19, McConnell 15, Williamson 16, Burroughs 24, Hartlove 22, Gaughen 17, Marr 22, *W. Gibson 18, *J. Graham 19, *W. Cooper 14, *E. Murphy 18, Jno. Algard 15: total 271.

Riverside Gun Club.—Jas. Heisler 13, W. Barnes 17, R. Smith 20, P. R. Heverin 20, G. Pryor 15, E. Calvert 13, A. Richardson 16, R. L. Barnes 14, E. K. Barnes 17, H. Barnes 17, S. Steele 16, W. Heverin 14, W. Richardson 14, R. Gibson 18, G. Haines 17; total 240.

DEL.

Mattern Defeats Green.

WEST RUSH, N. Y., Jan. 3.—A very interesting live-bird match came off at West Rush on New Year's Day between J. E. Mattern and J. Green. The conditions were 50 live birds, $25 a side, 50yds. boundary, each man to pay for his birds. The match was shot in a snowstorm, with quite a strong wind, which helped the birds to fly well. The birds were a good lot, quick to leave the trap and strong on the wing. The ground being covered with snow made it difficult to get on to white birds. Green shot a good pace for a new man at the trap, it being his first experience at live-bird shooting, although he is a good clay bird shot. Mattern won by 4 birds. Green shot a Parker Bros. hammerless 12-gauge, 7¾lbs., 3¼drs. Wood powder, 1⅛oz. No. 7 chilled shot in both barrels, U. M. C. smokeless shells. Mattern shot a Parker also, 7¾lbs., 12-gauge, 40grs. E. C. powder, 1¼oz. No. 8 shot in first barrel and 1¼oz. No. 6 shot in second barrel. Score:

J E Mattern	11112122*1211021112210112—22

RAVELRIGG.

The Grand American Handicap.

PITTSBURGH, Pa., Jan. 4.—*Editor Forest and Stream:* Judging from the number of inquiries I have received, a great many sportsmen are under the impression that the $1,000 guaranteed by the Manufacturers' and Dealers' Association in the Grand American Handicap will be divided so as to cover the three days of the tournament. For the benefit of all who are of this belief I will state: The Interstate Association guarantees that the one event, viz., the Grand American Handicap, will be worth $1,000 or more; which will make first money not less than $500, second money not less than $300, third money not less than $200.

ELMER E. SHANER, Manager I. M. & D. A.

Good Work at Little Rock.

LITTLE ROCK, Ark., Dec. 28.—The twelfth shoot for the Pulaski County Medal, which took place Friday, Dec. 21, was the most interesting contest that has ever taken place for the trophy, the competition being keen and spirited from start to finish. The shooting of Duley and Dickinson was of an exceptionally high order. When each competitor had shot at 25 targets, Duley and Dickinson were tied on 22 each, with Cunningham one behind with a score of 21. In the next 25 Duley and Dickinson kept up their fine work, while the other fell gradually behind. It soon became evident that one of these shooters would prove the winner. When the race was over they were tied with 46 out of 50, each having scored 24 out of their last 25. Everybody expected Duly to go straight in his last 25, as he was shooting in grand form, centering his targets well and pulverizing them into dust. For quite a while he led Dickinson by one target, the latter having lost his sixth target in his second 25, Duley kept smashing them until the forty-ninth round, when he let an easy left-quarterer get away from him, after having made a fine run of 34 straight, the race resulting in a tie, each having scored 46. It was agreed to shoot off the tie at 25 targets each. Duley kept up his grand work, and duplicated his previous good score by again scoring 24 out of 25. Dickinson having only scored 22, Duley won the trophy after the most exciting contest that has ever taken place for the medal.

Aside from the medal contest a number of live birds had been procured and some of the boys took a shy at them. Dickinson did the best shooting at pigeons, scoring 27 out of 32, with 3 out of bounds. The weather was perfect, with just enough wind blowing to help the pigeons along, which were of the finest quality, while the Kings automatic traps that were used made corkers out of the majority of them. Scores:

Medal shoot, 50 targets, unknown angles:

PAUL R. LITZKE.

Live Birds Under Difficulties.

PITTSBURGH, Pa., Dec. 25.—No shoot under more disadvantageous circumstances as far as the weather was concerned was ever held in this section than the 25 live bird, $20 entrance, handicap conducted by the Herron Hill Club on the Brunots Island grounds yesterday.

Woe to the prophet that predicted that we would have a mild winter! Had the shooters found him yesterday he would have been compelled to act as judge in a nitro powder contest. Here is an idea of the conditions: Thermometer 12 deg. above zero, high, biting wind, 15in. genuine A No. 1 snow, and, mind you, no bar within a mile! And what was worse, the island was never harder to reach. The car line to the ferry uses electric heaters and they don't seem to heat in cold weather. In addition one had to be ferried over the back channel through a sea of ice. Thoughts of an upset in the frigid water was enough in itself to make a man wish he had stayed at home.

A big cannon stove in the club house boomed out heat, and so freely was it patronized that the air was redolent with the fragrance of gum boots, all wool coats and sole leather. Unless a man was in the race his audience outside generally consisted of the referee, trap puller and scorer. "How many did you get?" was the general query when he came hustling in and crowded his way to the stove.

The first few birds showed that shooting was going to be rather trying on the nerves, temper, eyes, fingers and toes. A blinding snow came up every now and then, and when the beautiful stopped a peculiar sheen was cast off by the snow-clad range and cloudy background. White pigeons, and they were plenty, made the shooter mutter in an undertone. The birds were blinded by the snow and many of them wouldn't take to wing until the scare rope was brought into play. "No bird" was called at least a score of times. The pigeons were out in the cold all night and this made them doubly sluggish. Several crates were put near the fire and the birds brightened up in good style.

Secretary Lautenslager got the list ready by 11:30 o'clock and fifteen minutes later Alex. King, Jr., went to the score: Several old-timers were missing but there were a couple of new-comers who started off at a gait that soon caused some guessing. The visiting contingent consisted of J. E. Wright, the clever Wheeling expert, Levi Stephens and C. E. Verges of Lowell, O., and R. Clark of Parkersburg, W.Va. The handicapper had put Clark in at 27yds., but when the little fat fellow cut loose with a 10-gauge gun the boys began to look at each other and say, "Did we get it?" As the race went on there were some growls heard about "cannons," etc. Clark was in the hunt. His only lost bird dropped dead a yard out of bounds. "G. Cleveland" was a well known distiller. He said he wouldn't be in the race, so he took the duck hunter's name in vain. The shoot began to draw down after the fifteenth bird and the boys to make the finish quite interesting got up an optional sweep at $2 each on the last seven birds. This added much to the sport.

On the last round each man shot at four birds. Shaner was he only man who then had a chance to make a clean score. He has never done much live bird shooting and had given the boys a shock by his clean work. Bird No. 22 went down all right. On the second call of "pull," trap No. 3 opened and a genuine duffer began to wobble off, quartering to the right. "Bang!" went the first barrel, and the snow flurried in front of the bird, amid cries of "Oh, Elmer." The pigeon lazily flopped along, crossing trap No. 4. Shaner again cut loose. Once more the pellets dallied with the snow in front and the dub pigeon wallowed out of bounds amid cries of "What do you think of that?" Shaner joined in. He had lost just $93.75 by missing a slab pigeon through carelessness. He got into the 24 hole by nailing the next two.

When Stephens came up there was a craning of necks and these side remarks of "If he drops into the 23 hole he may get second money all alone." Mr. Stephens tried to get his 24th pigeon, but it was a strong tailer and got away with shot from both barrels. Verges and Clark wanted to bet a cartwheel that he would get his last bird. He did, and so captured $56 unassisted. Mr. Stephens shot well, especially for a man who has only one hand. His right hand is off at the wrist. He balances the gun on the disabled member and shoots from his left shoulder. Despite his affliction he swings a gun into line very quickly.

The optional sweepstakes on the last 7 birds was divided. Full scores below, 25 birds, handicap rise, $20:

Bessemer, 29	2222222202222222222222222—24

They Respect the Birds Now.

TROY, N. Y., Jan. 3.—The new Village Gun Club held its firs shoot at Sliters Hotel, Snyder's Corners, Troy, and Sand Lake road, on New Year's Day, the weather being all that could be desired. The majority of the members faced the traps for the first time and consequently held the birds in greater respect than before. The score in the live bird contest for the Club's gold challenge medal was as follows, 10 live birds, handicap rise:

J Potts, 28	110012200*—5	J Willert	000010001*—2
W Jackson, 28	1002000102—4	W Payne	0000000000—0
W B Christopher	*1010*200*—3	W Christopher	10200 —2
S A Christopher	101120*001—5	J Hyde	00010 —1

At the targets, Potts won three of the four events with 20, 18, 21 out of a possible 25 empires; Jackson won the fourth with 18 out of 25.

THOS. BALDWIN, Sec'y.

New Utrecht Gun Club.

WOODLAWN PARK, L. I., Dec. 29.—It was by no means a pleasant task this afternoon that fell to the trappers at Woodlawn. The field was covered with frozen snow and the strong wind made it extremely chilly work for all who had to be outside the club house. Only seven members showed up to compete for the fourth contest for the E. C. Powder Company's cup. G. W. Coulston, who is shooting in capital form just now, carried off the honors of the day, winning the cup with a score of 9 out of 10. Scores on the cup and other contests were as follows:

E. C. Powder cup contest, 10 live birds, club handicaps and allowances:

G W Coulston, 29	211*122121—9	W F Sykes, 29	22222**202—7
C A Sykes, 29	12*2112120—8	Capt Money, 30	*2002*1111—6

No. 5, miss and out: Furgueson and Coulston 2, Money 1.

The Interstate is After Droppers.

PITTSBURGH, Pa., Dec. 28.—*Editor Forest and Stream:* "One of the cardinal points of the Interstate Manufacturers' and Dealers' Association is to elevate trap-shooting, and eliminate abuses connected therewith." Having this object in view, the executive committee decided at a recent meeting that at all future tournaments given under the auspices of the Association, "dropping for place" will not be tolerated. A notice to this effect will appear in all programmes issued by the Association, and a determined effort will be made to enforce the rule.

The stand FOREST AND STREAM has taken against "dropping for place" should meet the hearty approval of every true sportsman throughout the country. That the evil exists it cannot be denied, but not to the alarming extent claimed by friend Hough. Except at one particular tournament or the series given by the Interstate Association during the past season, I can recall but two instances wherein targets were purposely missed.

In connection with this subject I personally, take exception to your editorial mention [issue of Dec. 22] on practice of professional experts "dropping for place." In my experience, covering quite an extensive period, I have found that the professional expert who represents the manufacturer, breaks all the targets he possibly can. He pays his entrance all through the programme at the beginning of the day, generally shooting in the first or second squad in every event; he has not, even if so desired, an opportunity to drop for place. His average per cent. for the day is to a certain extent his stock in trade, and is of more value to him than the few dollars he might gain by "dropping for place." I have had the professional expert come to me where a mistake had been made in his score giving him one target less than he really broke, the place paying him more money, however, than his right score would have paid, and ask to have the mistake rectified, as it affected his average for the day. At the same time he had first average already won by a long majority. Now, had it been the money he was after he would never have said a word about the mistake. This is not an isolated case either. If the expert shot who is not in the employ of the manufacturer would shoot as honestly as the professional expert, there would be very little "dropping for place."

I am a firm advocate of a board of control for trap-shooters, but whether or not that body should be a national trap-shooting association I am not prepared to state. Similar associations in recent years have proven failures, and the confidence of the gun clubs in such associations have in a measure received a severe "jolt."

I admire the pluck of the Memphis Gun Club in throwing down the gauntlet to place-shooters. They have announced, "That dropping for place will not be permitted at their tournament, and parties so offending will be requested to leave the grounds." If such action was concurred in by other gun clubs who give tournaments, I believe the complaints regarding the abuses of trap-shooting would be few and far between.

In my opinion the remedy for "dropping for place" is in the hands of the management of tournaments, and it will only require the making of a few examples to put a stop to the practice entirely.

ELMER E. SHANER.

Ben. O. Bush Suggests a Change.

KALAMAZOO, Mich., Dec. 28.—*Editor Forest and Stream:* FOREST AND STREAM in its efforts toward the reformation of trap-shooting should meet with the hearty approval of all lovers of the sport.

Dropping for place has long been an evil, but just so long as shooters can make a dollar by dropping, why they are going to drop, that's certain; because human nature is human nature with shooters as with all other persons, and each one looks out for himself. Under the rules at the present time the shooting is generally so easy that there are many ties for each of the moneys in a match, thus practically making an incentive for a shooter to drop should a hole be left open.

This should be changed; the shooting should be made more difficult, thus causing fewer ties, and instead of handicapping the experts, the poorer shooters should be given more opportunities. Let the shooting be rapid-firing, from five unknown traps, expert rules, 18yds. rise for all. Have an automatic unknown pull, which will secure equality to every shooter, so far as the pulling of the traps is concerned; then confine the experts to the use of but one barrel, and give the balance of the shooters the use of both barrels. Fine every shooter $1 (to be added to the pot) who turns away from a firing point before opening his gun, and whenever a shooter shall have reached first money by the use of two barrels in one event, then confine him to the use of one barrel in subsequent events until he fails to reach any of the money. Do away with the blackboard and use a more modern apparatus for refereeing and scoring; run every man off the grounds who is found keeping track of the scores, because such men never shoot, but always tell their friends among the shooters which place is the best to drop into. Some shooters shoot for fun and some for money; those who shoot for fun are generally the poorest shots, consequently allowing them the use of two barrels would be granting them more fun as well as enhance their chances of reaching the money.

Some may raise the objection that there will be many straight scores where the use of two barrels is granted. Not if the targets are thrown hard and swift; for if the experts can't make straights with the use of one barrel, then the poorer shoots cannot do it with the use of two. "The shooters are outgunned," is a wail I hear from somewhere; but this is not so, as the longest shot is from No. 1 score to No. 4 trap, which is less than 23½yds. rise on a practically straightaway target. If all shooters could score every target at which they fire, then trap-shooting would soon cease; for it is the uncertainty which adds zest to all tests of skill, as it breaks the monotony of a too frequent repetition in the attainment of perfection.

BEN. O. BUSH.

Views of a Manufacturer's Agent.

DAYTON, Ken., Jan. 1, 1895.—*Editor Forest and Stream:* It is thoroughly in accord with the high standard that has always governed the management and general tone of FOREST AND STREAM that this paper should be the one to openly organize a vigorous crusade against the glaring abuses that have so long hampered, and frequently openly disgraced, trap-shooting.

It was FOREST AND STREAM, years ago, that sounded the alarm cautioning sportsmen against the use of that malignant form of dynamite known as Ditmar powder, the introduction of which caused so much damage at the time, and subsequently withheld so many from using the more modern kinds of nitro powders as they came along, causing many to cling to the black, from sheer fright of what might reasonably be expected from any other kind—and well they might after having once been exposed to so much danger.

Some one as a natural result has to bear the brunt of all radical evolutions, and while the change may, and probably will, during its inauguration cause much complaint, and even engender bitter feeling, yet it is quite evident that some system should be adopted which will more evenly and fairly place all on an equal footing, and at some time peremptorily debar from further competition all tricksters and droppers for place.

But, gentlemen, in our zeal to accomplish great things, let us not overlook little ones. Let us be fair and just, and discriminating enough to properly weigh all men and give all honest shooters a fair chance. A man's skill and not his occupation should clearly be the standard by which he must be gauged. It is obviously unjust to wage war against a set of men who sell guns or ammunition simply because that is their business, and arbitrarily handicap these regardless of their skill. To call a man a professional because he sells guns or ammunition, irrespective of whether he can shoot or not, is so absurd that it should never be considered *au serieux*.

Are the men who stand behind counters and sell guns, etc., professionals? What are they paid for? Shooting as a means of subsistence or for an income, or merely to talk gun?

If on the other hand the gun and ammunition men are barred now because of their superior skill, how long will it be before another set of men step to the front and distance in like manner the poorer shots? Then what? Are these to be ruled off too? If so, better not squander any more money or waste further time learning to shoot, for when excellence is attained ostracism follows!

This is all so clearly unjust and unreasonable, not to say un-American, that it seems strange any would-be formulator of rules should indulge in such ideas in print, because they at once show a narrow-minded spirit and malicious intent.

As I take it, what we want to eradicate from our tournaments are tricksters, brawlers, rowdies in disguise, whatever their occupation, toughs, schemers and general pirates. Such are a nuisance anywhere, whether posing as unsuspecting dove-like amateurs or full-fledged professionals. I can't for the life of me see the difference. To be inflicted with such persons under any circumstances is bad, and the sooner we are rid of them the better. And that is what FOREST AND STREAM with the influence it wields can do.

What we want now is a system of handicap that will in a measure equalize men and insure more of the money going to a greater number of participants. Large purses accruing from added money subscribed by the clubs giving the shoots will always attract a big array of talent. Let these purses be within the reach of a greater percentage of the shooters, bar no one who behaves himself and who shoots squarely, but devise some system of shooting that imposes a handicap on the best shots, be they who they may, regardless of station in life or occupation. Help along the weaker shots, thereby encouraging new men and more of them to join the ranks of the greatest and most enjoyable sport we have. Then if some of the more fastidious though perchance less deserving, deem this a too democratic way of shooting, let the said select few congregate by themselves—but by all means allow the great army of shooting men to go marching along; otherwise it is going to be hard to discriminate between the open and above board gun men (*i. e.*, known representatives of gun firms) as against the sub rosa agents who, if not numerous to-day, do exist, and who under the proposed system of "professionals barred," will soon multiply, and from the very fact of their secret mission will render themselves formidable because unknown. GAUCHO.

Morfey Won by Two Birds.

PHILADELPHIA, Pa., Jan. 3.—T. W. Morfey, of Paterson, N. J., won a well-fought match to-day from John Rothacker, of this city, the score being 92-89. Morfey allowed his opponent to shoot at 106 birds to his 100. At the end of the first 25 the score was a tie, both killing 24; the 50th round found Morfey only one bird ahead, with a score of 44 to 43, by no means a winning gait. The third 25 saw Morfey gain two more on his antagonist, the score at the commencement of the 75th round standing 66-63 in his favor. This left Morfey but 25 to shoot at, while Rothacker had 30; it began to look like Rothacker's match. Morfey, however, pulled himself together and killed straight, the match being practically over at the 100th round, Rothacker being 7 behind with only 6 to shoot at; his misses in the nineties were fatal to his chances. How nearly Morfey came to losing this match is shown by the fact that at the commencement of the 91st round Rothacker was only four behind him with 16 birds to shoot at against Morfey's 10.

The match was shot on the grounds of the Keystone Shooting League, of Philadelphia, at Holmesburg Junction. These grounds are well fitted for events of this character, the club house and all the appointments of the grounds being of the first order. A large number of spectators were on hand to witness the match. Among the number were: W. H. Wolstencroft, Jas. Wolstencroft, J. H. Wolstencroft, Jr., J. L. David, —. Worrell, N. Swope, Wade Wilson, Geo. Beck, Walter Sterling, Robert A. Welch, R. Provost, H. Eilenberger, V. D. Konover, Charlie Zwirlein, "Dutchy" Smith, Chas. Reeber, Gus Muller, Chas. Brown, Wilmer Thomas, Chas. Irwin, John Hack, A. Jacob, H. Ridge, E. David, Captain Pack, Wm. N. Pack, J. W. Budd, Geo. Cubberly, Dr. Allen, A. J. Rust, H. "Landis," Henry Wolf, J. Dean, J. H. Davis, etc., etc.

The birds were a mixed lot, a number of them being very good ones. Morfey's weakness was on towering birds, his 9 misses including three towering outgoers to the left, a circling incomer to the left that towered, and two towering right-quartering drivers; his other misses were a straight driver, a circling right-quarterer and a right-quartering driver. T. H. Keller, of New York, officiated as referee; Al Rust was official scorer, while F. "Henry" looked after the pulling of the traps. Scores:

Morfey vs. Rothacker, 100 birds, Morfey conceding Rothacker 6 extra birds, $100 a side, winner to pay for birds. 28yds. rise, 50yds. boundary:

T W Morfey	1111111112112112122210222—24

Terry's Opponent Failed to Appear.

FANWOOD, N. J., Jan. 2.—Dan Terry of Plainfield and Frank Batsch of Elizabeth were booked to shoot a match at the Climax Club's grounds, Fanwood Road House, yesterday; $25 had been deposited as a forfeit in the hands of Nate Astfalk of Elizabeth, N. J. Terry was on hand and so were the birds and a good-sized crowd of would-be spectators, but Batsch never showed up; neither did he send any message so far as could be ascertained. As other men and other guns were present the following events at targets and live birds were shot off:

Twenty-five empires, unknown angles:

Keller	1111111111011111111000111—21
Croft	1111111110101111111001111—21

Flushing Shooting Club Scores.

Strong and fast birds, a brisk breeze and a glare from the frozen snow, made the shooting on New Year's Day at the grounds of the Flushing (L. I.) Shooting Club anything but easy. Six events at live birds were shot off during the day, the following being the scores:

No. 1, 10 birds. No. 2, 5 birds, $2.50:

	No. 1.	No. 2.
J N Winslow (30)	0211222001— 7	....

* Shot a 10-gauge gun.

No. 6, same: Richards 4, De Raismes 2.

DURYEA WON THE CUP.

Jan. 3.—By doing some good shooting from the 32yds. mark, L. T. Duryea to-day won the Flushing Club's invitation cup for the third time. It thus becomes his absolute property. The cup is a remarkably handsome $150 silver trophy and was well worth winning. The efforts of the club, however, to provide an interesting contest did not meet with the success they deserved; the first and second contests produced but two contestants each time, three being present to-day to fight for the cup. Duryea's three wins were characterized by some capital shooting. In the first contest he killed 25 straight from the 30yds. mark. In the second, standing on the 31yds. mark, he killed 20 out of 25. To-day, penalized one more yard, he scored 21 on strong birds. Score:

Invitation cup, 25 live birds, $10 entrance, handicap rise:

L T Duryea (32)	2202222222222221201201210—21
Geo Roberts (27)	1111022020002110010220 12—16
F J J De Raismes (25)	0202002222020010120120022—14

Boiling Springs New Year's Day.

RUTHERFORD, N. J., Jan. 2.—The following scores were made at our club's grounds yesterday:

No. 1, 25 targets, unknown angles: Richmond 22, Collins 17, Paul 19, Brooks 12, Abbott 11, Evans 10, Lenone 9, Kelley 11, James 16, Kevitt 14, Jeannette 11.

No. 2, 15 targets, unknown angles: Richmond 14, Hall 8, Hutchinson 5, James 8, Collins 13.

No. 3, 10 targets, expert rules: Hall 7, Collins 5, Richmond 8, James 3, Hutchinson 6.

No. 4, 10 targets, unknown angles: Abbott 5, Paul 4, Brooks 5, Coe 3, Kelly 1, Lenone 4.

No. 5, 10 targets, unknown angles: Huck 7, Richmond 4, Brooks 4, Collins 6, Abbott 5, Paul 8, Jeannette 5, Coe 3.

No. 6, 10 targets, unknown angles: Hall 9, Richmond 7, Paul 8, Collins 6, Hutchinson 5.

No. 7, 5 pairs and 10 singles: Richmond 9, Hall 10, Paul 12, Hutchinson 9.

The following live-bird events were also decided:

No. 1, 10 birds, $7:

Richmond	2222221010—8	Hall	1122212222—10
Collins	1222122102—9		

No. 2, miss-and-out, $5:

Hall	21211—5	Hutchinson	10	—1
Richmond	22220—4	James	20	—1
Collins	22220—4			

W. H. HUCK, Sec'y.

The Season Opens at Memphis.

MEMPHIS, Tenn., Jan. 1.—The Memphis Gun Club opened its season on Dec. 22, the scores given below being made by the members present. From now on until April 1 the club will hold two shoots a month. After that date shoots will be held once a week. Scores of opening shoot:

No. 1, 10 targets:

Divine	1111111101—9	Schmidt	1101111101—8

The Country Club's Cup Shoot.

An even dozen members of the Country Club, Westchester, N. Y., put down their names on the score board for the cup contest. Knapp was heavily handicapped with a penalty of 31yds., both he and Seaver Page, who stood at 30yds., conceding one miss as a kill, besides several yards, to such men as N. C. Reynal, E. C. Potter, etc. Harriman, the winner, at 25yds., killed 19 out of 20, his allowance making his score 20 straight; the bird he missed was his fourth. This made his score at the end of the 10th round equal to Page's straight score of 10; on the shoot off Harriman killed 10 straight, while Page missed his 10th; the latter's score is worth noting when the handicap is taken into consideration. Scores:

Club cup shoot, 10 live birds, club handicap rules and allowances, 28yds. men and under allowed one miss as a kill:

*J B Harriman	1110111111111111111—20
J Seaver Page, 30	1111111111111111110—19
Duncan Elliot, 24	1111111110 — 9
N C Reynal, 28	111111110 — 8
P H Adee, 26	1111101 — 6
J P Knapp, 31	111110 — 5
Paul L Thebaud, 26	111110 — 5
E C LeMontagne, 26	111010 — 4
N D Thorne, 27	101110 — 4
F W Thorne, 23	111100 — 4
A deNavarro, 26	11010 — 3
E C Potter, 28	1100 — 2

* Harriman lost his fourth bird, but it was scored dead according to the allowance.

Knapp Was in Good Form.

The third contest for what is known as the President's Cup was decided at the Carteret Club's grounds, Bergen Point, N. J., on Wednesday, Jan. 2. The terms of the contest are 20 birds, handicap rise, ties miss and out. Knapp, who is shooting in very good form just now, won the race with a clean score of 20 to his credit; this makes his second win, as he came out ahead on Dec. 19 with a score of 19 out of 20; Fred Hoey has the other win, the initial shoot for the "cup" (which, by the way, is a Purdy gun, presented by the president of the club, George Work) to his credit with the score of 33 out of 34; Knapp was the runner up with 32 out of 34, his 14th bird in the ties dropping dead out of bounds. Just how well Knapp has shot in these three contests is shown by the scores he has made: 32 out of 34, 19 out of 20, and 20 straight, a total of 71 out of a possible 74.

The birds trapped on Jan. 2 were a mixed lot; had it not been for Phil Lumbreyer's patent "scare-ups" they would have been classed as quite moderate. As it was, the ingenious arrangement of red flannel and wood at each trap made a number of the birds remarkably fast and tricky. The weather was all that could be desired, save perhaps that a little wind would have been of benefit to the birds; the glare, too, was in a certain measure trying to the eyes. The race was not without interest, as Mackey and Duryea chased Knapp right home; he couldn't afford to make a single skip. Duryea, besides drawing an unusually large proportion of outside traps, was careless with his third bird, an easy left-quartering incomer; that miss kept him to the collar all the way through the race, but he forced Knapp to kill straight to win. Mackey, on the 27yds. mark, also killed 19, missing his 11th bird, a fast outgoer to the left; Mr. Mackey's first barrel was very effective, his second barrel being called into service but twice in the last nine birds.

Of the other shooters, Floyd Jones and Mead were the first to be actually out of the race, as they had three misses to their credit at the end of the 13th round; they shot along, however, until the conclusion of the 19th round. Seaver Page withdrew in the last round with a score of 17, having no chance of either first or second place. Capt. Money was shooting away off with his first barrel; he was consequently heavily handicapped, as he usually plants his first quickly and effectively. Scores:

President's Cup, 20 live birds, optional sweepstake:

J P Knapp, 30	22222222222222222222—20
L T Duryea, 30	22012222222222222222—19
O T Mackey, 27	22221221210111112112—19
J S Page, 30	2211102012221111212 —17
F Jones, 29	202*11112122*111221 —16
W H Mead, 24	21102110211*022121 —15
Capt Money, 31	2222212*1222220120 —15

Referee, John S. Hoey.

Krueger—Ertter.

YORK, Pa., Jan. 4.—Not long since one of our daily papers published a challenge in which a gentleman from Gettysburg, Pa., challenged any man in Adams or York counties to a 100 live bird match for $100 a side under American Association rules. The challenge was accepted by A. C. Krueger of Wrightsville, this county, who probably under his shooting *nom de plume* of "Blackbird," is known to the shooting world as one of the best target shots in the State. On several occasions he has held his own with the best shots in the country. He and the gentleman from Gettysburg met and arranged a series of five 100 bird matches, one being shot in each of the following places: York, Gettysburg, Lancaster, Columbia and Harrisburg. Quite an interest has been manifested in these matches, as Krueger, although having a reputation as a target shot, is known to have done but little live bird shooting, whereas Ertter has the credit of being a very good live bird shot.

The first match of the series was shot on the Fair grounds at

York on New Year's Day. The weather was cold and unpleasant, the ground covered with a sheet of snow which with its glaring surface made the shooting very difficult. The birds were an excellent lot; duffers were the exception; most of them were very good and quite a good percentage were "corkers." As will be seen from the scores given below, Krueger made the excellent run of 34 straight in the beginning of the match, and on the best birds of the match at that. He made this run with his new L. C. Smith ejector, made by the Hunter Arms Co., shooting it for the first time. The gun was ⅛in. longer in the stock than any Krueger has shot heretofore, and not being accustomed to this, the gun punished him so that he was obliged after shooting at 35 birds to change guns; this undoubtedly was the cause of his losing the match. His load was 45grs. American E. C. powder in U. M. C. Trap shells with strong 1⅛oz. No. 7 chilled shot in both barrels. Ertter also shot a Smith ejector, the property of a gentleman of this place. Ertter used No. 7 shot in the first barrel and No. 6 in the second. He is a very deliberate shot and makes some beautiful kills. Krueger is quick and snappy in all his movements, and when shooting his best does some brilliant work.

The second match is to take place at Gettysburg, the home of Ertter, within a week or ten days. The date has not yet been set, but FOREST AND STREAM will be furnished with the scores. The following are the scores of the first match, being one bird shoot. Only 99 birds were shot at by each man:

First match between A. C. Krueger of Wrightsville, Pa., and C. R. Ertter of Gettysburg, 100 live birds per man, $100 a side, American Association rules:

Krueger.....2211112112222121211112222—25

YORK.

Rye Defeats Coscob.

The Rye (N. Y.) Gun Club and the Coscob (Conn.) Gun Club shot a ten-men team race on Christmas Day on the grounds of the former at Brookview. Each team shot at 50 birds, losers to pay for the birds. Rye won after an exciting contest by two birds, the scores standing 33-31. Live bird and target events made up the balance of the programme for the day's sport. The same clubs will shoot a return match at targets on the Coscob grounds during the second week in January; the change from live birds to targets is necessitated by the law which forbids live bird shooting in Connecticut. Scores:

Rye Gun Club.		Coscob Gun Club.	
L E Ganum	02200—2	W Ingersoll	11221—5

Trap at Wilmerding, Pa.

WILMERDING, Pa., Jan. 3.—The Wilmerding Gun Club held an all-day shoot on New Year's Day. In the morning a couple of events were shot at live birds, the afternoon being devoted to the breaking of bluerocks. Notwithstanding the coldness of the weather, there was a satisfactory attendance of shooters. Scores in the live bird events:

No. 1, 10 birds, $5: S. Bishop 10, D. Boyd 9, F. McIntosh, W. Sharrard and P. Reich 8, J Gilm 7, P. Boli and J. McIntosh 6.

No. 2, miss and out, $1: J. McIntosh 4, W. Sherrard and P. Boli 3, J. Hancock and S. Bishop 2, F. McIntosh 1, D. Boyd 0.

Fifteen shooters toed the mark in the target events, among them being "Old Hoss," Elmer Shaner, "Bessemer," "Hamilton," J. Gilm, J. and F. McIntosh, etc. The following is a summary of the scores, each event being at known angles with an entrance fee of $1 in the 10-target races and $1.50 in the 15-target event:

Number of targets:	*10*	*10*	*10*	*10*	*15*	*10*	*10*	*10*	*Broke*

A. A. MACKERT, Sec.

New Year's Day at Wellington.

WELLINGTON, Mass., Jan. 2.—The Boston Shooting Association started the New Year with a shoot at this place. The chief item on the day's programme was a team race, nine men on each team, losers to pay for the dinners. Twenty other events were shot off under various conditions, 3,020 targets being thrown during the day. LeRoy was shooting well as usual, having eight straight scores to his credit, Wheeler coming next with four. The team shoot resulted as follows:

Herbert's team—Herbert 16, Wheeler 13, LeRoy 16, Allison 18, Kennison 15, Puck 20, Pray 16, Adams 14, Freeman 8; total 138.

Sawyer's team—Sawyer 16, Dickey 19, C. B. Sanborn 11, Mascroft 13, Curtis 17, W. A. Sanborn 10, Warren 8, Buffum 14, Hanson 4; total 114.

Ayling Defeats Mosher.

SYRACUSE, N. Y., Dec. 27.—Chas. F. Ayling and George Mosher of the Syracuse Arms Co., shot a live bird match yesterday afternoon on the grounds of the West Shore Gun Club. At the close of the 21st round the score was a tie, each having killed 15 birds. Both men then missed their 22d birds, leaving the score still a tie; Mosher, however, dropped his 24 and 25 birds, while Ayling killed his last three. This ave the match to the latter by two birds, the scores being 18-16 in favor of Ayling. Score:

Match: Ayling vs. Mosher, 25 live birds per man:
C F Ayling.....1212002212222202200100222—18
George Mosher.....1021210222220220002220020—16

Clark Won the Medal.

HARRISBURG, Pa., Dec. 30.—W. G. Clark of Altoona, and W. Hepler, better known as "Wellington," of the Harrisburg Shooting Association, shot a race yesterday for the Keystone Top Shot Wad Company's medal, which was held by Hepler. The latter recently defeated J. O'H. Denny in a match for the same trophy by scoring 20 straight. Yesterday afternoon Clark, who is shooting in a much improved style, turned the tables by scoring 19 to Hepler's 18.

Owing to the club shoot the match did not commence until 4:45 P. M., the last half being shot in the dark. The day was clear, but cold and windy, while the birds were a fair lot, with now and then a corker. The grounds are some three-quarters of a mile from a street car track, a distance that necessitated a drive to the grounds, particularly as there were 14 inches of snow covering the surface of the earth. The traps are located on the brow of a hill, all birds with an outgoing tendency being quickly lost to view. There is also a bad background caused by thick woods. Clark apparently had the luck of the birds, but this was unquestionably due to the fact that he didn't give his birds a chance to get hard, killing them all close to the traps, centering them well and shooting in quick time. His 15th bird started as a driver and was hit hard with the first barrel; it then towered and was hit again with the second barrel; turning right back, it flew toward the score, going out of bounds about 1yd. high, finally turning and dropping dead 5yds. inside the boundary between the 30yds. mark and the traps. Clark's best birds were his 5th, 7th, 8th, 15th and 17th, every one of which was a hard bird.

Hepler's 3d bird was a low-twisting driver, brown and white in color, but still hard to see on the snow; it was hit hard with the first barrel. His 7th left the trap like shot out of a gun, but was beautifully killed with the first barrel; 10th bird was a zigzagging corker, missed with the right but stopped with the left in quick time about 15yds. from the trap; 14th and 15th were low-flying snow scrapers, which almost disappeared over the brow of the hill; the first was well killed, but the second was only feathered with both barrels, being gathered in by the solitary scout who had enough interest and animal heat to brave the elements in the hope of a supper; the 18th was simply a streak of white, and was killed with the prettiest shot of the day.

The medal is now held in Altoona and will be defended by Bill Clark. Scores:

ADAMS.

New Year's Day at Saranac Lake.

SARANAC LAKE, N. Y., Jan. 1.—There was a good attendance at the New Year's shoot of the Saranac Lake Gun Club this forenoon, many ladies being present. The shooters were divided into three classes, the winner of each class shooting a handicap for the prizes, which were: First, brass clock; second, 10lbs. E. C. powder. The boys have only been shooting at the trap for three months, so that we do not make any very high scores, although we have lots of fun.

Club shoot, 30 empires, known traps and angles:

Trap at Orangeville, Md.

ORANGEVILLE, Md., Dec. 26.—Mr. J. A. Hartner gave his annual shoot yesterday to the members of the Wood Powder Gun Club. During the day he attempted to break 50 targets straight, but failed on his 45th target, scoring 49 out of 50. He also gave an exhibition of his powers with a Winchester .22cal. rifle; he also proved that Mrs. Hartner has every confidence in her husband's skill with that weapon, as she allowed him to shoot at and break ten small bromo-seltzer bottles, the bottles being placed on her head.

Scores:

No. 1, 10 targets, 50 cents: Steever 8, Shackleford 6, J. Evans 7, Stine 8, Hughes 8, Overman 7, Kelly 6, Caler 7, Wilkerson 6, Mrs. J. A. Hartner 8, Riley 6, Hartner 10.

No. 2, 10 targets, $1: Lynch 7, J. Evans 8, Shackleford 8, Overman 6, Hughes 8, Steever 9, Caler 7, Wilkerson 5, Mrs. J. A. Hartner 7, Riley 6, Stine 7, Hartner 9.

No. 3, 10 targets, $1: Hughes 9, Caler 8, Stine 7, Wilkerson 9, Steever 10, J. Evans 8, Overman 7, Lynch 6, Shackleford 8, Eiler 4.

No. 4, attempt to break 50 straight:
J A Hartner.....11111111111111111111111—25
11111111111111111111011111—24

No. 5, 10 targets, $1: Steever 9, Overman 7, Caler 8, Kelley 6, Stine 8, J. Evans 6.

J. EVANS, Sec'y.

Shooting for Suppers.

HARRISBURG, Pa., Dec. 29.—Trap-shooting in this vicinity has been very dull since the advent of the game shooting season in October, as the boys put in all their spare time with gun and dog in the field and covers after quail, pheasants, etc.

A meeting of the association, however, was held and two members appointed captains to select teams for our annual banquet shoot. The conditions of this shoot are that the losing team put up the dust for a supper for both teams. Mr. Geo. R. Fleming and Mr. F. R. Leib were given the honor of choosing the teams. Originally there had been 27 members chosen for each team, but owing to the intense cold and deep snow only 10 men to each team turned out to shoot. These, however, made up in enthusiasm what they lacked in numbers, and what was most pleasing, there were quite a number of members who shot that had never, or very seldom, been to any of the shoots heretofore. Altogether it was a very pleasant and sociable gathering, and the match went off without a hitch. Mr. W. G. Clark of Altoona, Pa., and Mr. C. H. Cleve of Mifflin, Pa., were interested lookers on, Mr. Clark refereeing the match in a very satisfactory manner. Scores:

Team race, Leib's team vs. Fleming's team, 10 men a side, 8 live birds per man, losers to pay for a supper for both teams:

Leib's Team.		Fleming's Team.

New Utrecht's Holiday Cup Shoot.

The first day of the year was a big day at Woodlawn, L. I. Nineteen members shot for the Holiday Cup, Dr. Little, a class C man, winning the trophy. Coulston, who is now a class A man, and who killed 46 out of 48 during the day, gave the doctor a good hustling before the decision was arrived at.

Other events were also decided during the day. The third contest between the fathers and sons was brought off, the seniors winning by three birds. A three-cornered match at 25 birds a man for the price of the birds resulted in Capt. Money having to pay for 74 pigeons. In the sweeps Coulston was once more well to the front. Scores:

Third match, fathers versus sons, 15 birds each:

Honors Divided at Canajoharie.

CANAJOHARIE, N. Y., Jan. 2.—On Christmas Day T. C. Peguin and Chas. Weeks, members of the Canajoharie Rod and Gun Club, shot a race at 20 live birds per man for the price of the birds. The result was as follows, 20 live birds, 30yds. rise, 50yds. boundary, 3 traps, for the price of the birds:

Chas Weeks.....02202212122212 210100—15
T C Peguin.....11212012210220022001—14

Jan. 1.—On this date a match between the same parties, but the conditions were somewhat different, the number of birds shot at by each man being 12, the consideration at stake being $25 plus the cost of the birds. Peguin won by two birds as follows:

T C Peguin....222211112102—11 C Weeks.....122210200122—9

CHAS. WEEKS, Sec'y.

Union Gun Club's Record in '94.

SPRINGFIELD, N. J., Jan. 1.—The winners in the monthly club contests for the prizes annually given by the Union Gun Club are given below. The conditions governing these prizes are as follows: Club shoots once a month, 30 targets per man, 3 unknown traps, targets to be thrown as far and as fast as possible, six highest scores to count:

Class A—E. D. Miller, first prize, 160 out of 180; W. N. Drake, second, 156 out of 180; A. A. Sickley, third, 147 out of 180.

Class B—R. S. Williams, first prize, 146 out of 180; W. Sopher, second, 140 out of 180; Joseph Briant, third, 138 out of 180.

Class C—Dr. Jackson, first prize, 136 out of 180; he was the only one to qualify in Class C.

E. D. MILLER.

The South Side's Fourteenth Annual.

The South Side Gun Club of Newark, N. J., has a history that few clubs can boast of. Organized on March 15, 1881, it will soon have completed the fifteenth year of its existence. During the whole of the time that has elapsed since the organization there has never been a single Saturday afternoon on which its club house doors have not been opened to members and their friends, or on which traps and trappers have not been on hand and ready to provide amusement for all such visitors as might happen to show up. The first day of each year also since the birth of the club has witnessed a gathering of shooters who have kept the targets flying briskly until sunset.

New Year's Day, 1895, was no exception to this rule. Thirty-nine shooters took part in the different events shot off during the day, and 3,950 targets were thrown from the 5 traps. The

weather was perfect for the purpose of target shooting, although early in the day the sun shone with quite a glare on the snow, making it somewhat difficult to "break them all" until the sun had passed the meridian.

Among the shooters were Enoch Miller and Dr. Jackson, of Springfield, N. J.; "U. M. C." Thomas, Bridgeport, Conn.; L. H. Schortemeier and M. Herrington, of the Emerald Gun Club; Warren Smith and Billy Drake, two cracks from the Maplewoods; F. V. Van Dyke and his "pump;" W. S. Gummere, of the New Brunswick Gun Club; T. H. Keller, of the Climax Gun Club, busily telling everybody about his club's shoot on Jan. 10 and 11; Chas. C. Hebbard, of the Empire Target Co.; while among the home members were R. H. Breintnall, Lemuel Thomas, Asa Whitehead, Hoffman, Dr. Hunt, Fisher, E. A. Geoffrey and a host of others whose names appear on the score sheets. Robert A. Chetwood, president of the Elizabeth Gun Club, and W. M. Parker, also of Elizabeth, were among the spectators.

The officials of the South Side Club are: President, R. H. Breintnall; Secretary and Treasurer, W. R. Hobart; Manager, J. H. Terrill. The above, together with Asa Whitehead and E. L Phillips, form the governing committee. With such men to look after the comfort of their guests, it is unnecessary to say very much more. The cashier's office was presided over by John H. Hedden and W. R. Hobart, who kept things moving in a lively manner, payments being made promptly after each event. The scorer's box was occupied as usual by Theodore E. Burt, the club's official scorer. Mr. Burt has acted as official scorer for the club almost since the first day it was organized; no better testimonial as to the accuracy of his work need be quoted. The targets used were empires, thrown from bluerock traps, North's electric pull being used. All the events were at known angles unless otherwise stated.

No. 1, 10 empires, $1: Van Dyke 10, Breintnall 6, Keller 7, A. C. 5, Hobart 9, Hoffman 7.

No. 2, 10 empires, $1: Yan Dyke 9, Breintnall 10, Keller 7 Hunt 7, U. M. C. 8, Hoffman 7, Roberts 8, Parker 9, Shorty 9, Geoffroy 9, Thomas 9.

WM. L. HOWLAND, Sec'y.

Nebraska Trap-Shooters.

OMAHA, Neb.—We are enjoying quite a flurry here just now among the trap-shooters. J. C. Read won the championship of Nebraska at the State shoot at Central City last June, and some ten days ago issued a challenge through the *Bee* to shoot any resident of the State a 100 live bird match for $100 a side on the grounds of the Bemis Park Gun Club just across the river. And Mr. Read suddenly finds himself with his hands full. John J. Haidin, of this city, has accepted his defi for Jan. 12, and Geo. Nicolai, of Sutton, for Feb. 7. Mr. Read is one of the coming trap shots of this section, but both of these men will make him shoot all he knows how.

Referring to trap-shooters, it may not be generally known but is nevertheless a fact, and that is that Omaha boasts of one of the best all-round shots in the world, and his name is Frank S. Parmelee. While Col. Parmelee does not enjoy quite the notoriety of Champion Elliott, Capt. Brewer, Dr. Carver and one or two others, he is undoubtedly the peer of any of them, and in a 100 live bird match has an even chance to beat any man in the country. Of course this is only my opinion; but I have seen them all shoot, and Col. Parmelee suffers none by comparisons. He beat Elliott on the grounds at the State shoot a year ago, killing 98 out of 100 to Elliott's 91, and has a snap at any time and always with any of the local men in this land of fine shots.

SANDY GRISWOLD.

Princeton Points.

Misfortunes never come singly, and Princeton looks black (and orange) over her double defeat—at football and trap-shooting.

Very little interest is shown in gun club matters as compared with last season, which will probably account for the surprise party tendered to the Princeton Gun team and their 'busload of fair admirers by the Yale-Harvard contingent at New Haven.

Two members of the Princeton Club, Mr. E. P. Ward, ex-member of the board of directors, and Dr. E. L. Tiffany, ex-captain, spent Christmas in conducting a very successful holiday tournament at their home, Dansville, N. Y., an account of which will be found elsewhere.

WADS.

Rifle Range and Gallery.

Cincinnati Riflemen.

CINCINNATI, O., Dec. 30.—The Cincinnati Rifle Association held its regular practice shoot at its range to-day and made the scores appended. Conditions, 200yds. off-hand at the Standard target. Wellinger distinguished himself by making a clean score, his first one, counting 90. To say he was tickled is drawing it mild, and congratulations were unanimous. It was quite a fitting score to wind up the old year with:

Gindele	10	10	8	7	7	10	10	9	10	8—89
	10	8	8	9	7	9	8	8	10	7—84
	10	8	10	7	9	9	8	5	10	8—84

H. M. POPE, Sec'y.

Zettler Rifle Club.

NEW YORK, Jan. 1.—The Zettler Rifle Club held its monthly meeting and regular weekly gallery shoot at headquarters this evening. The struggle for first place on the list between the four high men continues to be close and interesting. In the competition to-night Henry Holges got rather the best of his competitors. He won the championship medal, scoring 246. He made 1,227 in his five scores, beating Louis Flach one point. Holges and Flach also tied for high score, each with 248 points. Scores:

Champion target: H. Holges 246, F. C. Ross 245, R. Busse 243. L. Flach 243, B. Zettler 242, M. Dorrler 241, M. B. Engel 240, Ph. Feigel 238, S. Buzzini 233, H. D. Muller 233, H. Munz 223.

Best 10-shot score: H. Holges 248, M. Dorrler 247, L. Flach 248, F. C. Ross 245, B. Zettler 245, R. Busse 244, M. B. Engel 243, Ph. Feigel 241, H. D. Muller 235, F. Buzzini 235, H. Munz 235.

Five best scores:

F C Ross	245	241	245	245	244	—1220
H Holges	246	242	245	248	246	—1227
L Flach	243	248	245	245	245	—1226
M Dorrler	241	241	247	245	242	—1220

New York Rifle Club.

NEW YORK, Jan. 3.—The New York Rifle Club held its weekly gallery practice on the Zettler Bros. range last night. Seven men participated. The scores are appended:

Isbell	245 247	Young	234 238
Herrington	242 244	Barker	233 235
Lloyd	244 245	Shorkley	226 240
Crocker	238 339		

Zettler Defeats Rosenbaum.

NEW YORK, Jan. 7.—Young Charles Zettler in a 50-shot match on Saturday night with William Rosenbaum ("Boff"), defeated the latter by a score of 1216 to 1213.

New York Schuetzen Corps.

NEW YORK, Jan. 5.—The New York Schuetzen Corps, Capt. Henry Offerman, held its bi-monthly shoot on the Zettler range last night. The attendance was smaller than usual. Only 20 men participated. The two team matches resulted in a tie.

Miller Rifle Club.

HOBOKEN, N. J., Jan. 3.—The Miller Club held its weekly shoot at headquarters last night, 12 members participating. Scores: Meyns 236, Miller 233, Dewey 228, Nelson 220, Scott 231, Vanderheyden, 229, Rogers 221, Stadler 230, Gallon 225, Sohe 232, Taylor 226, Kammel 220.

Greenville Rifle Club.

GREENVILLE, N. J., Jan. 5.—The weekly gallery shoot of the Greenville Club last night was well attended. Twenty members participated in the competition for class prizes. Some of the members were a little out of form from their New Year's experience. None of them, however, had lost their enthusiasm for gallery practice. Scores: First class—Geo. W. Plaisted 243, J. Boag 240, Wm. H. Robidoux 238, Wm. C. Collins 237, M. Dorrler 236, C. Boag 235, C. Scheeline 234 C. W. Agneau 231. Second class—C. H. Chavant 237, Henry Gotthardt 239, Wm. Charlock 235, John Spahn 236, Frank Chase 227, Jas. Dodds 226. Third class—A. E. Graef 233, Geo. Renker 227, John Hill 225, Edw. Barr 221, E. Wuestner, Jr. 222, F. Wuestner 217.

Deitrich Defeats Dutcher.

PATERSON, N. J., Jan. 5.—Aug. Deitrich and Wm. Dutcher, of the Paterson Rifle Association, recently shot a series of matches at 100 and 200yds., best two out of three, for $25 a side. Deitrich won the gelt. Scores: Dutcher, 100yds., 435; 200yds., 452; total, 887. Deitrich, 100yds., 433; 200yds., 508; total, 941.

Second match: Deitrich, 100yds., 437; 200yds., 503; total, 940. Dutcher, 100yds., 449; 200yds., 501; total, 950.

RIFLE NOTES.

The New York Schuetzen Corps held its annual meeting for the election of officers at headquarters on Jan 3. Capt. Offerman was renominated and unanimously elected to fill the position for another year. He, however, declined the honors and fought hard to have the honors of captain placed upon the shoulders of some other member of the corps. Capt. Offerman's kick, however, was of no avail, for the members would not accept any other nominee than Henry Offerman, and in the end Capt. Offerman was forced to reconsider his previous negative to the honors and will continue for another year as Captain of the New York Schuetzen Corps. Barney Kunner was re-elected Secretary, as was Aug. J. Christian Finance Secretary; E. Meyer, Corresponding Secretary; F. W. Meyer, Treasurer; John Bunz, Quartermaster. The election of the two shooting masters was laid over until the next meeting owing to the fact that no member present would accept the position of first shooting master.

The first match between teams representing the Empire and Greenville Rifle clubs will take place on the Greenville Club range Jan. 17; the match opens at 8 P. M.

Capt. A. W. Money, the famous pigeon shot, was elected member of the Zettler Rifle Club at the monthly meeting last week. If the Captain can reach the bullseye with the same ease with the rifle that he does the pigeon with the scatter gun, he will make some of the experts hustle for honors in the future.

That old champion and expert, Wm. Milton Farrow is reported as being desirous of entering the ranks of the Zettler Club. Mr. Farrow, as a member of the club, was the "Schuetzen" King of the great festival held in Union Hill Park in 1879.

Bicycle riding is said to be good for one's health. We heard one of our veteran rifleman who has been riding his "bike" for the past six months, make the remark last week that he had made up his mind that his use of the machine had interfered with his shooting and he was going to discontinue its use.

Wm. Rosenbaum, of the Empire Rifle Club, is at the present time shooting in fine form. At the weekly gallery shoot of the club last week he made a total of 2,451 in 100 shots. On his second string of 100 shots he made the following scores: 248 248 245 246 247 245 246 249 246 246; total, 9,466. An average of 245.8 for the 200 shots.

The Elite Schuetzen Corps has increased its membership to about 140. Capt. Walters and Shooting-Master Ignatz Martin should lose no time in getting the members into active gallery practice. The most successful rifle clubs are those that contain the active shooters.

The riflemen throughout the country are clamoring for the English edition of the programme of the great shooting festival (Bundes Fest). The festival opens June 30, and the by-laws of the Bund say that all societies wishing to join the Bund must make their entries four months before the opening of the festival.

The Iroquois Rifle Club of Pittsburgh held a successful Christmas Day shoot on its gallery ranges. The programme onsisted of cash prizes, sweepstakes for turkeys, etc.

The Zettler Rifle Club will hold its annual gallery prize shoot on its ranges, No. 219 Bowery, on Jan 19, 20 and 21.

The team shoot between the Empire and Greenville clubs has been postponed to Jan. 17.

The Friday Night Club is another one of Hoboken's many rifle clubs that keep pegging away at the gallery target from week to week.

The Philadelphia Schuetzen Verein held its annual election of officers for the coming year on Dec. 27. Wm. Gelzer was re-elected President, Jacob Roth, Vice-President and Jacob Weber treasurer. The association has sold its shooting park property on Queen Lane, Logan Station, to the city, realizing the neat sum of $110,359.05.

The Zettler Club at its last meeting voted to appropriate $150 to the "target of honor" at the Bundes Fest. This prize will be in gold, inlaid in a fancy case and incrusted with the Zettler Club monogram. The lucky shooter who wins this prize will have a fine memento to remind him in after years of the festival of 1895.

A 2oz. trial package sent post-paid for 25cts.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

With Fly-Rod and Camera.

A magnificently illustrated volume descriptive of fly-fishing for trout and salmon. By Edward A. Samuels. Cloth. Price, $5.00.

FOREST AND STREAM PUBLISHING CO., 318 Broadway, N. Y.

American Big Game Hunting

The Book of the Boone and Crockett Club.

EDITORS: THEODORE ROOSEVELT, GEORGE BIRD GRINNELL.

Price $2.50.

FOREST AND STREAM PUBLISHING COMPANY,
318 Broadway, New York.

Standard Works for the Sportsman's Library.

ANY BOOK HERE NOTED WILL BE SENT POSTPAID ON RECEIPT OF PRICE BY THE FOREST AND STREAM PUBLISHING CO., 318 BROADWAY, NEW YORK.

ANGLING.

The American Angler's Book.

Combining the natural history of sporting fish, the art of taking them, with instructions in fly-fishing, fly-making and rod-making, and directions for fish breeding. Description of salmon runs, inland trout fishing, etc. By THAD. NORRIS. 80 illustrations. Cloth. Price, $5.50.

American Fishes.

A popular treatise upon the game and food fishes of North America, with especial reference to habits and methods of capture. By G. BROWN GOODE. With numerous illustrations. Cloth, 496 pages. Price, $3.50. This is, by far, the most popular work which has ever been published on the fishes of America, and is the book that no angler who takes pleasure in knowing the fishes which afford him sport, can afford to miss.

Book of the Black Bass.

Comprising its complete scientific and life history, together with a practical treatise on angling and fly-fishing, and a full description of tools, tackle and implements. By JAMES A. HENSHALL, M.D. Illustrated. Cloth, 470 pages. Price, $3.00. Dr. Henshall's monograph is the standard work.

More About the Black Bass.

Being a supplement to the "Book of the Black Bass." By JAMES A. HENSHALL, M.D. Fully illustrated. Cloth, 204 pages. Price, $1.50. This is a supplement or sequel of Dr. Henshall's first volume, in which the author's aim is to bring the subject matter down to date.

Fly-Fishing and Fly-Making for Trout, etc.

By J. HARRINGTON KEENE. With plates of the actual material for making flies of every variety. Illustrated. Cloth, 160 pages. Price, $1.50. The matter of the book embraces everything which the fly-fisherman wants to know about the senses of fish, practical fly-fishing, casting and fly-making; with list of standard flies and their dressings; the feathers, silk and other material used in fly-making, there are samples of all, attached to blank sheets like pictures by way of illustration.

Fishing Tackle.

Its Materials and Manufacture. A practical guide to the best modes and methods of making every kind of appliance necessary for taking fresh-water fish and for the equipment of the angler and fly-fisher. With 454 illustrations and explanatory diagrams. By J. HARRINGTON KEENE. Price, $1.50.

With Fly-Rod and Camera.

By EDWARD A. SAMUELS, President of the Massachusetts Fish and Game Protective Association, author of "The Ornithology and Oölogy of New England and Adjacent States and Provinces," "Among the Birds," Associate Editor of "The Living World," etc., etc. Cloth, 480 pages (7×9½in.), 147 illustrations. Price, $5.00. The author is known as one of the most devoted and expert salmon fishermen of America. The volume is likewise noteworthy as an example of the rare possibilities of amateur photography.

Fly-Rods and Fly-Tackle.

Suggestions as to their Manufacture and Use. By HENRY P. WELLS. Illustrated. Cloth, 364 pages. Price, $2.50. The most exhaustive work on the subject in print.

MANUALS.

Game Laws in Brief.

Laws of the United States and Canada Relating to Game and Fish Seasons. For the guidance of sportsmen and anglers. Compiled by CHARLES B. REYNOLDS, Editor of *Forest and Stream*. Paper. Price, 25 cents. Gives all sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for the practical guidance of sportsmen and anglers. Carefully compiled, and shorn of verbiage. Handsomely illustrated with numerous half-tone engravings from *Forest and Stream*.

Woodcraft.

By NESSMUK. Cloth, 160 pages. Illustrated. Price $1.00. A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain English.

Tricks of Trapping.

Camp Life in the Woods, and the Tricks of Trapping and Trap Making. Containing hints on camp shelter, all the tricks and bait receipts of the trapper, the use of the traps with instructions for the capture of all fur-bearing animals. By W. HAMILTON GIBSON. Illustrated. Cloth, 300 pages. Price, $1.00.

Log Cabins.

How to Build and Furnish Them. By WILLIAM S. WICKS. New and enlarged edition. Price, $1.50. Mr. Wicks might have called his book "Every Man His Own Log Cabin Builder," for he has set out to describe fully and particularly each detail in the process of construction. Plans are given for cabins, large and small, with details of exterior and interior.

Hints and Points for Sportsmen.

Compiled by "SENECA." Cloth. Illustrated, 224 pages. Price, $1.50. This compilation comprises six hundred and odd hints, helps, kinks, wrinkles, points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer, in short for the field sportsman in all the varied phases of his activity.

SHOOTING.

Names and Portraits of Birds

Which Interest Gunners, with Descriptions in Language Understanded of the People. By GURDON TRUMBULL. Cloth, 222 pages. Price, $2.50. The average gunner with this work at hand would have little difficulty in identifying the contents of his bag from the text alone. Identification is further facilitated by portraits of the birds.

Antelope and Deer of America.

A comprehensive scientific treatise upon the natural history, including the characteristics, habits, affinities and capacity for domestication, of the Antilocapra and Cervidæ of North America. Second edition. By JOHN DEAN CATON, LL.D. Cloth, 426 pages, 50 illustrations; steel portrait. Price, $2.50.

The Gun and Its Development.

With Notes on Shooting. By W. W. GREENER. Breechloading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Chokeboring, Gun Trials, Theories and Experiments. Fully illustrated. Cloth, 770 pages. New edition. Price, $2.50.

The Art of Shooting.

An Illustrated Treatise on the Art of Shooting. With Extracts from the Best Authorities. By CHARLES LANCASTER. Illustrated with numerous drawings from instantaneous photographs. Price, $3.00. New edition.

Field, Cover and Trap-Shooting.

By CAPTAIN ADAM H. BOGARDUS, Champion Wing Shot of the World. Embracing Hints for Skilled Marksmen; Instructions for Young Sportsmen; Haunts and Habits of Game Birds; Flight and Resorts of Waterfowl; Breeding and Breaking of Dogs. With an appendix. Cloth, 493 pages. Price, $2.00. There is no other man in this country—or in any other, for that matter—better fitted to teach a novice the art.

The Still-Hunter.

A Practical Treatise on Deer-Stalking. By T. S. VAN DYKE. The information contained in "The Still-Hunter" is as exhaustive as it is possible to make it. 390 pages. Price, $2.

The Breech-Loader and How to Use It.

288 pages. Price, $1.00. A book for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study.

CAMP AND HOME.

Uncle Lisha's Shop.

Life in a Corner of Yankeeland. By ROWLAND E. ROBINSON. Cloth, 187 pages. Price, $1.00. "Uncle Lisha's Shop" is brimful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact in all the other characters introduced.

Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop," by ROWLAND E. ROBINSON. Cloth. Price, $1. When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living creatures.

Pawnee Hero Stories and Folk-Tales,

With Notes on the Origin, Customs and Character of the Pawnee People. By GEORGE BIRD GRINNELL. Cloth, 417 pages. Illustrated. Price, $1.75. New edition, revised. Like most Indian tribes, the Pawnees are story tellers. They have a vast fund of folk-tales and traditions, which have been handed down from father to son, and transmitted from generation to generation. Years ago, when the tribe lived in Nebraska, the author of the present volume camped and hunted with them, and joined in their village life. The nights were given up to story telling, and many of the tales told in the lodge and by the flickering camp-fire were carefully translated and written down. When published they excited great interest. They are tales of daring and adventure, weird accounts of magic, mystery and the supernatural; relations of the ways of life in the old, wild days; stories of war and the craft of war parties, the history of the tribe as treasured by the very old men. There is mother-wit in these stories, they are full of humor, sentiment, pathos and human nature.

Blackfoot Lodge Tales.

The Story of a Prairie People. By GEORGE BIRD GRINNELL. Cr. 8vo., $1.75. In this volume the story of the Blackfoot tribe is told by a friend, one who has hunted with them on the prairies, slept in their lodges, lived in their camps, and shared their daily life. The stories which constitute this history have been taken down by the author from the lips of the narrators, and are given without change as told to him. There is a singular and charming freshness about the stories, which give the history of renowned warriors of ancient and modern times, show how ancient customs arose, and explain natural phenomena. The account of the daily life, customs, and history of the Blackfeet presents a series of graphic pictures of savage life in peace and in war.

Our New Alaska;

Or, The Seward Purchase Vindicated. By CHARLES HALLOCK. Cloth, 209 pages, illustrated. Price, $1.50. Mr. Hallock's writings are always vivid and full of life.

THE KENNEL.

Dogs: Their Management and Treatment

IN DISEASE. A Study of the Theory and Practice of Canine Medicine. By ASHMONT. Cloth, 208 pages. Price, $2.00. The *Forest and Stream* says that this is one of the most valuable treatises on canine management and therapeutics that has appeared on this side of the water.

Kennel Record and Account Book.

Boards, $3. An indexed volume of 180 pages, consisting of a series of carefully prepared blank entry forms suited to the registration of all kennel events and transactions.

Dog Points and Standards.

First Lessons in Dog Training, with the Points and Standards of all Breeds of Dogs. Paper, new edition, 106 pages, revised to date. Price, 50 cents.

Training vs. Breaking.

Practical Dog Training; or Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of *Forest and Stream*. Revised and re-written. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, $1. A book for dog owners, who, by the instructions here plainly given, can successfully train their hunting dogs.

Modern Training;

Handling and Kennel Management. By B. WATERS. Illustrated. Cloth, 373 pages. Price, $2. This treatise is after the modern professional system of training. It combines the excellence of both the suasive and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

House and Pet Dogs;

Their Selection, Care and Training. Paper, price 50 cents.

Lee's Modern Dogs.

History and Description of the Modern Dogs (Sporting Division) of Great Britain and Ireland. By RAWDON B. LEE, kennel editor London *Field*. Illustrated, 584 pages. Price, $6. This is a standard work by an acknowledged authority, and is up to date. It treats all sporting breeds exhaustively. The illustrations are idealized portraits of typical specimens.

Kennel Secrets.

How to breed, exhibit and manage dogs. By ASHMONT. The dog from the time he is conceived to the time he curls himself up for his last long sleep is treated from every standpoint that could possibly occur to a man of wide experience with dogs. Every important subject that has engaged attention has been fully discussed, generalities being held practically valueless and misleading. Illustrated, 344 pages. Price, $3.00.

The Spaniel and Its Training.

By F. H. F. MERCER. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, $1.

Scientific Education of Dogs for the Gun.

By H. H. Cloth. Price, $2.50. The instructions are the result of the author's amateur practical experience of 37 years. *Forest and Stream* says: "This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study."

YACHT AND CANOE.

Small Yachts.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice. With numerous plates and illustrations. By C. P. KUNHARDT. New ed., 470 pp. of type and illustrations and 87 plates. Size of page, 14½×12½. Price, $10. This book is intended to cover the field of small yachts, with special regard to their design, construction, equipment and keep.

Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. New ed., 267 pp. Price, $3.00. A complete review of the development and present status of the marine engine and boiler as applied to steam yachting.

Canoe and Boat Building.

A Complete Manual for Amateurs. Containing plain and comprehensive directions for the construction of Canoes, Rowing and Sailing Boats and Hunting Craft. By W. P. STEPHENS, Canoeing Editor of *Forest and Stream*. Cloth. Fourth and enlarged edition, 264 pages, numerous illustrations, and fifty plates in envelope. Price, $2.00.

Canoe Handling.

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. BOWYER VAUX ("Dot"). Illustrated. Cloth, 168 pages. Price, $1.00.

Yacht Architecture.

By DIXON KEMP, Associate of the Institute of Naval Architects and Member of Council. Second edition. Super-royal 8vo., 530 pages, numerous plans and designs. Price, $16.80.

A Manual of Yacht and Boat Sailing.

By DIXON KEMP, Associate Institute of Naval Architects (Member of the Council). 750 pages, with numerous plans and designs. Price, $10.

THE ILLUSTRATED CATALOGUE OF FOREST AND STREAM BOOKS WILL BE SENT FREE.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JANUARY 19, 1895.

VOL. XLIV.—No. 3. No. 318 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page iii.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order Make orders payable to

FOREST AND STREAM PUB. CO., New York.

THE TERMS OF THE CUP RACES.

The past week has brought out nothing beyond a brief cable from Secretary Grant already published and the still shorter reply from Commodore Smith to show the exact basis of understanding on which a race has been finally arranged. The report of the Cup committee to the club on Monday night was conspicuous for its lack of information on this most important point, and we doubt whether the members who voted to accept the report and the challenge have any exact and definite understanding of the terms of the new "agreement." The committee has vouchsafed no information as to the nature or extent of the "concessions" which it has made, nor has the nature of these "concessions" been disclosed in any other way.

So far as it is yet known the Royal Yacht Squadron has had no definite and official statement of the position of the New York Y. C. since the resolution of May 17, 1888, that the club would accept a challenge under the terms of the races sailed in 1885-6-7; and it is hardly probable that the squadron would after so many years accept this as a good ground for the recognition of the new deed. It is, however, in every way probable that some assurance has been given by Commodore Smith to Lord Dunraven as to the present interpretation of the new deed.

The report of the committee is a masterly document. It affirms the integrity of the new deed as governing the proposed races; it contains no recognition of any rights accorded the challenger, and it mentions casually that certain concessions were made to secure a match, leaving it to be inferred that they were too trivial to demand specific mention. In this report, and in the minutes of the club, there is nothing to indicate the long struggle between the two parties, and it reads as though the New York Y. C. had received and accepted a challenge complying in every respect with the requirements of the new deed.

The assertions of American papers and of American yachtsmen are all in the same line, that the Royal Yacht Squadron has at last withdrawn all opposition to the new deed and has agreed to challenge under it.

How this view of the case will be accepted by British yachstmen is yet to be seen, but from all appearances the case is exactly the same as in 1892-3, one party claiming one thing and the other the reverse. As opposed to the American view the Field of January 12 says: "All yachtsmen approve of the Royal Yacht Squadron's accepting the custody of the Cup. The New York Yacht Club metaphorically consumed the deed, seals and all. The mutual agreement clause being interpreted to mean every clause, the deed can be wiped out of existence if the parties arranging the match so agree. The Royal Yacht Squadron will virtually hold the Cup, if won, as though no deed whatever existed. The situation obviously is a great absurdity, but this is not of the least consequence if the Royal Yacht Squadron be fortunate enough to become the holders of the Cup."

Each side has a right to its own opinion, but when, as it must sooner or later, the matter comes to a final test, the New York Yacht Club will be able to back its interpretation of the present agreement by its minutes, and by a receipt from Tiffany vaults for the America's Cup; while the Royal Yacht Squadron will have nothing to fall back on but some vague and worthless cablegrams to the effect that the new deed means nothing.

SALMON AT SEA.

One of the most carefully guarded secrets of the ocean is its relation to the growth and development of the salmon. We are to some extent acquainted with the movements and habits of that aristocrat of the fresh water streams when the instinct of reproduction leads it within the range of our observation; but after the stages of ascent, nest building and descent are ended the salmon is soon among the mysteries of the deep and gives us but a few transient glimpses of its oceanic life, and for these we are indebted to commercial fishery.

In a recent publication of the U. S. Fish Commission Dr. Hugh M. Smith has brought together a number of notes on the capture of salmon at sea, for the most part in pounds and weirs and, more rarely, on trawl lines set for cod, haddock and other bottom fish. To cite some instances bearing upon the object of this article:

At the Cranberry Isles, about twenty-five miles east of Penobscot Bay and thirty-five miles in a straight line from the mouth of Penobscot River, on July 14, 1888, six salmon weighing from four to six pounds each were taken in a herring weir. In June, 1893, a number of salmon of twelve to fifteen pounds were caught on cod trawl lines baited with herring and set on the bottom in rather deep water.

Two significant points are presented, the presence of the fish on the bottom if they really took the hooks on the bottom and not while the trawl was being lowered or raised, and the return of young salmon so near to their birthplace before maturity compelled their movement shoreward. It is generally supposed that salmon live near the surface, and the only known important winter fishing for them takes place in the Baltic and is carried on with short lines attached to a surface trawl. The return of immature fish, of which examples will be mentioned, supports the theory of Mr. Blackford which was published in Forest and Stream some time ago, namely, that salmon do not migrate far from the river mouths.

In December, 1891 a salmon weighing twenty-eight pounds was taken on a cod trawl near Halfway Rock off Salem Harbor, and in September, 1893, one was caught off Gloucester, Mass., on a hake trawl. These lines were set in depths of 120 to 150 feet. Mr. Blackford receives a few salmon every winter from the Atlantic coast. They are captured at Provincetown and North Truro in mackerel nets in very deep water off the cape. In Maine the smelt fishermen get them in their nets occasionally.

Referring again to the return of small salmon as described in Dr. Smith's notes:

Captain Atkins Hughes of North Truro, Mass., has for two or three years observed large numbers of young fish about six inches long in pound nets during October. Each net takes one or two barrels annually. In 1893 very few of such small ones were taken. At Provincetown, in September, 1892, Mr. V. N. Edwards saw a great many salmon weighing four or five pounds, each caught in pound nets In a single net he saw enough to fill two sugar barrels.

In Sandy Hook Bay the number of salmon taken has been increasing for the past three years in the spring only, and among them are sometimes seen fish weighing half a pound. In May, 1893, two medium size were caught at Mantoloking, N. J., thirty-five miles south of Sandy Hook, where none had ever been taken before.

The greatest distance at sea at which salmon have been captured was the record of Captain Solomon Jacobs about April 10, 1893. While cruising for mackerel about fifty miles E. S. E. of Fenwick Island lightship and sixty miles from the nearest land, he took a sixteen pound salmon in a purse net set around a school of mackerel. Another salmon was reported in the seine, but it escaped. No parallel case is known to the mackerel fishermen.

About the middle of December, 1894, a five pound salmon was reported as captured on a trawl with cod and haddock by a Gloucester fishing schooner. Many additional notes of similar character are among the records of the U. S. Fish Commission, and will soon be brought out, but enough is here stated to show what we started out to establish, the presence of adult salmon in winter near the coast and the frequent, we may almost say the regular, occurrence of young salmon not far from the fresh waters in which they were born. These facts appear to give great weight to the belief that the sea life of the salmon is passed in near by waters.

At a most opportune moment for this discussion, Mr. H. J. Barling contributes fresh information about the salmon of Alaska. Mr. Barling has spent many years at the great fishing centers and is well posted as to the movements of the fish at the most critical period of their life. He states that about the middle of May, 1894, just when the ice passed out of Karluk River, Kadiak, young red salmon came down the stream in myriads. To use his own words: "They looked like hail stones on the river." The run lasted a week. The fish were two and a half to three inches long.

The little salmon went right out to sea and disappeared. During the descent shags, gulls and divers were abundant and played havoc with the fish. With the departure of the salmon the birds went off and did not return until after the fishing season opened. These great runs of young salmon take place only once in two years, and this corresponds with our own observation on the spawning habits.

During the season of 1894 Mr. Barling caught forty salmon measuring six inches, and he saw a great many escape through the meshes of the nets. Sometimes they take individual of nine or ten inches. It was a pleasure to be informed that the increase in the size of the mesh has allowed the escape of nearly all Dolly Varden trout which were formerly killed by thousands and wasted on the beach.

Fully nine and one-half millions of salmon were caught in Alaska for canning and salting in 1894, or more than enough, if placed one behind the other, to reach from New York to San Francisco. It seems impossible that the supply should long stand such an enormous drain.

SNAP-SHOTS.

The Minnesota Fish Commissioners have been successful in establishing a breed of albino brook trout. As trout culturists know, it is not uncommon to find albino among newly hatched fry, but such individuals are usually of deficient vitality, and, as a rule, do not long survive. Three years ago several albinos were found in a lot of fry at the Willow Brook hatchery at St. Paul. From those which lived 147 true albino were obtained, and the stock had with fluctuations been preserved, until now the ponds contain nearly 2,500 of this year's hatching, and 22 which are two years old. The fish are to all appearances quite as strong and as healthy as their commonplace speckled relatives of corresponding ages. This new albino trout of the Minnesota hatchery is a marvelously beautiful fish. The body is a pure white, with the iridescent spots most delicately marked; and the fins shade from a delicate pink to a creamy white. If the stock shall be perpetuated we may be sure that there will be a great demand for the new fish.

Mr. John B. Lawrence, Jr., of New York, president of the Narrows Island Club of Currituck Sound, N. C., had an unusual experience recently with English snipe. He was shooting, Dec. 29, at Flanders, Long Island, not far from River Head, and started a lot of snipe from an open spring hole. The thermometer stood at 14 degrees Farenheit, and the bay was frozen over this spring hole being the only open water in the neighborhood. Mr. Lawrence killed eight snipe that day, two the next day and two more the day after. The birds were reported as having been there for a week or more. They were very fat.

The Sportsman Tourist.

IN THE BIG THICK.

In 1882 an uncle who was a railroad contractor had a large contract on the New Orleans and Shreveport Railroad, which was then building. Through his influence I secured a position as transit road man in a corps of engineers who were on the point of starting a preliminary survey from Alexandria, La., to Eagle's Pass on the Rio Grande River. I knew that we were going to a wilderness, and one of my first thoughts was to purchase a rifle. But imagine my chagrin when my rigid old chief told me to leave it behind, as he had one gun, and that was enough to provide fresh meat for the whole outfit. We were advised, however, to each carry a good Colt revolver as a matter of precaution, as we had heard numerous, and, I dare say, exaggerated, stories of the travelers who had been held up and even murdered in the lonesome pine woods between the Red River and the Sabine. It was not necessary to remind the boys a second time. Nearly all of them provided themselves with a pair of .44 six shooters, belts and scabbards and lots of cartridges, and as each axe man carried an axe and a long cane knife or machete, with which to cut the way through cane brakes and vines, I declare we were a formidable body of men, in appearance at least.

The first fifty or sixty thousand miles was without interest, as our course lay through the never-ending plantations white with cotton or green with sugar cane. We made rapid progress, and in about a week rose out of the low country into the hills. As soon as we were fairly in the timber we commenced to jump both deer and wild turkeys. Now came the trying ordeal. Lots of game and no time to hunt. Our sagacious old captain had anticipated this, and for this reason had forbidden any guns in the party, except the one owned by himself, which was a .44 Winchester rifle. He carried this rifle simply to kill meat for his men, and from no sporting instinct. He consoled the younger and more ardent of his troupe, however, by promising that we could take turn around and hunt on Sunday. This declaration will no doubt startle my religious reader, but when one considers the fact that there is no Sunday in Louisiana, except a regular gala day, and also that we were miles back in the wilderness, where we disturbed no one, it will be more excusable. As we advanced into the depths of the wilderness the game became more and more plentiful. We often jumped up whole droves of deer, and on one occasion counted over thirty deer as they ran off through the pine woods. The country between the Red River and the Sabine is very thinly settled, and the few squatters who occupy the section hunt only for their meat. It is a rolling, hilly pine woods, green with tall grass and well watered, and will some day become a productive section. In 1882 it was an ideal hunting ground, and a good hunter could kill all the deer and wild turkey he wanted. I would kill deer almost every Sunday, the only day in the week that I could hunt, and as I was the only natural born Nimrod in the party, the rifle was generally surrendered to me on that day. Our colored cook found time to kill as much game as the party required, and you know twenty strong, hardworking men can almost eat a deer a day. Of course, we had plenty of bacon, hams and that kind of meat along with us. But we looked to that rifle for most of our living.

The fishing was also magnificent. Every small creek that we camped near seemed alive with bass, trout and bream. Our sedate old captain was himself very fond of fishing, and as soon as camp was established upon a stream he would get out his artificial flies and go to work. He was an expert in the art of angling, and would land his fish nine times out of ten strikes. The captain, of course, did not stay out on line all the time. We had an excellent transit man, a fine young fellow from New Orleans, who was a good worker and true mathematician, as he was a genial and whole-souled gentleman. The conduct of the survey was principally carried along by the transit man, so that the captain or chief of our party had good time to look up good camping grounds, and to fish. We had to move camp three or four times a week, as the survey was pushing along rapidly, and the camp had to keep up with the men. In this way we found many fine creeks and fishing places. We always had either venison, wild turkey or trout for supper when we got back to camp after a hard day's work. I remember how we used to enjoy those meals. We had an excellent cook along with us, a colored boy named Graham, who had learned his trade on the large steamboats running into New Orleans, and where none but experts are employed. We paid him big wages, but we obtained grand results. Our captain used to say that there was nothing on earth that would come so near keeping a crowd of men contented as to feed them well and have their food well cooked and nicely served; and I think he was about right.

We went through awful experiences after we left the high, pine hill country, and got into the Sabine swamps and in the "Big Thick" of Eastern Texas.

One day before we were out of the hills we had stopped on the bank of a small stream to eat our luncheon. We had all learned to be "good soldiers" by this time, and would take advantage of every opportunity to rest. We had finished our luncheon, and all the boys had lain down on the ground to catch a short nap before our dinner hour was over. I was the only one awake, and I was half dreaming, and playing mumble peg with my pocket knife, when I heard a noise near by. I looked up, and there, within fifteen feet of me, were five large deer drinking at the brink of the stream. They had come down the steep bank of the creek almost to the spot we occupied and had not seen nor smelled us. I drew my revolver and put a ball into the deer nearest to me. They all ran off, and we tracked my wounded deer some distance, but finally lost the blood trail and had to give it up. I suppose the deer ran off somewhere and died. I would like to have bagged that particular deer, just to say that I had killed a deer with a revolver, but fate decreed it otherwise.

We finally emerged from the hill country and entered the dark and dismal swamps of the Sabine River. Now our privations and tribulations began in earnest. The river was out of its banks in the last part of October, as the fall rains had set in, and rains in that country mean downpours or torrents. I do not believe any of us had a dry thread on us for three weeks. We had to cross the overflowed swamps, and there was nothing to do but wear it. Lots and lots of times I have stepped off a bank or into a hole and gone out of sight head and ears only to come up snorting and swearing. I had to lead the van. That was my place, and I could not even compel one of the axe men to go ahead and see how deep the water was. It was lucky that I was an expert swimmer or I would not have filled the place. I went plump into the Sabine River before I knew I was within half a mile of it. The only way I found it was by walking into it, and then I knew by its depth and current that it was the river.

Well, we ran our line up to our bank, and I crossed the river on a Choctaw log, and then we triangulated the stream and found its width, and started our line in the overflowed swamp on the other side. Our camp outfit and wagons had to go nearly one hundred miles out of the way to find a ferry boat to cross We could not afford to lose the time by going with them, so we crossed the river on logs lashed together with pins and stays and existed rather than lived for four days without beds or anything to sleep on at night, or any cover from the rain which was falling constantly. We walked out of the overflowed swamp every night to high ground, built a big fire and roasted there till morning, and then plunged into the cold water again to remain all day. The depth of the water was anywhere from knee deep to shoulder deep, and often over our heads. We came near losing our field instruments half a dozen times. I thought to myself a thousand times that if that was civil engineering I would study law as soon as I reached civilization. However, everyone must learn his trade in the hard school of experience, and many times until I gave up the profession I had almost as hard experiences as the ones narrated.

We finally got out of that swamp only to plunge into another. The bad season set in, and a miserable time we had, plodding in mud and mire, chopping our way through impenetrable thickets, and cane brakes, and almost sleeping in the nasty, slimy, slippery ooze. The whole of east Texas, from the Sabine to the Nachitoches River, is an almost impenetrable thicket. They call it the "Big Thick" of Texas. It is one continued cane brake, with matted vines and small bushes as thick as the hair on a dog's back. Sometimes we would not progress a half mile in twelve hours' hard chopping, and we only cut a line open enough to get a sight through our telescopes, on the instruments How I have heard our transit man swear. He was an ambitious fellow and wanted to make a reputation, and half a mile a day would never make him one. I used to try to console him by telling him that if the company had not sent us into this "God forsaken" country they would never have known what it was, and as it was essential to know what the country was like, and what kind of a road bed could be gotten, we were doing the full measure of our duty. And we were.

To make a long story short, we chopped and chopped for two months, and about the first of January, 1883, emerged from the "Big Thick." There is plenty of game in there, but it can stay there so far as I am concerned, for I will never bother it again. I killed several deer, plenty of turkeys and many ducks and coons and oppossums, and squirrels and such small fry. Our cook laid a bait down and killed one good sized black bear, which came to it, so we had bear meat once on the trip. I cannot say that I enjoyed the hunting while in this thicket, because I was wet all the time, and one has to be tolerably comfortable to enjoy anything. On the Louisiana side of the Sabine, however, in the rolling pine hills, the deer hunting is simply grand. One can still or stalk hunt there to his heart's content, and kill deer every day of his life if he knows anything about hunting. One cannot help but jump them if he walks through the woods, and if he knows how to use a rifle he is sure of meat. I am going back to that country some day, and as there is still no railroad near it, I know the deer are bound to be there still.

As to the rest of our survey. We ran the line as fast as possible, so soon as we reached the prairies, to make up for lost time. We encountered some antelope, but they were so shy and wily that we could not kill any of them. We also came across numerous flocks of prairie chickens, but could do very little with them.

I have failed to mention the jack rabbits of Texas. The first one I jumped out of the grass, I vow I thought it was a fawn. They have ears from six to eight inches long, and the rabbit itself is as large as a small greyhound, and it takes a greyhound to catch one, too. I saw a beautiful race on the prairie near Hempstead, Texas, between a jack rabbit and four large fine hounds. An Englishman at Hempstead owned a pack of English deer hounds. One day while we were running the line near Hempstead, he came out with four of his dogs to have a race with a rabbit or an antelope. He jumped a rabbit, and it was a race for life and death. At first the rabbit gained on the hounds, then they gained on him, and the rabbit commenced to double on his track like a fox and run in a circle. Every now and then one could see the rabbit jump clear of the grass so as to locate the dogs. It took those dogs nearly an hour to catch that rabbit, and they finally overhauled him in less than a mile from where he started.

We reached our western terminus about the 1st of April, after running a line about 750 yards long and taking seven months to run it. We passed through some very disagreeable country in Western Texas, and got into the chapparel and mesquite thickets, and between that and the cactus we came near losing all of our clothing. When we got back to Shreveport we were a browned and hardy looking set, and would then have made good soldiers. We brushed up, bought new clothes all round, drew our eight months' pay and were happy. The railroad was never built. It was found that it would not pay, as the company was fearful lest they would have no local travel from the "Big Thick," and other sections of Eastern Texas, excepting the bears and alligators, and possibly the coons and catamounts. For that reason I say that the game is still in Western Louisiana, the garden spot of earth for deer hunting, the "happy hunting grounds."

I will in my next give you some minute descriptions of several deer and bear hunts that I had two years later in the Bolivar country, Mississippi, about one hundred miles south of Memphis, in the canebrakes of the Mississippi River swamps.

A. B. WINGFIELD.

TENNESSEE.

AN ENGLISHMAN'S EXPERIENCE OF FLORIDA FISHING.—III.

BY ALFRED C. HARMSWORTH.

I have said little of the Florida scenery, because it is difficult to convey any notion of its simple beauty in words.

We passed down a river which narrowed occasionally to a few yards only, and then broadened out to the width of half a mile. The water was blue as the cloudless sky, the trees for the most part monotonous—the strangely rooted mangrove, varied by magnificent palms.

As we emerged into a wide lagoon the mullet were jumping. I shall never forget the sound of those tens of thousands of fish leaping at one moment. A pound trout can make a fairly loud "swack" as it comes down. Try and imagine myriads of fish doing this at the same moment, picture them extending in gleaming shoals almost as far as the eye can see.

They ceased as suddenly as they had begun, and we went on and on through lagoon after lagoon until we grounded on one of the many beds of oysters that infest—yes, that is the correct word—the creeks and rivers of Florida.

Those who are fond of what it seems to be the thing to call the "succulent bivalve," should take a shipload of brown bread and butter, with an adequate supply of pepper and vinegar, and emigrate to Florida at once.

Oysters are to be had there for the picking. We got out of the boat, procured a mass of them and proceeded down stream eating them as we went.

A little further on I was reminded that travelers' tales are occasionally true. I daresay a good many of us have read one time or another a paragraph that often goes the rounds entitled "Oysters that grow on trees." Most of us have probably set the statement down as a thundering lie. I did certainly. I regarded it as of the same category as another popular paragraph that tells us about the gentleman of South Africa who has trained monkeys to serve as clerks. Having seen the tree growing oysters I can almost swallow the monkeys (metaphorically, of course).

The mangrove tree spreads in a curious way. As it grows, its branches dip over into the water and make fresh roots. To the drooping branches the oysters attach themselves, and thus it is that one can cut off a young limb with four or five dozen oysters attached. These tree growing oysters are not, as a rule, good to eat. They told me in Southern Florida that it is always dangerous to eat oysters that are uncovered at any state of the tide.

Presently we passed out of the wide lagoons into a narrowing portion of the river, where the rush of the water reminded me of the Rhone as it enters the Lake of Geneva. We had been more or less drifting hitherto, but now Hart had his work cut out. Owing to some curious natural formation it appears to be difficult to row going either way a little above Gordon Pass. The natives, with that delightful lack of formality which distinguishes American nomenclature of places, terms this "Pull and be d——d," and it was hard to suppress a smile when this free and easy name was mentioned quite seriously by some solemn old gentleman in discussing his adventures of the day.

A few yards more and we were to commence tarpon fishing. We anchored the boat at the verge of a large pool, and, though I did not know it, I was on the eve of an exciting experience. Having rigged up my tarpon tackle in the manner described in a previous chapter, I donned the necessary belt, cast out my mullet, sat down, lit a pipe, and prepared for a doze. I have described to you the stiff 7 foot rod, and the big reel that runs on ball bearings and carries 600 feet of fine salmon line.

Resting the rod across the boat I was indulging in a post-prandial day dream, when the handle of the reel began to revolve. I was awake in an instant. The check was off; I had come to the conclusion, after careful consideration, to invariably keep it off during the first run of a tarpon, in order that he might gorge the bait sufficiently without feeling any strain.

"Tarpon?" I said to Hart, interrogatively.

"I think so, sir," he replied.

About seventy-five yards of line ran out, when, to our dismay, the line speedily began to slacken. Either the tarpon had dropped the bait or it was not a tarpon at all.

"I guess it is a shark," remarked the guide.

Standing up in the boat, placing the butt of the rod in the cup of my safety belt, I swung round and struck the fish with all my strength and weight.

Whatever it was, and at eighty yards we were too far off to see, it came to the top of the water and plunged furiously. Hart was puzzled.

"I never saw a tarpon stop so soon as that," he said, "but I never saw a shark come to the top of the water in that way when he struck."

We had no time for colloquy, for the fish began manoeuvering in a style that was quite new to me.

Up came the anchor, and the next moment Hart was pulling with might and main for the centre of the pool, in order that I might have the best opportunity of playing whatever it might be.

The line suddenly slackened, I wound faster and faster till my fingers were going at their utmost speed. It is not easy to describe what passes through the angler's brain at an exciting moment like this, but for a brief instant I felt certain that whatever had taken my bait was off. But no! Of a sudden the strain on the line commenced again. I tried what I could do to weaken the fish by pulling against it. The result was merely to send the reel dashing round again, and it sang, for the check was now on as though it were being worked by some rapid machinery.

"That's a shark, sir," remarked Hart.

What was to be done. Playing shark on a light line is a sport that had never occurred to me, though it is one that in my opinion is next only to tarpon fishing

for excitement, as thrilling indeed as one could wish. A 7 foot shark is supposed to be as strong as three men. He can swim at twelve miles an hour, and can tow a heavy boat with the greatest ease.

The inevitable revolver, which I had taken to Florida on the advice of a friend who had been there, and which I found to be useful in more ways than one, was in my belt, and knowing that it would be absolutely impossible to gaff and kill a monster of this kind by the ordinary method, I got Hart to remove the "gun" and see that it was all ready for action if necessary. I was, however, slightly too previous. It did not occur to me that the killing of our friend would occupy the time it did.

"You must get him as soon as you can, sir," remarked the guide, "otherwise he will bite through your leather trace, and be off." So I resolved to try and fight Master Shark by strength alone. Pulling directly against him, however, I could do nothing; but when I worked my rod sideways with my whole weight, and the impetus caused by Hart rowing in a direction contrary to the fish, I found that I was able to turn him, and this, I think, is the secret of tiring a giant of this type.

Again and again I repeated the maneuver, and presently I began to gain on my fish. All this time, however, we had been traveling rapidly up stream. Resolving to get to close quarters and shoot the brute if possible, I told the guide to row his hardest in pursuit.

As he rowed I wound. We got within four or five yards of the monster, and I saw his great, pale brown hideous body, six or eight inches under water. Clasping my rod firmly in my left hand I took my revolver, attempted to lift the shark's head slightly, and fired

That was an exciting moment, for the fish might upset the boat. It is all very well for Floridians to tell one that a shark does not damage a "human" once in ten years in those parts. I do not believe the statement, and even if I did, a shark is such a loathsome and terrifying brute in appearance that I would certainly not care to be in the water with one in close proximity.

The bullet struck him at the back of the head and the result was scarcely what I hoped. He lashed the water furiously for a second, and was off down stream at a tremendous speed. By this time the perspiration was rolling from me, and I was getting tired. There was nothing to be done, however, but to follow him. He ran for a hundred yards.

I tried to check him several times meanwhile, and made him tow the boat a considerable distance, but I began to fear that either rod or line would give. Having placed himself at a safe distance from the boat, he commenced a series of jerking motions of the head that sent a nervous chill up the line and made me think that he was fairly certain to get away, and that I might as well end matters by cutting him loose.

"Nothing venture nothing have," and after a rest for a moment we were after him again.

He varied procedings this time by getting on the other side of a sand bank.

I could feel the line rubbing against the sand, and hoped there were no oyster shells in those parts. In a moment or two we were upon him. He bolted round the far side of the sand bank, towing us with him, and then out again into the middle of the pool. I tried my old tactics of dragging his head round sideways. He could not stand this.

Whether it pained him or tired him I am unable to tell, sufficient to say that we got him within six or seven yards of the boat, and were getting the revolver ready, when there was a repetition of the previous miniature maelstrom on the water, and down he went.

But for the dexterity of my guide he would have upset the boat, for he went directly underneath it.

Lowering the point of the rod I let him tow us. He was evidently tired, and perhaps the wound was telling upon him.

I could feel that he was struggling along against the stream with that heavy weight behind him, and I had that peculiar intuitive feeling that I had my fish. I gave his head a tremendous side turn, wound rapidly, and we were up to him.

Hart put the revolver in my hand. Bang! bang! bang! The water was red all round us, and with a horribly suggestive sound Hart drove the big gaff well into him. I shot him in the right place near the top of the nose, where the shark's brain is to be found. He was as dead as a door nail, and a particularly unpleasant sight into the bargain.

What was to be done with the brute? "A portion of the backbone would make a nice walking cane," remarked Hart. We towed him ashore, dragged him high and dry on land—but I will draw a veil over the next half hour, suffice to say that at the end of that time I had a trophy consisting of a long strip of shark skin, which is now being made into a cigarette case, and all the elements of an excellent walking stick.

We had scarcely settled down to fishing again when I had another run. What it was I shall never know. We came to the conclusion that it was a Jew fish. Jew fish attain a tremendous weight, and they have a more hideous looking head than one has ever seen in a nightmare. The bait was gone, a new one was necessary.

Almost immediately there came a run about which there was no mistake. One shark a day is quite enough for a strong man, and I am by no means a Samson. I did not wish for another battle, but the quarrel was forced upon me. Not having started with serious thoughts of tarpon fishing that day we had brought with us only two hooks. If I had cut loose this shark our sport would have ended for the day.

Having gained experience by this time, I should no doubt be able to kill him quickly and save my hook. The newcomer behaved in a different manner. He began by sulking. More than once we had him directly under the boat. As soon as our shadow passed over him he was off, first up stream and then down, and then from side to side, until the roar of the breakers told me we were not far from the mouth of the river. How many times I wound in on that gentleman and tried to shoot him I cannot remember, but over and over again I had him almost in sight and then he either saw or heard us and was off. The tide had turned, and he towed us down to the Pass, as the mouth of the river is called.

We had no intention of being towed out to sea, as have many other fishermen in those parts, and we resolved that as soon as we were able to do so we would land on a little sand bank at the mouth of the river and play him from the shore. There was some brisk fighting, however, before we got there, and I fancy I tired him more than he would have cared to confess. Once on shore we managed to get him into shallow water, shot him and hauled him up. Attached to him were a number of those little flatheaded fish which are said to follow the sharks in all parts of the world, and are known as pilot fish. It was most pathetic to see the way they attached themselves to their master as we drew him up. He was small, between five and six feet long, but very game. Some genial sportsmen from Toledo, Ohio, who were trolling at the mouth of the Pass helped us to cut him open, and I remember that his heart beat for some minutes after we had removed it from the body. Can there be anything more cold and greedy than the pale and stony green eye of a shark? This unpleasant fish has the smallest heart and eyes and the largest stomach of anything of its size that walks or swims.

UNCLE RUSTY AND OLD SILE.—II.

A Backwoods Correspondence.

Hawley's Meadows.—The folks have gone to meetin' and me and Jack are left to hum to see that the cows don't git into the mowin' lot. Can't ye imagine we're a settin' on the fence over thar?

See that brindle cow over yonder, rubbin' up agin that oak tree? Wall, sir, she sarved me the curiost trick once ye ever heerd of. It was two year ago last August; I was settin' out in the summer kitchin shellin' peas, and Jerushy was out in the woodshed pickin' up kindlins. All of a suddent she yelled, "Rusty! Rusty!" I said, "What is it?" kinder perlite and calm, for I was feelin' in good spirits that day, for I'd just finished hayin'. "Well," she sung out, "old Brindle's up in the orchid gorgin' them cider apples that's piled up under the pippin tree." Course I went up quick as I could and druv her out and put up the bars. Said I to myself, that cow'll be dead fore mornn'. She hed et about a bushel of apples. Next mornin' I milked her and kep her milk separate. Jerushy churned it to see if it was any good, and bimeby it come, and she says, "Look here, Rusty," says she, "what funny lookin' butter." I looked into the churn and there was about four pound of the nicest apple butter a feller ever see. Cider apples at that, too. Maybe you don't put much confidence in that there story—but it's gospel truth, and we 'gzibited the butter at the fair down to Cherry Park and got fust premium

Your letter come all right. I tell ye I was glad to git it. Does a feller good to git out and stroll round and see how things is getin' on. See the old bee tree where ye took out the honey last fall, and go down the old stone bridge over the brook and lie down on your belly and watch that big trout you uster watch, every now and then flap his fins to keep in the same place; walk up to the pasture with the black birch standin' in the corner, and see the skeleton of Mr. Fox ye killed last winter ahead of the old dog; and while ye set there thinkin' a couple of jays come and set in the cedars and pick them purple berries and scream at ye. Then go down to the flats along the river, go thro' the alders aways till ye come to a little open medder about an acre, all overgrown with wild rice and rushes and medder-rue, and ye'll see the old mushrat house tore down jest as ye left it last spring when ye was trappin'.

Go up on the hillside in the orchard that runs right up the hill till it comes to the woods; set on the fence and whittle—set thar awhile and mebbe ye'll see that old gray squirrel come out and bark at ye, and a little further on ye'll see a yeller and black bird come flittin' along and light on a candy thistle and scatter them down all round—don't move or ye'll scare him. Let the little feller git the seed he's arter. Hear that? That's a partridge drummin' up in the timber. Yes, sir; he's about half a mile away and ye kin hear him so plain jes like he was rite back of ye; that's cause the woods is so still. Ain't the hill hazy and far off? Pretty, ben't they? Gol, ain't that a sweet note back in the woods! That's a hermit thrush; ye'll go in thar and find ye can't see him, but he's in thar among them catbriars.

Thar, sir, Jack's got a woodchuck in the stone wall—hear him whistle and make that throbbin' sound and snap his jaw and chatter? Ye can git him out jest one way if the wall is too big to pull down, and that is to take a stick with a short fork on the end and push it in till ye comes up against Mr. Chuck; then twist it round and pull back—he's got to come then.

See that brindle cow gorgin' them cider apples. She'll be sick in the mornin'—but I won't prevent her. She b'longs to Stevey Pitkin, and me and him don't cotton on to one another not this summer—not sence we had that leetle dispute about what becomes of my traps what I had sot on his land last spring. Gol, how I wisht I could set here forever and watch things goin' on so pleasant like, but, let's see; I presume likely it's about 4 o'clock, and thars six cows to milk—come Jack—you'd most likely howl and claw about that stone wall the rest of the day if I'd let ye. Come, Jack, stop yer noise and let's go and fetch the critters. Yours,

RUSTY.

Through Parlor Car Express to Atlantic City via Pennsylvania Railroad.

The New York and Atlantic City Through Express via the Pennsylvani Railroad will be placed in service Monday, Jan. 14. This train will be composed of Pullman buffet parlor cars of the latest design and the standard passenger coaches of the Pennsylvania Railroad, and will afford a most comfortable means of reaching the popular "City by the Sea." The train will leave New York, stations foot of Cortlandt and Desbrosses streets, at 1.50 P. M. week-days, and arrive at Atlantic City, without change, at 5.30 P. M. Returning, it will leave Atlantic City 9.00 A. M. week-days and arrive in New York 12.43 P. M. Stops will be made in each direction at Newark, Elizabeth and Trenton.

This arrangement will afford excellent connections to and from New England, Eastern, Central and Western New York State.—*adv.*

Natural History.

QUAIL AND INSECT FOOD.

Cincinnati, Jan. 4—The quail shooting in Ohio during the past seasoan was poorer than I ever saw it before. In the early part of summer they were plenty, and their clear notes could be heard almost anywhere outside of the cities. But as fall approached they became fewer and fewer, until when the open season came there was scarcely a covey to be found. I do not mean throughout the whole State, for there were some good bags made in some localities if I was rightly informed; but generally speaking they were scarce. Since the first of June last I have been in the country, fishing and shooting, but my principal pastime was collecting insects, the study of which I am passionately fond of, and this, as everyone who follows it knows, places one entirely in communion with nature, and after a few summers of such work an object is exceedingly small that will pass one's eyes unseen. It teaches one to sight quickly and to catch the faintest sound. Many times while down on my knees picking over some bits of moss and rotten wood in search of some particular specimen, I would hear some little sound come from the leaves around me, and placing my ear close to the ground have listened to the sweetest chorus of insect voices that one could imagine.

With myself, and probably others, it is a problem what had caused the scarcity of our quail, but I have solved it to my own satisfacton and I hope to the satisfaction of others.

While on some of my rambles along the banks of Talawanda Creek, near the classic little village of Oxford, I came on to a quail's nest containing twelve eggs. Two days later when I visited the place they were gone. I called and soon had an answer from the mother bird. I dropped down and called again and listened. She answered again and came toward me through the grass and weeds, and I had a chance to view her with all her children but one. I was at a loss to account for it absence. The mother stood and watched me, while her children hugged the ground pretty closely, and if one would move she would give a chuckle and down would go its head as though it were shot.

The next day I found another covey of nine young birds. These were about one week old, and a day or two later I found still another covey of eight. Now these three coveys I watched day after day, but every time I found them one or two were missing. I went away on a collecting trip, and when I returned in September I looked for my pets, but, alas! I could not find one. So I borrowed an old pointer and tried again. After working hard for an hour or so, the dog made a stand while I tried to locate them over her head, but she sprung forward and caught one in her mouth while the mother bird and the surviving offspring, which was not much larger than a sparrow, arose and took to the thicket. The dog nearly killed the one it caught, so I had to finish the work to put it out of misery. This dead bird I dissected, and am now fully convinced as to what caused their deaths, and probably caused the scarcity of quail throughout the country.

Young quail live principally on insect diet and other soft food, the insects that the quail feed on require rich and rank vegetation, and the rich and rank vegetation requires rain. During all the summers I have collected, I have never found insect life so wanting as this summer. No rain, no rank vegetation, no insects, no quail. Is the problem solved? F. B. MAGILL.

THE PUEBLO BEAVER COLONY.

Lake Molechunkamunk, Maine.—Some of your readers may remember an article of mine which appeared in Forest and Stream number of March 23, 1893, regarding the unusual action of a colony of beaver, which came into the city of Pueblo and established itself well within the city limits in a marshy tract of land adjoining the union station of three railroads back of the Grand Hotel.

I was in Pueblo last month and interested myself in the subject, visiting the tract, and found the conclusive indications that the colony was still there, and evidently in a prosperous condition. The runs among the dead reeds and grass of the marsh were clearly evident, as well as on the firmer land of the shores, and their habitations beneath the banks were clearly indicated.

The situation had improved for the beaver by the unusually high freshets of last May and June, which threw up a substantial embankment at the south end of the marsh, saving the beaver the necessity of doing this work. The marsh is fed by a number of large springs, which creates an abundant supply of water, the surplus of which flows out beneath the railroad track to the Fountain stream below. In the marsh are many succulent tule, and grass roots which supply food, and about the spot are a number of cottonwood trees. The latter did not seem to have been disturbed since my last visit in March, 1893, when a number had been neatly cut down by the beaver, one of which I observed to have been twelve inches in diameter. The limbs had been entirely cut away from the parent trees, and conveyed into the marsh, and laid the foundation of the larger embankment now existing, which caught the debris of the last summer's freshets.

The body of permanent water now retained is increased over any previous holding, and results from the ingenious construction of the beaver upon taking possession of the marsh in January or February of 1893. I will confess that I was much surprised and delighted to find the colony still in possession, despite the proximity of so large a population as that of Pueblo, which cannot be less than 35,000, and which must certainly contain its proportion of adventurous boys. But the beaver colony has evidently failed to attract any special attention, and it is doubtful if more than a very few residents of the city know of its existence.

It is a very remarkable feature, that of the colony, that it should have become located where it is, and that it should have continued its existence in the midst of its most implacable foes. Within a very short distance is the railroad station of three large continental railways, the Denver and Rio Grande, the Union Pacific and the Missouri Pacific. From this station, erected

at a cost of over $30,000, a stone could almost, if not quite, be thrown by hand into the beaver colony; yet in speaking of the subject to the station master I found he was entirely ignorant of the subject.

In conversation with Colonel Stanton, an old and prominent citizen of the town and of Colorado, the owner of the land where the colony is located, and who is quite interested in this family of squatters who have taken possession of a portion of his land, he estimated that there were fully a dozen, and perhaps more, of beaver in the settlement, and that he had in a few instances warned off parties whom he had feared might intrude upon the beaver. He informed me that he had not known of any disturbance of them, and he should exert himself to see that they were not molested. Although he frequently visited the spot he never caught sight of the residents but once, and that only a few days before my interview, when, with a friend, approaching the marsh, they both saw a large beaver on the bank, which, disturbed by an incautious step, plunged into the water and disappeared beneath the shore. J. PARKER WHITNEY.

MONGOLIAN PHEASANTS.

Holland, Mich., Jan. 8.—For the benefit of those who may desire to rear the mongolian pheasant, to stock our woods and fields, I will give the result of my first year's experience with them. In the fall of 1893 I purchased four hens and two cocks from Mr. V. DeGuise, Mahwah, N. J. These I kept one winter without losing a bird. They slept out of doors in the snow all winter. And they did so from choice, as they could go into a warm barn if they desired. They do not roost together in a bunch as do quail, but scatter all over the pen. The hens began to lay April 15, and laid 175 eggs, the last one August 26.

I was compelled to use Plymouth rocks or other large hens for setting, as no bantams could be obtained. These hens killed a great many chicks by stepping on them, and I believe a large number were smothered in the nest. In each setting there were from two to six dead chicks in the nest. They had got out of the shell all right, but I think the great weight of the hens killed them.

The chicks will run soon after hatching. Here is something to guard against. I lost fifty per cent of my first hatch, as I did not think of their leaving the nest so quickly. It was cold and they were chilled. Several I found apparently dead, but upon being placed near a warm stove they soon revived and were all right in a day. The nest box must not be made so small that the young birds will be compelled to stay in the nest, because if it were the hen would be very liable to break the eggs by jumping upon them when returning from her feed. I make the nest box as small as practicable and take the chicks from the nest as soon as they are hatched and place them in a warm room until the eggs are hatched. Then I give all the chicks to the hen.

Before setting the hen sift her feathers full of Persian insect powder and put some in the nest.

I usually make the nests right on the ground. Cut a sod, hollow it out in the center, on the bottom, place it in the nest box with some straw upon it. I put the sod moist, so the eggs will not get dry, which would prevent their hatching. At any rate this is my theory, although it was somewhat shattered when a friend set twenty-three pheasant eggs under two hens, in a box four feet from the ground, where there was no moisture, and hatched seventeen live chicks.

An amusing incident occurred in connection with this hatch. Both hens were set in the same box at the same time, and of course both settings hatched at the same time. One of the hens was apparently puzzled at the peculiar looks, actions and noises of her brood. Jumping upon the edge of the box, she eyed them curiously for awhile, then gave a loud cackle and left the nest and could not be induced to return. The other hen readily took the addition to her brood and cared for the entire seventeen.

The chicks should be well protected from the cold and wet for the first few weeks of their lives. I kept my hens and chicks in a barn for the first week, then they were taken out into a run 4x8 feet in size, of inch mesh, wire netting. It is best to cover the runs with fish net or something of that description, as the young birds are very wild and liable to injure themselves by flying against the top of the run when disturbed. The runs should be placed on grass, or better, in growing clover—which will supply insect food—and a small spot should be spaded so that they may roll in the sand, something they enjoy. Every night and on rainy days I cover the runs with old matting, or oil cloth, to keep out the dampness. I tried placing a box in the run for them to roost in at night, but frequently they did not all get in, and if the night was cold I would find one or two outside dead in the morning. Before placing the chicks out in the runs I dust them and the hens well with insect powder, and have had no trouble with lice, not losing a bird from this cause.

I feed for the first week eggs boiled twelve minutes, chopped fine shells and all, and rolled in ground barley—barley-meal. Use enough of the barley so that the feed will not be sticky. Feed four times a day for the first week, first giving the hen all the grain she will eat, or the young pheasants will not get much of the egg. After the first week or two gradually give them a little grain each day, changing entirely to grain after two months. Chopped meat should be given occasionally, also cabbage, lettuce, clover, etc.

Having read that it was absolutely necessary to feed the larvæ of flies to the young pheasants, I experimented a little. I placed two broods in the same situation and treated them exactly alike, except that I fed the larvæ to one brood only. The birds which had none did exactly as well as the others. The eggs partly supply the insect, or animal, food.

I set about 100 of the eggs laid and hatched about sixty chicks. It does not seem to pay to set the eggs after the warm weather comes on, as I got but one or two chicks out of each setting hatched during July and August. It would pay better to feed the eggs to the young chicks.

I now have seventeen young pheasants alive, eight hens and nine cocks; the rest have been killed by the hens stepping on them or by fighting among themselves, and several have escaped.

In the early spring I shall set five pairs at liberty, the rest of the hens I shall keep for breeding purposes. The surplus males I shall dispose of in some way. The birds raised this coming season will be turned out in September. A few days ago one of the old males, in an endeavor to get into an adjoining run, got its head fastened in the netting and was dead when I found it. I have it mounted and in my collection of game birds. I am very much indebted to Mr. F. L. Rogers, with the Wyandanch Club, for many valuable hints and would probably have been more successful had I followed his suggestions more closely. ARTHUR J. BAUMGARTEL.

THE ZOO IN WINTER.

Paris has two great collections of living animals in its Jardin des Plantes and Jardin d'Acclimatation. A French journalist has recently visited the former and has published his impressions of recent improvements in one of the daily newspapers. It appears that the Jardin des Plantes has introduced a style of descriptive label which is to be found in its perfection in the Zoological Garden of Antwerp and elsewhere on the Continent. It is a card giving the class to which the animal belongs, its common and scientific names, the name of the describer of the species and the habitat.

Along with these dates is a small map of the world on which is marked in red the area over which the animal is distributed. This method of condensing a great deal of useful information within a small space has added much to the pleasure of visitors and is, therefore, very popular.

The difficulties to be overcome in imitating the natural surroundings of certain animals and the effects incident to change of season are set forth by the correspondent in the following quaint style: "The air is keen, intensely cold; a sheet of ice covers the winding streams. The easy carriage and satisfied countenance of the polar bear are explained by the descriptive label, which states that he is a native of boreal regions, and it is pleasant to feel a temperature which recalls his birthplace. On the other hand, what cruel irony pursues these poor sheep frisking about awkwardly in their furs! They are from the Atlas Mountains, and now, for Mount Atlas, they are reduced to an enclosure of a few metres in the middle of which rises a ridiculously little rock heap.

"These goats are from Morocco; they have a sorrowful look which excites our pity. They shiver and murmur through their small teeth to whoever approaches: can you tell me the country wherein the orange flourishes? They are not consoled by the thoughtless reply of the Parisian: It is the Garden of the Tuileries."

It is gratifying after all to observe the progress shown in providing for the wants of animals kept in captivity—progress which is not limited to the older establishments of Europe, but is equally manifest in our own country. Nature has surrounded many of her wild creatures with conditions which are almost impossible of reproduction, but humanity has labored faithfully to render captivity as little painful and as favorable to longevity as circumstances will permit. T. H. B.

Frozen Fish and Greedy Ducks.

Titusville, Fla., Jan. 6.—The following may interest your readers, showing one of the results of the cold snap on the Banana creek and Mosquito Lagoon in Florida.

The water is very shallow, and it became so cold (ice making along the edge on the banks) that myriads of fish died, of all kinds and sizes, so that they lay in a continuous string along the shore. I found an alligator apparently dead at the water's edge, and slipped a noose over his snout, when he opened a fishy eye and backed off. He was finally shot, and measured ten feet two inches. A man at the foot of Mosquito Lagoon gathered in forty green turtles in one day, most of which died shortly after.

The most curious result of the fish being killed was that the broadbill ducks, of which there are many here, took to feeding on the small dead sea trout, which they dove for and picked off the bottom before they had decomposed enough to float. In the small cove by the side of the Canaveral Club house seven ducks were found floating, and stranded on the shore dead, each choked with a fish half out of its mouth, too large to be swallowed. Another still warm and apparently just dead was picked up while I was out shooting. No doubt very many met their death in a similar manner. W.

Early Generic Names Restored.

In the first number of the new series of Science, a publication which for some little time has been suspended, Dr. C. Hart Merriam announces as a result of his investigations that the generic name Mazama, which for years has been employed for the mountain goat of the West, must be supplanted by the name Oreamnos, which Rafinesque also proposes for this genus. The goat's name, therefore, according to the most recent authority, would be Oreamnos Montanus.

In the same article the name Anisonyx Raf. is given as the earliest generic name for that group of ground squirrels which we have known under the name Spermophilus.

Wild Pigeons in New Jersey.

Princeton, N. J.—I see in the last issues of The Forest and Stream various notes on the occurrences of the wild pigeon in New York State. I thought that it might interest a few to know that New Jersey was also favored. About the third week of last August I saw a flock of 28. These did not look as if they were going to stay with us very long, as they were flying south, but they were quite near and low, so there was absolutely no mistake as to their identity. These are the only individuals I have seen in years. In September, 1881, I shot a single bird, and in August, 1891, while in the Adirondacks, on the Moose River, two separate individuals. It is to be hoped that the few that remain will be permitted to make the attempt at least to keep thei race from dying out entirely. It was with great disgust that I read that hunters were trying to shoot o catch with nets those that were seen in New York.

A. H. PHILLIPS.

Game Bag and Gun.

IN MASSACHUSETTS COVERS.

One Sunday in last August, while picking my way along a muddy wood road some thirteen miles from Boston, my attention was attracted by innumerable holes that might have been made by thrusting a lead pencil into the soil. I had, however, heard of these often enough to feel no surprise when my dog came to a point, and on walking up I flushed a woodcock, which rose silently and slowly made its way to a patch of alders. Though an inexperienced shot myself, I could not help wondering how sportsmen could have found pleasure in shooting these birds when the season opened in July and August, finding them almost featherless and lifeless.

During my walk I located three other woodcock, two of which were near stone heaps on a scrubby hillside, and a covey of eight grouse. These few encouragements made me spend much of my spare time before September 15 in like manner, and I noticed that, although a careful examination was made, there were no footprints of the birds around the borings.

September 15 came at last, after what seemed to me several months of waiting, and was a perfect day for shooting. Determining to get a good start, I retired early the night before, giving strict orders to be called at 5 a. m. I was therefore somewhat annoyed, on waking myself, to find that my "day off" was to begin at 6.30 instead. In half an hour I was on my way to the woods with twelve shells of No. 9 and ten of No. 6 shot (I am cranky on loads, for, after experimenting, I find that 3¾ drms of powder under 1⅛ oz. of shot suits my 12 bore as well as any load.) The high spirits of my dog soon improved my temper, and by the time we came to my first location I felt that if I got only two or three birds my day's vacation would more than pay me.

For some time I had seen little of the dog, his bell telling me that he was well within the regulation distance, but soon he trotted carelessly towards me through a bunch of alders and had come within thirty feet of me when his head suddenly jerked to one side and it seemed as if he had seen the head of Medusa. Although taken while completely off his guard not a muscle stirred after catching the scent; how awkward he seemed compared to the graceful poise taken when stopping on a bird after trailing it.

However, I knew that of the two this was the better way of showing his nerve, so getting in the best position possible, I watched him a full minute before giving the signal to flush. He did not stir, and only after being ordered the third time did he give that well known leap and land, with forepaws stretched well in front, almost on top of the hiding bird. A shrill twitter of wings (or throat, as some say), and "Philohela minor" was at the top of the trees, to pause an infinitesimal period, then dart like an arrow out of sight. It was my first shot of the season, and I was so much occupied by the actions of my dog (it is not all in shooting to shoot) that the gun did not speak out until the bird had disappeared. However, as the dog had not budged after flushing and seemed anxious, I sent him in, and was soon agreeably surprised to see him reappear with the bird in his mouth. It was only winged, and its head and neck, stretched from the dog's mouth, kept perfect time to his motions as it looked in all directions for some way of escape. I admit, I felt badly.

The next location was at the edge of a marsh some half a mile further on, but before reaching it we flushed three more, of which only one came to bag. This was scarcely surprising, as the cover was so thick as to make it almost impossible to see the birds when they rose. On coming to the edge of the meadow the borings were all there, but the bird was missing. After considerable search I came upon two empty shells, which explained both the absence of the bird and some shots I heard the day before.

Moralizing on how some men stretch the game laws, I wended my way to the stone heap above mentioned, where Polly struck a trail and soon came to a point under a scrubby oak. Being on the wrong side I was walking around when Philohela decided that he had been there long enough, and went out on the opposite side from me. I caught just a glimpse and let drive through the thick of it, when, after the smoke had cleared, I saw the token of success shown by a dozen downy feathers which floated aimlessly above the trees.

This soon convinced me, as it has done often before, that a good sized charge of powder will send shot through a branch with better results than a small one. I had gone scarcely ten steps farther on when a bur-r-r to my right made me whip up and take a snap shot at a reddish grey streak as it appeared for an instant in the scrub. I listened anxiously until a dull thump, accompanied by a hurried rustling in the leaves, told me that a ruffled grouse was shortly to be added to my bag. I was now feeling friendly with everything, even with the twigs that occasionally snapped back into my face, for I was convinced that my previous poor opinion of my skill was entirely erroneous. In fact, when, a mile or so further on, another woodcock leaped from under my feet and flew through an opening toward a thick swamp, I felt sorry for him as, taking cool and perfect aim, I pressed first one trigger and then the other. But my previous sorrow for the cock was not a circumstance to what I felt for myself as the bird, with never a feather missing, winged his way to what I knew was safety.

Just then a series of whistles warned me that it was noon and high time for lunch, so I started homeward by a circuitous route that lead me through a grove of young pines standing at the foot of an oak ridge. Here, as I expected, six grouse rose and hurried up the ridge, despite my two pressing invitations to stop. Thinking that was all, I started after them, when another rose and immediately put a pine between him and myself. This was a good idea, but it failed, as the pine was too small to completely hide him.

Now, "enough is as good as a feast," so I left the others, thinking I had enough for one time, and continued homeward. I had almost arrived there when a twitter came from my left (the dog was tired and must have stumbled on it accidentally) and standing perfectly still, I was rewarded by seeing a woodcock appear over my head to drop not ten feet from me. It repeated the

actions of one I had noticed last year, and perhaps a description may prove interesting. As soon as it reached the ground it ran about two feet at right angles from me, when, suddenly looking around, it saw me. Immediately squatting close to the ground, it curved the tail well over its back and held the head with the bill pointing to a spot on the ground about three inches away. This was undoubtedly a method of concealment, for it made a nearly perfect imitation of the dry oak leaves that lay scattered about. Suddenly stepping forward, I had the longed for opportunity of seeing him rise from the ground. The bird accomplished this by leaping almost perpendicularly into the air, and spreading its wings immediately after leaving the ground. I had to stop him before he went far.

After a hearty lunch, I amused myself by taking a series of photographs of my game. The one given shows that, of the woodcock, there was but one young bird, which seems singular, as the season was a very fair one for breeding. At half past four, while thoughtfully looking out of the window, I saw three gunners heading in the direction of my favorite spot. It lay in the opposite direction from the locality of my morning hunt, so feeling sure they were of that class known as "pot hunters," I seized my gun, hat and a few shells and hurried towards the place. My conscience troubled me a little until when almost there I passed one of them, who was giving vent to a number of stentorian signals in order to convey to the others an idea of his position.

The "spot" is a line of alders and birches which separates a cow pasture from a woody swamp, so, knowing that the birds would not go toward the pasture, I sent in the dog and walked along the swampy side. The line was some two hundred yards long, and on coming to the end, I had two more fat woodcock in my pocket and another goose egg to my credit on a bird that flew in plain sight for some fifteen feet. How on earth did I miss it? I wonder if I am the only one who has asked himself that question. I rather think not.

J. H. BOWLES.

A HUNTING TRIP IN NORTHERN COLORADO.

It happened one bright September morning that five congenial spirits in Northern Colorado found themselves confronted with a week's enforced idleness, and by a unanimous verdict it was decided to spend that week in the mountains among the lonely parks and rushing streams that are the home of the elk, deer, bear, mountain lion, trout and many varieties of smaller game. These five were known as Mark, Pete, Smithy, Old Si and Frey.

Mark had been a cowboy in Kansas, and at one time drove a stage coach between Canyon City and Cripple Creek. Any one taking this drive at the present time will long remember it. The coach, drawn by six horses, leaves Canyon City in the morning and immediately traverses a desolate prairie seamed with deep arroyas and covered with sage brush and cactus. But when the mountains are reached what a change! The road is hewn out of the steep hillside. Above are peaks and lofty mesas, below are canyons so deep that cattle at the bottom look no larger than rabbits. The rocks are of all colors, red granite and sandstone predominating. Occasionally a huge fragment of red sandstone may be seen perched upon a weather beaten column of the same material, the whole resembling a gigantic king in a set of chessman and reminding one of the mushrooms in the Garden of the Gods.

The road from Florence to Cripple Creek, although perhaps not so grand, is much wilder. For miles, it winds through deep canyons with almost perpendicular sides, in some places so narrow that there is scarcely six inches of space each side of the wheels. The new Florence and Cripple Creek Railroad follows this canyon, and is a splendid example of railway engineering in the mountains. When it is completed the gold ores from the Cripple Creek mines will be shipped to Florence, where suitable smelters will be erected.

As one continues the ascent toward the great gold camp the mountains become less rugged and gradually merge from rocky peaks into gigantic soil clad domes, from the tops of which the beautiful Saugre de Christo range can be barely discerned in the distance, more like a phantom than a reality. This name, meaning 'Blood of Christ,' was applied by the early Spanish discoverers owing to the prevailing color of the rocks.

For miles around Cripple Creek the mountains are literally dotted with prospect holes, and the loose brown soil thrown out from each reminds one of a gigantic colony of woodchuck burrows.

Passing through Arequa, Anaconda and other camps Cripple Creek is finally reached. Here all is excitement. The town is brilliantly lighted with electricity, and numerous gambling halls luxuriously fitted up with facilities for playing poker, faro, rouge-et-noir, roulette and the Mexican game of craps beguile the lucky prospector or the hardworking miner into parting with his lucre much more rapidly than he made it.

Cripple Creek is at an altitude of about 9,000 feet above the sea level, and anyone wishing to climb another thousand feet up to one of the gold mines in the vicinity must give himself ample time, for the atmosphere is so rare that breathing becomes very difficult after an unusual exertion.

But to return to the trip. Mark's armament consisted of a .44 caliber Winchester and a heavy ten bore shot gun, both of which he well knew how to use.

Pete had been a globe trotter and was at one time a trumpeter in the United States Cavalry during Indian campaigns in Arizona and Colorado. He had traveled in France, Spain, South America, British Columbia and all over the United States, and never tired of singing the praises of Salt Lake City with its wide, well shaded streets and inexhaustible supply of flowing well water. It may sound strange to a resident of the well watered Eastern countries to dwell upon a supply of pure well water, but when it is remembered that all the towns and mining camps use long distances from snow fed mountain streams the advantages of such a supply will be appreciated. A remarkable similarity exists between the topography of the Salt Lake Valley and the Valley of the Jordan, Palestine. Let the reader compare a good map of each of the two countries, and nearly every lake, river, mountain range and peak in one will be found to have its counterpart in the other

Pete carried an "old reliable," and about whose accuracy and killing properties we were constantly reminded.

Smithy was the largest, strongest, best natured and sleepiest man in the party. It was a half hour's job every morning to get him out of bed, but once up he worked as hard as any one. Smithy was armed with an antiquated Sharp's .45-70, with which he could not first hit a deer at 50 yards, but he improved greatly with practice. His favorite weapon was Mark's shot gun, with which he was constantly trying "double raises" on grouse or magpies.

Old Si was the youngest of the party, and was so nicknamed on account of trying to palm himself off as a youth of 19. He rode a little gray mare which persisted in shying at every black stump and large bowlder she saw, but a couple of days' work soon quieted her down to business. Si was the authority on fishing matters, and was armed with a Winchester .38-40, with which he could barely hit a 12-inch circle at 20 yards. He improved wonderfully before the end of the trip and did some good shooting.

Frey was a tenderfoot from New York State, and had only been in the Western country six months. He was a regular crank on shooting matters, and carried a Marlin Safety .38-55 and a Colt's .38 caliber six shooter with both of which he had won several matches in local contests. As he had never seen big game, there was considerable speculation as to his probable success.

The blankets, cooking utensils and provisions are packed in a light wagon and sprawling on top of the load are Mark, Pete, Smithy and Frey, while Old Si brings up in the rear on his old charger.

It is late in the afternoon before the start is made, and we stop for supper beside a cool rill of water. We have brought enough bread for the first two meals; after that has gone we will have to cook flapjacks and bake biscuits in a Dutch oven.

This is simply a shallow iron pot with a tight fitting cover and is indespensible in a camping outfit. It is placed upon a bed of coals and embers are piled upon the cover; thus the bread is thoroughly baked on both sides.

After supper we start up a canyon toward the high mesas. A rabbit runs across the road in front of the wagon. "I'll get it," says Old Si, but he doesn't. "Watch me hit him in the head," says Mark, but his rifle is sighted too high and he overshoots bunny, who concludes to take his departure for more salubrious climes. The road now becomes steeper and the boys walk to lighten the load. The sun has set and the moon is in the first quarter, making everything visible, yet indistinct. Graceful, white-stemmed quaking asp, resembling the silver poplar of the East, grow on each side of the road and in the moonlight the trunks have the appearance of silver.

After a delightful climb the boys reach the mesa and wait for the wagon, which overtakes them in about half an hour. In this high altitude there is frost or ice nearly every night, even in summer, and the rainfall is sufficient to ensure a luxuriant growth of grass. All round us are groves of quaking asp and pine, which undoubtedly shelter deer and perhaps elk. It is 11 o'clock, but still we push on, for we cannot camp without water. Finally we notice a deep depression, and following this down we discover a spring almost ice cold, so we light a fire, boil some coffee and are soon asleep, with the sky for a canopy.

At daybreak next morning Mark and Frey start on a hunt for grouse. Mark finds one, and tries to shoot its head off with his rifle, but just as he pulls the grouse jumps and the bullet catches it in the back without injuring the flesh. Frey follows a deer trail and is soon in thick foliage, where the light is very dim. Stepping slowly and carefully so as not to break a twig he suddenly beheld a shadowy pair of antlers rise over a knoll in front. Instantly the rifle is raised to his shoulder, but the buck sees the motion and turns to flee. Bang! and down he comes, shot through the heart. To say that Frey is proud is feebly expressing it. He has killed the first wild deer he ever saw at the first shot. Hastily bleeding his prize he blazes a trail to the clearing and starts back to camp for a pack horse. Mark and Si return with him, and soon the deer is in camp and a nice slice of venison and a fat grouse are cooking over the camp fire. After breakfast Frey rides Old Si's charger and acts as advance guard to warn the others of the proximity of game. Soon he sees a jack rabbit, and riding back tells the others. Old Si is the first on the spot, but is not quick enough, for Brer Rabbit lights out just as Si pulls and the bullet only kicks up a cloud of dust behind him.

In the afternoon we commence a long descent to a splendid river, and at noon stop at its edge for dinner. Smithy and Si rig up their tackle and catch a few fine trout, while Mark and Pete cook dinner. Pete makes the slapjacks, and they are indeed a substantial job. There is no attempt at deception—they are full weight, every one and are guaranteed to stay in a person's stomach twenty-four hours without going to pieces. Smithy suggests that we save some for sinkers, and Si ties his horse to one to prevent its straying away. Frey grumbles at the coffee and tries to improve it by a double dose of condensed milk, but this only makes it worse He finally discovers that the coffee is all right and that the trouble lies with the milk, which he afterwards lets severely alone.

We are soon in motion again and follow a well made road up the river. In a clump of bushes a flock of magpies are squalling, and Frey jumps off to shoot one, for the fancies the wings will be pretty for his sweetheart to trim her hat with. Taking a careful aim he tries to knock the head off one, but the bullet just grazes the wing, cutting nearly all the feathers off, so that the bird cannot fly. As magpies can be taught to talk, and make nice pets, Frey catches this one and ties it with a rag and a string around its leg. It soon becomes quite tame, and eats meat from his hand, but the rag wears off, and Miss Mag escapes.

That night we bivouac beside the river, and have a splendid meal of venison, trout, potatoes, onions and coffee, not to mention the slapjacks.

We have scarcely finished supper when a fine doe comes bounding along within fifty yards of our camp, but we have sworn not to shoot a doe, so she is allowed to go unmolested.

Next morning we make an early start, and about 4 o'clock in the afternoon we reach our destination. We have scarcely jumped off the wagon when Mark and Smithy catch sight of an animal which they mistake for a squirrel. Instantly the Winchester and shotgun commence a serenade, and after running about twenty yards the squirrel drops. Upon examination he proves to be a woodchuck or ground hog, not very common in this locality. A bullet from the rifle has shattered one fore leg near the shoulder, and the stricken animal is now endeavoring to amputate the useless limb. A shot in the head soon puts him out of his misery. We camp in a beautiful spot with water and wood handy, and plenty of good pasture for the horses. The river is close by, and from it we can catch a magnificent string of trout. Early next morning Mark, Frey and Old Si start for one of the nnest haunts of the deer in America.

It is a beautiful park, with lofty hills clothed with quaking asp and pine rising on each side. Deer are all around us, feeding among the trees on each side of our trail, and as Si has never shot a deer he goes ahead with "Old Ebenezer," which he has borrowed from Pete. His motions started the deer, and they leisurely trot away in every direction. We wait for some time, but hear no shot. Suddenly he returns pale and breathless. The gun won't go off owing to defective ammunition, so he borrows Frey's Marlin, and soon four shots ring out, but nothing drops. Si has got the buck fever badly, and is doing some very wild shooting. Soon he gets another chance, and this time drops his deer with a neat shot in the head.

Mark makes a wide detour and comes upon a beautiful mountain lake, deep and tranquil with the tall pines on the mountain side mirrored in its depths. All around are stumps of trees which have been felled by beaver; and there, far across the lake, are two elk. Mark cautiously moves out of sight and makes his way to a point from which he can obtain a good shot, but the elk disappear and all attempts to find them fail. Since he cannot get elk Mark concludes to try a shot at deer, and soon has an opportunity at a big buck, which comes bounding past. Bang—miss—bang—he's hit, but too far back. Bang—miss again. Bang—and over he rolls, shot through the heart. After much difficulty we pack the two deer so that they will stay on the horse and commence our return journey to camp. The trail widens down a deep canyon, over boulders and fallen trees and through streams, and before we get to the worst part the sun goes down and we are left in darkness. We manage to keep the trail, however, and arrive safely in camp.

Next morning Pete and Smithy start for elk. They follow the trail that the boys took the day before, and leave their horses in a grove of quaking asp, taking the precaution to light a fire so that the smoke will enable them to locate the spot from the mountain where they propose to hunt. Up they climb into the heavy timber. Deer are almost constantly within range, but they are after nobler game. For two hours they climb the mountain side, carefully hunting through every promising clump of timber, but although the full round tracks of the game they are seeking are plentiful their makers are not visible. Discouraged they retrace their steps toward their horses, and just before reaching them are startled by a splendid bull elk not twenty yards away. The two Sharps ring out almost as one; the bull staggers, but keeps on his pins. He is hard hit, and the boys have little difficulty in keeping within sight of him. He soon grows weak from loss of blood, and Pete ends his sufferings by a shoulder shot. After dressing the carcase it is carefully covered with leaves and left, to be called for next morning, for it is too large to pack on one horse, and the boys are too tired to walk and pack both horses. Next morning they return with a spare animal and two pack saddles, the meat is loaded on two of the horses, and the boys take turns riding the third.

Toward evening Frey takes a stroll up the hillside to see what he can find He has scarcely gone a quarter of a mile when he beholds above him a triangular head with two round ears peering over a log. It is a silver tip bear, a species much larger than his black cousin, and nearly as fierce as the cinnamon. Frey draws a careful bead on the snout and lets drive. With a bound the bear springs from behind the log and starts down hill for the hunter, who hastily fires two more shots, drops his gun and starts for the nearest tree. Of course, it is very foolish to run away from a wounded bear (in print), but in real life somehow it does not seem so ridiculous. A bear may have a dozen heavy bullets through his vital parts, any one of which will prove fatal, and yet live long enough to kill his assailants. When a bear receives a wound he generally starts to run in the direction he happens to be heading when the wound was inflicted, and if the hunter happens to be in that direction he had better remember the old rhyme.

'He who fights and runs away
Will live to fight another day,

and act accordingly.

After making a 100-yard record for himself, Frey ventures to look around, and to his relief finds that the bear is not in pursuit. Drawing his six shooter he cautiously retraces his steps, and recovers his rifle. Not twenty yards away is the bear dead. The first shot had struck him in the mouth, coming out at the back of the head and causing almost instantaneous death. His first convulsive jump had started him down the hillside, and he had continued rolling until stopped by a boulder. Frey had actually run away from a dead bear, but in his delight at having slain a near relative of "'Old Ephraim" he does not think of that. The pelt is removed with great care, and two of the boys, having come to see what the shooting was about, help him carry in his trophy, which he fondly dreams will some day form a rug for a dainty pair of feet to rest upon.

We have now as much meat as we can carry home and decide to break camp next morning, so are up bright and early, and the second day arrive at home with our meat in perfect condition. We dry the greater portion of it, and for many a day it serves to remind us of our trip in the wilds of northern Colorado.

COLORADO. EDW. F. BALL.

A CARIBOU PARADISE.

It has long been suspected that there was no lack of caribou in New Brunswick. If positive evidence was needed it is more than supplied by a hunting party which returned the other day from Nor-West Miramichi waters, where they fell over so many caribou that all the big game yarn spinners have been thrown out of a job for the winter. The story told by the boys reads like a romance, but they are both good boys, who read Forest and Stream every week of their lives, and there is no reason whatever to doubt a word of it. There were two of them—Billy Chestnut and Bunny Phair. Billy has had a good deal of experience in moose and caribou shooting, and is a cool, reliable shot. Bunny has had a whole lot of experience, too, but is liable to very sudden and severe attacks of buck fever. They had with them as guide the well known hunter and trapper, Arthur Pringle, who is a deadly marksman as well as a gentleman and a scholar, and who for many moons sat at the large, but luminous, feet of Henry Gamaliel Braithwaite. For several seasons the two men trapped and hunted together, until, strange to say, the fur became scarce, when the partnership was dissolved, Pringle opening up a business on his own hook on Nor-West waters, while Braithwaite hung out his sign at the old stand on the Little Sou-West Lake. As all-around woodsmen they have no equals in this province. When you come to talk of big game, there is not much choice between the two districts. Last fall a year ago Pringle and his brother shot three fine moose, one of the heads measuring four feet seven inches from tip to tip. If any of our American friends want to see where nature fairly humps herself—if they want to get away from the "debts, duns and deviltries" of city life—if they hanker for to slay the mighty moose and the coy, capricious caribou—I can recommend Arthur Pringle, Wayerton, Northumberland County, N. B., as a guide who will give them complete satisfaction. I am under no obligation under Heaven to Mr. Pringle. I simply say it because it is so. His location is easily reached, for there is an excellent wagon road from Newcastle to Camp Adams (36 miles), and from there, in the early autumn when big game is ripe, you can pole up the Nor-West in canoes to the very center of the hunting grounds where moose and caribou abound. I will advise also that a cook, or general utility man, be employed, whereby the guide can be left free to attend to hunting, and the work of carrying, of which there is more or less to be done, can be reduced to a minimum. The leading features of the hunting trip above referred to I give in Billy Chestnut's own words:

"We left Fredericton on November 8, and sledded it through from Newcastle to Camp Adams on the Nor-West Miramichi, where Pringle met us on the 10th. He had just shot a young bull moose, and had a fine supper in readiness for us. We had expected to proceed to Camp Crawford, twelve miles further up stream, by canoe, but Pringle had not brought the canoe down, owing to the ice forming in the river, so we shouldered our packs at sunrise and frogged it through, reaching Crawford's in the evening. Here Pringle makes his base of operations. Two days later we tramped six miles further up the Forks, where Pringle has one of his hunting camps. We saw two fresh moose tracks on the shore, but did not follow them. Next day we started for Smoky Camp, six miles distant. We had scarcely taken leave of the Forks when we sighted three caribou, one of which had a fine set of horns, out on the big barren. We got within 150 yards of them.

"I had entered into a solemn contract with Bunny that he was to have the first shot, or I would have opened the ball at once. Bunny thought the game was too far away for a sure shot, so Pringle and he worked down wind for the purpose of creeping up, but in the meantime the caribou took alarm and disappeared.

"We found on reaching Smoky Camp that it was well named. It was the joint product of the architectural genius of Braithwaite and Pringle, when they were trapping on these grounds some years before, and it must be admitted that, except as a smoke house, it was not a huge success. Our stay there, however, was short, as we pushed forward the next day, leaving the Nor-West stream behind us and then crossing the head of the Sevogle and camping on the south branch of the Nepisiguit. Here we pitched our cotton tent, banked up the sides nicely with boughs and made ourselves as snug as possible. The chief difficulty was the item of fuel, as the only wood to be found was tamarack and prince's pine.

"We had not left the camp more than twenty minutes next morning till we struck the trail of sixteen caribou. The tracks were all spread out at first, but as we followed them they converged and united in a single well-beaten path. As we were hustling over the barren in pursuit, a herd of five caribou, one a dignified old buck with a fine pair of horns, crossed the trail ahead of us. Bunny fired twice, but failed to connect. We found as we cruised around the barren that the larger drove had been only a short distance ahead, and had made off on the ball hop when they heard the crash of Bunny's 50-110 Winchester. Sadly we retraced our steps for lunch when, within 200 yards of the tent, on a little island in the stream, we routed another herd of twenty caribou. Bunny was at once seized with acute symptoms of buck fever and fired his cannon again without success. I managed to let down the tail ender of the drove as they galloped off through the green woods.

"After dressing the caribou and stowing some of it away, where it did a lot of good, we started out again. A small doe caribou showed up away off on the barren. Bunny braced up in great shape and scored a clean kill at 100 yards. He then climbed to the top of Bald Mountain, which is a hill about 200 feet high, completely covered with white moss, not a tree or switch upon it of any kind. It is a famous resort for caribou, owing to the white moss on which they feed. From the summit we had a view of nine caribou down on the barren on the other side, one of which had a big spread of antlers. We slid down the hill, but when we got within range of the herd, the buck was not to be seen. We did not fire at them. Suddenly we caught sight down the barren to our left, and about 300 yards away, of the old buck aforesaid, and within a rabbit jump of him was the biggest drove of caribou that Pringle says he ever saw or heard of The hard-hacks seemed to be fairly alive with them as they moved quietly around, cropping the moss and twigs. The plain was open on all sides and the problem was how to get near them. Whenever the animals had their heads down and none of them seemed to be on the alert Pringle and I ran rapidly towards them, getting such shelter as we could from the hard-hacks, posting Benny behind as a rear guard. We did not get more than half way down when we saw they were becoming restless. I fired at the old buck and dropped him in the snow, whereupon the whole drove lined up for a peep at us, and then, with cracking hoofs and waving flags, charged up the barren and out of sight around the spur of the hill. I counted 43 of them as they went by, and Bunny said there was a left wing of seven caribou that went off in another direction. As the animals surged up the slope Pringle tumbled two fine bucks in their tracks. We could have killed a number of them, but there were no other large heads among them.

"Next morning we went out to carry in the heads, but as Bunny had not yet brought down any horns he and Pringle took a cruise up the barren while I stayed behind to skin the buck I had shot the afternoon before. In less than half an hour they ran into a bunch of 12 caribou The walking boss was scratching his shapely head in the bushes. Bunny fired five rounds from the cannon without disturbing him; then, as his ammunition had given out, he tried him with Pringle's rifle and laid the brave old patriarch low. As they went up to skin and dress the buck, the remaining 11 caribou stood looking at them not more than 20 or 30 yards away. Then they started off in single file, but when Pringle gave the caribou call they halted and wheeled to the front and stood facing him like a rank of soldiers. They remained there motionless for over a minute and then went off like the whirlwind, scattering the light snow in clouds behind them. While I was dressing my caribou a young buck came up and walked around me in a circle for fully twenty minutes, but as he had no horns I did not bother with him, and he walked off quietly around the mountain.

"After yarding up the meat for future use, we started next day to carry out our heads, and as we also had our packs and rifles were obliged to make a double trip of it to the Forks. Pringle was away from us for three days, having gone down to Crawford's to pole up the canoe. While on the trail between Smoky Camp and the Forks we saw a drove of 33 caribou feeding in the valley of the south branch of the Nor-West. We had all the heads we could lug out in the time at our disposal and did not molest them. We poled down to Crawford's with our whole outfit, and were detained there two days by a heavy snow storm. The ice in the river was now quite strong—in the more rapid stretches the water was open—at other places we had to haul the canoe over the ice. We abandoned the water route at McCulley camp, four miles above Camp Adams. At the latter camp we were obliged to wait there until a portage team came in. While Pringle was looking after his traps on November 24 he ran across three buck caribou, and it is interesting to note that while one of them had a nice set of horns, another had only one horn, and the biggest buck had shed both of his horns. Pringle said that he had picked up in previous years freshly shed caribou horns as early as November 15.

"While delayed at Camp Crawford we saw some moose signs, but the weather was bad and the crust heavy, and we spent only half a day in looking for them. In this vicinity are the best moose grounds on the Nor-West waters, and the chances for calling at the right season are good. All three of the fine heads Pringle and his brother brought out last fall were secured within two miles of Crawford's camp.

"Pringle says that it is a mistake to suppose that there are two varieties of caribou in New Brunswick. The woodland variety is the only one he has ever seen. There is a great deal of difference in the appearance of individuals as to size and color. Some are fawn colored with dappled spots on the back; some have perfectly white necks and bellies, while others have markings of drab or dirty grey. The color of their horns, as in the case of the moose, is somewhat affected by the bark they have rubbed against. The number of points will indicate, though not with certainty, the age of the animal. It often happens that some of the points are entirely rubbed off when the horns are in the velvet. There is the greatest possible variety in the shape of caribou horns, no two animals by any chance having horns that look much alike. Young bucks have comparatively straight horns, with few branches, and in a tussle for possession of the harem they are usually more than a match for the older ones My own buck had 28 points, Bunny's had 29, and Pringle's largest had 19. Pringle says that some caribou are much less addicted to rubbing than others and carry the velvet as late as September. It is my opinion from what I saw on this trip that nearly, if not quite, all cow caribou carry horns of some description."

Strange to say, Bill's testimony differs from that of Bunny on the cow-horn problem; the latter claiming that very few of the cows they saw had any horns at all. It also differs from the observation of the undersigned. During our cruise with Braithwaite this fall, Mr. Ireland and I saw only one cow caribou that wore these ornaments. On the other hand, my venerable friend, Chief Gable, who is so old that he ought to see the importance of telling the truth, and who has killed so many caribou in his time that he is afraid to tell about it when he happens to be sober, says that all cow caribou over two years of age without exception carry horns. It looks to me as though the most that can be said is that some cows have horns, while others have not. We will have to posses our souls in patience until somebody gets up in the amen corner who can tell us the why and wherefore and how many. PROWLER.

FREDERICTON.

Answers to Correspondents.

P. L. B., Dresden, O.—1. Where can I find good deer and bear shooting in the Virginias? 2. Can the above be found in Ohio in fair numbers? 3. Can I find good turkey shooting any place in Ohio? If so, where? Ans. 1. Write E. A. Watson, Nimrod Hall, Bath county, Va. 2 and 3. We know of no place.

R. S., Madison, Wis.—You may piece out the weak priming by using black powder, but it is better to use the primers specially made for nitro powders.

CHICAGO AND THE WEST.

The West of the Present and the Past.

UNCLE BILL HAMILTON.

CHICAGO, Dec. 25.—No man could have been sheriff at old Fort Benton in the old days without being of approved bravery and decision of character, and all through his term of office Bill Hamilton was respected alike for his courage and his integrity. It is a curious comment on the methods of those days that, after Hamilton had served satisfactorily for some time in office, it transpired that he had been naturalized in British America and had not taken out his naturalization papers again in America, where he had once been naturalized—if, indeed, he could have done so in the second instance. But the fact that he was a citizen of both America and England, or perhaps of neither, did not seem to make much difference to the men who elected him sheriff. They wanted him to catch their criminals for them, and he did this faithfully and satisfactorily. There are a great many needless frills in political matters, anyhow.

Hamilton as Prospector.

Uncle Bill does not appear to have cared much about mining, and preferred scouting and Indian trading. Yet, when the "Wind River Stampede" of the early 70's took place, when the big band of prospectors left Bozeman to go through the Big Horn country, he appears to have forgotten his preferences. Maybe he went as guide through the hostile Indian country. Anyhow, he was along—possibly through sheer love of adventure. The history made by this band of frontiersmen is written deep to-day in the hearts of the tribes who opposed them. The expedition was made up of the flower of the Montana frontiersmen, and they left a terrible record behind them.

No expedition of the West was ever more disastrous to the Indians, or more successful for itself. These men were out for several months. Uncle Bill told me that they went down the Yellowstone Valley to the mouth of the Big Horn, then up that stream. All along the latter stream they were fighting Indians. The expedition fought thirteen pitched battles with the united forces of the Indians, and had skirmishes almost every day. Let us remember this was not an army expedition, but just one of men going out to see the country. Uncle Bill says they probably killed 200 Indians. They played all kinds of tricks on the Indians, such as leaving poisoned sugar behind in the camp, or "doctored" rifle cartridges, loaded with dynamite instead of powder. Sometimes they would make believe they had buried a man, planting instead a lot of dynamite, with cap and fuse fastened to a board, so that the Indians in digging up the supposed white man in order to get his scalp would set off a baddish sort of torpedo instead. The mining men and their dynamite played so many tricks of this kind that after a while the Indians thought that there were evil spirits among the whites, and finally ceased to follow them, and called back the tribes. This was the more easily the case because of the exceptional good luck of the white men. They lost only one man killed on the trip, and he was buried and his grave covered by the earthworks which the whites threw up, so that the Indians never found the grave. They said the white men were devils and could not be killed.

Surely that must have been a hard fighting crowd. Uncle Bill told me that the Indians were about them in swarms. "In one fight," said he, "40 men whipped 1,500 Indians. We formed a line and waited for them as they charged. Each man was on one knee and in front of him he had his hat full of catrridges. We mostly shot the old Sharp's buffalo rifle. We waited till they got pretty close, and we were all good shots and we fairly mowed them down. The white man could always outshoot the Indian, and he was always braver. Those Indians would rarely ever come back for more than one charge. I count the Cheyennes as the bravest fighters of the Indian tribes. They would nearly always charge twice. The Arapahoes would also sometimes charge twice.

The Sioux would hardly ever charge more than once.

None of them were real fighting men such as we had. Why, we had mere boys, farmer boys 18 years old, from the Gallatin Valley back of Bozeman, who outfought any Indian that ever lived. In fact, they fought just as well as any of us older men. Once, I remember, when we had a heavy charge coming in front and most of us were on the firing line there our leader called for volunteers to go back and clean out a coulee full of Indians who were creeping in back of us. Eight of those boys, that we didn't think steady enough for the firing line, volunteered, and they jumped down into that gulley with nothing but their six-shooters and ran every Indian out of it and shot them right and left. And yet they talk to me about the heroic bravery of the redman!" And here the old man's fist smote the table, his voice rising in the only excitement I ever saw him show.

Hamilton as Scout.

When the army was operating in the Yellowstone, Big Horn and Rosebud countries in the 70's, before the time of the sad Custer campaign, there was much need of good guides and scouts, and many of the old-time frontiersmen went into the service, Bill Hamilton naturally among others. Hamilton, Johnson, Laforge, Mitch Booyer, Reynolds and, in all, dozens of others I suppose, all hardy fellows and many of them fine ones, were out with one or other of the columns of the army, one division of which was under Custer, and history tells that not all of these men came back. Hamilton was among Custer's first scouts and was with the army years before the Rosebud campaign, employed at the close of the Nez Perce campaign, and a great friend of Lieutenant Bradley, who was killed at the battle of the Big Hole (Lieutenant Bradley was the author of a most interesting monograph on Indian life and customs, which in the manuscript fell into the hands of the Montana Historical Society. That body will soon publish a part of it.)

A very common arrangement with these scouts, perhaps not understood at the War Department, but certainly understood by the commanding officers on the front, was for a scout to hire out, say, for $5 a day and

rations, and all the horses he could steal from the Indians. These articles of war were not to be found in the military regulations, but nevertheless many and many a one of the best scouts worked on just this basis, stipulating that they should own all Indian ponies captured by themselves. The army thus protected the scout and the Indian was the loser.

"I didn't go into that business for my health," said Bill, "but for horses. You may well suppose that when I was on ahead of the troops and spied out an Indian village, the first thing I did was to run off the horses and then to go back and inform the troops that I found the Injuns." Here the old man fell into a fit of musing.

"Tell me about the Slim Butte fight, Uncle Bill," said his friend Lovekamp. (We were talking out at Billings.) A faint gleam came into Uncle Bill's eye.

"Eh?" said he, in feigned ignorance. But we made him talk.

"Well, in that fight," said he, "I was scouting ahead, and I found the camp of the Indians in a little valley. I saw a mighty fine big black horse, tied in front of a lodge which had a chief's shield hanging in front of it. I wanted that horse pretty bad, and I waited all night, and before daybreak I crawled into the village and cut the horse loose and led him out of camp. I got a nice big mule out of the herd, too, and was nearly out of danger before any alarm was given. Then I got away and got back to the troops, and in the morning I led them on to the village. We were walking in company down over the rough country, expecting every moment to jump the Indians, when just over a low ridge we ran square into an ambush they had laid for us. There were twelve men abreast and I was in the front rank, walking, and leading my new black horse. They rose right up against us and seemed to shoot a blaze of fire right into our faces. Out of the twelve men in the front rank two officers, fine young fellows they were, brave as lions, were killed and six men were killed or wounded besides. I don't know why I wasn't killed, I'm sure. I didn't think my black horse was a lucky find, though. When the Indians fired into us the troops dashed right on in and the Indians ran, of course.

"I musn't tell stories about the army, of course, for that wouldn't be right," continued Uncle Bill, "but there was one thing happened at that Slim Butte fight, or we will say it happened there, though may be it didn't, which I have always remembered. About all the U. S. Army officers are brave men, as brave as any in the world, but at this fight the commanding officer, Colonel M., was a coward. He just stayed back of the troops, behind a bank, and when the firing began he hugged the ground as close as he could, and every time a bullet came over he would butt his head into the bank till he could get his head clear into it. He was the only one who wasn't forward in the firing line before the fight was over. Those soldiers used to love a fight mostly.

"It was quite another man, Colonel McKenzie, who was in charge at the Tongue River fight," continued the old man, now that he had started in this reminiscent mood, and going on to tell of one of the most dangerous exploits of his whole life. "Colonel McKenzie was brave enough, but he was always waiting to 'form fours.' Now, you can't always count fours when you're fighting Indians.

"I was on ahead in that action, too, and I found it the village, and I saw there was a big pony herd. I thought there were about 350 head of horses, some good ones. This seemed to me a chance to make a big strike, and I determined to run off the whole herd for myself, before the troops came up, or else get killed a-trying to do it, because I knew I had the best sort of a chance there to make a lot of money. We had a lot of Snake Indian scouts along, but, as usual, they were a good ways off from the hostiles—they knew enough for that.

"I made a bold rush, in plain daylight (it was early morning), and I stampeded the whole herd. I got them headed for a little sort of box canyon, and I kept right after them, yelling and riding hard as I could, and there wasn't a head of their horses left except what they had tied by their lodges. The whole camp of them got out after me, over a dozen of them on horseback, and they rode right up with me, all of us mixing up in making the running horses. They shot at me all the time, and I shot at them, but I kept on running the herd, and the shooting only helped scare the horses on more. I had Indians ride right up along and grab at my bridle, and at the last I threw my empty pistol into the face of one who was trying to reach me with a knife. But I kept on a-running them horses off all the time, you see.

"There was a sort of pile of rocks near the mouth of this little canyon, and It hrew myself off my horse there and he went on back of me up the canyon. I had the herd back of me, and the whole Indian village right up against me in front. I didn't know whether I could hold them horses or not, and I knew it was a close corner. I had nothing but my rifle, but I lay close and waited till they came up near me and then I shot as straight as I could. (His friends say he killed 10 Indians there in a few moments, but I could never get Uncle Bill to say about that.) Whenever I shot they would fall back, and that was the way it went. None of them happened to hit me.

"When the troops, back a couple of miles or so, heard the firing, they came forward, or at least the first company did. Colonel McKenzie kept the others back, forming company front or something or other. From where I was lying I saw the first company, a few men, coming down into the little valley to one side, all regular and steady and at a trot, mind you, at a trot! Lieutenant McKinney was at their head, as fine and brave a man as was ever on earth. I tried to get them to hear me, and called loud as I could to them to charge but they were too brave, those fine fellows. They came on at their steady trot and the Indians rose up and mowed them down. Lieutenant McKinney was shot down not far from me, and I ran out and dragged him in with me, behind my little pile of rocks, and took care of him, but he was dead. Then the second troop came forward and they came down that hill just a-boiling, and of course the Indians broke and run; but out of 60 men who went into that valley, 36 were killed, and the Indians hardly lost a man killed by the troops. That was a brave lot of men in that troop. One sergeant of that troop was the coolest man I ever saw in a fight. His commanding officer rebuked him for not going into skirmish line. 'I don't know anything about skirmishing,' said the sergeant, 'all I know about is shooting, and I wanted to get where the shooting is good.'

"After that fight was over I was mad all through at the thought of the poor fellows who had been killed before the second troop got up, and for once in my life I felt like cursing a commanding officer. 'Why, in —— didn't the second troop get up?' I couldn't help saying.

"'We were forming fours,' said Colonel McKenzie.

"'Yes,' said I, 'and while you were forming fours you were letting some of the finest men in the United States Army get killed!' I couldn't help saying that, with the thought of Lieutenant McKinney and all those other brave fellows, who wouldn't have been killed at all if one good swift charge had been made.

"That was how I ran off the herd at Tongue River. And I never got a head out of all the herd, which I had risked so much for, thinking I would quit the trail after that, perhaps. Captain Egan took all my horses and gave them to the Snake Indian scouts, who did nothing whatever in the fight or before it. I have never forgiven Egan for that, and I think that to-day the United States Government owes for those horses, which were taken from me directly contrary to the agreement made with me by General Crook himself. I have always felt a little sore over that ever since."

Stories like the above may read a trifle oddly in army circles, but I have no reason to doubt the accuracy of Uncle Bill's statements, subject to the lapse of years in memory and subject to any unintentional inaccuracy in reporting. Many other such stories of the old days I could tell as they came from the lips of this remarkable and really lovable old timer, perhaps the worthiest man alive to-day to speak to us about the West of the Past. But these will do for now. Later I wish to speak of the causes of the sudden disappearance of the buffalo, as Uncle Bill Hamilton describes that. Then we must bid him goodby for awhile, though he has invited me to come and join him on "one last hunt," as he calls it, and promises that if I will come he will take me into that very corner of all the Rocky Mountains least explored and least known to-day. As that is his secret by choice, it must also be ours, for a time at least.

From Utah.

Mr. John F. Cowan of Butte, Mont., spent Christmas in Salt Lake City, Utah, and writes me from there very entertainingly about shooting matters. He describes that section as a great one for shooting, but says, "there is a fine opening for missionary work such as your paper is carrying on." Any reader who notes the destruction of ducks mentioned by Mr. Cowan will agree with the above. How long will it go on, this absurd, unreasonable, ungentlemanly practice of butchering the last bird possible? It isn't sport. There can only be one consequence upon it. The game will soon be all destroyed, so that respectable shooters will have no shooting. Mr. Cowan says that the shooters mentioned were two men who once shot in the Kansas City Gun Club. They were so called sportsmen. If Mr. Cowan will give me the names supported by witnesses of those who saw the bags mentioned I shall take pleasure in making the full details public, as I would in the case of any man, "sportsman," or not, wealthy man, distinguished citizen or what not. Forest and Stream may get itself disliked by certain short-headed individuals who want to kill all they can, but it will not be disliked by the long-headed man, who are in at the end of an enterprise. Mr. Cowan says: "At Salt Lake City fine duck shooting can be secured within a few miles of the city, or if that is not satisfactory an hour's run on the cars to the north or south will place one on as fine ducking grounds as there is in the United States.

"I am tempted to tell of some of the bags made at the mouth of Bear River, where it runs into Salt Lake. I say tempted because I am really ashamed to tell of the number which some of the shooters, I won't say sportsmen, claim to have killed. I am ashamed because I know that every true sportsman will say those fellows are either champion liars or the greatest game hogs on earth. Think of two men in less than two days shooting and killing 700 ducks, and this is what I was assured was done there last year. And the same two men this year killed 600; one of them killing 183 mallards between 3 and 6 o'clock one afternoon. I was assured by one man that last year he and six or seven others killed over 3,000 ducks. I wonder if it ever occurred to such shooters that possibly at this rate the supply might soon be exhausted. I wonder, too, that if they would stop and think about in the right way if they wouldn't feel just as well after it was all over if they had stopped shooting when half that number were killed. Try it once and see, and my word for it you will feel more enjoyment than to go killing as long as there is a duck in sight."

I know of no better way to stop such slaughter than to print the facts in a journal which goes into the hands of the reputable sportsmen of the country. There are few men who will approve of such killing. Indeed, the change of sentiment in such matters is one of the most distinctive features of modern sportsmanship.

An Old-Timer Now.

I have recently come into possession of one of the old-time "Old Reliable" Sharps' which were the joy of the old timers' hearts long years ago, and which are still sworn by in the mountains by the old timers, who will not hear to a repeater. By means of this gun I hope now to be able to pose as an old timer myself before long. I think I will cut the notches for Injuns along the lower edge of the stock, and those for bears and other large game along the top. If I run out of wood I can go out on the fore end. I feel that a man with a buckskin shirt and a Sharp's Old Reliable is somewhat of a figure hisself, and I want to post people about this.

Wants Pointers on Skunks.

Mr. Sam. D. McMillan of West Salem, Wis., writes me as follows:

"Did you ever hear tell of a skunk farm? Where can I get some pointers on the subject?"

If this were submitted to the Information Wanted editor he would probably reply in his cold, heartless way: "Ans.—(1). Yes. (2)—Get about 400 yards to leeward of the farm." I wouldn't do a thing like that, because I am naturally polite. Really, I can't tell Mr. McMillan much about the skunk industry, but I know there is such a farm, if not more than one, somewhere, and I have no doubt that some one will come forward in Forest and Stream before long and give the information about it. I don't think the habits of the skunks would be any bar to the industry, nor do I think the scent glands need be removed. I have seen a captive skunk handled with impunity by his keeper (at San Pedro Spring gardens, San Antonio), who picked it up and touzled it about as he liked. "They seem to have no scent when they are tame," said he, "or at least they never use it."

E. HOUGH.

909 SECURITY BUILDING, CHICAGO.

NOTES FROM THE PLAINS.

Omaha, Neb., Jan. 10.—The lack of wild fowl shooting in this vicinity during the past fall season was in a great measure counterbalanced by the excellent quail shooting. There were more of these birds, all the regular shooters agree, than there has been for a period of ten or fifteen years. In fact, it is doubtful whether they were ever so plentiful before. With no backset this winter the crop next fall should be larger than ever. Of course, there were many birds killed. They retailed at $1 per dozen part of the season in the open market, but a great abundance has been left over for seed. Stockton Hith and Fred Montmorency were up at Honeycreek on the last day of the open season and say that they flushed covey after covey that had evidently never been shot into. However, it is not the gunner who decimates the ranks of Bob White out this way, but old Crimp and the hawks. The mercury drops as low as 28 degrees below out here, and hawks are no more plentiful anywhere in the country.

My old duck hunting host, Anse Newberry, of the Sugarbeet marshes writes me that big gray wolves are very numerous and very aggressive throughout the north part of Cherry County. These fierce brutes are very destructive on the stock and seem to have an especial appetite for horse flesh. When once they select a victim he rarely escapes. A sneak, a sudden spring and the horse is hamstrung and at their mercy. A Mr. Bridgeman, near Newberry's, lost two fine colts New Year's night.

Lou May, a very energetic member of our State Fish Commission, has just returned from a couple of months' sojourn in the Gulf States. He had some great sport with the sea bass at Pass Christian, and can spin about as many and about as good piscatorial yarns as the next one. There is only one man whom I know who can beat him, and that is Charlie Richards of Rochester, N. Y. Mr. May says the commission has a great campaign mapped out for the coming season—that over thirty lakes and streams in the sand hill country are to be stocked with bass, croppie, pike and pickerel fry.

As usual, the wild fowl shooters are all predicting great sport the coming season, but just what they base their prognostications on I fail to see. There never has been such a woeful scarcity of rain in this country, and the outside world is pretty familiar with the calamitous drouth out this way during the past summer. The truth is I cannot recall such a thing as a hard, rushing fall of rain, of any considerable continuance, within the past year, and last fall there was little or no water on any of our famous ducking grounds. So far this winter, however, there has been a goodly fall of snow in the mountains, and when the usual thaw comes this will be sufficient, in all probability, to swell our streams and fill our lakes in a way that will delight both hunter and fowl. Last fall was the poorest season I ever experienced out this way. There were scarcely any ducks at all, save blue and green wing teal, and they never fail, and the geese came in along the Platte and the Loup in thin and spasmodic flocks. In fact, the honkers have been much more plentiful since the first of December than at any other time and tolerable bags have been made off and on, so far, all through the winter. Last spring it was just the opposite. Birds have not been known as plentiful in ten years, and canvasback were particularly numerous. Lawyer Simeral, Ed. W. Hamilton and I bagged 169 in a single afternoon's shooting—all canvasback!

CAMP NINE AGAIN.

Sand Lake, Mich., Nov. 26.—Pursuant to a previous letter, this writing finds us home, after a two weeks' outing, not exactly upon our own grounds, as we found them already occupied, so we moved a half mile up the road, the boys protesting against trespassers, but good naturedly making the best of it. Two days of work were necessary to make our new site habitable; but we were in it to stay, and soon had fine quarters with dry jack pine wood in the woodshed and were ready for business.

The first day I spent in visiting a section (640 acres of pine forest.) Here, with the singing sea of resinous boughs overhead, their delicate odor imparting new life with each inspiration, the earth a carpet of pine needles, with acres and acres of winter green with berries so dense that yonder hillside seems painted red-brown and beautiful beyond description, we forget all else in our admiration of "God's first temple," and our day's pleasure is marred only by the thought that the once magnificent forest of Queen Michigan will soon be gone forever.

On Tuesday, Nov. 6, Nine Powell, the father of the camp, scored the first venison, a 150 pound buck and a beauty. On the 9th one of the boys brought in a fine doe, and three more were added on the 18th and 19th, making five deer, one red fox, four partridges, one mallard, seven fox squirrels, numerous adventures and several narrow escapes, two we think worth recording.

The principal actors in the first were Gil. Reynolds of the Big Rapids National Bank, and a 200 pound buck, which had been startled by others of the party and was accompanied by three small deer. Gil tells it: "I was standing in a very thick growth of scrub oak when a crackling of brush caused me to look behind me, and suddenly the air was full of deer tails. Bounding

straight toward me was a monster buck of gay color, surmounted by a pair of horns as large as a tree top. For an instant I was terrified. As he was almost upon me I swung my gun toward the rushing mass and, closing my eyes, fired as he flew past. How either of us escaped destruction will forever remain a mystery."

We measured the distance between Gil's track and those made by the deer and found it exactly six feet, and all admitted it to be rather close quarters.

On the 20th two other members of the party tracked a large black bear a few rods; and discussing the probable size of the "critter," perhaps not over anxious to find bear, not having lost any, then walked carelessly around a fallen tree top, when out scrambled the bear from almost under their feet and they haven't seen him since. "It's a wonder," said Nine, as we walked over to the place and found it only four steps from the bear's bed to the point where the boys "charged backwards," "that he didn't get both guns away from them."

Laughing over this characteristic dry remark of Dad, we returned to camp to prepare for home. All agree we have had a great time. If deer have been a trifle wild we better appreciate those we were fortunate enough to get, and arranging our game before our cabin, we prepare for a photograph by Louie, the cook, who, by the way, is quite an artist.

We met Deputy Warden Brewster on the train homeward and learn that 21 violators have been "called down in Lake County to the tune of from $20 to $50 each. The moral is plain: Leave the dogs at home.

JIM.

TEXAS AND THE SOUTHWEST.

Protection Needed.

Several gentlemen of San Antonio were discussing gun and rod matters a few evenings since, and during the conversation the "stop the sale of game" platform of Forest and Stream was freely dessicated. The wholesale butchery of canvasbacks and redheads on our coast was touched upon and several plans were ushered into being having for their objects—first, the stoppage of the slaughter, and second, the prohibition of the shipping of game out of the State. By securing a passage of a law at the hands of the incoming Legislature, which convenes in Austin this winter, a great blow would be struck at the coast pot hunter of Texas. He would be prohibited from shipping his ill-gotten game, and not finding high toned patrons in paying quantities within the boundaries of the Lone Star State he would probably be driven to the desperate expedient of blowing up bladders in a snuff factory, or to representing some rural east Texas district in the Legislature. There he would find congenial fellows in those whose only legislative effort in the past has been the exemption of his territory from the application of the game law.

One gentleman (a visitor from Chicago) related how the opulent and aristocratic (?) sportsmen of the North and East produced a tickling sensation in their palates by ordering Texas canvasbacks for dinner. It struck some of us that if sufficient gentlemen of the North having the preservation of the high toned birds of Texas would masticate on pintails, blue bills or some other plebeian bird, that perhaps the Texas canvasbacks and redheads would be a drug on the market. Now, as these gentlemen are at present howling themselves red in the face about stopping the sale of game, would it not be well for them to add another aphorism to their platform: "Stop the buying of game." Don't order canavsbacks and redheads when you are entertaining a friend. If he is of the right sort corned beef and cabbage will satisfy his appetite; besides, it is much more wholesome food. A little help on the part of the Northern epicure and a sharp stick from Texas might make the pot hunter abandon his nefarious occupation.

A gentleman just in from the duck regions of the coast state that the natives don't kill mallards and teal, and turn up their very red noses at pintails and blue Williams. They are all after canvasbacks and red heads, and where they were plentiful a few years ago there are none to be had now. They pursue the birds as far as one can go by boat or any other means of locomotion, and yet but few of these contraband hunters are citizens of this State. They come from other States, bringing their ammunition and guns with them, pay not one cent toward supporting the Government, kill off all our game and ship it out of the State.

A Man With a Hatchet.

I stopped to examine some quail I saw dangling like dish rags in front of an alleged game stand in San Antonio last week and found that out of about a hundred birds not a single one had been killed by the gun. They were all trapped birds, the lives of which had been mercilessly squeezed out of their pretty heads at the sacreligious hands of some mercenary cut-throat who ought to be hung.

A thing in human shape stepped forward to inquire what I wanted. I inquired that I wanted to know where he bought the birds. He said they had been shipped, and when he was told they were trapped in violation of the State law, he replied that it was just as bad to shoot them as to trap them, and went on to tell me the law was wrong and that he was of course right. I disagreed with him energetically with a lot of choice Billingsate I picked up from Br'er Hough during his last visit to Texas. The alleged man didn't do a thing but step back behind his counter and come at me with a cheap and chippy chopper in the shape of a hatchet with which he proceeded to enforce his argument.

He didn't enforce much. I am on a still hunt for the trappers, and will surely get them, or stop their little game.

Unfit for Food.

By the way, a few words of warning to the public will not be amiss while we are under the nauseating head of quail trapping.

A few years ago, before the law prohibiting the trapping and netting of quail, there were thousands of live quail daily exhibited on the plazas of San Antonio and offered for sale. While wandering around on several occasions I noticed that a great many of the birds had died, some of them by beating themselves against the sides of their prisons, but most of them from starvation. When an order came in from a hotel or restaurant the murderer clutched the live birds in his villainous hands and crushed the little heads until dead, then the whole mass was tied up in bunches, including the sick birds that had died, those that had starved, and then they were sent to the purchaser for the delecation of his guests.

I rather incline to the idea that the epicure of to-day will not relish a bird that died in a coop by being trampled down by its companions. But still they eat them, and as a matter of fact, nine-tenths of the birds offered for sale in San Antonio are birds that have been trapped and a great proportion of them are unfit for food and positively injurious to health.

Visiting Sportsmen.

It did me a world of good to-day to skake hands with Mr. Willard Adams of Chicago, who reached San Antonio last week. He looks a little peaked owing to the fetid Chicago air he has been breathing for the past year. Everybody seems glad to see "Big Adams" somehow. A very pleasant hand shake was exchanged between the writer and Mr. Laning, also of Chicago, who is searching for ozone and quail. He'll find both in plenty before the winter's over.

Deer on the Islands.

A party of duck hunters just returned from the coast say that the shooting for the past two weeks has been the best they ever saw. On the shell banks, a few miles from Rockport, thousands of pintail, blue bills, canvasbacks and redheads are feeding every day and the evening flight is something immense. During a short visit this party made to one of the neighboring islands they saw 19 deer in one herd and saw deer every day of their stay there.

TEXAS FIELD.

BOSTON AND MAINE.

Boston, Jan. 12.—A Supreme court decision of a good deal of interest to those who use the gun has just been handed down in Boston. It was an overruling of defendant's exceptions in the case of Charles E. Whitten of Lynn vs. John Hartin of Boston. The plaintiff brought action to recover for the loss of a leg. Whitten was shot November 10 in the leg. The accident took place in Maine. The defendant Hartin was firing at a partridge at the time and did not see Whitten, who was sitting down not five feet off the traveled road or way. The claim set up by the defendant's counsel, after the adverse verdict was rendered at the trial at Salem, was that the plaintiff was careless in leaving the road and sitting where he was liable to be shot. The Full Bench holds that, on the evidence the plaintiff was not negligent in leaving the road and sitting down to rest by the roadside, and that it appears that he gave the defendant all the warning that he could when he first saw that he was about to be shot. The verdict must stand, and it gives the plaintiff $5,545. This was a very costly partridge for the defendant. Some sportsmen and hunters are pleased with the rendering of the Full Bench, and think that the result upon other careless hunters will be good. On the other hand, prominent sportsmen claim that the ruling is unjust, as well as the verdict, for the shooting was purely accidental, and will be just as likely to occur again. "No hunter in the world," they say, "would ever shoot in the direction of a human being, if aware of his presence."

"Speaking of rulings," a Lewiston, Me., gentleman said the other day, "reminds me of an offhand ruling of the late Judge W. Virgin of Maine. In his lifetime he was one of the legal lights of that State and an ardent friend of fish and game protection as well as a lover of the rod and rifle." The Lewiston gentleman and another man were fishing in Weld Pond, close by the Judge's boat. "The other man hooked a salmon but lost it," said he, "the hook bearing out. Soon I had the same fish and landed him. The other fellow pointed out his hook mark and claimed the salmon. We agreed to leave it to the Judge. He rendered the law unto us like this: 'Wild game belong to no one until it is in the possession of some one. You may shoot a deer, and if it runs around and falls at my feet and I put my hand on it, it's mine. The salmon belongs to the man who caught it.'"

Pickerel fishing continues to be in order, though the recent very cold weather has not been favorable. Irving Powers, A. E. Aldrich and W. Shapley are just back from a pond somewhere in New Hampshire and did not get many fish, though they positively refuse to enlighten their friends on the subject. They are not willing to even give the name of the pond. They quiety refer inquirers to Mr. R. H. Jenkins, whom they call "Jink." They say that he is telling the story. Now, Jink was not with them, but he tells a good story of their success. He says that they obtained a "fishing board" of a countryman, or "board for fishermen," he is not sure which. They spread the board on the snow and began to fish, and when they had fished awhile they counted and counted 105 pickerel, all laid on the board. At this point the man who furnished the board declared there was "some game" and that he "was not in it." They told him that the fish were game or game were fish and referred him to the laws of New Hampshire. At this the fellow went off in a huff, and the boys came back to the Boston Chamber of Commerce without any fish. Jink declared that all this happened at Moosehead. Now, since there is no Moosehead Lake in New Hampshire, and since there are no pickerel in Moosehead Lake in Maine, the conclusion is that Jink knows nothing about the fishing trip of the boys. But no one thinks of accusing him of telling a fish story, because he rarely goes fishing, besides being one of the Aldermen of his city, and having run for the Great and General Court.

Claud H. Tarbox and Charlie Bailey have been on the Byfield pond again after pickerel. This time their old friend the Colonel was with them. They were off for the pond at 5 o'clock in the morning. The Colonel had all his traps with him, as well as those of the other boys. The pickerel bit pretty well, but not at the Colonel's hooks. He could not understand it. The others told him it was on account of "his age and failing eyesight," a standing joke of the boys when the Colonel, who is a crack shot and a good fisherman, happens to miss. He usually retorts with: "Well, I taught you fellows all you know about fishing or shooting, anyway."

SPECIAL.

Sea and River Fishing.

ANGLING NOTES.

Are They Grayling?

Under this heading Mr. B. A. Warner of Granville, N. Y., sends me the following query: "A year ago last July I fished in a stream in this State (New York) and caught fish that were before unknown to me. I will describe them to you and probably you can tell me what they are. From the descriptions I have read and the illustrations I have seen of the Michigan grayling, I should say that the fish I caught were very similar in shape and coloring. The general color is silvery white; the back is shaded with grayish green; the belly a beautiful white; the sides showing when fresh from the water a delicate iridescence.

"The fish takes small trout flies eagerly and is very quick in its movements and a good fighter. I found them in swift water and in pools at the foot of the rapids, the larger ones in the pools. I caught 30 in about two hours' fishing, weighing from two ounces to half a pound each. The stream in question flows into a larger body of water, but I think the fish do not leave the stream and enter it, as I have fished there without catching any of them. Do you know of any fish answering this description?"

I should say positively that the fish were not grayling; and I should guess that they were fall fish, "or cousin trout," as they are called in New England, Semotilus bullaris. They are called also silver chub. I do not at this moment recall the iridescence on the sides, still the fall fish may possess it. Otherwise, so far as the description goes, the fish may be the fall fish.

It is a spring spawning fish, and at spawning time the males develop crimson on the belly and lower fins. I should call the color of the back a steel blue. They rise to the fly and fight when hooked much like the brook trout. Hence the name "cousin trout." They are found in trout brooks, also in ponds and lakes, and grow to over two pounds in weight. There are two reasons why the fish mentioned were not graylings. The first is because there are none in this State (which statement I will qualify later), and second, had they been grayling the first thing to strike the observer would be the great dorsal fin, colored like the dorsal fin of no other fish found in the fresh waters of this country, and the black markings on the sides. The best picture that I ever saw of the grayling is a photograph reproduced in Forest and Stream December 22. The black markings in the photograph are faint and are not shown at all in the half tone.

Mr. Mitchell, in sending me a photograph of the grayling, said: "The curiously shaped and placed black spots do not show as plainly as I had hoped they would. The dorsal of the fish in trout shows up well, but the stripes on the ventrals do not appear at all. The iridescence of the caudal and the beautiful tints of the body are, of course, impossible in a photograph."

Here is a description of the coloring of two of the fins of the grayling: Ventral fins ornate, dusky, with diagonal rose colored lines; dorsal with a black line along its base, then a rose colored one and then a blackish one, then rose colored, blackish and rose colored one, the last stripe continuing as a row of spots; above these is a row of dusky green spots, then a row of minute rose colored spots, then a broad dusky area, the middle parts of the fin tipped with rose."

Once you have seen this fin of the "banner bearer" you will never mistake it for the fin of any other fish.

I said there were no grayling in this State, and while I believe this to be absolutely true, to be historically correct, I will add that some years ago when Mr. Fred Mather, the present superintendent of the New York Fish Commission, maintained a hatchery and trout ponds at Honeoye Falls, Monroe County, New York, he procured grayling eggs from Michigan and hatched them at his hatchery. Later he allowed all the fish of the species to run down into the outlet stream, and within a few days he has told me that he never heard of them afterwards.

About Black Bass.

Dr. Hinde's comments upon the habits of black bass at night in Forest and Stream of Jan. 5 I read with great interest, and while I cannot give him any positive evidence upon the subject, I will explain why I have come to believe that the small mouth black bass remains stationary during dark nights.

For a number of years I fished for small mouth black bass in Back Bay of Lake Champlain, and one of the best fishing places at certain times was Wood's bar. This is a bar of white sand extending eastward from Wood's Island until it forms a point, and then suddenly breaks off into deep water. After a few days of wind from the north or south the water would pile up in one end or the other of the bay, and upon settling back to its normal condition the water made a strong current past the point of the bar, and that was the time to fish it. I fished it very early in the morning, always trying to anchor on the point of the bar before daylight. Black bass assume the color of the bottom over which they rest, and I think this is a good time and place to say that I was the first to publish this fact. I discovered it by accident, and by keeping my eyes open. Those who read angling works will find this peculiarity of the bass mentioned in a book, but the author forgot to say that I told him about the discovery in a personal letter some years before his book was printed and at the same time informed him where I would make it public within a few days of the date of my letter, which I did. This is a trifling matter, but as it has been on my mind occasionally for years I thought I would unload it here.

The first bass that we caught in the morning on the bar were very light colored, and in 1890 in Murray's "Lake Champlain and its Shores" I mentioned one morning's fishing thus: "Before the sun fairly appeared above the hills I noticed the light color of the bass, which was evidence that the fish had been on the white sand all night." That was my belief then and it is the same now. After the light colored bass were caught and the sun came up, or, at least, after daylight, dark colored bass were caught, showing that the fish were coming in from deep water to feed. I did not attribute

the stationary habit of the bass at night to faulty eyesight. I knew that the fish came on to the bars and shoals at night to feed, and supposed that when gorged they remained till morning. In the same lake it was customary to catch bass on the shoals in the evening, waiting for them to come on, long after dark. Then, too, bass are often taken on very dark nights. I recall that one night on Schroon Lake when returning from fishing to the hotel it was so dark that the boatman was rather feeling his way, so to speak, when my fishing companion startled me by an exclamation that made me think for a moment that he was going overboard. His line and flies in some way became loose from the reel bar where the stretcher fly was fastened, and unknown to him was dragging in the water behind the boat, when one of the flies was taken by a black bass. It was so dark that we could scarcely see one another in the boat. Every one who has fished much for black bass can doubtless furnish instances of the fish taking bait or fly at night when it has been dark as Erebus, and on moonlight nights often feed in a way to spoil sport on the day following. It is more than likely that evidence similar to that which I have related may be forthcoming as to the stationary habits of the fish at night, and it will be of interest to hear further from Dr. Hinde on the subject.

Spawning of Trout.

Following Dr. Hinde's note about black bass is a note on the New Hampshire trout season signed "Columbia," and from it the reader must infer that the writer favors closing the open season for brook trout about the first of August (I assume April 15 to be an error), because trout have been found to contain spawn in July. One would think that "Columbia's" thirty-one years' experience as a trout fisherman would have taught him more about the spawning of trout than he admits in his article. If the open season for trout fishing is to conform to the time when trout are found without spawn in some stage of its development, and there is no fishing allowed through the ice, the anglers of New Hampshire might well hang up their rods for good.

It does not follow because trout are found during the summer months with undeveloped mustard seed eggs that they have any idea of depositing ripe spawn before the regular time in October and November. Prof. Goode says: "The spawning season (for brook trout) begins in New England in October, and continues from three to six months, and during this period the fish should be protected by stringent laws."

Livingstone Stone, one of the best fish culturists in the country, is a New Hampshire man, and for years maintained trout ponds at Charlestown, N. H., and he records that the earliest spawning of trout in that State is on Oct. 12. In New York State some trout spawn as late as the month of March. Last June I saw a Sunapee trout opened at Sunapee Lake, N. H., and it contained such spawn as to cause two gentlemen who were with me to comment upon it, and yet that spawn would not have been ripe until November, for these trout or saibling do not begin to spawn until after the brook trout. Ripe brook trout eggs vary greatly in size, but if any one whose conscientious scruples about catching trout in August will get a pea 3-16 inches in diameter, or an "A" shot, and put it in his vest pocket and then get some less sensitive angler to catch a few trout in August and compare the spawn of trout as developed in August with the pea or shot it will be found how unripe August spawn is, for the pea of this size given is about the average size of ripe trout eggs. As to eating these slimy, half-fed, ill-conditioned trout in April, that is a mere matter of taste. Most people, I think, will prefer the fat, clean, well favored trout of August, even if they have partly developed spawn, for at that time they are in the best condition. The fact that the eggs are partly developed should carry no weight, for the eggs are also partly developed in June, the difference being only in degree. Shad are at their best for the table just before spawning, but who eats shad just after spawning?

If there be any well founded objection to August fishing, and I doubt it, it does not arise from the fact that the trout will spawn from two to three months later, but from the fact that at that time the streams may be low and that the trout congregate at spring holes where they may be, and are slaughtered by those who exercise no good judgment in fishing.

There is no hard and fast rule about the time at which trout spawn in different waters, but trout spawn earlier in running water than in ponds. I have seen trout gathering about spawning beds in the Cupsuptic River in Maine from the 5th to the 15th of September, while at Paxmachenee Lake, seven miles away, the trout were just beginning to come up out of the deep water on the 19th of September the same year. In water with low temperature they spawn earlier than in water with higher temperature. Some years ago, for the purpose of putting this subject before a legislative committee, I obtained some information from the hatchery superintendents in New York. Mr. Mather wrote from Long Island: "Brook trout begin to spawn on Long Island in November. Last year we took the first eggs the last day of October—two small fish. The length of the breeding season is from Nov. 10 to 30, although some fish struggled along till January."

Mr. Green wrote from the Caledonia station in the western part of the State: "Trout spawn in Caledonia about October 15. Spawned the first trout to-day (Oct. 15) at 2.20 p. m."

Mr. Roberts wrote from his station in the Adirondacks: "Trout came on quite heavy about the 1st of October. I took one female September 21, but this is quite rare, and I got no more until October 11. They usually spawn early in October."

On two different years a female trout was found in the ponds of the Plymouth hatchery in New Hampshire in August with ripe spawn, but there were no ripe males and the spawning was considered one of those rare and unaccountable things we hear of occasionally. There has been a heap of nonsense written about the close season for trout fishing because immature spawn has been found in trout in the summer months, but for all that trout do not spawn before the early days of October, and the season can be kept open, I firmly believe, with profit until the 1st or 15th of September.

Spawning of Land-Locked Salmon.

The spawning of trout reminds me of another matter which I find noted in my notebook. A few years ago a New Hampshire Fish Commissioner, now dead, put in circulation a statement that land-locked salmon did not spawn until they reached a weight of about five pounds. Last year a female land-locked salmon of less than two pounds' weight spawned at the Plymouth hatchery in New Hampshire. I have taken male salmon smolts o less than three ounces in weight with ripe milt

Shrimps.

Mr. George E. Winton, Bridgeport, Conn., writes: "I write you for information. We have a stream stocked with trout, and we are informed that there is a fresh water shrimp cultivated for feeding trout and if put into a stream will increase to an extent that will supply food for the fish. Can you give us any information on the subject or refer us to some one who can?"

Fresh water shrimp are not cultivated, but they are found in abundance in some streams. They multiply rapidly and are excellent trout food, and it is such crustaceous food that gives the trout the rich red flesh that some trout possess. Write to James Annin, Jr., Caledonia, N. Y., whose advertisement will be found in this journal and he will supply the shrimp for $2 per thousand. I may add that last season, when a younger brother asked me where to get some trout to stock a tank, I told him and advised him to get shrimps for food at the same time. Afterwards he found a stream near where he lives in which shrimp could be collected half a bushel at a time. The fresh water shrimp is not unlike the salt water shrimp in appearance, but it is much smaller.

A. N. CHENEY.

THE MEGANTIC BANQUET.

If that good fellow Shakespeare had attended the eighth annual banquet of the Megantic Fish and Game Club in Boston last Thursday night he might have been inclined to re-edit some of his previously expressed opinions and admit with one of the speakers that there is no bond like sport to make the whole world kin. He would not have needed Chairman Prescott's assurance that the accidents of birth or wealth were not necessary qualifications for recognition there, for he would have seen the backwoodsmen, Rob Phillips and Jack Boyle, as honored guests as Governors and Senators, and he would have realized that the only qualifications expected were good sportsmanship and good fellowship. It was pleasant to see how all artificial bounds went down before those hearty sportsmen, the bond of age among them. The old veterans of the club forgot their years and dignity and for the time being ate and drank and talked and sang with all the ardor and dash of youth—even if the songs were of a light and frothy order and dealt with "Daisy Bell" and the "Bowery." And all the new recruits held their own with the veterans—for it was nothing if not equality—and even guyed them and interjected gags (not jags) in the best considered parts of their speeches. But the veterans were boys for the moment and accepted all the freshness and irreverence of their juniors good humoredly and returned it in like coin, and often with a decided advantage to their side of the argument.

At 7 o'clock nearly 150 members and guests had assembled in the reception rooms of the Vendome. This was a large gathering considering the fact that one of the worst storms of the winter was raging outside, and showed the stuff the Megantic men are made of. Rain and snow had fallen till the streets were flooded, and if the rain had lasted a little longer canoes and setting poles would have been necessary to reach the hotel. But as it was, only one man stayed away on account of the mixed up state of the elements, at least only one gave that excuse for staying away.

The long dining hall was decorated at one end with the arms of the commonwealth of Massachusetts and the national colors, while at intervals along the walls were placed the mounted heads to moose, caribou and deer, loaned by members of the club for the occasion. But the chief object of interest was the carcase of Dr. Bisnop's moose which lay in state at one end of the room. This moose was a grand old fellow, nearly black, and looked all the larger for being beneath a tessellated ceiling instead of the roof of his native evergreens He weighed over 1,000 pounds, but had rather disappointing horns for such a big fellow. Particular interest attached to him, however, on account of his fighting qualities, and the way he met his death was told by the doctor.

Before the feast of reason came the pleasant task of reducing the compound equation of the menu to simple terms, and in this the assembled hunters were highly successful. That there are diversities in the gift of eloquence most people will admit, but as far as could be observed there was no such diversity in the appetites of those present, and from the haunch of the lordly moose down through the gamut of corribasset caribou and Crosby Camp venison to the cubs of black bear—juicy little innocents as they were—nothing was slighted. These pieces de resistance are mentioned especially as coming from the Megantic Club preserve. It is a question whether any other game club in existence could duplicate that menu.

It took 250 square miles of woods and rivers to make it in this case, and the select minority of preserves that boast such game are not apt to get it all at once. Their moose and caribou and bear and deer will not time their deaths so conveniently to the date of the club banquet that they may be punctually there. Generally they have other engagements.

Beside the big game on the menu there was the usual assortment of lesser varieties to fill up little unsuspected vacancies in the physiology of the guests, and though the equation was an elaborate one the guests had no difficulty in solving it. This done they settled back comfortably in their chairs, and as the smoke of their cigars arose, awaited the second installment of the feast. President Alexander Taylor, Jr., of Mamaroneck, N. Y., was not present, and the part of the toastmaster devolved on one of the club's vice-presidents, Mr. Walter C. Prescott.

Mr. Prescott opened with a few well chosen remarks He said the objects of the club were the propagation and protection of fish and game, and the sport of its members. In all these objects the club had been highly successful. As a result of protection they have to-day more game than ever before, and more fish than they ever dreamed of. The club has always been a factor for good, both in Franklin County, Maine, and in Quebec province Canada. It has not looked selfishly solely for its own interests, but has had the interests of the settlers included in their territory always in mind, and has benefitted all the neighboring hamlets by its existence. Mr. Prescott incidentally mentioned that the extent of this benefit last year was upwards of $14,000. He stated that the club had on its roll 281 members, but that he should not be satisfied till he had seen the full complement of 300 reached and a waiting list besides in order that the lukewarm members might be weeded out and the club still further strengthened.

The chairman then introduced General Dalton, who filled the gap occasioned by the absence of Governor Greenhalge, who at the last moment had been called away by telegram. General Dalton welcomed the out of town guests of the club, and his remarks were the occasion for hearty cheers for some of the woodsmen present.

Commander Henry T. Lyons of the Charlestown Navy Yard—hero of Samoa and ex-captain of the Nipsic—was present as an honored guest. Toastmaster Prescott in introducing him generously forbore to make capital by punning on his name, but he would not have been far out of the way if he had presented him as one of the club's lions. The commander was heartily cheered and his name was frequently upon the lips of subsequent speakers.

His remarks were chiefly relative to the country in the neighborhood of the River Platte, which he said was the finest country for small game he had seen in two trips around the world. He said that while there in the Yantic his navigator shot 3,642 birds of which he kept record. These included five kinds of duck, three kinds of partridge or ruffled grouse besides English snipe, wood pigeons, doves, swans and marsh birds. With reference to Samoa, Commander Lyons said that there was very little game there but a great deal of trouble. He modestly concluded by affirming that they had done very little that men fighting for their lives would not have done.

The newly elected president of the Massachusetts Fish and Game Protective Association, Mr. P. C. Clark, remarked that as a fisherman he felt that his lines had fallen in pleasant places. He was glad to be there, and glad that the interests of all present were identical in the matter of game protection. He cited the advances protection had made in Maine, New Jersey and Minnesota, and mentioned some of the problems still to be solved. Mr. Clark said further that after the grass and green things had been created right at the very start of things the Infinite mind thought of fish and game as a measure to make the world pleasant. Bearing this in mind when he killed his three thousandth coot some years ago he put on it this inscription with all due reverence: "Oh, all ye fowls of the air, praise ye the Lord!"

When he came to his four thousandth, however, as he did last September, Mr. Clark was obliged to go to Shakespeare for an inscription. He said he could find nothing more fitting than the quotation about Hamlet's uncle: "He did murder most fowl."

Dr. C. H. Gerrish of Exeter, N. H., a well known wing shot, was the next speaker. He took as his subject "The Ideal Sportsman," and a very pretty portrait he painted.

He began by taking up cudgels with those who did not believe in the sportsman's truthulness. He acknowledged the melancholy fact that there were such, and asked why it was that no one would believe a man who stated he had killed two different things with the same shot. The doctor knew this to be a fact from personal experience, for he had once killed a mink and an eel at the same time. He was on his way home from a shooting trip, and seeing a commotion in the water of a brook that ran near the road he was following, slipped a couple of shells in his gun and ran down to see what the trouble was. He saw the mink, and when he shot it found that he had also killed a large eel that had caught on to the mink and was trying to swallow it.

The first man he met asked what luck he had had.

"Well," said the doctor, "I got fifteen birds and a mink and an eel." The man turned on his heel and I walked away without saying a word. The next man he met asked the same question. "Fifteen birds," said the doctor, and then remembering the other item in his bag, added, "and I killed a mink and eel with one shot."

"Well, that's too bad," said his friend. 'By the way, what brand did you say you are taking now?"

The doctor said that not "every man who gets his gun off" is a sportsman. He must be a gentleman. He must also be a temperate man, and take the good things of life just as he loads his shells—with moderation. One of his crisp aphorisms was: "We hate the man who shoots just after us and never misses anything."

During the intermission that followed the Beth Huron Male Quartette entertained the assemblage with some well rendered selections. Secretary Robinson read letters of regret from a number of invited guests or members who were prevented from attending the banquet. Among these were letters from Roger Walcott, Edw. U. Curtis, Wm. E. Barrett, ex-Speaker of the House and Congressman-elect, A. C. Gould, editor of Shooting and Fishing, ex-Governor Russell, A. G. Bouthby, general passenger agent of the Maine Central Railway; L. H. Trotter of Philadelphia, who put his regrets into verse; the editor of the Maine Sportsman, W. Y. Wentworth, A. G. Mills, president of the Adirondack League Club, Fred C Barker, Camp Bemis, N. G. Shaw, the lumber king; Hon. Hy. Elmer, Canadian counsel; W. W. Brown, Hon. A. H. Stroud, Hon. E. L. Pillsbury and others.

President Marsh of the Inglewood Fish and Game Corporation of New Brunswick, was the next speaker. He spoke of the bounds that separated Canada and the United States, raised by politics, and allegiance to different governments, but said that when sportsmen grasped hands these bounds were wiped out of existence. His speech was a prose poem and received some hearty cheers.

Captain William H. Jackson was introduced as one of the "live oak timbers" of the Massachusetts Rifle Association. He told a whimsical story of his trip to

New Brunswick for caribou during the fall, and in concluding said that he wished to be enrolled as the 282d member of the club.

Rev. Charles Follen Lee said that his wood days were no more, and told of the deer he had shot at distant five yards, and how badly he scared it. Mr. D. J. Flanders, general passenger agent of the Boston and Maine road, was called upon for a speech, but did not respond. Fred Beal of the Sandy River Railroad, and Editor Brackett of the PhilipsPhonongraph, than which no paper gives more hunting news, each made a few remarks. Then Dr. Heber Bishop told the story of his moose in a graphic way.

Capital speeches were also made by Mr. C. J. Woodbury, vice-president of the Massachusetts Fish and Game Association, and Hon. George W. Wiggin, ex-president of the same association.

The club song "Ozone," to the air of "Daisy Bell," was then sung with a spirit, and the club banquet was over. J. B. BURNHAM.

Cod Fishing on the Al Foster.

NEW YORK CITY, Jan. 13—Since writing my last article on cod fishing I had the pleasure of meeting several admirers of Forest and Stream on the Al Foster, and all agree without exception that a great deal of pleasure can be had in catching a cod. My friend Mr. William H. Van Cott, Jr., caught three the last trip of the Al Foster—total, 36 pounds—and regrets that this last storm has driven the fish away. I had the pleasure of catching my largest cod, weight 30 pounds, and trust the bad weather we have had will soon clear up so we can again try our luck. The largest cod fish I saw caught with rod and reel on the Al Foster weighed 45 pounds, and the one who caught it—Mr. Smith—told me, "it was a serious question at one time who owned the rod." H. C. W.

A Lazy Man's Fishing Dog.

LITTLE ROCK, Ark.—The secretary of the Grassy Lake Club has a fishing dog, so he says. The mode of working him is to plant the rod, adjourn to the shade for refreshments, and when the fish bites the dog barks. If the fisherman loses the fish the dog shows his disgust in the plainest terms. I have not seen that dog fish yet, and for further details refer you to the honorable secretary. J. M. R.

Game and Fish Protection.

The Michigan Export Law.

ESCANABA, MICH.—*Editor Forest and Stream:* Quite a sensation was caused here the other day by the arrest of Q. R. Hessel and Charles Grunert, of this city and Capt. Thompson, of the schooner Frank Miner, on the charge of having venison in their possession. In some manner the officers discovered that the schooner Frank Miner, lying at the Merchant dock, had a huge quantity of venison aboard which was billed for some point in Wisconsin, and made an investigation, which confirmed their suspicions. The captain of the vessel was, of course, indirectly interested in the matter, but he was brought before Justice Glaser and fined $10 and costs, amounting in all to $17. Hessel, it seems, induced the captain to take the venison, but claims that he was ignorant of the contents of the boxes and was merely doing a friendly act for Grunert. However, the officers considered the evidence accumulated sufficient to warrant the arrest of both Hessel and Grunert, and on Monday morning the latter appeared before Justice Glaser and was fined $50. Hessel entered a plea of guilty yesterday morning and was discharged after paying a fine of $16. The contraband venison was disposed of according to law.

The Adirondack Deer.

HAMILTON, N. Y., Jan. 10.—*Editor Forest and Stream:* I wish to record my opinion as to the hounding of deer. Two hunting trips to the Adirondacks have convinced me of the mistake in allowing the use of dogs. The real sportsman will feel more satisfaction in getting his deer by honest stalking than in any other manner. There is no honor in standing by a runaway and murdering a deer that is driven before the muzzle of one's gun by dogs. There are enough deer in the wilderness to give any one who is willing to work for the opportunity a fair shot. I hunted only ten days each trip, and could desire no better chance for success. During my first outing, which was in September, 1893, I saw eleven deer with two standing shots, and last August I saw four deer, two standing within thirty-five yards. With the convening of the new legislature let us have a new deer law. COLLEGIAN.

The Massachusetts Fish and Game Protective Association.

BOSTON, Jan. 10.—*Editor Forest and Stream:* The annual meeting of this association was held at the Hotel Thorndike last evening. After seventy-five members had fortified themselves with a good dinner they got right down to business, and after the election of four new members—Messrs. J. Payson Bradley, Wm. B. Kehew, Sanford Phipps and Edward W. Morse—and the choice of Mr. Isaiah C. Young of the State Fish Commission as an honorary member, the report of Secretary-Treasurer Kimball was in order. This gave the very gratifying information that the bills were all paid and that there was upward of $2,000 in the treasury. During the year the work of the association has been considerable, and several prosecutions for illegal fishing have been made; this has been especially the case in Worcester county, where the work of Deputy Warden John F. Cuming has been very effective; he has received substantial encouragement from the committee of the association on the enforcement of the fish laws to continue the good work. The following officers were elected for the ensuing year: President, Benjamin Cutler Clark; Vice-Presidents, George W. Wiggin, C. J. H. Woodbury, Edward E. Hardy, Dr. John T. Stetson, Ivers W. Adams, Edward J. Brown, Edward E. Allen, Secretary and Treasurer, Henry H. Kimball; Librarian, John Fottler, Jr.; Executive Committee, Herbert Bishop, Sidney Chase, Dr. W. G. Kendall, W. B. Hastings, Chas. G. Gibson, Hon. W. F. Ray, Chas. A. Allen, Loring Crocker, Jr., W. B. Smart, Rollin Jones, Henry J. Thayer, Edward E. Small; Membership Committee, Edward T. Barker, Arthur W. Robinson, Walter C. Prescott; Fund Committee, Dr. J. W. Ball, W. Hapgood, Edward Brooks.

Mr. George W. Wiggin retires voluntarily from the presidency after several years of faithful and efficient service, but the board of management will continue to have benefit of his careful judgment and wide experience. Mr. B. C. Clark, who succeeds him, has been one of the most active members of the association for many years, and its affairs could not be intrusted to safer hands.

The annual dinner—always an interesting occasion—takes place at Young's Hotel, Wednesday evening, Jan. 30, and acceptances have already been received from a brilliant galaxy of after-dinner speakers, so that the affair promises to be up to the usual high standard. A big moose is already in the cold storage at Quincy Market. Dr. Heber Bishop, returned from Megantic region, will lead the choruses. WM. B. SMART.

New York Association.

The annual winter convention of the New York State Association for the Protection of Fish and Game was held in the Assembly rooms of the Yates House, Syracuse, Jan. 10, President D. H. Bruce in the chair. The meeting was a great success in every way—attendance, earnestness and attention to business. The following delegates were present:

Anglers' Association of St. Lawrence River—G. M. Skinner, R. Grant, H. C. Cornwall, W. H. Thompson.

Honeoye Falls Anglers' Association—A. Mather.

Rochester Rod and Gun Club—H. D. McVean.

Canandaigua Rod and Gun Club—Chas. B. Lapham, Chas. T. Mitchell.

Genessee Valley Fish and Bird Protective Association—F. J. Amsden, F. W. France, H. S. Wadsworth, H. H. Weidemer.

Niagara County Anglers' Association of Lockport—Wm. H. Chase, F. K. Sweet.

Caledonia Fishing Club—Jas. Annin, Jr.

New York Association for the Protection of Fish and Game—John G. Hecksher, Robt. B. Lawrence.

Onondaga County Sportsmen's Club—Andrew S. White, A. R. King, Myron Weidman, Nathan Ayres, Wm. Prettie.

Anglers' Association of Onondaga County—Gen. D. H. Bruce, C. S. Smith, R. A. Molyneux, D. S. Morgan, Amos Padgham, Henry Loftie, Chas. H. Mowry.

Black River Fish and Game Protective Association—W. E. Wolcott, G. G. Chassell.

Morehouse Lake Club, Middleville—W. W. Mosher.

Chautauqua County Association for the protection of Fish and Game, Jamestown—F. H. Garfield.

Honest Fisherman Club, Seneca Falls—Dr. F. G. Seaman, Ernest G. Gould.

Steuben County Fish and Gun Club—L. S. Parker.

Central New York Fish and Game Protective Association—H. C. Carr, J. D. Alden, W. S. Gavitt, S. S. Granger, E. J. Gould, Dr. Seaman.

Franklin County Fish and Game Protective Association—Morton S. Parmelee, H. C. Skinner.

There were also present Chief Protector J. Warren Pond and twenty-five of the district protectors. The attendance of the protectors has come to be a regular feature of the State Association meetings, and the effect is beneficial and stimulating to all concerned. If anything were needed to rouse enthusiasm it was supplied when President Bruce made his opening address. The services of Gen. Bruce in revivifying the Association and putting it upon a business basis, are well understood and appreciated. The recommendations as to legislation adopted were as follows:

Prohibit floating or jack-shooting for deer and the killing of does at any time. The transportation of deer after Nov. 5 should be prohibited. The hounding of deer should be permitted only between Sept. 10 and Oct. 11.

It is the sense of this Association that the open season on rabbits and hares in the whole State, except Queens, Kings, Suffolk and Richmond counties, and in the counties of St. Lawrence, Franklin, Essex, Clinton, Lewis, Warren, Hamilton and Herkimer be confined to the open season on woodcock and grouse, and the use of ferrets be prohibited.

Web-footed wildfowl, except geese and brant, shall not be pursued, shot at, hunted, killed, possessed or sold between the first day of March and the first day of September, and shall not be pursued, shot at, hunted or killed between season. On the Hudson River, south of the Troy Dam, and its tributaries, boats propelled by hand may be used for the purpose of shooting web-footed fowls.

Amend Sec. 74 by striking out "16th day of August" and inserting "1st of September" as opening day on ruffed grouse and woodcock.

Amend Sec. 76 by striking out the words beginning "unless it be" and ending "out of the State."

Amend Sec. 79 by making the season for meadow larks open Aug. 15.

Amend Sec. 82 by including English pheasants.

Amend Sec. 102 as follows: Any illegal device to be used for taking fish being found in possession of any person on any of the inland waters of the State when such use of such device is prohibited on shore or islands of said waters, shall be deemed a violation of Sec. 102.

The section fixing the open and closed seasons for bass was approved.

There was considerable discussion over Sec. 111, resulting in no changes of the section; length to be continued at 8in.

Amend Sec. 132: That Sec. 132 be amended so as to read after the words "nor in Lake Ontario within one mile of the shore nor any islands therein," nor within three miles of the mouth of Niagara River.

Sec. 132, strike out: "The waters of Lake Ontario to the county of Jefferson included between Blue Rock within the town of Brownville and the town lying between the towns of Lynn and Cape Vincent, including Chaumont Bay, Griffin Bay and Three Mile Bay and in the county of Oswego between the northerly line of the town of Mexico and Jefferson county line are hereby exempt from the provisions of this act."

Resolved, That the above-named wording of Sec. 132 be hereby repealed.

Sec. 134: Resolved, That it is the recommendation of this Convention that Sec. 134 be changed so as to make the size of bar of meshes of nets used in Lake Erie and Lake Ontario one and one-half inches instead one and one-eighth inches as the law now reads.

Resolved, That the Board of Fish Commissioners be authorized to fix conditions under which Canadians may be permitted to fish in American waters and hunt in American fields such as shall fairly accord with similar provisions of the Canadian officials.

Sec. 141, strike out: "Suckers, bullheads, eels and dogfish may be caught at any time by means of hooking and spearing in any of the waters of this State."

Sec. 145: Restrict the length of minnow nets to twenty feet and their width to four feet. The young bass, pike or wall-eyed pike shall not be taken or used as minnows for bait but all such young fish when taken must be returned to the water without unnecessary injury. This section shall not authorize the placing or use of nets or any other device of the kind used for catching fish in the streams, or the taking of trout by means of nets or other device except angling, in other waters.

Sec. 149: Resolved, That all net fishing, except for minnows, in all inland waters of the State be prohibited.

Second resolution: Resolved, That all fishing in the inland waters of this State with nets, except for minnows, should be prohibited, but if such prohibitions should not be made, then it is resolved that Sec. 149 be amended by striking out the words "may prescribe such rules and regulation," etc., and insert "shall prescribe such rules and regulations," and at the end of such section add the following: That no nets shall be drawn for whitefish except under the supervision of a regular or special game protector or their duly constituted deputies; that each and every person shall pay a license, to be fixed by the Commissioner of Fisheries, for the privilege of drawing a net, said license to be paid to the person or persons so supervising the drawing of the same; that no person shall be licensed to draw a net until the name of the applicant shall have been submitted to the organization in the locality where he resides, and that a copy of the rules and regulations shall be forwarded with each license issued.

Add to Sec. 150: That licenses shall, upon application, be issued by the Commissioners of Fisheries to those parties who desire to deal in live game, birds or game fish, and without such license no persons shall deal in live game or fish.

Amend Sec. 231: That this Association recommend the penalties to be imposed for violation of the game laws be fixed as follows, except dynamiters: for conviction, first offense, a fine in the discretion of the court; for conviction, second offense, not less than $25; for conviction, third offense not less than $50; for conviction on any subsequent time, no fine imposed, but imprisonment within the limits fixed by law.

W. S. Gavitt, James Annis, Jr., and A. C. Cornwall, as a nominating committee, brought in this list of officers for 1895: President, Frank J. Amsden of Rochester; Vice-President, Robert B. Lawrence of Flushing; Secretary and Treasurer, John B. Sage of Buffalo. The nominations were ratified.

The following were appointed a legislative committee to prepare the resolutions adopted at the meeting, and to bring them before the Senate committee: Cornelius W. Smith, Syracuse; J. S. Van Cleef, Poughkeepsie; Howard Widner, Rochester; Dr. J. S. Parker, Bath, and Charles Lapham, Canandaigua.

A vote of thanks was tendered to Gen. Dwight H. Bruce, the retiring president, for his efficient work done in the past for the Association.

The National Game, Bird and Fish Protective Association.

CHICAGO, ILL., Jan. 11.—As announced earlier, the annual meeting of the National Game, Bird and Fish Protective Association occurred at the Sherman House this city, the first session being on the evening of January 9, the concluding one on the evening following. On both occasions, President M. R. Bortree was in the chair, filling the duties handsomely. The secretary, Mr. Fred E. Pond, being detained at home by sickness, Mr. W. H. Thompson, of Waukeka, Wis., was chosen secretary pro tem., serving thus acceptably for both sessions. It was a singular, but I hope not inauspicious fact, that when the meeting was called to order, both on the first and on the second evening, there were 13 members present. These increased to sixteen the first evening, and to about 20 on the second. There were present Mr. A. L. Lakee, of Kalamazoo, Mich., Mr. C. F. Bates, of Cedar Rapids, Iowa; Mr. W. H. Sharpe, of Waugeke, Wis.; Mr. Howard Bosworth, of Milwaukee, Wis.; Mr. L. K. Buntain, head fish and game Warden of Ohio, from Dayton, O.; Mr. I. W. Sharp, of Indianapolis, Ind.; the remainder was made up from Chicago. Several new members were admitted, making the total membership for the United States now foot up about 250.

It would waste valuable space to no purpose to take up in detail the routine business of the first evening. The only real news of the evening, and it was very good and interesting news, too, lay in the remarks on the raising of Mongolian pheasants, made by Mr. Howard Bosworth, Warden Buntain and Mr. Thompson.

Mr. Bosworth said that he started two years ago with eight birds. This fall he had had 150 full grown birds at one time, but a mink got into his coops one night, and killed fifty birds. He paid $5 each for his parent birds. He had put $2,500 into the project, and all he wanted was to get the birds introduced and protected in Wisconsin. He would furnish eggs next season at nominal cost to anyone wishing to rear the birds. He thought about forty of his birds had escaped and were now wild near his place, fifteen miles out of Milwaukee. He thought the Legislature would soon pass a law protecting the birds.

Mr. Bosworth said that these birds were prolific, laying from forty to sixty eggs in sixty days. One hen laid eighty-one eggs one year. They were polygamous, one cock being proportioned to five hens. The cocks had to be separated by high base boards in the pens, so they could not see each other, as they fought viciously. He said he had lost ten broods of chickens by putting the eggs under hens infested with vermin. (All hatching had to be done under dosmestic hens.) He had found it best to build the nest on top of a pile of sulphur, and lime. He first put in three hen's eggs, to see whether his hen was going to set. He shut her up on these eggs, and after a day or so let her out. If she returned to the nest, he placed the pheasant eggs under her, first killing the vermin on the hen. This was done by holding her up by the wings, and filling the reversed feathers, even to those of the neck and head, full of insect powder. Three days after that, the same treatment was given again, and it was repeated about three days before the hen was to come off, (which is twenty-four days, three days more than will domestic fowls).

Mr. Bosworth said he had found dry maggots the best food for the young birds. These he obtained by hanging raw beef above the coops the maggots dropping down. The slaughter house maggots scurvied the young birds so that they died. The young birds were large and active. The old birds stood the winter very well. They lived on buds, etc., much as wild grouse do, but would eat grain if necessary. He thought their adaptibility to this region as established beyond doubt. He had wasted money in his ignorance, but thought he was on the right track now. His coops were made tight, to keep out wild animals, and his runways were 250 feet long, covered with fine wire netting.

Mr. Sharp told something of his personal knowledge of the success of the Oregon experiment with these birds, and Mr. Buntain, the Ohio Warden, spoke in a very interesting way of the attempts to introduce the bird in Ohio. This, he said, had been done by the State of Ohio as a State, $800 having been appropriated for that purpose, to the Fish and Game Commission of Ohio. Their first three attempts had been unsuccessful, but now they had ordered three dozen ring-neck pheasants (at $45 per dozen), and one dozen Memphis pheasants (at $70 per dozen(, and he supposed these birds were now at hand at the State hatchery at Salina Ohio. He said the State would push this well, as they had sportsmen on their State Board, and a fund to work with. He thought it was advisible as to have public fish hatcheries. The Board would probably lease Rattlesnake Island, in Lake Erie, about seventy acres in extent, to use as the breeding ground.

Mr. Thompson said that he and some friends had a few birds at Gay's Mills, Wis., and that one or two having died, the others had escaped, one cock and three hens, and were now wild in the woods near there. He also knew of three pairs that were loose and wild in the woods near Muscoda, Wis.

GOOD WORK IN OHIO.

Warden Buntain gave an interesting story of the State work in Ohio against game law violaters. He said that a year ago last August he had a midnight fight with five illegal seniers. He was forced to shoot three of them down, and knock the other two down with a rock, being shot twice in the fight himself, and having his skull fractured by a blow from a rock. This injury necessitated trephinning of the skull, but he said he wasn't dead yet, nor was any one of the men arrested. He took them all into town in a farm wagon, all unconscious, fainting away himself after they had been taken care of. While waiting for the wagon, he had his five men all piled up like cordwood, and was sitting on top of them, on the point of shooting the whole gang, one by one, not feeling very well himself. Mr. Buntain said there was no worse State than Ohio, but that an entire change of sentiment was occurring, so that his work had full support.

Mr. Buntain said Ohio had stopped the sale of quail, and its Supreme Court had affirmed its decision in the Roth case, of Cincinati, which held that Indiana quail could not be sold in Ohio. (A most important decision it would seem.)

THE SECOND EVENING.

At the election of officers the following were chosen to serve for the ensuing year: President, M. R. Bartree, of Chicago, re-elected; 1st Vice-President, Jos. Hunter, of Washington, D. C.; Secretary, A. L. Lakee, of Kalamazoo, Mich.; Treasurer, W. H. Thompson, Wauzeka, Wis. State Vice-Presidents will be appointed later. The next meeting will be at Chicago. Several reports were read, including the interesting ones of the President, Mr. Bostree, and of the attorney, Mr. F. S. Baird. A long list of recommendations was advanced by its committee, on recommendation being in tote such as would need enthusiasm, but little was said about better executive measures in putting into effect the laws now on the statute books. As much discussion seemed inevitable over such details as how best to spend the $50,000 which a $1 que tax would raise for the protective purposes (provided it were past and collected and as little had been said as yet by way of practical action, it

was at length wisely concluded to adopt all the recommendations in toto, on the basis that they were all good things, which wouldn't need any pushing along. One phrase of these resolutions, taken up by Mr. R. S. Mott, was the nearest approach to national action if anything offered. Mr. Mott's motion was to the effect that the executive committee should be instructed to take the necessary steps to memoralize Congress to take action in accordance with the suggestions of the recommendations adopted. This was made of record. Several letters from absent State officers were read. There was much aimless discussion, as is usual in such meetings, but the intentions of those present were no doubt sincere for the most part. We could well report that such meetings must so often take on the phase of a debating school, when so much remains to be done by way of practical work. State Warden Blow, of Illinois, talked at length upon theoretical and practical phases of protection.

E. HOUGH.

The Kennel.

FIXTURES.

DOG SHOWS.

Feb. 19 to 22—NEW YORK.—W. K. C., Jas. Mortimer, Supt.
Feb. 26 to March 1—DETROIT.—City of the Straits K. C., J. W. Garrison, Sec'y.
March 5 to 8—CHICAGO.—Mascoutah K. C., J. L. Lincoln, Sec'y.
March 12 to 15—DENVER.—Western K. C. Co., E. T. Weiant, Sec'y.
May 7 to 10.—SAN FRANCISCO, Cal.—Pacific Kennel Club.

FIELD TRIALS.

Jan. 14.—SALINAS, Cal.—Pacific Coast F. T. C.
Jan. 21.—WEST POINT, Miss.—United States F. T. C., Trials B., P. T. Madison, Sec'y.
Feb. 5.—NEW ALBANY, Miss.—Southern F. T. C., T. M. Brumby, Marietta, Ga., Sec'y.
Sept. 10.—MORRIS, Man.—Manitoba F. T. C., John Woolton, Manitou, Sec'y.

The Specialty Clubs and the W. K. C. Show.

The different specialty clubs which make a point of doing their best for the W. K. C. Show have again provided a valuable and varied list of specials. The Mastiff Club sets forth an array of plate and medals valued at over $900, and the club's generosity should meet with a better response from exhibitors than is usually the case. The St. Bernard Club donates the usual silver medals, and their offerings, considering the importance and popularity of the breed, pale considerably by comparison with other clubs which, though not so well taken care of in the regular prize list nor so generally popular, are much more enterprising and generous.

The Westminster Challenge cup, which Mr. Moore has won twice, and which if he wins once more he can claim as his personal property, is not offered in the premium list, nor are the *Herald* medals, which lapses, may, we trust, be merely the result of oversight. The new Bloodhound Club makes its bow with an encouraging list, their handsome challenge trophy being supplemented by gold medals which follow the winners in the regular classes. The two Great Dane Clubs have done nothing so far, and the National Greyhound Club does not seem to be in a generous mood, not even one of their handsome medals being put up.

Considering the popularity and importance in every way of the pointer, and setter breeds, one would expect to find the clubs that are intended to help these breeds, represented by an array of specials second to none, and it would seem that, if the Pointer English and Irish Setter clubs are not willing to do more than they are doing now they had better dissolve and give way to individual effort as in past years, when valuable specials were offered by friends of the breeds which gave rise to no end of friendly competition and excited interest. The Gordon Setter Club, with its very limited resources, and considering the position of the Gordon in public favor, deserves credit for its efforts, for six specials of $5 each are provided besides a $100 silver vase.

"How are the mighty fallen!" one cannot help exclaiming when, on turning to the first catalogue of the W. K. C. Show, we find special prizes given by lovers of the pointer and setter aggregating in value over $1,500, and most of these prizes had no string attached but were won out and out at the first try. We understand, of course, that pointers and setters at that time were the most important breeds, but does not the present interest in the breeds as shown by the special lists prove the splendid enterprise of the owners of the non-sporting breeds and the decadence of such enterprise on the part of the pointer and setter men. For instance, there was not a special offered for mastiffs, St. Bernards, bulldogs, spaniels, collies or fox terriers at the show in 1877. The Spaniel Club, as usual, comes well to the front with prizes valued at $365. The Collie Club, with its trophies and cups valued at $650, not to mention the Stud Dog medal and the valuable annual sweepstakes, shows that this breed is well taken care of. Then the Bulldog Club, which really has done so much for the breed it fosters, puts up an array of trophies valued at $650 in addition to the handsome club medals. The young Boston Terrier Club offers four $5 specials, open to all, as well as a $10 special confined to club competition.

Although the Fox Ferrier Club does not announce its specials in the premium list, this healthy and vigorous club will be sure to have lots of work provided for the judge when the catalogue is published. The different rough terrier breeds seem to be content with the W. K. C. $20 kennel prize, but friends of these breeds, who should amalgamate and form a Terrier Club will probably put up something for their pets before the show opens.

The Pet Dog Club seems to be resting on its oars as far as the premium list is concerned. Dachshunds depend upon the Manice Challenge Cup, value $250, and the W. K. C. Kennel prize, and a piece of silver plate is the extent of the Beagle Club's offering, but this club generally distributes its favors to other shows during the season. From the foregoing it will be seen there is ample food for thought on the subject of specialty clubs and their value to the breeds they represent.

The A. K. C. and Its Disqualified Members.

At the last A. K. C. meeting, notice was given by Mr. Watson, of a proposed rule that would prescribe disqualification by the A. K. C. for exhibitors who happened to exhibit dogs at shows where an exhibitor disqualified by the A. K. C. was allowed to compete. While the A. K. C. evidently had some such rule in mind in order to make their penalty of disqualification more severely felt by the unlucky one that had incurred it, such wholesale and uncalled-for legislation struck them as too general. The committee on rules met subsequently and discussed the question in all its phases, but could come to no definite decision until the secretary proposed the following rule, which was unanimously adopted by the committee, subject, of course, to its endorsement by the delegates to the A. K. C.:

TO BE REGULATION IX.

"In the event of any persons or club, not a member of the American Kennel Club, holding a show at which the entry of any person not eligible to make entries at American Kennel Club shows is accepted or who may be permitted to show dogs or act as agent for any other exhibitor, and officiate in any capacity at the show, every person officially connected with such show shall at once be suspended by order of the president and deprived of all privileges of the American Kennel Club, pending the holding of the next meeting of the Executive or Advisory Committees, at which meeting the committee must either remove the suspension or impose a penalty of disqualification for such period as they may decide upon."

One can quite understand that those in power in A. K. C. affairs desire to make their penalty of disqualification as far reaching as possible, still the question naturally arises, what business has the A. K. C. to interefere with men who give a show outside of their jurisdiction? If this rule becomes an A. K. C. law, a person disqualified by the A. K. C. cannot even handle a dog at any show held in America. It would be well for the A. K. C. to consider carefully every phase of this question before making such a sweeping and arbitrary rule. The A. K. C. practically controls all the principal shows held in this country from Maine to California, and in them no disqualified exhibitors may participate in any capacity.

Is this penalty not severe enough without seeking to render innocent men liable for another man's A. K. C. crimes? In the event of passing this rule, the A. K. C. will have to keep track of all the entries at shows held in the country, but the disqualified exhibitors can easily get around the difficulty by showing their dogs in another name. But outside of this contingency, the rule, while better than the one first proposed, is arbitrary and uncalled for. There are several small shows given in this country by Fair Associations and other people who have no idea of or affinity with A. K. C. jurisdiction, and over whom the A. K. C. can have no control whatever and therefore what business has the A. K. C. to seek to bring these people into disrepute, as a sentence of disqualification would in a sense? Let the A. K. C. be content to legislate for its own members and let the other part of the world jog along as it may. Even the English Kennel Club has not sought to extend its arbitrary powers in this direction and if the A. K. C. is well advised they will let well enough alone. The question arises in this connection whether shows have the power to refuse any entry when accompanied by the proper fees. This new rule may be aimed at the Toronto Fair Association, which last year allowed an A. K. C. disqualified exhibitor to compete at their show. On the committee of this show are men who are valuable in the fancy and against whom there is no breath of suspicion of wrong doing, still if this rule passes these men, who are personally every bit as worthy of the confidence of their fellow fanciers as the President of the A. K. C. himself, if they allow this disqualified exhibitor to compete at their next show, will be branded as wrong doers and their names will be included in the black list that is sent to every A. K. C. show committee on application. The proposed rule should be killed at the first opportunity.

The W. K. C. Premium List.

The advance sheets of the W. K. C. premium list were received too late last week to admit of extended notice. The lists are now in the mail and we find that in the aggregate there is about the same amount of money offered as in 1894, but the classification is enlarged from 215 to 238 classes. While some of the breeds suffer a reduction in prize money, additional classes have been provided in the more important, or rather, popular breeds. Nearly all the breeds have challenge classes, with prizes of $15, $10 and $6, but in many of the principal breeds the first prize last year was $20. Those breeds having $15 and $10 in challenge, and $20, $10 and $5 in open classes are mastiffs, St. Bernards, pointers, setters, collies and smooth fox-terriers. The breeds that get $15 and $10 in challenge, and $15, $10 and $5 in open classes are field and cocker spaniels, poodles, deerhounds, greyhounds, Russian wolfhounds, English and American foxhounds, beagles, wire fox-terriers, Irish, black and tan, Bedlington, Scottish, Skye, and Yorkshire terriers and Italian greyhounds. Mastiffs do not get a novice class this year, but St. Bernards have the same full classification as last year. Newfoundlands are cut down to one class. Bloodhounds, great Danes and Russian wolfhounds have puppy classes added, but greyhounds will have to be content with one class for the youngsters. Gordon setters have a much larger classification this year, puppy and novice classes being divided and a field trial class added. In spaniels, Irish water and Clumbers have their classes divided, field spaniels are cut in puppy and novice classes, but two more important classes are given to cockers to make up for this. Rough collies, while sharing in the reduction in challenge prizes, have a new veteran class provided for dogs and bitches over five years, with prizes of $15, $40 and $5. Two new classes are for dogs and bitches under two years, which should meet with much indorsement from the collie men. Poodles do not fare so well this year, corded and curlies go together in the challenge class and the puppy sexes must also compete together. Bulldogs secure divided classes in puppy and novices, which add $30 to the prize money over last year; in bull-terriers there is no change. Boston terriers fare much better this year, as they have separate classes for sex and are divided by weight. The beagle classification it not altered with the exception of the field trial class, which is cut $10. Smooth fox-terriers have a new veteran class added for terriers over five years old that is sure to bring out the old boys, while wires get an additional puppy class. Black and tans fare the same as in 1894. Irish terriers are cut down to the level of other roughs with three open class prizes instead of four and $40 less. Other roughs the same as in '94, excepting Scottish, whose classification is doubled, in keeping with the growing influence of the breed. Classes for the American breds and puppies are added, which means an extra outlay of $90. Yorkshires are cut one challenge class, and wisely so. Toys and pugs are not altered, but toy spaniels are pretty much huddled together. One challenge class for all breeds and the other breeds have one class each, which represents a saving of half the money given in 1894. Of course this will not please the owners of these pets but then it is difficult to please every one and it must be remembered the W. K. C. have to pay the bills. A new class is made for Schipperkes and Italian greyhounds get the same as last year.

In most of the breeds the W. K. C. gives $20 kennel prizes.

Spratts Co. will attend to the commissariat, and may be depended upon to bench in their usual artistic manner; while to Sanitas Co. will be intrusted the task of purifying the air.

The entries close on Feb. 4, and as before, it will cost $5 to enter a dog. Intending exhibitors should bear in mind that entries must this year be sent to Mr. James Mortimer at 59 Liberty street, room 2. Premium lists can be secured at this office.

International Field Trials.

MONROE, MICH., Jan 7.—*Editor Forest and Stream:* In your issue of Jan. 5, appears a letter from Mr. W. B. Wells, wherein he states that in a letter of mine I had something to say about his dogs and himself. If he was the reporter for your paper at the International Field Trials then I had something to say about him,—if he was not the reporter I said nothing about him. By referring to my letter his name does not appear in it. I cannot see any reason why a judge or judges, who are accused of placing dogs wrongly are not entitled to say anything in their own defense. Mr. Wells must have changed his mind since last year when he contended that the rules did not require that the first and second dogs to run together and Cleopatra got first, without running against Tobe, who won second. Mr. Davey did not insist upon his rights, when asked what he meant to do in the matter, Mr. Wells arguing he was correct in his construction of the rules. If I was prejudiced in favor of Tobe this year because of his running back to my old strain, why was I not prejudiced last year also, when he only got second without an opportunity of being put down with the winner of first.

Whatever Mr. Lacy and Mr. Stoddard thought of the treatment Luke got last year was not asked by the judges—but notice Mr. Stoddard, who is a practical and experienced handler of dogs, did not agree with Mr. Wells in a decision given by the latter in the Northwest last September. If Mr. Stoddard was correct in one instance, is he not likely to be correct in another? Mr. Wells' experience does not confirm my comparison of the grounds run over by Tobe and Luke, but think I have bagged more varieties of grouse and more woodcock and quail, over pointers, setters and spaniels, than Mr. Wells ever saw alive, and have run dogs over a greater and more diversified territory than he ever saw, excepting when he might be examining a map, and I make no admission to the contrary in the Tobe-Cleopatra heat.

Where Cleo did her good work I fail to see. She did make one point on quail in her two heats, and her wretched work on birds was done on what Mr. Wells claims the most easy ground for a dog to find and point birds on. She got them out of the brush pile when she came up to where Tobe was pointing, without the necessity of pulling or tearing the pile to pieces. Just a little time previously four dogs were tried in those woods, and Tobe was the only dog of the four that got a point on the scattered birds. One covey was flushed outside in the stubble when Tobe and Cleo were down, Cleo flushed a covey later on the opposite side of the woods, and Luke pointed a covey soon afterward near the centre of the woods. Those birds which were flushed outside went directly into the woods, and those Luke pointed were not seen to leave the woods, so if they were not there they must have either gone into the ground, or evaporated, and as Luke could neither find them, nor the holes they had gone into, they must have taken the latter course. Where there is a might not be, there is often a might. The four minutes beat Mr. Wells speaks of between Tobe and Luke in the small field, the judges' notes give as ten minutes, and one of the largest fields run over during the trials, and certainly one of the best for a dog to show his range, speed, quartering and style of going, indeed it was so large Luke never found the outside of it. When ready to be put down, Tobe was held until Luke had obeyed those calls of nature Mr. Wells mentions, and they were sent off as evenly as a brace of greyhounds from the slips in a coursing field, but before Luke was half way across the field, Tobe was racing down the fence on the opposite side, when the former returned to his handler, only to be urged out again and showed quite an indifference about getting away at all. A dog going out from his handler and keeping out until signaled or called in, who points his birds steadily, allowing the shooter to walk leisurely and quietly up to him and flush the birds, is more likely to create a favorable impression than one who is frequently returning to his handler and requiring urging to keep him out and when he does point has to be reached in the most speedy manner possible. I don't think that a dog which goes off like an overjoyed collie before a butcher's cart, only to return and go similarly out again when ordered on, can be considered very proficient in quartering. Where Mr. Wells got his information about my opinion of Toledo Blade is a mystery to me, unless it comes through his gift of imagination. I understand, however, that he has bred or contemplates breeding to Tobe; if such is the case, he may get a little more independence into his kennel and reach a point that the records show the Campbells left off at (with natives) and later Manitoba Frisk, who has the same native blood in his pedigree as Tobe. As I never turn over a trusty, tried friend for a doubtful new one, I hoep to retain as far as possible, the same strain until I am convinced I have seen a better, or until I become unfit to use a dog.

JOHN DAVIDSON.

POINTS AND FLUSHES.

[*From a Staff Correspondent.*]

During the recent field trials in North Carolina, Mr. Lorillard made some remarks on the conditioning of dogs, and on the dissatisfaction of owners who were not entirely practical, which impressed me as being very sound. He referred particularly to instances were an owner sent a nice fat dog to a handler to be educated, and the dog afterward was returned thin in flesh and with a rough surface. Many owners under these circumstances at once conclude that the dog has been half starved and ill-treated. They do not know that a dog at work must be thin in flesh and hard in muscle, and that, when working in brush and brier, in grass and in mud, in rain and in sunshine, a smooth coat is an impossibility. Mr. Lorillard further mentioned that similar beliefs were prevalent among horse owners who were not practically experienced. They sent smooth, rounded horses to the trainer, which were returned in thin flesh, affording the owner ground for conclusion that neglect and starvation had been his horse's lot.

There is no doubt of the truth of the foregoing, although there is also no doubt but what dogs have been ill-treated too. Of that there is no question. But many times owners have felt aggrieved at the conditions of their dogs after a season's work, when there was no just cause for grievance.

A dog, then fleshy, is in much worse condition for work than one which is half starved, and also is in much worse condition physically, aside from all considerations of work. The fleshy dog is think in wind, indolent, or at least incapable of more than a few minutes of exertion, which is followed by great distress and exhaustion.

Owing to the inability of such dog to work more than a few minutes at a time, it requires many days and sometimes weeks, to work off the fat, tone up the degenerated tissues, strengthen the thick wind and restore the powers of endurance. A fat habit of body is sometimes made permanent if of long duration, and it is impossible to get the dog out of his habits of indolence. He will not or cannot work enough to reduce his flesh. He is predisposed to disease, for, like all carnivorous animals, his natural condition is thinness of flesh. His natural habits of life are those of constant activity. Indolence and fatness invite disease and shorten his life. It is no kindness to feed a dog more than the wants of his system demand. A master who overfeeds his dog may be kind but he is thoughtless. He is kind from his own standpoint of what he requires himself, but he is unkind when he applies his own standard to the needs of the dog. Man can eat three meals a day, with one or two extra ones thrown in on occasion. The dog is fully supplied with one meal a day. He is a carnivorous animal, and therefore requires a generous proportion of meat in his diet. He thrives well on a straight meat diet, all authorities to the contrary notwithstanding. The error in feeding meat, as in feeding in general, is in giving it too often. Once a day is sufficient. Gluttony in man or dog can not end beneficially. It is true that the dog will eat vegetable food, but he eats it from necessity, not from choice. In a mixed diet containing meat, he always picks out the meat first when he can do so. After all, the centuries of domestication with its enforced vegetable diet, have not changed the natural craving of the dog for a meat diet. His teeth, digestive organs, instincts and natural cravings, have not been changed. However long he may be in the confinement of a city, he shows his rejoicings by capering about and barking joyously when taken into the freedom of the country, and at first sight he will chase a rabbit fiercely, all of which indicate that he is not a vegetable eater from choice.

B. WATERS.

NEW ORLEANS.

The True Type of Skye Terrier.

Editor Forest and Stream:

I am somewhat curious to know if you have been taking notice of the correspondence in the English *Stock-Keeper* between our best Skye terrier judge, Mr. James Pratt and others regarding the true type of Skye. Mr. Pratt holds that those which are now shown on the English bench are not Skyes at all, but are what he calls "Lothian Terriers," and that they have robbed the genuine Skyes of their birthright. If this be the case I am sorry for fanciers who are overstocked with so-called "Lothian Terriers," both in the States and in England, and I think it is a great pity that Mr. Pratt did not open up this subject long ago instead of judging and recognizing "Lothian Terriers," as Skyes (when really he did not think them Skyes) and thus allowing and encouraging fanciers to go on producing what he calls the wrong sort. I am glad to say that I am fortunate enough to have both types and can thus please the fancy of different judges.

Mr. Pratt, I believe, intends bringing out some Skyes shortly, which he calls the true type, as he wishes to teach fanciers what Skyes really ought to be and I am wondering very much if they will be the produce of my bitch "Phumps," which he got from me for a time until he had a litter or two from her, after which I got her back again. This bitch won first prize at Toronto show and is the dam of my grand little terrier, "Buccaneer." I may mention that when in England I first showed this bitch at Malden show, Mr. Pratt judging. He was so struck with

her that he was very curious to know where I had got her and remarked at the same time, "That is the stamp of bitch I have been looking for for the last ten years."

Mr. Pratt is a great admirer of her son Buccaneer, and he tried to purchase him from me before I left England. He now advises me to go on breeding the Phumps and Buccaneer stamp, so as to show the Americans what Skyes really ought to be.

I do not and never will agree with Mr. Pratt that what he calls "Lothian Terriers" are not true Skyes, but as I said before, I have both types and can follow whatever the fashion be in Skyes.

MRS. E. M. WILLIAMS.

CHARLOTTESVILLE, Va.

DOG CHAT.

Is it strange that England leads the world in show fox terriers, when the breeders over there have such a crowd of dogs to choose from? But the real toppers are scarce even there. It is estimated that upwards of 72,000 fox terriers were bred in the decade preceding 1892, this calculation being made in the basis of one terrier in every litter of four being registered on the E. K. C. Stud Book, the registrations from 1880 to 1892 numbering 18,000. Making allowance for the large number of fox terriers bred by people who are not in any way connected with the fancy, it is estimated by Mr. Gresham, in the *Live Stock Journal* that upwards of 9,000 fox terriers are bred in the United Kingdom every year.

The Mere Kennels, Tarrytown, N. Y., about three weeks ago lost, while out at exercise, a very promising fox terrier dog, about nine months old. He was marked half black head and black ears, black spot on back, and root of stern, and had on a leather kennel. He was the best of their older lot of last year's crop, and his loss is the more aggravating as he was to be shown at the coming New York Show. The finder will be generously rewarded, and should communicate either to this office or the owner. The kennel has a bitch pup by Ripon Stormer that is expected to "speak for herself" when shown next month.

The Bedlington Terriermen are in earnest in their endeavors to organize a specialty club for the breed and will meet at the Forest and Stream office, 318 Broadway, New York, on Friday, Jan. 18, at 1 P. M. All who are interested in this game terrier are requested to attend.

St. Bernard breeders, the world over, will be sorry to hear of the sudden death of Champion Keeper; "Keeper of the perfect head," as Stock keeper (Eng.) long ago dubbed him. It seems that Keeper expired after a few hours illness, and it is supposed that he had ruptured himself. This grand dog was imported to England from Switzerland by Mr. H. J. Betterton. He was whelped in May, 1887, and was by Ino. out of Sans Peur; Ino. by Leon, out of Belline, a noted matron. Mr. J. F. Smith, of Sheffield, afterward purchased Keeper and he died in his kennels. Keeper was perfect in disposition and as a stud dog was renowned for transmitting his intense quality to his progeny. During his show career he had won the stud dog prize every time he competed for it, as well as the St. Bernard Club's 100 guinea challenge cup three times. There is a good deal of Keeper blood in our best smooths, that noted matron Judith, being a daughter of his out of Regina. The beautiful Empress of Contoocock is also a litter sister of Judith's, and from him no doubt the wonderful family, by Alton-Judith, derive their wonderful type and St. Bernard character.

The rumor that the Southern California Kennel Club would not hold a show this year is unfounded and their annual show will be held as usual. This year's will make the seventh show this plucky club will have held and is expected to be as good if not better, than preceding ones.

That lawyer who said, during his pleading in a will case trial in Alameda Co., Cal., when evidence was given that the testatrix had seen the spirit dog, that "It is no more irrational to believe that dogs have spirits than that men have them." must be a dog lover and therefore a good sort.

It is possible that the Oakland Kennel Club, of California, may hold a show either just before or after the San Francisco show. With the turn of the new year kennel affairs seem to be looking up on the coast. Portland, Ore., has just held a small show in connection with the Exposition. The dogs were for exhibition only, but a good deal of interest seems to have been taken in them, and we trust this will induce the Columbia Kennel Club of that city, to bestir themselves and hold a show after the California events.

The prospects of the Pacific Coast Field trials held this week, at Salinas, Cal., are said to be excellent. Birds are plentiful and the grounds in good shape. The Amateur Stake is expected to draw well, and increase the interest in field sports on the coast. In this connection it is interesting to note in our lively contemporary, *Field Sports*, that California is fast coming to the front with excellently bred field dogs. They have in the State in English setters a son and daughter of Gladstone, a son and daughter of Count Noble, two sons and a daughter of Roderigo, three daughters of Gath's Mark, a son of Gath, several sons and daughters of Dan Gladstone, a whole litter by Sportsman, a son of Eugene T., and any quantity of the descendants of sires of lesser note. In pointers they have a son of King of Kent, two daughters of Rip Rap, a daughter of Strideaway, several sons and daughters of Vandevort's Don, a daughter of Proxteth, a son of Upton of Blithe, a daughter of Graphic and many others. In Irish setters are a son of Bruce, a son of Elcho, Jr., a son of Beau Brummel and Coleraine, two litters by Finglas and many others of good blood.

With all due deference to our friends who ridiculed our criticism of Ealderman's, the mastiff, ears being too small, we decline to "shake," and still maintain our assertion in spite of the "disinterested" evidence of those authorities who have never seen the dog and of the instigator who bred him but has not seen him since a pup. Ealderman's ears are next door to a rose ear, are small, held from the head, and "crimpled" at the roots and on a head of the size of Ealderman's, they appear as small and out of comparison as his kennel mate Leamington's are too large. We have without doubt seen more mastiffs on the bench than our Hulton friend, and had still more opportunities for comparison and, while not by any means setting up to be as great a theoretical authority, are quite convinced that such an ear as Ealderman showed at Toronto, is not to be desired on any mastiff. And could Mr. E. Court Rice, Dr. Turner, Mr. Taunton, Mr. Cook, and other practical mastiff men see the ears in question, they would doubtless be of the same opinion.

Another well-known fancier has joined the order of Benedicts. This time it is Mr. James E. Greene, of the Wankie Kennels, who is so well and favorably known in kennel circles, and we are sure that those who know him will join us in extending congratulations and wishing the happy couple every prosperity.

The premium list of the City of the Straits Kennel Club's third annual show is out in good time. Contrary to expectations the club has cut down the prize list considerably both in money and in classification. Mastiffs and St. Bernard must be content with two prizes in the open of $15 and $10, and challenge prizes of $15, and St. Bernard's get a local class with prizes of $5, $3 and $2, an innovation that is sure to be appreciated and add to the entry. These two breeds are the only ones in which puppy classes are provided with prizes of $10 and $5. Pointers and English and Irish setters do not fare so well as last year, having prizes of $10 in challenge and $10, $5 and $3 in the open classes. Gordons get $10 in challenge, and $10 and $5 in open classes. Great Danes, cocker spaniels, collies, beagles, and fox terriers (smooth) get separate challenge classes, with $10 prizes and $10 and $5 in the open divisions. Those breeds in which challenge dogs compete together are Russian wolf hounds, greyhounds, field spaniels, poodles, bull terriers, pugs, black and tan terriers and Italian greyhounds, with $10 in challenge and $10 and $5 in open classes. Other breeds not mentioned above do not have challenge classes, bloodhounds, dandie Dinmonts Skyes, Yorkshire, toy and Scotch terriers have but one class each, and in regard to the latter now important breed, this is not a wise classification as no doubt the principal kennels will be sending dogs to Chicago and would like to take this show in on the way. There is no Bedlington terrier class this year, and this will afford the proposed new club an opportunity to show the good it can do. Local classes, in addition to those mentioned, are given to pointers, English and Irish setters, cocker spaniels, fox terriers (smooths), and pugs, competition in these divisions being confined to dogs and bitches owned in Wayne Co., Mich., and Essex Co., Ont., Canada. The club donates $10 kennel prizes to most of the important breeds, competition being rightly restricted to four from each kennel. The entry fee is $3, except for locals, which are charged $2, and entries close on Monday, February 11. The usual arrangements have been made with the American, National and United States Express Companies.

The judges are restricted to two well-known adjudicators. Mr. John Davidson takes foxhounds, greyhounds, pointers, setters, dachshunds, deerhounds, beagles, Italian greyhounds and miscellaneous, and Mr. James Mortimer will place the mastiffs, St. Bernards, Great Danes, collies, bloodhounds, wolf hounds, spaniels, poodles, all terriers, bull dogs and pugs. The bench show committee is composed of Messrs. G. M. Hendrie, Chairman, J. W. Garrison, R. Bangham, Guy D. Welton, C. A. Parkinson, W. Howie Muir, T. C. Ouelette and Charles Thurman. All entries must be made with J. W. Garrison, 18 Peninsular Bank Building, Detroit.

At a meeting of the Executive Committee, of the Bloodhound Club, it was decided to hold the first annual meeting at the New York Show, on February 20, at 2 P. M. The secretary, Mr. Charles H. Inches, says that as the club has been so liberal in its offers of specials, a large exhibit of this noble breed is expected.

Mr. George Thomas will return from England early in February and is getting a good team together for the W. K. C. Show. He sent three dogs over that arrived Jan. 7, but particulars regarding them have not yet arrived.

Mr. L. A. Rice, late of the Scotswood Kennels, has accepted a position at the Bartholdi Hotel, New York, and will be pleased to welcome any of his old friends.

Champion Obo II is dead. Spaniel breeders the world over will feel more than a pang of regret and give a kind thought to the old dog that has done so much for the cocker spaniel in America and sympathy will be generously extended to his late owner, Mr. J. P. Willey of Salmon Falls, N. H., for the names of both are inseparably connected with the foundation and building up of the cocker to the high standard in which we find it to-day. Although Obo II did not live to see the day when the vexed question, "What is a cocker?" will be definitely settled, had dogs the power of retrospection this great stud dog might well have indulged in self complacency. For his influence on the breed was unique; and no other stud dog, of any breed, unless it be Elcho Jr, the Irish setter, has so indelibly fixed a type through his sons and daughters. There has scarcely been a winning cocker produced during the past decade that did not trace almost directly to "old Obo II"—as he was affectionately termed by those who were wise enough to follow Mr. Willey's lead. The old dog has failed visibly during late years and his death was to be expected any time. He received the tenderest care, but the end came on Jan. 2. Mr. Willey is inconsolable. Obo II was whelped Aug. 7, 1882, and was by Obo out of Chloe II. Mr. Willey bought him when a puppy from his breeder, Mr. F. F. Pitches, Claremont, N. H. He was first shown at Manchester, N. H., in 1883, and then won firsts at Lowell, Mass., New Haven, New York, Philadelphia, and at Boston in 1885, when with champion honors thick upon him he was retired and his energies were henceforth devoted to the improvement of the breed. He was indeed a "pillar of the stud."

Mr. E. M. Oldham, the well-known spaniel judge, will probably be more intimately connected with the shows on the circuit this season and is desirous of acting as superintendent. His experience with shows and exhibitors should well fit him for such a responsible position.

The annual meeting of the United States Field Trials Club will be held at West Point, Miss., Wednesday evening, Jan. 23.

The dog show held at Cincinnati this week is a most gratifying success to those who have been hard at work in arranging the details. An entry of three hundred was secured, and the quality of the dogs shown was good. The report of the show will appear next week.

The noted Boston terrier, Jem Mace, who is said by many of the experts on this style of dog to be one of the best in his class, has been sold by Mr. Tom Plant to Mr. H. Alward, Chicago, Ills. Three hundred dollars was the price given.

Word was received in New York last week that the important mastiff case, in which the well-known Beaufort's Prince was claimed by Mr. Martin Fallon, of Bridgewater, Mass., as a dog he had lost in 1893, was decided in favor of the plaintiff and against Dr. C. A. Lougest, who owned and was showing the dog at the time it was claimed. The verdict seems unaccountable, in view of the evidence, and Dr. Lougest will receive the sympathy of his fellow breeders. It will be remembered by our readers that Beaufort' Prince was attached by Mr. Fallon at the last Boston Show, and a bond of $500 being put up he held the dog until a final decision was rendered as to his identity. In the first case, tried last summer, Dr. Lougest gained the verdict, but Mr. Fallon appealed the case, retaining possession of the dog meanwhile. On Jan. 4 to 8, in the Third Superior Court at Boston, the appeal was heard. No new evidence seems to have been adduced by Mr. Fallon, and notwithstanding the evidence of such well-known dog men as Herbert Mead, secretary of the Mastiff Club, who sold Prince to Dr. Lougest and J. L. Winchell, who bred the dog, and the deposition of Mr. Fraleigh, who originally purchased the dog from Mr. Winchell, and who in turn sold the animal to Mr. Mead and Dr. H. C. Glover, Dr. J. Stewart, John Read, B. F. Lewis, Geo. Glazier, Charles H. Innes, C. Walter Lougest, S. Jeff and Dr. Lougest, who are all more or less familiar with the dog, either in its public or private life, the jury rendered their verdict in favor of the claimant, and in addition awarded $25 damages. The lawyer for the plaintiff, in addressing the jury, made a serious accusation when he characterized Dr. Lougest's witnesses as "A parcel of dog men from all over America, whose evidence was manufactured to bolster up the case." We trust the case will not rest here and we believe it is Dr. Lougest's intention to carry the case to the Supreme Court. This is a matter of vital importance to exhibitors of dogs. The mastiff in question is well known to be Beaufort's Prince, and though Mr. Fallon may be perfectly honest in his conviction that the dog is the one he lost, there is no room for doubt but that he is mistaken. The case is of such importance that some action should be taken by his fellow fanciers, to help Dr. Lougest in his struggle, for the result of this verdict practically leaves dog owners in a critical position. If their dogs can be claimed on such evidence as that adduced in this case, no man's dog will be safe unless it is surrounded with a bulwark of identification marks that even an ordinary jury can appreciate.

Hunting and Coursing.

BRUNSWICK FUR CLUB'S WINTER MEET.

The success of the Brunswick Fur Club as an association of enthusiastic foxhunters is amply proved by the gathering of sportsmen now comfortably installed in the hotel at Barre, Mass. Nothing stops a New England foxhunter, his dogged enthusiasm sustains him throughout the wretched weather that we may expect at this time of the year; rain or snow, sleet or blow, it's all the same; he will try for a brush and tramp many a mile in the cold slush, happy if he hears the hounds scream once in a while and happier still if sly reynard comes sneaking his way and he gets a shot at him. The opening day was not very propitious, the thaw having made the going very sloppy and although foxes are said to be plentiful, the hounds could do little driving owing to the excess of moisture. There are upwards of forty foxhunters here with about thirty-five hounds, and among them several that have made notable records in the hills of New England. A pleasant feature this year is the presence of the noted Kentucky fox hunter, Mr. W. S. Walker, with three hounds of a strain that is known in almost every fox hunting state in the Union for their gameness and speed.

He arrived on Monday afternoon from his home at Point Level, Ky. The dogs he has with him are Joe Carr, Alice and Big Stride that ran in the trials at Olympian Springs, Ky., last November. His presence gave rise to an interesting talk on southern and northern hounds and he showed New Englanders that the prevalent idea that Kentucky hounds have no trouble in catching their fox is altogether erroneous, not more than one fox in thirty starts being run into.

The Worcester Fur Company is here in force represented by such fox hunters as A. B. F. Kinney, O. F. Joslin, D. C. Luther, W. R. Dean, G. H. Waite, O. M. Bell, Frank Stone, E. T. Whittaker, W. S. Perry, A. H. Perry, John R. Thayer, and E. S. Knowles. Among the other hunters and members of the B. F. C. are: B. S. Turpin, the secretary, who brought R. D. Perry's famous hounds Clinker and Trailer along with him; A. M. Snow, H. J. Given and F. G. Andrews, of Brunswick, Me.; H. M. Gregg, L. V. Dennison, W. B. Stone, W. H. Flagg, C. L. Wellington, of Waltham, Mass.; F. G. Fox and W. H. Perkins, of Ware, Mass.; E. Hill, of Phillipston; Ben Holden, of Princeton, Mass.; L. Smith, of Weston, Mass.; P. F. and R. B. Holden, of Boston; G. P. Barry, of Salem, Mass.; F. W. Eddy, of West Newton, Mass.; W. H. Bragdon, of Portsmouth, N. H.; R. D. Perry, of Portland, Me.; J. M. White, of Milbury, Mass.; Mr. Carr, of Holliston, Mass., and others.

On Monday evening the members of the Worcester Fur Company, held a meeting and decided to hold their annual snow hunt on January 23, at Sutton, Mass., providing the weather is favorable, if not the hunt will be postponed till the next day.

The annual meeting of the B. F. Club was held on the same evening, with Mr. L. O. Dennison in the chair. After the annual reports were read and accepted, the chairman spoke of the necessity of choosing the officers according to their ability and not altogether as they stood in popular favor. He was in favor of such changes of the running rules as would tend to create greater interest in the club among fox hunters.

Dr. A. C. Heffinger was nominated by A. B. F. Kinney, but was opposed by some of the members on the ground of his leaning toward the southern hound in preference to the native. Mr. Dennison, though also nominated, declined the honor. The first ballot resulted in a tie vote on the two nominations, but on the second, Mr. Dennison being firm in his refusal to serve, Dr. Heffinger was elected president. Messrs. Kinney, Given and Joslin were appointed a committee to nominate the other officers and they were elected as follows: Vice-Presidents, L. O. Dennison, O. F. Joslin and H. J. Given; M. F. H., R. D. Perry; Treasurer, W. B. Stone; Secretary, B. S. Turpin; Executive Committee, A. B. F. Kinney, R. Seely, A. MacDonald and L. E. Conant; W. S. Walker, A. K. Walker and Dr. Wash Miller, of Kentucky, and F. M. Whipple, of California, were elected Honorary Members. The committee appointed to revise the constitution and running rules is composed of Dr. Heffinger, B. S. Turpin and R. D. Perry. The rest of the evening and most of the night was given up to social jollity and those who essayed to gain a little sleep in preparation for the labors of the morrow had a troubled time of it. Among the hounds that are here are: A. B. F. Kinney's Pepper and Diamond; D. C. Luther's Nigger; O. F. Joslin's Juliette; W. R. Dean's Dime; G. H. Waite's Rover, and A. B. McGregor, is here with N. Q. Pope's two couple, consisting of Zach, that ran so well in the B. F. C. trials last year; Sunmaid, also a winner in the trials, and Duke and Flirt.

TUESDAY.

The horn sounded for breakfast at 6 A. M., and an hour later the barges were ready to convey the hunters to their hunting grounds. The main body was conveyed about two miles to the northern edge of the township. A party of six, under Mr. Stone's leadership, went to the grounds west of the hotel.

At 7.30 the first pack was cast off.

In this pack were Pepper and Diamond, Joe Carr and N. Q. Pope's hounds. They were put on the east side of the Templeton road, but failed to strike. Meanwhile the main party which cast the hounds off at the upper end of the grounds had little better luck, but after thirty minutes they struck a trail in a clump of pines and the Kinney party's hounds closing in, the united pack drove the fox toward the Thousand acre swamp to a loss. A track was found and a young hound put on, but he did not do more than a little whimpering on it and then came in. Mr. Conant's, hound, a son of the well-known Bonny, got off on a line by himself and was heard doing some good driving.

The party that hunted west of the hotel did the only real work of the day. Half an hour after the throw off their hounds started a fox and drove reynard for more than three hours. Not content with this they started a second fox for another good run, during which Mr. Smith was given the only chance for a shot, but was unable, owing to his awkward position, to bring down the game.

The hunters straggled in about noon, and many of the hounds felt like their masters, pretty tired out and followed suit. Messrs. R. D. Perry and J. M. White arrived about this time, the latter bringing the celebrated hounds, Logan and Fly. Then the snow commenced to fly, and only stopped at five o'clock. This makes the hunting conditions more propitious and good sport is expected to-morrow.

WEDNESDAY.

All the disappointments of yesterday were forgotten when the blinds were raised this morning, for the inch and a half of snow that fell yesterday afternoon put the grounds in excellent shape for trailing and as foxes were reported more plentiful than the experience of yesterday would indicate, bright anticipations were indulged in, and the hunters were not disappointed, for the members of the B. F. C. enjoyed some of the very best fox hunting they have ever seen. The trailing conditions could not have been improved, the snow was just moist enough to hold the scent well and not impede the going.

The start was made at 7 A. M. for grounds west and north west of the hotel, which are admirably adapted for this sport.

The hunters divided, the main party cast off their hounds a mile west of Hotel Barre. Duff, Bonny and four other hounds were sent in first and when they had started a fox, after a few minutes trailing, others were cast off at intervals further up the road. The air was soon full of music, for the hounds seemed to be driving hotly in almost every direction and the hunters on their stands had never long to wait for a sight of the fleeing fox. The first hounds put in drove their fox in great style for two hours, when reynard saved his brush by an ignominous retreat into mother earth. But the hounds would not be denied, and in an hour had another fox moving and bustled him along in such shape that he took refuge in Thousand Acre swamp.

The other party composed of L. O. Dennison, W. R. Dean, D. C. Luther and others, tried the grounds to the northwest of the hotel, putting in six couple of hounds near Sherman Hill. While uncoupling the hounds there was music on the Hill, for a local farmer had cast off two couple, and they had a fox before them. The club hounds soon started another one and he took them at a great pace straight over the hill. Andy McGregor, Mr. Pope's manager, scored the first brush on an outside fox, killing with the second barrel, but as "Andy" was not in the pool the winner of which must shoot the first fox, the pool remained. R. D. Perry wished he was up in the open country of Labrador, when he spied his fox, but could not get a bead on owing to the thick brush. Messrs. E. Hill and H. Given viewed a fox and catching one of the White Oak hounds, put him on the hot trail. The hound ran a short distance and then put for the hotel, and his dinner. The southern hounds did not run up to expectations, and many of them were seeking the hotel by noon time, along with some faint-hearted northern hounds, but the latter were in the minority. In the evening Mr. Kinney, whose hound Logan, had been missing since yesterday, received word that a fox had been shot last evening, by C. B. Caldwell, of Cold Brook, which was closely pressed by a hound wearing a collar with Mr. Kinney's name on. This turned out to be the sensational Logan, who is such a corker when he knows there is a brush in front of him. Opinions varied as to the number of foxes started during the day, some said twelve, others twenty, and calculation and comparisons showed that about seven foxes were on the move at one time. As there is every prospect of the good weather continuing, the hunters are delighted, and many will stay the week out.

THURSDAY.

The conditions, contrary to expectation, were not so good today, and the going was very poor, both for hounds and owners. A fine, dry snow was falling, and the wind from the northeast was chilling and boded ill for good scenting. Still, undaunted, the hunters went at it, and few stayed in. About ten couple of hounds were sent off to-day. The hunters split up into numerous parties so as to cover the country more thoroughly, and swampy ground was made for. An interesting party was composed of such veterans as A. B. F. Kinney, O. F. Joslin, W. S. Walker, L. O. Dennison, R. D. Perry and J. M. White, and they tried their luck in the country west of the hotel, with seven hounds. A little over two miles from the start, a fox was jumped and he had to bustle along for two hours before he saved himself. The south end of the township was tried by another party, and within half an hour of the cast off a fox was up and they had an exciting time. The fox was hard pressed and made toward Paul Wheeler's stand. This hunter sent two barrels into him. Though the fox was hard hit it managed to get into the brush, Wheeler's hound leading, the others close up. Wheeler, going into the brush, found his hound had run into the varmint and the latter, though wounded, was holding his own with a neck hold on the hound. Wheeler tried to aid his hound, and reynard gave him a nip on his hand, but was soon killed. Dr. Heffinger came up, fortunately, and attended to Mr. Wheeler's wound.

C. Howe, with Dick Turpin and A. Fisher's Jack, put his couple in on the north of Sherman Hill, and had the best fun of the day. The two hounds soon jumped a fox and ran him without a check to Howe's stand, and death. They wanted more blood and soon put up another red one, when a splendid drive followed, the hounds bearing reynard toward Mr. Howe's gun until finally another brush fell to this lucky hunter's bag, and gave him a record.

Although at noon most of the hunters had made the hotel and the welcome fire, a number of hounds were still out, among them Mr. Walker's Joe Carr. Duff, though scarce in condition, is full of gameness, and when he came in it was seen that he was bruised in two places on his side, probably the result of a fall. Three couple of hounds are reported lost so far.

FRIDAY.

The last day of this most successful winter hunt closed with the death of four foxes. The weather moderated during the night, and though the air was raw the dampness had softened the crust, and the scent-holding conditions were good. Most of the hunting to-day was in the open and woods, away from the swamps, and foxes were seen so frequently that the hunters had plenty of excitement. Again Mr. J. H. Walker's Dick Turpin proved himself the hero of the week and was responsible for pressing two foxes to their death. Soon after 7 A.M. the hounds were cast off in different sections to the south of the town. In one pack were Dick Turpin, Rover, Clip, Clinker and Billy. They soon had a fox moving and gave out some glorious music. Two other foxes were also on the go. To Mr. Howe, the lucky shot of the week, fell the first fox, Dick Turpin leading the other hounds. Dick soon after had another one up and driving full cry toward E. T. Whittaker's stand the latter bowled the red varmint over and scored another brush. The third fox was going great guns pursued by C. Pierce's Mayor and Sport but he did not go fast enough to get out of the way of Alvin Fisher's good aim and his pelt soon hung at the belt of the man from West Rutland. W. L. Stone, of Worcester, provided material for a lot of good-natured chaff through his experience with the fourth fox. Clinker and Gip were screaming on a hot trail and going toward Mr. Stone. The fox soon came within view and Stone let go. The fox turned and faced him and gathered in the second barrel; still he wouldn't turn up his toes but stood his ground like a statue. Three more charges were sent toward him but no go, for at the third report he whisked his brush and with a scornful ta-ta lit out. But he was doomed, for shortly afterward J. W. Jones of Needham stopped his earthly career. Most of the hunters then made for the hotel and prepared for their return home after enjoying the best hunt in the annals of the B. F. C. Several hunters will be compelled to stay over as their hounds are lost, presumably in the big swamp. Among them is Mr. W. S. Walker's fine Kentucky hound Joe Carr, who has been missing since he entered the Thousand Acre Swamp on Tuesday. W. R. Deane and Charles Pierce are also feeling anxious about their hounds which are still out. W.

Brunswick Fur Club's Business Meeting.

The annual meeting of the Brunswick Fur Club was held in the parlor of Hotel Barre, Barre, Mass., on Jan. 7, Vice-President L. O. Dennison in the chair, and a large number of members present.

The reports of the secretary and treasurer were read and accepted. The latter showed the club to be in excellent financial condition, with a balance of $225 in the treasury.

The election of officers for 1895 resulted as follows: President, Dr. A. C. Heffinger; Vice-Presidents, L. O. Dennison, O. F. Joslin, H. J. Given; Master of Hounds, R. D. Perry; Secretary, Bradford S. Turpin; Treasurer, W. B. Stone; Executive Committee, A. B. F. Kinney, R. Seely, A. McDonald, L. E. Conant.

The following gentlemen were elected active members of the club: Hon. John R. Thayer, Worcester, Mass.; Pitt F. Holden, Charlestown, Mass.; Geo. E. Carr, Hollistown, Mass.; Marshall Parks, Bradford, N. H.; Geo. B. Appleby, Oxford, Mass.; Wm. H. Perkins, Ware, Mass.

The honorary members elected were: W. S. and A. K. Walker, Point Level, Ky.; F. M. Whipple, Pasadena, Cal.; Dr. W. Miller, Lexington, Ky.

L. O. Dennison, R. D. Perry and Bradford S. Turpin were appointed a committee to revise the running rules and constitution.

Speeches on various matters of fox hunting interest were made by Hon. J. R. Thayer, W. S. Walker and others, and at a late hour the meeting adjourned to Wednesday evening.

The adjourned meeting was called to order by President Heffinger. It was voted to request the American Kennel Club to appoint a committee from the Brunswick Fur Club to examine the pedigrees of fox hounds offered for registration, and to suggest as members of that committee Dr. A. C. Heffinger, A. B. F. Kinney and R. D. Perry.

It was voted to make an exhibit of fox hounds at the New England Kennel Club Show, and to hold the field trials during the week of Oct. 28.

The following committees were appointed: On field trials—R. D. Perry, N. Q. Pope, R. Seely, H. J. Given, A. McDonald.

On Judges: Bradford S. Turpin, Stephen Decatur and S. Knight, Jr.

On Membership: A. B. F. Kinney, H. A. P. Smith and A. G. Hall.

Adjourned to Friday evening.

At that time Vice-President Dennison called the meeting to order. The Executive Committee of 1894, to whom was referred the protest entered by J. M. White, owner of Logan, regarding the award in the trailing class at the '94 field trials, reported: "That the committee have carefully investigated all the evidence in the case and find that Logan led the chase much of the time, and under the field trials rules, which appear to have been misunderstood by the judges, should have had a place among the winners in the trailing class."

The following gentlemen were elected honorary members of the club: H. F. Maxwell, East Sharon, Mass.; Lemuel Smith, Weston, Mass.; Chas. Gregg, Bedford, Mass.; Q. A. Faunce and A. A. Lincoln, Walliston, Mass. Adjourned.

BRADFORD S. TURPIN, Secretary.

Fox Hunting in Ohio.

CINCINNATI, Jan. 4.—*Editor Forest and Stream:* The series of fox chases given by the Batavia Fox Hunter's Club, of Batavia, Ohio, continuing from Dec. 25 to 29, ended on Saturday in a glorious sight chase after reynard. Being the last day of the series a great throng was out to witness the event. Nine puppies were to have been cast off after the fox, but other ambitious owners of hounds put their dogs in, running the fox to earth in less than thirty minutes, and spoiling what promised to be a protracted run by the young dogs. Christmas Day was celebrated right merrily, in the saddle, by the club members. The weather and other conditions were favorable, and the best fun of the series followed in a hot run of two hours and thirty-five minutes. The pace, a hot one, was too much for his foxship, who to save his brush, sought refuge in a hollow log, and was captured alive and sound. Bad weather on Wednesday and Thursday made outdoor sport impossible, a strong north east gale, accompanied by a heavy fall of snow interfering greatly with the hounds, making trailing next to impossible. On Friday, however, notwithstanding the very deep snow, and zero weather, seven couple of hounds were cast off in the morning, one and a half miles from Batavia, and soon jumped a fox, running until almost two o'clock in the afternoon, or altogether five hours and forty minutes, when reynard, tired out, took to a den in the low hills just west of the town. Many horsemen on good mounts saw most of this race.

In the club's kennels are some excellent dogs, Mr. Thomas Glancy's Lead and Grover being the best. Of the visitors Col. A. B. Whitlock, of Kentucky, participated, bringing along six from his famous pack of shaggy hounds. His red dog, Gregg, and white and black bitch Bird, outran everything during the meet, and for hounds combining nose, speed and endurance, they have no equals in this section. Mr. Anderson, of Cincinnati, entered five Kentucky hounds, his large white, black and tan Dock, showing rare speed and great staying qualities. In choosing territory for the next meet of the National Fox Hunters' Association, the section adjacent to Batavia offers exceptional inducements, namely, an abundance of red fox, splendid country to hunt over, hospitality of its people, ample accomodations for all and superior facilities for reaching it by rail or pike with horses and dogs, being less than twenty miles from Cincinnati. Hon. R. W. C. Gregg, Chas. Tatman and Thomas Glancy entertained from Cincinnati during the meet Messrs. Langdon, Anderson, Isbell, Eugene Hoffman, G. G. Johnston, and Col. Whitlock, from Kentucky. CLERMONT.

HUNTING AND COURSING NOTES.

It is not generally known that Mr. E. H. Rummele, Jr., of Sheboygan, Wis., sold his noted beagle Base to a gentleman in New York. The latter sent the dog to the Rockland Kennels to board and Mr. Kreuder has just purchased him. Base is one of the best field trial beagles we have, as his consistent record shows. In 1892 he won second, All-Age Stake, National trials, and repeated in 1893. His race with Glory, when Messrs. Dorsey and Ashburner hung over the fence, run to a standstill will long be remembered by those fortunate enough, or otherwise, to be there. At the Northwestern trials in All-Age Stake, 1894, Base won first. Base was whelped Feb. 5, 1889, and is by Spelo out of Gypsey Belle, running back to Ringwood and Blue Boy, and to Mr. W. H. Ashburner belongs the credit of breeding him. Mr. Kreuder now has an opportunity of settling, on his own ballywick, the respective merits of the Eastern and Western winners of 1894—Buckshot and Base. Base, this week, together with Buckshot, champion Frank Forest and others, is placed in our stud columns, and surely with this array of talent close at hand New York beagle men should be able to breed something that can show heels to those demons from Vermont and other outlying districts.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

G. G. H., Stamford, Conn.—I have an Irish terrier bitch a little over a year old afflicted with chorea, I think. It began with twitching in a hindleg, and now both front legs twitch. Is there any remedy for this, and will it result fatally if not attended to? It does not seem to trouble her. 2. Is Emerald Queen, Irish terrier, registered in the E.K.C.S.B.? Ans. You do not state how long she has had the twitching and whether it was preceded by distemper. Try the following:

Rx	Pot. brom.		
	Sod. brom.	*aa*	dr. ss.
	Tr. bellad.		dr. i.
	Syr. simpl.		oz. i.
	Aq. ad.		oz. vi.

Mix. Give one tablespoonful twice a day. 2. No.

P. F. A., Alliston, Ala.—Can you give me some remedy that will cure my pointer dog of mange. He is about 3yrs. old and has had mange three or four months. His skin is thick and red and seems to itch terribly. Ans. Treat for worms. Use following medicine:

Rx	Pot. bi-carb.		
	Sod. bi-carb.	*aa*	dr. ss.
	Liq. arsenicalis.		dr. i.
	Aq. ad.		oz. vi.

Mix. Give one tablespoonful twice a day. Use the following dressing: Cocoanut oil, castor oil, kerosene, sperm oil, equal parts of each; mix together. To be well rubbed all over the dog every other day.

B. Z. BREWER, Canandaigua, N. Y.—Neither Dixie Daken nor Romp 3d are registered, therefore we have no means of completing the pedigree.

Yachting.

A part of the every-day experience of the business man is the crowded L car or suburban "trolley," with a seating capacity of possibly a third of the number of passengers; the majority, including some ladies, depending on the lofty and greasy roof strap for a precarious support. The male portion of those fortunate enough to obtain seats may be divided into two classes—first, a very small minority whose inborn chivalry and courtesy prompts them to rise on the instant and offer their seats to a lady; second, the great majority who, secure behind the bulwark of a morning paper, absolutely decline to move under any circumstances. The third class includes a comparatively small number whose courtesy is not unmixed with due caution, and who, instead of jumping up the moment a lady enters the car, prefer to wait until it is clearly evident that no one else proposes to sacrifice himself. They would not see a lady standing while they are seated—of course not—but a due regard for the feelings of others leads them to retain their seats until it is absolutely certain that they are robbing no one else of the blessed privilege of self-sacrifice.

A very similar state of affairs maintains just now in the matter of Cup defense, and those who are so liberally blessed by fortune that they can afford the luxury of the sole ownership of a 90ft. racing cutter, or even of the possession of a few shares in a syndicate, may be divided into three similar classes. The first class, those who jump in at the first news of a challenge, as Gen. Paine has thrice done, and as the Puritan, Priscilla, Atlantic and Colonia syndicates, has totally disappeared, the experience they have gained has come high, and any addition to it must be paid for at a still higher figure. There is not a man in the New York Y. C. to-day who is anxious to build alone a 90ft. Cup defender; and we doubt whether there is one who has any strong desire to put upward of $20,000 in a syndicate. All the talk of syndicates in the daily papers is absolutely devoid of foundation, and of the many names suggested as anxious to begin at once, not one is correct. Among those mentioned who will not build Cup defenders, and who are not hunting even for chances to invest good money in syndicates are Com. Gerry, Com. Brown, Com. Smith, Com. Morgan, Mr. C. Oliver Iselin, Archibald Rogers, R. S. Palmer, Gen. Paine, W. K. Vanderbilt, Cornelius Vanderbilt, John E. Brooks, J. Malcolm Forbes, Bayard Thayer, J. Pierpont Morgan, and C. W. Chapin. Nearly all of these gentlemen have had a trial of the syndicate business, and they very wisely know when they have had enough of a good thing.

The second class, of those who will not go into a syndicate at all, is a very large one, much larger than in 1893; but it would obviously be improper to mention names. The third class, of those who are quite willing to give every one else a fair chance for the honors before claiming them for themselves, is a small one this year; Mr. George Gould and a few others may come forward voluntarily in view of the necessities of the case, but it is unlikely that there will be enough to make up a syndicate of say a dozen men; and the probabilities are that a great part of the necessary sum, say $150,000, will be contributed more or less unwillingly by prominent members of the club whose *esprit du corps* leads them to come to its aid. Time enough has already elapsed to show that there was no one eagerly awaiting an opportunity to win yachting laurels in the defense of the Cup; and also to bring out positive statements from Gen. Paine and others that they could not be counted on this year.

At least one new yacht must be forthcoming, for the reputation of the club if nothing more, even if a new and larger yacht were not imperatively needed for the safe defense of the Cup; and such a yacht will undoubtedly be built, regardless of cost; though up to the time of writing there is no definite news of the organization of a syndicate. As a matter of course, she will be designed and built by the Herreshoffs, and in all probability of Tobin bronze throughout. The question of type is still a matter of rumor; but there is a growing impression that Mr. Herreshoff may this time resort to a keel boat. This would surprise us little, as we look at the course of yacht racing from Minerva and Gloriana to Vigilant; but though we are still in hopes of seeing the keel model for the first time fairly tested in the largest class, we hope that the Cup defender of 1895 will be more or less modeled after Vigilant and Navahoe, with a centerboard as a distinguishing feature.

To our mind, the chances of a successful defense of the America's Cup were never as doubtful as in the present case. Looking at the enormous natural advantages which inhere to the defender, as was proved in the case of Britannia against Vigilant last year, to the skill of Mr. Herreshoff and presumably of the managers of the defending yacht, we should certainly back their chances, in betting on the result. There are, however, certain different conditions from those which existed in the past, and which must be taken into consideration.

In the first place, Mr. George Lennox Watson is no fool, nor even the ignorant copyist of other designer's ideas which he is represented on this side of the water. He made a mistake in Thistle, and Valkyrie was beaten by Vigilant, but he has turned out scores of successful boats of all sizes, including Britannia. He has twice raced for the Cup, he is well acquainted now with the probable weather conditions, and, since Valkyrie was designed, in the fall of 1892, he has greatly increased his experience through her and Britannia, and in the very interesting 40 and 20-rating classes. It is safe to assume that Mr. Herreshoff will turn out a faster yacht than Vigilant; and it is equally safe to assume that Mr. Watson will turn out a superior craft to both Valkyrie and Britannia. Assuming further that the American boat is again the better of the two so far as model and original construction are concerned, the chances are still decidedly favorable for the foreign craft.

On this side, there is very little likelihood of more than one new boat, and for working her up to racing form there are available at most five older and smaller boats, Volunteer, Navahoe, Jubilee, Colonia and Vigilant. Of these, even if all be fitted out, which is very doubtful, three require material alterations before they can be made available for any trial races, one is on the other side and must be brought over and fitted out anew, and the fifth, Navahoe, is very much of an unknown quantity. The

working up to racing form of a real 90ft. racer, attempted for the first time, is a larger task than has yet been thrown upon the defenders of the Cup; and the means thereto are much less adequate than in former contests.

On the other side, Britannia is a known quality, sailing better last year than in her first season, ready now for a preliminary racing season in the Mediterranean, to return in still better racing form as a trial horse for the Dunraven cutter. Whether Satanita will be fitted out is uncertain and of minor importance; but there is now well toward completion the new 90ft. Fife cutter Ailsa, which will, we understand, be ready for the Mediterranean races in March against Britannia. When the Dunraven boat reaches the Thames by May 17 for her first race, she will, if nothing unforseen interferes, meet both Britannia and Ailsa; sailing about a dozen matches against both before she strips for the Atlantic voyage. While not altogether settled, there is even a chance that the challenger may be allowed to select the faster of the two new boats, Valkyrie III. and Ailsa, for the Cup races.

In any event, the opportunities for determining and remedying the defects of the new boat, and of working up to the highest racing form, are very much better on the far side of the Atlantic than at home. Of course the challenger must lose all of July and August in stripping, crossing to New York and refitting, and will have nothing to race against here by way of trial prior to the Cup races; but apart from this drawback, the chances for thorough preparation and the realization through practice of the highest possible speed of the vessel, are on the side of the challenger.

There is one way in which these changes might be materially improved; by sending over Ailsa, Britannia, or both, with Valkyrie III., and the sailing of trial races off Sandy Hook, for the purpose of tuning up the latter, even if the final selection of the fastest of the three be denied by the New York Y. C. By this means the serious drawback of loss of trim in refitting may be entirely avoided.

In yachts of this size, and for this special purpose where draft and cost are not counted, we believe the keel type to be quite as much superior to to the centerboard as it has proved to be in the 40 and 46ft. classes; but if everything is to be risked on one big boat, even more of an experiment than the four 87-footers, and with no other new craft as a trial horse, we hope that this boat will be a centerboard, like Vigilant. Should she be a keel boat and be defeated by any untoward circumstance, the blame would be laid to the keel type and not where it belongs—to the depending for Cup defense on but one vessel.

Though the new deed has failed of attaining most of the objects of its framers, they have succeeded in one, that of limiting the competition to yachts of 90ft. waterline. It must be evident to any observing yachtsman that such yachts as even Mayflower and Volunteer, when rigged with a single stick, are abnormal, outside of the legitimate demands of yacht racing in America, and that no permanent and well-filled classes can be maintained. However much has been learned in the past from them, the net result has been disastrous, to abolish the individual owner, to limit the number of yachts built and raced and to limit the functions of men who were once keen racers to the drawing of checks for syndicates. The defense of the Cup would be infinitely safer to-day if instead of one big boat paid for by a popular subscription or a syndicate of reluctant yachtsmen, it depended on half a dozen 70-footers, each owned and sailed by one of such representative men as Archibald Rogers, C. Oliver Iselin, A. Cass Canfield, Gen. Paine, R. S. Palmer, August Belmont, E. D. Morgan, Bayard Thayer and the Adams brothers.

There is little doubt that nearly all of these gentlemen would welcome the chance to race against their own craft if such work were at all within reasonable limits for a private purse; and a racing 70-footer, as the cost goes in this country, would be quite as expensive as most men would care to go when the short racing life of modern craft is considered. The America's Cup was given primarily for the building up of yacht racing in this country, and in no way could that end be better obtained than in reviving the 70ft. class. As matters now are, the only use of the Cup is to produce a single expensive craft fitted for but one purpose, the winning of three races; and equally worthless thereafter whether she wins or loses.

No small part of the widespread interest in the past races for the America's Cup is of a sentimental rather than of a practical nature; and is dependent on such names as Puritan, Mayflower, Volunteer and Vigilant, with those of their respective opponents. Had the owners of all past Cup defenders been content to name each boat in turn America, with successive numerals as the sole means of distinguishing them, the history and traditions of the Cup races would lose all their interest. From this point of view it is to be regretted that Lord Dunraven has sacrificed all sentimental considerations in naming his new challenger after his two former yachts, leaving it to a numeral to distinguish them. Beautiful and poetic as they are, the names of the daughters of Wotan, and especially of Brunhilda, have become wofully stale and hackneyed in yachting, and for each of the ten original Valkyries of the old myth there are probably two or three namesakes afloat. Though but a small detail of the Cup racing, it is a pity that Lord Denraven has not given to the new challenger such an original and distinctive name as her prominence entitles her to, thus avoiding all confusion with other Valkyries.

The New York *Sun* is responsible for a long article by a "marine draftsman," condemning the long overhangs of modern yachts. We quote the following definition of the metacenter as important if true: "The exact distribution of the sail area around the center of lateral resistance, gravity and buoyancy, *collectively known as the metacenters*, is the utmost that science has accomplished in modern yacht designing." This is on a par with the New York *Herald's* definition of the metacenter quoted some time since.

Southern Y. C.

One day last week, Mr. A. Cardona, Jr., who represents Mallard Bros., wholesale grocers and commission merhants of New Orleans, kindly invited me to take a trip with him to West End, a pleasure resort on Lake Ponchartrain. Its chief attraction to us, however, was its yachting features. The club house of the Southern Y. C. is there, and a large part of the fleet was in harbor safe from danger, for the lake in its angry moods is dangerous. It is quite a large body of water, about 58 miles long by 26 wide. A short pass connects it with Lake Borgne on the east, thence is an open course to the Gulf.

I had known Mr. Cardona many years as a gentleman sportsman, but I had no knowledge of his enthusiasm as a yachtsman and his reputation and record as a skillful amateur sailor and racer. He is a member of the Southern Y. C., a powerful organization of about 1,500 members. Races are held regularly and frequently in the proper season, and no better evidence of their popularity and the popularity of the club can be mentioned than the large attendance of gentlemen and ladies who fill the balconies of the club house whether the contest be between two of the smallest boats or the whole fleet, great and small. The club house is a substantial structure, roomy within, and with a broad balcony on the side facing the lake, from which a good view of the whole triangular 15-mile course can be obtained. The main hall is decorated with yachting pictures, mostly of famous yachts and races. Nor are the social features overlooked or neglected. An ample lunch and good welcome are provided for the friends who attend the club's events, and social gatherings in the club house between times keep the yachting spirit aloof from dullness.

The club is in an excellent financial condition, solidly progressive and free from the distressing fluctuations in interest and membership which come to organizations whose treasury and membership ebb and flow quickly. B. WATERS.

NEW ORLEANS, La., Jan. 4.

Racing Fixtures.

The British yacht clubs have just done a good work in holding a meeting of representatives, on Dec. 20, at which dates for the principal events of the season were arranged, as follows:

May 17, New Thames.
May 18, Royal Thames.
May 25, New Thames to Harwich.
June 1, 3, and 4, Harwich.
June 7, Royal London.
June 8, Nore to Dover.
June 10, Royal Cinque Ports.
June 13, Royal Southampton.
June 14 and 15, Royal Southern.
June 20 and 21, Royal Mersey.
June 24, Isle of Man.
June 26, Campbeltown.
June 29 to July 15, Clyde.
July 19 and 20, Royal Ulster.
July 23, Royal Alfred.
July 24, 25, and 26, Royal Irish.
July 25, 26, and 27, Royal Yorkshire.
July 29, 30, and 31, Royal Cork and Royal Munster.
Aug. 2, British Channel and Royal Cornwall.
Aug. 5, Royal London, Cowes.
Aug. 6, Royal Yacht Squadron and Royal Southampton.
Aug. 10, Royal Portsmouth Corinthian.
Aug. 13 to 16, Royal Victoria.
Aug. 19 and 20, Royal Albert.
Aug. 23 and 24, Royal Dorset.
Aug. 26 and 27, Torquay.
Aug. 30, Royal Dart.
Aug. 31, Start Bay.
Sept. 3, 4, 5, and 6, Royal Western and Plymouth.

Other dates arranged were June 29 and July 1, Antwerp; July 13, 14, and 15, Havre; July 18 and 19, Royal Cinque Ports; July 20 to 25, Ostend regatta, and July 26, Ostend to Dover.

In the event of Vigilant sailing, in some of the early races at least, on the other side, these dates will be interesting to our readers. The circumstances of yacht racing in this country unfortunately do not call for any common arrangement of dates for the whole coast; but at the same time the yachtsmen of certain localities, as New York and the Sound, and of Boston Bay, might well follow the same course and arrange local circuits which would avoid the clashing of fixtures and promote inter-club racing.

This Year's Concessions.

The following list, presumably official, of the "concessions" so generously granted to the challenger this year, is given by the New York *Herald:*

"It may be in order, now that the challenge of the Squadron has been accepted and the races next fall are assured, to note for the information of yachtsmen generally just what concessions the Cup committee have allowed the challenger. The load waterline length of the yacht only is required to be given, which is 89ft. Five races will be agreed upon. The system of measurement, time allowances and racing rules of the New York Y. C. will govern. Six hours will be the time limit for each race. The measurement of the yachts will be made with all live weights on board, and the measurer will properly mark the boats forward and aft. The withdrawal of the original challenge and the simultaneous acceptance of a new challenge, that the best of the British boats may be sent here, will be in order. The ten months' notice is waived and eight months substituted, and all races will be started to windward that are practicable to do so. That is a fair and sportsmanlike list of concessions, and reflect much credit upon the liberality of the Cup committee in their interpretation of the mutual agreement clause of the deed of gift."

Out of this formidable list there is but one point which is not clearly a right of the challenger according to the recognized usages of match sailing—the granting of five races instead of three. The Cup committee has conceded nothing in accepting the waterline only when it could get a race on no other terms; it concedes nothing in sailing the race under its own rules and time limit rather than those of the challenger; in agreeing, through measurement, to prohibit a "ballast crew," it gives up nothing, as the same expedient would be open to the other side if not specially forbidden; it has not yet agreed to the substitution of another boat; and the requirement that all races must be started to windward, if practicable, was originally made to favor American boats. We would like to see, on the part of the *Herald* or others who share its views on this subject, a list of half a dozen real concessions made by the holder to the challenger in the entire course of Cup racing from 1870 to 1893. We have never been able to discover this many, and we doubt whether our opponents can do so.

Magnificent But Useless.

Since the days of Puritan and Mayflower the FOREST AND STREAM, while recognizing the fine racing afforded by a fleet of 80 or 90ft. cutters, has held the view that such a class could not be maintained permanently in American yachting, and that far better results would be had by abandoning the occasional expensive experiments, such as that of 1893, and devoting all efforts to the permanent maintenance of a class of 70-footers. The following editorial from the New York *Times* is in line with the arguments which we have always advanced:

"It is rather a pity that the famous deed of gift provides in effect that the possession of the America's Cup shall be contested by vessels which are of no use for any other purpose than contesting it. That is true, at least, on this side of the water. On the other side there are races enough provided for single-stickers of the first class to appease the ambition of an ambitious sportsman, and would be even if there were no such trophy as the America's Cup in the world. Even in England, however, the fact that the trophy exists has exercised a distinct influence in increasing the size of cutters. Nobody builds a first-class cutter with a view to racing without cherishing a secret hope that, after she has been proved to be the best of British yachts, she may prove to be good enough to win back the cup and gain for her owner immortal renown. So first-class cutters have been growing bigger and bigger ever since the first contest in which a cutter took part, that in which the Genesta was the challenger. And now it is recognized that the challenger, in order to have a fair chance of success, must 'build to the limit.' So, of course, the defender must build to the limit also.

"The trouble is that a defender is of no use for anything except cup defending. The builder of a successful competitor for the honor and glory of defending the cup has his reward in the honor and glory. But the builder of an unsuccessful competitor has no reward at all for a very large expenditure. There is no racing season here that would justify the richest owner in maintaining in racing trim a boat that takes thirty or forty men to handle properly. When the unsuccessful competitor has been proved unsuccessful there is nothing to be done with her except to convert her into an undersized schooner or to convert her into junk. In neither case is there anything like a fair return for the outlay. If she be not good enough to defend the cup she is good for nothing. The case is much worse with a racing yacht than with a racehorse. The thoroughbred has been said to be a mere gambling implement, but that is absurd. A thoroughbred is an excellent animal for many other purposes than racing, and he is also useful for improving the breed of horses. A racing yacht is not at all in the same situation. You cannot cross her with a shovel-nosed coal barge and produce a fast and game half-bred coaster. You can do nothing but turn her into a poor schooner or break her up.

"So it is unlikely that, with the experience of 1893 behind them and with the existing financial conditions, there will next season be a squadron of competitors for the honor of defending the Cup. It is possible that the owners of one or more of the vessels then built may think that they did not have a fair chance and may fit them out anew to try again. It is fair to presume that there will be at least one new boat built in New York, and to hope that one will be built in Boston to try conclusions for the honor of these ports. If there should be only one it would be necessary to rent one of the old ones, or to bring the Vigilant back from British waters for the purpose of getting 'a line' on the new boat. For evidently it would not do to run the risk of meeting a British challenger with a boat that had never been tried against anything of her own size. But it is pretty plain from experience that we cannot trust to an old boat, for it is extremely likely, to say the least, that the Thistle would have been too good for the Puritan and the Valkyrie for the Volunteer. The America's Cup is the American trophy that is most eagerly coveted in Great Britain, and it is not to be imagined that we will let it go for want of spending money to insure its retention."

A Cup Defender from Baltimore.

We give the following from the New York *Tribune*, for what it is worth, as a good example of the tales with which yachtsmen will be deluged in a short time. It is remarkable that the fame of this 14-knot yacht, designed on the lines of Valkyrie, but presumably with 4½ft. draft, has not long since reached New York:

"Yachtsmen and ship-builders of this city were talking to-day about building a cup defender. The fastest clipper ships in the world were built in Baltimore yards, and there are several shipbuilders here who believe they can construct faster yachts than any that have sailed in the races on this or the other side of the Atlantic. A prominent Baltimore yachtsman, who desires his name withheld until a syndicate is formed, says he is willing to start the subscription with $1,000, and several other subscriptions of $500 each have been volunteered. N. G. Moore, designer of the famous clipper yacht Baltimore, has offered to build a winning yacht for $35,000, or receive no pay for his time and work beyond the actual cost of the materials. The clipper Baltimore was designed something on the line of Lord Dunraven's Valkyrie. She beat every craft that raced with her. The model of this yacht is still in the possession of her designer and builder, Mr. Moore, who is the only man living who knows the lines upon which she was built. Her equal for speed, he claims, has never been built. Mr. Moore says he knows that the yacht easily made fourteen knots on more than one occasion, and that he received the solemn assurance of the Virginian who purchased her that in one trial of speed she made the remarkable time of sixteen knots an hour, a record that none of the modern flyers has ever equaled.

"In building the new yacht Mr. Moore said he would sacrifice everything for speed. The boat would be about 95ft. long with 80 or 82ft. keel, and would draw 4½ft. of water. She would be rigged entirely with wire rope, and her sails would be of a peculiar make. One set would be used for preliminary trials, and the other would be foiled in a prepared solution and tested shortly before the race. Cedar would be chiefly used in the construction. One novel feature of the rigging would be the manner in which the mainsail would be kept close to the mast. Most of the modern racers have their sails fastened to the mast with iron hoops, and there is always a space of several inches through which the wind rushes, thus taking considerable pressure from he surface of the canvas. The new Baltimore would have her sail fastened in a groove in the mast so that not a single pound of wind pressure would be wasted.

An Auxiliary Knockabout.

Mr. Arthur Binney has recently designed for Mr. C. F. Lyman, a knockabout of a new type, which is described as follows in the Boston *Globe:* "The boat will be a keel knockabout, with good cabin accommodations and a fair-sized sail plan. She will be 38ft. over all, 25ft. waterline, 10ft. beam and 4ft. draft, with a cabin 8ft. long, having 5ft. 7in. headroom under a low house. The cabin will have the usual berths, sofas and lockers, with a small sideboard forward. There will be a toilet room, galley and sleeping place for a boy forward. The cabin finish will be mahogany.

"The most interesting part of the boat is, however, the motor. It is of a comparatively new model, and works on an entirely different principle from the ordinary naphtha engine. It is really a gas engine, in which the vapor of naphtha, mixed with air, is exploded in the cylinder, and strong claims of safety, cleanliness and freedom from offensive odor are made for it. No fire or special lighting when starting is required, and the motor is easily controlled and reversed.

"The motor occupies only a space of 4ft. in length, and as some of this can be put under the cockpit floor, an extra space of only 2ft. 6in. is required between the cockpit and the cabin. The after bulkhead of the cabin will be made unusually solid and tight, to avoid any chance of odor in the cabin. The stack, through which the products of combustion are carried off, will be led under the cockpit seats and up through the deck aft of the cockpit combing. The part above the deck will be telescopic, so that it will not interfere with the main boom when the boat is under sail.

"The motor can be started, stopped and reversed from the cockpit, and by an ingenious arrangement the two-bladed screw can be detached from the shaft and lifted from the water through a hatch just forward of the tiller. The screw can also be readily replaced by means of the slides in which it runs.

"About five-horse power is expected to be developed, and a speed of four or five knots. Due attention will be given the lines of the boat, and a fair speed is expected under sail, although such good windward work as would come from greater draft is not looked for. The boat will be built by the Fore River Engine Company."

Corinthian Y. C. of Philadelphia.

The annual meeting of the Corinthian Y. C. of Philadelphia was held on Jan. 9, when the following officers and committees were chosen to serve for the ensuing year: Com., Edgar T. Scott, steamer Sagamore; Vice-Com., Russell E. Tucker, cutter Mermaid; Rear-Com., Edwin P. Baugh, schr. Mon Reve; Sec'y, Addison F. Bancroft; Meas., G. Herbert Millett; four trustees to serve for three years—Edgar T. Scott, Russell E. Tucker, Addison F. Bancroft, Robert K. Neff; these with the present trustees, W. Barklie Henry, Alexander Van Rensselaer, Louis P. Evans, Henry S. Jeanes, Anthony J. Drexel, Victor J. Petry, Robert J. W. Koons and Frank H. Rosengarten, constitute the Board of Government for the present year; Race Committee—Addison F. Bancroft, Wm. R. Ellison, Isaac W. Jeanes; Committee on Ad-

missions—Chas. H. Brock, Edward D. Toland, Alexander Van Rensselaer, G. Herbert Millett, Robert K. Neff.

The report of the Board of Trustees and Treasurer showed the club to be in a flourishing condition. The club has now a membership of 153, consisting of 130 resident, 16 non-resident and 7 honorary members, with a fleet of 69 yachts enrolled, divided as follows: 6 schooners, 16 cutters, 13 sloops, 2 yawls, 13 open yachts, 9 steamers and 10 launches.

The report of the regatta committee showed that, in addition to the annual and autumn regattas, ten special races had been sailed during the season, and that the outlook for the coming season was very encouraging.

The annual dinner of the club will be given at the Hotel Stratford on Jan. 19.

The R. Y. S. Challenge.

A special meeting of the New York S. I. was held on Jan. 14, with Vice Com. Brown in the chair, to consider the report of the America's Cup Committee, as follows:

"New York, Jan. 14, 1895.

"To the New York Yacht Club:

"Gentlemen—The America's Cup Committee have the pleasure to report that, having made such concessions as were, in their opinion, necessary to insure a match, they have succeeded in obtaining from the secretary of the Royal Yacht Squadron a definite assurance by cable that the America's Cup shall be held according to the terms of the deed of gift. It is as follows:

London, Jan. 7, 1895.

Smith, Yacht Club, New York:

Having regard to construction placed on deed of gift, 1887, by the New York Yacht Club, the Royal Yacht Squadron are willing to receipt on terms of deed of gift, 1887. Grant, Cowes.

"The Committe have replied that with this understanding the terms of the pending challenge are satisfactory, and they, therefore, request the club to take action in the matter, as power of formal acceptance was not delegated to the committee.

"The following is, therefore, proposed:

"Resolved, That the challenge for the America's Cup from the Royal Yacht Squadron, dated December 2, 1894, be accepted, with the understanding that the squadron have agreed to receipt for the Cup according to the terms contained in the deed of gift. JAMES D. SMITH, Chairman.

"A. CASS CANFIELD, Secretary."

A motion to accept the report and adopt the resolution was then carried by a rising vote, and Secretary Oddie was directed to notify the Royal Yacht Squadron, by letter, that its challenge had been accepted. Vice Com. Brown then made the following statement: "The Chair states, for the information of the club, that efforts, with promise of success, are being made to secure requisite funds for a new boat for the defense of the America's Cup, the result of which will be announced shortly." The meeting then adjourned, after which the Cup Committee met and prepared the following circular.

"The America's Cup Committee of the New York Yacht Club beg to announce that, for the purpose of selecting a vessel to represent the New York Yacht Club in the coming contest for the America's Cup, trial races will be sailed during August. These races will be sailed under the rules and time allowance of the New York Yacht Club, as far as practicable, but any excess of length on the load water line over 89 feet will be counted double for time allowance. These trial races will be open to all vessels of one mast, constructed and owned in this country, and between 65 and 90 feet on the load water line.

In their selection of the vessel best adapted in their judgment for the defense of the America's Cup, the Committee reserve to themselves the absolute freedom of choice, based upon all-around qualities, the results of the trial races not to be considered as necessarily conclusive, and the evidence furnished by previous performances prior to such races to be considered or not at their discretion.

Due notice will be given of the exact dates of the trial races.

James D. Smith, Latham A. Fish, A. Cass Canfield, J. Fred Tams, Archibald Rogers, Gouverneur Kortright, C. O. Iselin, Committee.

N. Y. Y. C., 67 Madison avenue, New York, Jan. 14, 1895.

While rumors of all sorts are afloat, there is very little reliable news to chronicle. One of the most important items is that the New York Y. C. is having no easy task in arranging a syndicate to build a Cup defender, and the plan of a popular subscription to raise money has been seriously proposed. Another interesting item is that considerable feeling exists on the part of some members of the New York Y. C. against Mr. George Gould, the one man who thus far appears to be willing to put up any large amount of money for Cup defense. On Jan. 14, the final order to begin the work of construction on Valkyrie III. was received at Henderson's yard. Among the many unauthorized rumors is one that a syndicate has been partly formed, of which Mr. Gould is not a member, and that he will for another syndicate, the boat to be managed by Mr. W. Butler Duncan, Jr.. As a matter of fact, there is quite as much difficulty in finding a man to manage a syndicate boat as in getting the money to build and run her. Various rumors are afloat as to who will sail the new challenger, one report being that Captain Cranfield will not bring her across, but will come out by steamer, if at all; another being that he will go in Mr. Gould's service, and that Sycamore will take his place.

YACHT NEWS NOTES.

The annual meeting of the Seawanhaka Corinthian Y. C. was held on Jan. 8, at the town club house, Mr. John E. Roosevelt, the senior captain present, occupying the chair in the absence, through illness of Com. Hill. The routine reports for the year were read, showing that the club was in a prosperous condition in spite of the general hard times, the membership being but twenty less than in 1893, and the fleet practically the same. The following officers were elected: Com., E. C. Benedict, steam yacht Oneida; Vice-Com., Henry C. Rouse, schr. Iroquois; Rear-Com., S. V. R. Cruger, slp. Indolent; Trustees, Henry Stanton and Charles H. Leland; Sec'y, Henry W. Hayden; Treas., Walter C. Hubbard; Meas., John Hyslop; Fleet Surgeon, J. West Roosevelt; Fleet Chaplain, Rev. George R. Vandewater; Race Committee—Oliver E. Cromwell, Walter C. Kerr, Valentine Mott, Charles A. Sherman and Charles W. Wetmore; House Committee—Geo. Bullock, Colgate Hoyt, Walter T. Owen, Edward M. Townsend, Jr. and Camille Weidenfeld; Committee on Lectures and Entertainment—Robert Center, Clarence Goadby and J. Howard Wainright; Committee on Lines and Models—John Hyslop, A. Cary Smith and Wm. P. Stephens; Law Committee—F. Kingsbury Curtis, Alfred Ely and Frederic De P. Foster. The report of the race committee dealt in detail with the successful race inaugurated last year from Oyster Bay to New London and return, on the occasion af the Yale-Harvard rowing race, and of its peculiar features, the cumulative time and variable wind factor, and suggested that the event be made a permanent one. The following resolution was adopted: "Resolved, That a race to New London be made an annual event of the club, and, unless otherwise determined by the race committee, it shall be sailed three days prior to the Yale-Harvard boat race." The date set for this year is June 25-26, and that for the annual regatta is July 2.

On Jan. 4 the Massachusetts Y. C. held its annual meeting, the following officers being elected: Com., E. P. Boggs, steamer Nashawena; Vice-Com., Frank E. Simpson, steamer Avenel; Rear-Com., Oliver H. Perry, slp. Fanita; Sec'y, Wm. B. McClellan; Treas., R. C. McQuillen; Meas., Wm. E. Waterhouse; Assist. Meas., Chas. H. Dodd; Directors—Henry W. Savage, Erastus Willard, Stewart Jordan, W. O. Gay; Race Committee—Louis M. Clark, Percy Hodges, S. P. Perrin, W. S. Crosby, C. E. Bockus; House Committee—Francis Gray, A. J. Clark, E. H. R. Revere, Jacob Barbey, John Dearborn: Membership Committee—Gilmer Clapp, W. A. Underwood, A. W. Randall, Wm. T. Jenney, C. D. Parkhill, E. R. Wise, John S. Clark. The race committee of the club was authorized to try to arrange for a series of union races similar to those of last year.

At a meeting of the New Rochelle Y. C., on Jan. 7, the following officers were nominated, to be voted for on the first Monday in February: Com., Wm. Buchanan; Vice-Com., Henry Doscher; Rear-Com., S. C. Baldwin; Sec'y, Frank M. Hunter; Treas., B. B. Strong; Meas., Henry Andrus; Regatta Committee—Oscar Chellborg, J. W. Rough and W. E. Moore; Membership Committee—Harry Thompson, Fred W. Schoonmaker, Charles Towle; Trustees—G. K. Thompson, Dr. F. S. Grant, W. S. Spencer; Law Committee—Chas. Voltz, J. F. Lambden. A report was presented to the meeting stating that C. Oliver Iselin would not give a new lease of Echo Island to the club. A committee was appointed to see if Harrison Island, which is situated between Echo Island and the mainland, could be secured.

The annual meeting of the Brooklyn Y. C. was held on Jan. 8, the following officers being elected: Com., R. C. Hopkins, slp. Faus'ina; Vice-Com., C. H. Humphreys, slp. Adele; Rear-Com., Geo. R. Wheeler, catboat Rosamond; Meas., H. W. Kilbourne; Pres., P. H. Jeannot; Treas., Willard Graham; Sec'y, Wm. Cagger; Trustees—John Macrae, C. H. Oliver, Geo. P. Foote, Daniel O'Reilly, M. J. Hanly, F. H. Brunner, Louis Wunder, Edward Salt, E. H. Chandler; Membership Committee—A. G. Walden, C. H. Frost, G. C. Shafler; Regatta Committee—Geo. R. Whitehead, F. L. Townsend, F. W. Bobbett.

Canoeing.

The sharply rounded keels of the English canoes have never been generally adopted in America, the longer and more open courses permitting of a straighter keel; at the same time the keel perfectly straight from end to end, in Mr. William Willard Howard's canoe Yankee, is not a feature of the fastest American canoe, but, with the larger sail area aft, is a fad of Mr. Howard's to which he has clung tenaciously for some years. Shortly before his departure last spring, we had the pleasure of explaining to him the nature of the sailing grounds on the Thames, and of the type of canoe used there; and to point out that, even if advantageous on American courses, a canoe with a perfectly straight keel would have no possible chance on the Thames.

Mr. William Willard Howard.

According to the *Yachting World*, Mr. William Willard Howard, the American canoeist, has left London for the south of France, with Mrs. Howard. From another source we learn that Mr. Howard is on his way to Armenia, in a journalistic capacity. We clip the following from the *Field*: "Short of the actual word of the owner of the American canoe Yankee, we hear on 'good authority' that Mr. Willard Howard intends to again challenge for the Royal Canoe Club sailing challenge cup in 1895. Of course, such a challenge comes under the new rule of the club, and needs two months', or sixty days', notice before the day of the race. We shall in due course probably hear all about the canoe with which he will tackle our men, but in the meantime it would be idle merely to venture opinion as to what form she will probably take. One thing, however, is probably certain; that is that she will no longer represent the American racing model of to-day; that she will not be straight on keel, with plumb stern and post; indeed, we may safely doubt whether she will in any important particular approach the Yankee model and fitment of 1894. The 1894 craft proved herse'f too slow in stays; indeed, too uncertain, and a miss-stays in rough water would mean a certain capsize; her rig was faulty for windward work and for running; and her Salcombe performance showed that capsizing ran very near being a dangerous performance with her in open water, whatever it may be on the upper reaches of the Thames.

"Seeing that the Royal C. C. sailing races for 1895 are to be on open salt or tidal water, we may anticipate a wholesale change in the model of the American craft; but we do not forget that in America some wonderful sailing has been done on open salt water by canoes not differing very greatly from Mr. Howard's Yankee. Then we have also a well-authenticated notice of a competitor from the Northern C. C., on the Tyne; and it is stated in the south that Dragon, which was designed by Mr. Linton Hope this summer, has been overhauled, and will be brought out "up to date;" probably that means both in ballasting and sail plan. The interest of such racing would, of course, be greatly increased if one or more expert canoe sailers were to bring out a powerful open-water type of canoe with liftable bulb-fin—big-bodied boats up to full beam of 36in.

"The Crouch estuary can be pretty rough at times, and one of those times may be the cup race day. We do not say that the small, shallow 30in. up-river canoe cannot be sailed on such a day in such waters, but that, in all probability, the extra 6in. of beam and suitable freeboard, coupled with a bulbed fin and sloop rig, would probably show the way round."

The *Yachting World* further says that Mr. William Willard Howard will spend next summer on the Solent, with a half-rater of the Spruce III. type, now building, and with which one match has already been made. His canoe Yankee is at Plymouth, ready to be returned to America to have her forefoot cut away and her hollow spars renewed.

The Royal Canoe Club.

At the annual meeting on Nov. 29, the Royal C. C. adopted a proposal advanced by Mr. Baden-Powell for the establishment of a special class of cruising canoes, the limitations being as follows:

II. New Rule, New Class. Rule 23.—A cruising canoe, to be classified for racing purposes, shall be sharp at each end, with no transom or flat stern. Any metal keel, centerplate or ballast, shall be detachable from her, and any "bucket well" fitted within the sleeping compartment shall be detachable. Dimensions, maximum, length over all not to exceed 16ft., beam not over 42in., sliding seat, if any, when rigged in, to be within the beam of the boat. Her fixed draft, including keel, or drop keel when hauled up, shall not exceed 14in. Extreme length of any spar shall not exceed the load waterline length or the rating length. Rating, by rule $\left(\frac{\text{l.w.l. x sail area}}{6{,}000}\right)$ not to exceed 0.3. Minimum dimensions—depth inside, from deck to skin (to be taken at any point within 3ft. of the mid over-all length, and at not less than 10in. out from the middle line) shall not be less than 14in. Depth outside, from top of deck at middle line to under side of keel (taken anywhere up to 1ft. from either end) shall not be less than 12in. Sleeping space not less than 5ft. 6in. in length, with hatchway thereto of not less than 18in. in width for a distance of length of 3ft. Rule 22, as to certificates and marking of l.w.l., shall apply to cruising canoes.

The so-called "canoe" created by this new rule is really what has always been known hitherto as a canoe-yawl, of the type of Cassy and Ethel. After thus recognizing the canoe-yawl in place of the canoe, the R. C. C. has gone a step further in altering its definition of a canoe-yawl so as to admit of a counter and of any position of the rudder, though it is provided that the boat "shall be sharp at each end with no transom or flat stern." This change, which makes the canoe yawl merely a racing half-rater, was probably necessary, the latter craft having practically supplanted the old canoe-yawl; the new "cruising canoe," too, will make an excellent craft for many old canoeists; we note with regret, however, this fresh evidence of the disappearance of the 16x30 canoe and the several types of canoe-yawls proper. It may be that both of the new classes are best fitted to modern requirements; but we cannot forget the pleasure we have had of old, and the great good that has come to boat sailing through the old types.

A new rule was passed, doubtless in view of the American challenge of last year, as follows: "Challenges or entries from abroad in relation to either of the challenge cups shall only be accepted if received at the club over sixty days before the day appointed for the cup race." Under the old rules, a foreign challenger might quietly sail away from New York or Boston with his canoe, secure in the knowledge that the challenge cup races of the R. C. C. were mere perfunctory affairs, with two or three starters, and present himself and his entry a week before the race.

Red Dragon C. C.

PHILADELPHIA, Jan. 11.—*Editor Forest and Stream:* The Red Dragon held its annual meeting and dinner at the Imperial Hotel on Friday, January 4, with an attendance of twenty-four active and associate members out of thirty-one total membership. The purser reported the club free of debt, with a good balance in the treasury. Commodore McCormick then read a report containing rules of the measurement and racing of the unclassified boats, the canoe yawls and cruisers. The report was laid over to be acted on at the February meeting. The election of officers for 1895 resulted as follows: Commodore, A. S. Fenimore; Vice-Commodore, H. W. Fleischmann; Purser, Omar Shallcross; Quartermaster, J. E. Murray; Fleet-Surgeon, Dr. F. O. Gross; Correspondent, M. D. Wilt. The meeting then adjourned, all proceeding to the dining-room. Dinner was served at 7.30 P. M., and everybody had a very large time. All the officers had to make speeches, except Mr. Wilt, and he was made to sing. After he was done, the club wished he had been allowed to speak instead. Anyone who has ever heard Mr. Wilt sing will understand why. Some of our members are quite musical, if he isn't, and between courses, Messrs. Wise and H. W. Fleischmann made things very lively with mandolin and guitar, and the club quartette, Messrs. H. and R. Fleischmann, Wise and Bachmann, was very much in evidence. The party broke up at 12.30, with everybody happy and full (of supper) and all resolved to make 1895 the best year we have ever had.

M. D. W.

A. C. A. membership, Central Div.: Will M. Comb, Jr., Rouse's Point, New York; Eastern Div.,: Burton W. Grout Worcester, Mass.

Puritan C. C. Annual.

The seventh annual meeting and dinner of the Puritan C. C. of Boston, was held at Young's Hotel on Jan. 5. A goodly proportion of the members were present and an enjoyable evening resulted.

The annual meeting was held before the dinner. The club treasury was found to be in excellent condition. Plans were discussed for a club house on the new Strandway (a marine boulevard and park being constructed by the city of Boston). It is the intention of the club to build a model canoe house within a year. The members of the Puritan C. C. have seen most of the canoe club houses in the country, and will combine the good points to make a model house. The election of officers gave the following board for 1895: Com., Jas. W. Cartwright, Jr.; Vice-Com., Geo. B. Underwood; Rear-Com., Howard L. Rogers; Sec'y, Chas. T. Dodge; Treas., L. Hedge; Board of Directors, the foregoing officers and Jas. Bragdon and E. S. Gilmore; Membership Committee, F. A. Heyer, Sam'l Johnson, 2d. Frank R. Kimball; House Committee, Commodore, Treasurer and L. J. Webster; Meas., John R. Robertson.

After the business meeting was adjourned, the members and their guests discussed the good things. After a couple of hours at table the members took their sheets aboard and tacked for their respective homes. In the race home the Hon. Secretary was disqualified for rounding too many lamp posts; but to his credit be it said, that he reached home without a capsize.

Time, 12 P. M. Weather, clear. Wind, N.W. x S. ¼ E.

The new club house is on Dorchester Bay. If you are over that way, drop in.

ILEX.

Trap-Shooting.

FIXTURES.

All ties divided unless otherwise reported.

Send notice of your shoot like the following:

Jan. 22-23.—SPRINGFIELD, N. J.—Tournament of the Union Gun Club; targets. E. D. Miller, Sec'y.

Jan. 23.—ALTOONA, Pa.—First match W. G. Clark vs. W. M. C. Jones, 100 live birds, $100 a side.

Jan. 24-25.—LITTLE ROCK, Ark.—Winter tournament Little Rock Association. Paul R. Litzke, Sec'y.

Jan. 24.—NEWARK, N. J.—Newark City handicap, 25 live birds, $10 entrance, birds extra, under the auspices of the Newark Gun Club. Shoot to take place at Erb's grounds.

Jan. 30.—PITTSBURGH, Pa.—Second match, W. G. Clark vs. W. M. C. Jones, 100 live birds, $100 a side.

Feb. 1.—BURNSIDE, Ill.—Kleinman vs Carver, 100 live birds, championship of America and a stake of $200

Feb. 5-7.—UTICA, N. Y.—Two first days, targets; last day, live birds. Open to all. Send for programmes to E. D. Fulford or H. L. Gates.

Feb. 22.—ALBANY, N. Y.—First tournament of the Eastern New York Trap-Shooters' League, of the series of 1895, under the auspices of the West End Gun Club. Henry A. Kratz, Sec'y.

Feb. 27-28.—ELIZABETH, N. J.—Second bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds. Events open to all.

April 3-5.—WILLARD PARK, Paterson, N. J.—Interstate Manufacturers' and Dealers' Association's third annual grand American handicap at live birds, at New York; $1,000 guaranteed, all surplus added.

May 8-10.—WEIR CITY, Kas.—Ninth annual owl shoot of the Amateur Trap-Shooters' Association of Missouri and Kansas; $300 in cash added. W. W. McIlhany, Sec'y.

May 9-11.—NEWBURGH, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec'y.

May 14-16.—DAYTON, O.—Ohio Trap-Shooters' League annual meeting and tournament under the auspices of the Buckeye Gun Club, of Dayton, O. Ed. Taylor, Sec'y, 8 West Third street, Cincinnati.

May 21-24.—Knoxville (Tenn.) Gun Club's fourteenth annual tournament; $1,500 added to the purses.

May 29-30.—CANAJOHARIE, N. Y.—Two-day's tournament of the Canajoharie Gun Club; targets. Chas. Weeks, Sec'y.

May 30-31.—GRAND RAPIDS, Mich.—Valley City Gun Club's annual tournament; targets; added money announced later. C. F. Rood, Sec'y.

June 3-8.—CHICAGO, Ill.—Illinois State Sportsmen's Association annual tournament. Convention at Sherman House June 4.

June 4-7.—MEMPHIS, Tenn.—Memphis Gun Club's annual tournament; $2,000 added money.

June 19-21.—CLEVELAND, O.—Chamberlain Cartridge and Targe Company's second annual tournament; $1,200 in bash added.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament

Oct. 3-6.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooticg League of Philadelphia, John C. Shallcross, Sec'y, Frankford. Pa.

Oct, 9-11.—NEWBURGH, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec'y.

Little Rock Shooting Association.

LITTLE ROCK, Ark., Jan. 10.—Please announce that the Little Rock Shooting Association will hold its winter tournament Jan. 24-25. Everything will be done to make the shoot attractive and interesting. Live birds and targets will be used. Two cents will be charged for targets, deducted from the purse. Fifteen dollars will be given as average money. To the shooter making the best average on th first day $3 in cash will be paid, and the one making the next best average will receive $2 in cash. The second day the same average prizes will be given, while the shooter making the highest average in the two days will receive $5 in cash. Lunch will be served on the grounds gratis to the shooters.

PAUL R. LITZKE.

CONTROL OF TRAP-SHOOTING.

Thursday, Jan. 24, will be an important day in trap-shooting circles. The formation of a National Trap-Shooting Association or whatever the title of the new organization may be, is an object that interests every trap-shooter and dealer and manufacturer of guns and ammunition, targets and traps, throughout the length and breadth of this great country.

It is perfectly true that trap-shooting has grown in popular favor very largely during the past five years; it is also perfectly true that there are many more successful tournaments held now than could possibly have been carried to a satisfactory conclusion less than half a decade ago. All this, of course, is very gratifying; the congregating together of brother sportsmen in front of the traps cannot but be productive of much good. The sport is a manly one and the spirit of emulation engendered by it is healthy. But the number of shooters and the number of successful tournaments might be increased yet more.

Human nature, however, is so constituted that it is very rarely that any competition of skill can be brought about without some incentive, such as a medal, cup or cash. Sweepstake shooting with several moneys, class shooting, introduced into the sport with a view to popularizing still further these trials of skill, has undoubtedly aided greatly in inducing tyros to try their hands at the trap, with the result that these same tyros have become wedded to the sport and have oftentimes become real experts. But this class shooting wherein it is possible, as pointed out by "Basille" elsewhere, for a man by making a lower score to win a larger amount than another does who breaks a target or two more, has opened up an avenue for in-and-out shooting that has brought a more or less evil reputation to trap-shooting in general. A national organization may not be able to stop it altogether, but it is cowardly to say that it cannot. The more sportsmanlike class of shooters are very strongly opposed to the wilful missing of a single target, the sole object of that miss being to drop into a better place. It is naturally distasteful toa gentleman to do anything dishonest, and it cannot be argued that dropping for place is an honest action.

But the organization of a national association can do much to help along the cause of trap-shooting, outside of legislating against droppers. At present clubs are merely individuals, some stronger than others, like human beings. A government, some republican form of government, is what is needed to weld all these units into a homogeneous whole. If there are any arguments to be adduced against the formation of such an organization, those arguments should be presented at the convention of Jan. 24.

It is specially asked that all gun clubs take action on this matter and either appoint a delegate or send resolutions setting forth the stand taken by their members. All communications on this point should be addressed "Chairman of convention, care of Forest and Stream Pub. Co., 318 Broadway, New York." This will insure that all such will reach the right hands.

The call given below has received six more signatures since last issued, Chicago desiring to add her influence to the matter:

THE CALL.

"In view of the fact that there is unquestionably much crooked work indulged in at the trap tournaments throughout this conntry, and being certain of the fact that such cannot but be prejudicial to the best interests of this sport, we, the undersigned, do hereby issue a call for a convention of those interested in the future welfare of trap-shooting to meet at the Astor House, New York city, on Thursday, Jan. 24, at 2 P. M. The purposes of this convention will be the organization of a governing body for the trap-shooters of the United States, and the consideration of the best and surest method of combating the evil referred to. We ask all gun clubs and kindred organizations to elect a delegate to attend this meeting, or in default of so doing, to send to the convention a resolution indorsing the purposes thereof.

Shooting at Towanda, Pa.

TOWANDA, Pa., Jan. 5.—The New Year's programme of the Towanda Gun Club will no doubt be remembered by its participants as a most pleasant one, if not financially a success. Owing no doubt to the severe cold weather, the thermometer registering anywhere from 10 to 20 deg. below zero, many were kept away. Many ardent lovers of trap-shooting, however, were on hand, the excitement of the sport no doubt keeping their blood in circulation while facing the traps, the club room stove also being very useful. M. F. Lindsley and his wife, Ed. Kniskern and Mr. Baldwin of Elmira, N. Y., braved the cold, along with Park and Martin of Wilkesbarre, Pa., Nelson and Fisher Welles of Trvalusing, Pa., Dr. Keyes of Willawanna, Pa., McCabe and Forbs of Rome, Pa., Montanye, Shiner, Dittrich, Parrott and Pitcher of Towanda, Pa.

The Towanda Gun Club grounds have always been conceded by those who shot on them as among the hardest in the world; the difficult background, the shooters standing above the traps, will account for the ragged scores; there was also a dazzling sunlight on the snow, with the piercing cold. The two highest averages for the day were Montayne 71 per cent., Park 65 per cent. Scores as follow. Ten targets each, entrance $1:

	1	2	3	4	5	6	7	8	9	10		1	2	3	4	5	6	7	8	9	10
Montanye	9	8	6	7	8	9	7	6	6	8	Shiner						6	5	.	4	.	.
Park	4	5	7	7	8	5	8	.	.	7	Pitcher			1	2	5	4	.	.	.	.
Lindsley	3	5	6	9	.	9	4	.	5	6	Wanda						6	3	.	.	.
Martin	4	5	4	4	3	.	.	.	.	3	F Welles				4	7	5	.	.	.	4
Keyes	.	.	.	3	3	4	.	.	.	3	Kniskern									5	8	6
Parrott	.	.	.	1	.	3	3	.	.	.	Baldwin								1	5	1	2
Dettrich	.	.	.	3	.	.	2	.	.	.	N Welles									5	6	7

Live bird scores were as follows, the three first events being at 5 live birds with $2 entrance:

	No. 1.	No. 2.	No. 3.
Montanye	11000—2	12201—4	10010—2
Lindsley	22*21—4	20212—4	02211—4
P Welles	02011—3	11011—4	22111—5
Baldwin	10001—2	20001—2	20000—1
Kniskern	01200—2	11101—4	11110—4
Wanda	01000—1	....	....
Martin	00110—2	20111—4	11211—5
N Welles	01111—4	10111—4	10211—4
Park	11111—5	10211—4	00211—3
Shiner	10010—2	11010—3	....
Parrott	....	00200—1	....

A $1 miss and out was also shot, being won by Montanve; the score was Montanye 6, Kniskern 5, P. Welles and Baldwin 2, Lindsley and Park 1, Martin and N. Welles 0.

During the afternoon "Wanda" shot at six birds in accordance with the request of the members of the club and of several spectators; of the six she killed five. W. F. DITTRICH.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

The secretary of the Bronx River Gun Club writes that the following officers have been elected for the ensuing year: President, James Duane; Vice-President, Dr. J. P. Adams; Secretary and Treasurer, J. T. Murphy. The club grounds are situated at West Farms, directly across the road from the station of the Harlem River branch of the New Haven Railroad, so that nothing more accessible could be desired. There is more or less shooting every Saturday afternoon, and all interested are cordially invited to give them a call.

Newark, N. J., Jan. 11. New Jersey Trapshooters League. The fourth annaul meeting will take place on January 21, at one o'clock P. M., at the office of the Winchester Repeating Arms Company, 312 Broadway, N. Y. City. Clubs not already members are cordially invited to affiliate and send a delegate to this meeting. W. R. Hobart, Secretary.

What becomes of all the empty shells used at the traps? The London (England) Gun Club, evidently believes in letting nothing go to waste, judging from the following advertisement in the London *Field:* "For sale, a large quantity of best once used Central Fire No. 12 Cartridge Cases, Price 7s. per 1000, package included. —Postal order to be sent on application to Secretary the Gun Club, 4 Carleton street, London, S. W."

Carver won the second match of his series with Tom Marshall, of Keithsburg, Ills., by the score of 75 to 72. The shoot took place Jan. 11, at Kewanee, Ills.; both men shot badly, while the birds were a very good lot.

Topeka, Kan., Jan. 11.—The shoot between the Leavenworth Gun Club and the West Side Gun Club, of Topeka, for the State championship trophy, held here yesterday, was won by Leavenworth. The shoot was for 250 birds a side, divided into thirty singles and ten doubles. Score: Singles—Topeka, 115; Leavenworth, 125; doubles, Topeka, 70; Leavenworth, 69.

The New Haven Gun Club will hold shoots during the present year the second Wednesday of each month, rain or shine. There will be two sets of prizes, one to be competed for the first six months, and the other the last six months, the four highest scores to count on each.

Lieut. Gibson, writing to "Wick" of the Cincinnati (O.), *Tribune*, says: "Trap birds (English blue rocks) are far different from the live pigeon in America. Every one flies, and that hard, and it takes a good gun, as well as holder thereof, to stop 'em. I shot at twenty, ten each time, and, feeling in most excellent form, scored but six out of my first, and but five without a miss in my second ten. You know the Grand Prix is a miss and out. So where will I be?"

George Klinman, the champion live bird shot of America, has accepted Carver's challenge, and will shoot him a race at 100 live birds, $100 a side, for the championship badge. The shoot will take place at Watson's Park, on Feb. 1.

R. A. Welch, of the Riverton, N. J., Gun Club, one of the best amateur live bird shots in this country, has been declared the winner of the Riverton Challenge Plate, he having successfully defended it against all comers in '94, defeating among others Work, Hoey and Dando.

The Newark (N. J.) Gun Club's big live bird sweep, at Erb's grounds on Jan. 24, will have a large entry list from all accounts.

Jim Elliot won first money alone in Charlie Zwirlien's 25 bird race, $10 entrance, birds extra, on Jan. 9. There were 24 entries, including Morpey, Hill, Brewer, Van Dyke, etc.

Wm. T. Wilcox, secretary of the Flushing (L. I.) Shooting Club, was present at the big shoot at Larchmont on Friday. Mr. Wilcox expects that his club's 50 bird handicap on Jan. 17, will have a liarge number of entries.—EDWARD BANKS.

Frank Class, of Morristown, N. J., has found a man willing to bet $50 that he can kill 44 of 50 birds trapped under the same conditions that Brewer backed himself to kill 46. The man is Eddie Hill, of Trenton, N. J., and the shoot comes off on Wednesday, Jan. 16, at the Morristown Driving Park.

Some of the city dailies speak of Knapp, the winner of the Larchmont championship cup, as a comparatively unknown man and as a surprise party. As a matter of fact Knapp was the favorite, and would have sold as such in all probability had there been any pools on the event. A match between George Work and Knapp on even terms, 30 yards rise, 50 yards boundary, would be a capital betting race at 21 yards boundary. Work would seem to have an advantage; he is quicker and his lightning second barrel is a great advantage under such conditions.

H. W. Lacy, the kennel man of Forest and Stream, is a member of the Yanticaw Gun Club, of Nutley, N. J. On New Year's Day, Lacy shot with the club for the first time. Being a member of Forest and Stream's staff, he was presumed to be almost an expert, receiving but two targets allowance. The result was rather adverse to the reputation of Forest and Stream, Lacy's score being only 7 out of 25. Twitted with this poor score, and his connection with the paper referred to, he acknowledged the corn, but added, "You just talk dog to me!"

W. G. Clark, of Altoona, Pa., and W. M. C. Jones, of Pittsburg, Pa., have signed articles to shoot a couple of matches at 100 birds each for a stake of $100 a side, each match and expenses. The following note from Altoona, Pa., explains itself: "Altoona, Pa., Jan. 10. The proposed matches between W. G. Clark, of Altoona, Pa., and W. M. C. Jones, of Pittsburg, has been arranged and will be shot during the present month. The first will be in Altoona, on Jan. 23, the second in Pittsburg, on Jan. 30. The races are at 100 birds per man, each event, and for $100 a side and expenses. "Old Hoss," of Pittsburg, will be referee, and stakeholder, Grant."

The Herron Hill Gun Club, of Pittsburg, Pa., has elected the following officers for 1895: President, Alex. H. King (re-elected); Vice-Presidents, J. E. England ("Bessemer"), and H. L. Born; Secretary, Louis Lautenslager (re-elected); Directors, H. J. Levis, John H. Shaffer, W. S. King, Captain "Bessemer"; Shooting Committee, Louis Lautenslager, "Bessemer," and Jacob Motz. At the meeting at which the above officers were elected, a delegate was appointed to represent the club at the convention of trap-shooters in New York, on Jan. 24.

The Keystone Shooting League, of Philadelphia, Pa., celebrated its 14th anniversary in fitting style on Jan. 7. Live birds and targets formed the day's programme. A team race at live birds between the members of the club, 12 men to a team, 7 birds to a man, resulted in a victory for No. 1 by one bird; scores, No. 1. 65; No. 2, 64.

Springfield, N. J., Jan. 9. At the annual meeting of the Union Gun Club, of Springfield, N. J., held on Jan. 5, at the house of Dr. T. J. Jackson, the following officers were elected to serve during 1895: President, Dr. T. J. Jackson; Vice-President, L. T. Terry; Secretary and Treasurer, E. D. Miller.

Knoxville, Tenn., Gun Club shows up well according to the figures and facts quoted by R. Van Gilder, the club's active secretary. Mr. Van Gilder's letter is worth reading, and he is perfectly correct when he says that shooters like to read what their brother shooters have been doing.

The Peekskill Gun Club has elected officers as follows for the ensuing year: President, Milton Jordan; Vice-President, H. B. Wygant; Secretary, O. J. Loder; Treasurer, E. F. Hill; Captain, H. P. Dain; Directors, H. L. Armstrong, P. H. Mason and William Dunphy.

The programme of the Utica (N. Y.), tournament, to be held on Feb. 5-7, is now out and can be had by addressing E. D. Fulford, or H. L. Gates, the managers. The programme for the first two days are exactly similar, each containing 8 events at 20 targets each at a uniform entrance of $2. The events are class shooting, four moneys, known angles, birds extra at two cents each. Thursday, Feb. 7, is the live bird day. On this date the Central New York handicap, open to the world 20 birds, $10, birds extra at 25 cents each, handicap rise; four moneys, will be the main event. American Association Rules will govern all contests which handicaps 10 gauge guns, two yards. Firing points will be protected, so that no matter what the weather may be, the shooters will be fully protected and comfortable.

Enoch Miller, secretary of the Union Gun Club, Springfield, N. J., writes under date of Jan. 10, as follows: "This club will open its grounds this season with a two days' tournament on Jan. 22 and 23. The tournament is open to all. Ten dollars will be given for general averages, for the two days' shoot. The grounds are easily reached from New York or Newark by the D. L. and W. R. R., to Milburn Station, where hacks will meet all trains. Everything will be arranged at the club grounds for the comfort, and to the satisfaction of, all contestants. Shooting commences at 9 A. M. each day. The club has just put in a complete set of expert Empire traps."

The Rockaway Point (L. I.) Rod and Gun Club has elected the following officers for 1895: President, Edward Bourke; Vice-President, Major Spott; Treasurer, Commodore Steinbrucker; Secretary, Josephus Bourke; Steward, Van Roosevelt Meyer; Captain, L. H. Schortemeier.

The Amateur Championship.

The Larchmont Club, and incidentally J. P. Knapp, deserve more than the ordinary amount of congratulations upon the successful result that has been arrived at in the biggest amateur shoot ever held in this country.

The affair took place on the club's grounds on Jan. 11 and 12. It is no easy matter to find nine men in any locality who are willing to plank down their $100 and shoot through a 100-bird sweepstake. It is all very well, now it's over, to look back and say that there should have been more entries. Perhaps there should, still nine entries is a very satisfactory number.

There were several well-known names absent from the scoreboard when John S. Hoey, the referee, called Knapp to the score to open the match. Among the more prominent absentees were: Fred S. Hoey, who is knocking over pigeons at Monaco; L. S. Thompson, who is now convalescing after an attack of pneumonia; the three Philadelphia cracks, Charles Macalester, T. S. Dando and R. A. Welch, Macalester and Welch being probably two of the best amateur shots in the country; Macalester in particular having the great record of an unbroken string of victories in all the matches he has shot. G. W. Coulston, a member of the New Utrecht Gun Club, is also shooting in form good enough to warrant the supposition that he could hustle any of them for first money. The reason Welch was not present was because he was on a shooting trip down South at the time of the shoot; otherwise nothing could have kept him out.

Although very few individual wagers on the result were made, the general opinion seemed to be that Knapp, Duryea, Work and Moore were the most dangerous men. Knapp was picked every time as due for first or second place, the honors for next choice being divided equally between Duryea and Work; the latter owes his position in this match to the fact that he has been absent from the trap for some few weeks, whereas Knapp and Duryea have been in steady practice and have both shown excellent form. It was a very plucky thing of Edey and "Madison," both members of the Westchester Country Club, to enter in such a big race. It is true that both are capital shots on their own grounds where the birds are not so very fast; but at Larchmont, in addition to the background being by no means as good as it might be, they met fast birds; these two items formed an important factor when it came to shooting in hot company. C. Furgueson, Jr., is a shooter who has shown time and again that he is a good stride above mediocrity; in this match he drew a quantity of hard birds with the inevitable result.

Dr. Wynn, a member of the New Utrecht and Larchmont Gun Clubs, is one of those persons whom (without any attempt at flattery whatever) it is always a pleasure to see engaged in an event of this kind. Dr. Wynn is not in his *premiere jeunesse* so far as years go, but if there is any truth in the saying that no man is older than he feels, then Dr. Wynn may be said to be only a colt. Although he has shot pigeons for over 30 years, and although it would be impossible to find a black hair on his upper lip or under his soft felt hat, yet the doctor enjoys pigeon-shooting as well as anybody does, and what is more can kill as many as most. There is another feature about Dr. Wynn's pigeon-shooting that is so uncommon that it is worth mentioning, as I have a few lines to spare; he takes a joke just as readily as he puts the laugh on one of his fellow shooters, and no amount of "kidding" can phase him.

Capt. Money, another veteran at the traps, was one of the entries in this big race. For about two months past the captain has been shooting away behind his true form. His score of 19 out of each of the first two series of 25 birds is probably some 6 or 8 birds less than he ought to score upon such pigeons as were trapped for him on Friday. His repeated misses bothered him a good deal, and he did a lot of thinking. Toward the close of the day he came to the conclusion that he had during the above two months unconsciously so altered his position at the traps as to place him at a disadvantage. Whether this was so or not, his last nine birds out of the first 50 were killed in his old style, his first barrel being as deadly as usual, while incomers were just like finding them.

Of course an event of so much importance attracted lots of attention, not only from clubmen but from the daily press, every paper of any note in this city being represented on the press bench. Where so many well-known shooters and clubmen are present, it is almost impossible to mention all. The following is a partial list: De Forrest Manice, Gouverneur Kortright, C. W. Bird, Gerard M. Barretts, Robert A. Bull, William R. Brixb, Newberry D. Thorne, W. H. Harper, Frank Duryea, William Potts, Arthur Duane, L. Q. Jones, W. T. Wilcox, the Hon. Henry A. Gildersleeve, H. B. Fessenden, Chauncey Kerr, George I. Seney, William T. Murray and F. T. Pelton. James S. Taylor, one of the best live bird shots in the West Newburgh Gun and Rifle Association, Newburgh, N. Y., was also present. Mr.

Taylor shot a match with Knapp some time before Christmas, Knapp beating him by but one bird in a 100-bird race.

The weather was fine overhead, and at times the sun shone brightly, but scarcely a breath of wind came during the whole day to aid the birds. Had their been any sort of a breeze it is safe to say that Knapp's 46 would not have been scored, as the birds were a really good lot. They were all blue, and as quick on the wing in the majority of cases as it was possible for them to be. To the average spectator they might not seem an extra fast lot, as now and then a streak of loiterers would be met with. That is one of the peculiarities of pigeon-shooting when a large number of birds are required; one crate contains nothing but fast birds, while the next crate, precisely similar in every other respect, will have several duffers. The table given below showing the flight of the first 450 birds gives a good idea of the general quality of the birds. It is to be noted that whereas only 89 showed any incoming tendencies, there were altogether 246 outgoers. The background already referred to made high scores under the circumstances that existed almost impossible. Immediately over No. 3 trap is a broad stretch of swampy ground with a fringe of dark timber on the far side; to the right is a rocky knoll covered with a heavy growth of large trees; over No. 2 trap was a grassy hill with a few apple trees on it, and with some large grey rocks cropping out just above a snow-drift; to the extreme left was the side of a hill that made a very bad background during the duller portions of the day, and which had the effect of making mortally wounded birds struggle hard to get over the boundary. Moore lost four birds that fell dead out of bounds just over the left field bonndary line, all very nearly in the same place.

The shoot began promptly at 11:09 A. M. with Knapp to the score, the order being Knapp, Work, Wynn, "Madison," Furgueson, Edey, Duryea, Moore, Money. The first 100 birds were shot in exactly 60 minutes; the second 100 in 59 minutes; the third 100 in 62; fourth in 60 minutes, and the remaining 50 in just 30 thirty minutes, making a total of 4 hours and 31 minutes for 450 birds. This time is remarkable for many reasons—first, there were nine men shooting in the match, each man shooting but one bird at a time; second, the dogs Don, Snipe and Topsy were quite slow in retrieving; third, the trappers did not appear to be trapping fast, but this slowness on their part was probably due to there being no particular hurry as they were generally in before the dogs when the birds killed were outgoers; fourth, the regularity with which each series of birds was disposed of, the third series being the longest. Fred North, the superintendent of the club grounds, was trap puller, and had everything in capital shape by the time the match was started. The birds he furnished would be creditable to anybody.

Work's first miss was excusable; he shot at a flipper from No. 3 trap, the bird, which was missed clean, being undoubtedly on the ground again when the first barrel was fired. Work dwelt a bit before trying his second barrel, the bird jumping just as he pulled the trigger and going away unscathed. Edey's 34th was an exact reproduction of Work's bird and escaped in a precisely similar manner. Each bird, if killed by the second barrel, would have been "no bird if gathered."

The post of referee was filled by John S. Hoey. That's all that need be said of that department, Mr. Hoey's work being too well known to need any further mention. As for the shooting of the different contestants, the general results as shown by the scores is the best criticism. The tables also given below will be of some interest. The first of these is a list of the flight of the birds drawn by each shooter: *

	D	RQD	LQD	RQ	LQ	RQI	LQI	I	H
Knapp	7	4	11	4	15	4	3	2	0
Work	10	8	12	6	8	3	1	0	1
Duryea	11	4	11	3	11	3	2	5	0
Wynn	12	5	10	5	8	2	6	2	0
Moore	11	8	11	3	6	6	1	4	0
Furgueson	9	6	12	4	10	1	7	0	1
Money	8	7	15	3	7	1	5	4	0
Edey	10	5	13	6	5	3	6	1	0
Madison	10	8	8	1	6	6	5	5	0
	88	55	103	35	76	29	37	23	2

* D, driver; RQD, right-quartering driver; LQD, left-quartering driver; RQ, right-quarterer; LQ, left-quarter, RQI, right-quartering incomer; LQI, left-quartering incomer; I, incomer; H, hoverer. Work and Edey lost two "sitters."

The following table shows the way in which the traps were pulled; it will be noticed that Nos. 1 and 5 were the most favored, Furgueson drawing No. 1 no less than 21 times out of his 50:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.
Knapp	12	10	8	11	9
Work	13	9	8	7	13
Duryea	10	10	8	10	12
Wynn	10	10	8	10	12
Moore	12	14	5	7	12
Furgueson	21	9	4	7	9
Money	13	9	8	11	9
Edey	11	10	7	11	11
Madison	14	10	6	11	9
	116	91	62	85	96

The first day's scores showed Knapp leading by two birds with the score of 46; the others followed in this order: Work 44, Duryea and Wynn 43, Moore 42, Furgueson 40, Money 38, Edey 36, Madison 33.

Second Day.

Saturday, Jan. 12, was a day that would have been a credit to April; January, as a rule, has very few such days on her list. The pleasant weather, added to the closeness of the previous day's scores, brought forth a much larger attendance of spectators at Larchmont. Among those present were: Jordan L. Mott, Jr., Hon. Henry A. Gildersleeve, Augustus Munroe, De Forrest Manice, J. F. Lovejoy, Wilson Marshall, Francis D. Beard, George I. Seney, Randolph Hurry, Wilson S. Alley, Lloyd Taylor, Alfred Marshall, George A. Cormack, H. P. Benjamin, Charles A. Boyd, D. I. Jackson, Archie Pell, George Barnes, J. Otto Donner, Archibald Le Roy, R. M. Bull, C. F. Ulrich, W. C. Wilcox, Arthur Duane and Paul L. Thebaud.

The shooting was of a higher caliber than that shown by most of the contestants on Friday. Of course "Joe" Knapp, as his friends call him, did some great work with his gun, and by that work deservedly won the $250 cup presented to the winner by the club. He led off by killing 11 straight in his third 25. His 12th bird was a left-quartering driver from No. 5 trap; the first barrel effectively killed it instantly and Knapp thought it useless to make sure with his second; breaking his gun he turned from the score. The bird, though, was not dead; when the dog got to it, up rose the pigeon and fluttered out of bounds. That settled it; Knapp never saved any more shells, but settling down to work he ran out his 100 birds with 38 straight, his total for the day being 49 out of 50, with one dead out of bounds. The winner has been shooting in wonderfully improved form during the last two months, and judging from his more recent records no one living has any license to beat him easily.

Work was second with 89, while Duryea was third with one less. In fourth place Furgueson and Moore were tied with 86. Edey and Capt. Money, who pulled up well on his last 25, came next with 23, the two last being Wynn and Madison in the order named with totals of 79 and 65 respectively. Dr. Wynn's form on this day was very different to that which he displayed on Friday, when he left off with a score of 43, being tied for third place with Duryea. Edey's shooting was far superior to his work on Friday, when he only made 36. By dint of some capital work he raised his total to 80, scoring 44 out of 50 with two dead out of bounds.

The double figure runs made by each of the shooters were as follows: Knapp 38 (unfinished), 27, 17; Work 27, 15, 14; Duryea 13, 12, 11, 10; Furgueson 14, 13, 13; Moore 22, 12; Money 20, 10; Edey 17, 12, 10; Wynn 15, 12.

In dead out of bounds, Wynn and Madison tied with 7 each; Moore lost 6 birds that way and Edey had 5 carry his charge of shot over the boundary; Knapp and Duryea each had 4 "dead out," Work, Furgueson and Money losing 3 of the same kind. Every one of Knapp's above-mentioned 4 birds would have been gathered in an 80yds. boundary, his score thus being equal to 99 out of 100 with that boundary.

The scores of this day on the last 50 birds stood: Knapp 49, Work, Furgueson and Duryea 45, Edey and Moore 44, Money 42, Wynn 36, Madison 32. It took nearly half an hour longer to shoot the 450 birds to-day than yesterday; the match began at 11:30 A. M. and the last bird was killed at 3:55 P. M., a total of 4 hours and 52 minutes.

Another table that will be of interest is the following, showing the traps pulled; No. 1 was again very materially to the fore:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.
Kapp	12	8	5	13	12
Work	12	13	6	6	13
Duryea	10	12	4	16	8
Furgueson	15	16	5	10	4
Moore	14	7	6	11	12
Money	18	11	3	10	8
Edey	21	7	7	5	10
Wynn	11	7	9	13	10
"Madison"	10	13	7	11	9
	123	94	52	95	86

The flight of the birds was as follows:

	D	RQD	LQD	RQ	LQ	RQI	LQI	T
Knapp	3	10	16	5	5	10	1	0
Work	4	6	16	5	3	11	3	2
Duryea	7	6	9	13	2	9	1	3
Furgueson	6	12	21	6	0	3	2	0
Moore	4	5	12	6	3	17	2	1
Money	8	6	14	3	1	9	7	2
Edey	6	1	17	11	1	9	2	3
Wynn	6	8	12	5	1	12	2	4
"Madison"	3	6	16	8	1	9	2	5
	47	60	133	62	17	89	22	20

The full score of both days is given in full below. It is of especial interest, as this shoot is the biggest of its kind ever held in this country. Its success will unquestionably lead to others of a similar nature, and such contests will always be popular, not only with the shooters themselves, but also with the general public, who take particular interest in amateur work in every field of sport. It is very seldom that in a championship contest the winner was spotted so very generally from the start, that is, by those who follow the sport closely. Public form in this instance was considered and the result justified the selection. For second choice it was the prevailing opinion that between Work and Duryea there was but little to choose. Captain Money's position may be said to have been the disappointment of the match.

Full scores follow:

Amateur championship contest, 100 live birds per man, $100 entrance, 30yds. rise, 50yds. boundary; for the amateur championship of the United Stetes and a cup, value $250, donated by the Larchmont Yacht Club. Purse divided (after deducting 10 per cent. for the club) into four moneys, high guns to win, 50 per cent. to winner, 25 per cent. to second, third and fourth dividing remaining 25 per cent.:

EDWARD BANKS.

Memphis Asks Suggestions.

CHICAGO, Ill., Jan. 4.—In the view of the present agitation in trap circles on the question of honest shooting, the following from the Memphis Gun Club may furnish interesting reading. Memphis has attained a rapid reputation as being without doubt the first city to take a practical and absolutely fearless and sincere position against dropping and combining at tournaments. The dropper who is suspected at Memphis will have to go, and the search for him will be sincere and earnest. The intentions of the Memphis gentlemen may be thwarted, though I doubt this extremely, but that they are eager to go surely and carefully can be seen from the remarks of Mr. Divine, who sends the following comment on the proposed regulations of next June's Memphis tournament. I hope that if any one can think of a way to make dishonesty more difficult he will volunteer suggestions, so that the final form of the Memphis programme regulations will be practically perfect so far as the present wisdom of honest trap-shooters can make them. Mr. Divine writes:

."I inclose you some manuscript rules which we contemplate using in the programme of our coming tournament. Thinking it would be a good idea to have this appear in the FOREST AND STREAM, as foreshadowing what will probably be the rules and regulations under which the Memphis tournament would be held, I send it to you for the purpose of bringing out any comment or suggestions from others outside of the tournament."

The text mentioned runs as below:

"It is the sentiment and desire of the Memphis Gun Club to give a shoot free from pooling or dropping for place, a shoot which will give the amateur and expert gentlemen the same chance, and we hope by adopting rules herein to make it possible for both classes to have a fair and equal chance. We assure all visiting shooters that we will do all in our power to make this tournament a pleasant and enjoyable affair, both to the good and poor shooter.

"There will be a committee of three appointed, whose duty it will be to classify all shooters, who will closely scrutinize the shooting of all participants, and where they detect the least disposition on the part of any shooter to fail to make a good record they will call his attention to the fact and place him in a higher or lower class. This change when made, will provide for the party remaining in that class all day.

"The members of this club are determined to have a fair, high-toned, gentlemanly shoot, and they intend to do everything in their power to make it pleasant and fair to every one. If we fail it will be for want of that gentlemanly co-operation which we shall expect from every one attending this tournament.

"We assure every one coming to this tournament that if they lodge a complaint with this committee they will investigate the same, and if the charge is sustained they will immediately expel from the shooting grounds such parties, or any other party pooling or dropping for place, or guilty of any ungentlemanly conduct.

"We cordially extend the hospitality of the club and its members to every visitor who comes to our tournament to shoot upon the great level of gentlemanly merit, and who are determined to assist us in eliminating from our company the gamblers and cheats.

RULE 1.

"There will be two classes, known as expert and amateur. There will be $250 added money to both classes each day.

RULE 2.

"The expert class will be composed of all known experts, who will be required to shoot in this class throughout the tournament. All amateurs having or making an average of 85 per cent. or over will be placed in this expert class, and will remain there until their day's average falls below 85 per cent. The highest average made by amateurs during the shoots of 1894 will be taken as a basis for classification for the first day.

RULE 3.

"The shooters, so classified, shall shoot in their respective classes throughout that day. Those amateurs shooting in the expert class failing to make an average of 85 per cent., will be put back in the amateur class on the next day's shoot. All amateurs shooting in the amateur class making 85 per cent. and over, will be advanced to the expert class for the next day. These classifications will be made at the end of each day's shoot.

RULE 4.

"There will be the same amount of added money in each class; that is, $250 in each class each day. Both classes will shoot at known traps and unknown angles at the same time.

RULE 5.

"There will be four moneys in the amateur class, divided as follows: 40, 30, 20 and 10 per cent. There will also be four moneys in the expert class, divided as follows: 40, 30, 20 and 10 per cent. Advanced amateurs in this class failing to make 11 out of 15 or better, will be entitled to a rebate of one-half their entrance money.

RULE 6.

"All matches will be shot at 15 birds each.

RULE 7.

"All birds will be thrown as near 7ft. high 20ft. from the trap as possible, and as fast as the traps can throw them."

There is no uncertain sound to the above. The Memphis Gun Club men are not running any stone dog. Can any shooter tell them how to make their game harder and squarer? I would suggest that nothing is said as to the question of salaried shooters. Shall we see Mr. Organ's suggestion of an increased entrance fee for them embodied in the final programme, or should the plan be adopted which is announced in the programme (a very elegant and thorough-going little book too), which the Chamberlin Cartridge and Target Co. have put out in announcement of their second annual tournament, June 19-21. The Chamberlin plan allows all manufacturers' agents and professionals to share only in the first, second and third divisions of the purses at any time. I do not think the better class representatives will object to this. But of the sliding-scale classifications I would think the Memphis plan, which keeps a shooter in his class for the entire day, better than the one announced fo the Chamberlin tournament, by which a man may be put up or down after each event, "the scores of each event forming the basis for handicapping in the following event." Skillful crooks at the trap have often "beaten" that plan of classification, which at first sight would appear better than to make a man shoot in the same class all day. There are only a few days at a tournament, and the dropper who would drop all day in order to get into a lamb fold the next day would probably be corraled by a sharp committee before sunset of the first day, even were he not held up by the hope of average money or some of the other valuable considerations by which shooters are these days induced to favor managements with their presence. E. HOUGH.

909 SECURITY BUILDING, Chicago.

Dropping for Place.

YOUNG'S POINT, Ont., Jan 2.—*Editor Forest and Stream:* I am not a pigeon shooter, but always read with interest the accounts of it in your truly admirable paper. The mysteries of dropping for place were hidden from my understanding until explained in the extract, "Pittsburgh is After Droppers," in your issue of Dec. 29.

Now I know nothing about it, but it really seems to an outsider very extraordinary that the rules should be such as to encourage the practice. It really seems unfair that if A and B tie for first place they have to divide first money, each thereby getting less than C who is only the third best shooter, and yet gets second money and more than the better shots. Of course gentlemen are not supposed to be after the dollars, but only honor and glory; but still on the bare principles of justice it seems to an outsider that A and B should either toss up for first and second prizes, or else that the first and second prizes should be added together and divided equally between them, C getting only what he is justly entitled to, the third prize. When an unfair principle of awarding the prizes prevails, it must be expected that sometimes it will be met by unfair shooting; at any rate the temptation seems to be purely gratuitous.

Then again, how can any judge or referee pretend to say for certain that a bird has been purposely missed. The most honorable shooter may be placed in a very unpleasant position; the very fear of being thought to have dropped for place may cause a nervous miss. It seems to me that the very existence of such a rule should make straight men chary of entering a competition when an accidental miss can be open to evil constructions.

Is there really any reason against ties dividing the two moneys.

BASSILLE.

Clark and Adams Tied.

ALTOONA, Pa., Jan. 5.—An interesting live bird contest took place to-day at the Juniata Base Ball Park between W. G. Clark and "Adams," at 50 birds each, for a private consideration. The afternoon was an exceedingly cold one, the thermometer being almost to zero. As a consequence many of the birds were slow in starting. They were a very strong lot, however, and the scores are not as poor as they look on paper. The match was governed by revised Hurlingham rules, and was refereed by G. G. Zeth; C. F. Stoltenberg trap puller.

Adams went to the score at 3:15. His first bird was a difficult right-quarterer, and was grassed in fine style. He is practically a new-comer in the trap-shooting ranks, and shows a very high degree of skill. His misses were in nearly every case excusable, for the light was very poor. A heavy cloud, stretching from Wopsononock Mountain to the city, made it almost as dark at times as night.

Clark shot a nice race, but had some very hard luck in birds falling dead out of bounds. Seven of the nine lost were retrieved by the dogs just beyond the ropes.

The resu't was a tie, and darkness prevented the shoot-off. They decided to arrange a similar race for a near future date, when the present one will be decided. The scores:

Fifty live birds, 30yds. rise, 50yds. boundary, nominal stakes.

Clark	111111012*1*110222*122**1—18
	21121212111*111222122122*—23—41
Adams	22221101222221122222022202—22
	0222022*20112012222122110—19—41

The traps were pulled as follows:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.
Clark	8	11	15	11	5
Adams	13	10	9	10	8

GRANT.

Western Traps.

CHICAGO, Ill., Jan. 11.—The old reliable Illinois State Sportsmen's Association swings into line on the usual early June dates, which for 1895 are 3-8. The annual convention will be held at the Sherman House on the evening of June 4. There will be a banquet this year, on June 4, and this will no doubt be a pleasant affair. This meet is always a good one, and everything points to a great time this year. The new secretary, Mr. Herman Meyer, is a hustler, and the new president, Mr. Shepard, who was the old secretary, is as dependable and accurate as ever.

Dispatches announce to-day that the tournament at Kewanee, Ill., is doing well. Tom Marshall shot his second race with Dr. Carver there yesterday, and Carver won with 75 to Mr. Marshall's 72. Deterline and W. T. Irwin shot a target race to-day and there will be a team race between Kewanee and Neponsett towns.

Mr. Jesse Pumphrey of Columbus, O., and well known at the traps, was in Chicago for a short time this week.

Dorsey Burgess writes me from American Falls, Idaho, that the boys out there are going to have their first try at pigeon shooting this week, and they are loading up with No. 4 shot and F. G. powder. That ought to kill them all right. Mr. Burgess sends me a tracing of a Snake River trout, 25in. long. This fish weighed 8½lbs. Which shows that a trap-shooter can be something of a fisher himself.

Audubon Gun Club, of Chicago, met last night, Jan. 10, and elected as officers for the ensuing year Chas. Kern, President; C. S. Wilcox, First Vice-President; Chas. Morris, Second Vice-President; W. L. Shepard, Secretary-Treasurer. Directors will be F. A. Place, R. B. Organ, L. M. Hamline, C. S. Wilcox and C. B. Dicks. This club will shoot for the following year on the same sliding handicap used by the Chicago Shooting Club, the invention, I believe, of Mr. Organ. To illustrate, using the handicaps of the latter body; Geo. Kleinman shoots at scratch, but should he fail to win, he is allowed one bird in his next shoot, never any more than one bird, and this to cut off when by winning he goes up again to scratch. Eddie Bingham is allowed one bird all the time, never more or less. R. B. Organ is allowed one bird, with a slide of one bird. And so on down, the entire handicap and the slide for each man being determined by the close knowledge of the ability of each shooter, gained through long and intimate acquaintance at the trap at the club shoots. There is no fixed rule of handicap, and indeed such a rule is hard of laying down. These clubs find the sliding scale entirely satisfactory as among themselves. E. HOUGH.

909 SECURITY BUILDING, Chicago.

Jones-Knapp vs. Edey-Reynal.

L. S. Thompson and W. S. Edey were matched a short time ago against J. P. Knapp and Chauncey Floyd-Jones, the match being arranged to take place on the Westminster Kennel Club's grounds, Babylon, L. I. Thompson being taken ill, the match would have fallen through had not Edey agreed to take N. C. Reynal as his partner, all bets on the other match being off, the new race being made for the price of the birds. Side bets on individual scores kept up the interest in the match until the last bird was shot.

Reynal has been shooting very well lately, but on Tuesday, Jan. 8, the day of the race, he was decidedly off color. The birds were very fast, as a rule, and when he tried to be careful it seemed as if he couldn't get on to them in time to be dangerous. Floyd-Jones started out rockily, missing seven out of his first 25 and then dropping three more out of his next 13. From that point up to his last three birds he did as good shooting as he has ever done, scoring 56 out of the 60 birds. Two more would unquestionably have been scored to him, making that total 58, had a man, or even a careful dog, been sent to gather his 66th and 71st birds. Kitty, the club's brindled retrieving bull-terrier, was wild and over-anxious, causing both birds to flutter over the boundary; Kitty's small mouth is to be urged in mitigation of her misdeeds, and, as a further set-off, must be credited with brisk and lively work under unpleasant conditions.

Knapp is shooting very strongly just now and would prove a warm antagonist for any live bird shot. His score of 85 is much better than it looks, as he experienced an unusually large amount of ill luck in the way of "dead out of bounds." No less than seven of his 15 lost birds fell dead just out of bounds, the birds being very strong ones and their wings escaping injury. Fast as were the great majority of the birds, Knapp's time was just as fast, several of his kills being very fine ones. A better lot of birds is very seldom trapped in this country; they were all blue and as quick as English snipe when once the traps were opened. Well as Knapp shot, only one bird separated his score from that of his partner. As a matter of fact the way in which Floyd-Jones pulled himself together after the 38th round was the feature of the match, his first-barrel work being particularly effective.

Edey started out well, killing 17 out of his first 19: this work was all the more creditable as he was standing at 30yds., some 2yds. more than his usual handicap. His longest run was only 14, from the 14th to the 56th round inclusive. Floyd Jones had a run of 27 and another of 16; Knapp had one of 23, while Reynal's longest run was a 16, made in his first 25.

At the end of the 25th round Reynal and Edey were two ahead, the score standing 41 to 39; when 50 birds each had been shot at Floyd-Jones and Knapp led by 5 birds, the score being 85-80. The next string of 25 each showed the same pair leading by 9, the score sheet showing 129-120 in their favor. In their last 25 birds each Knapp and Jones killed 40 to their opponents' 35, gaining five more, winning the match by 14 birds, the totals being 169 to 155. The order of shooting was Floyd Jones, Edey, Knapp and Reynal; Floyd Jones beat his man by 7 birds, while Knapp at the close also led Reynal by the same number.

Floyd Jones led off and missed a fast twisting right-quarterer, Reynal also missing a very quick bird from No. 3 trap that went to the right; Knapp's third fell dead out of bounds, giving their opponents the lead. At the end of the 19th round this lead had been increased to 4; then Edey missed his 20th and 21st, but Knapp's 22d and Floyd Jones's 23d both being scored lost, the score at the end of the 23d round was still four in favor of the Country Club men (Edey and Reynal). Both, however, missed their 24th birds, and the first quarter of a century showed them only two ahead. The 32d round was marked by Edey letting off a driver from No. 4 trap, the score then being tied, the lead having been reduced to a single bird in the previous round. Floyd Jones lost his 33d bird, but Reynal did the same thing, so the score was still a tie, remaining so until the 35th round, when the same shooters slipped up on a right-quartering incomer from No. 1 trap. That gave the lead to the Westminster Kennel Club team, a lead that they gradually increased until the 90th round found them 15 ahead. The 94th round showed a gain of one more when Edey's bird fell dead out of bounds. Although he followed this up by losing two out of his last five, the lead of 16 was reduced to 14, owing to Floyd Jones and Knapp each losing two birds out of the same number. Reynal's finish on his last string of 10 birds was totally at variance with his previous work; he shot in good time and centered his birds well, killing them all close to the traps.

The result could hardly be termed a surprise, as on paper Knapp and Floyd Jones are a strong team, particularly if, as happened on this day at Babylon, the latter should strike his old-time gait. Experience goes a good way toward winning a match at pigeons, and both the Westminster Kennel men have shot far more pigeons than their opponents from the Country Club. The total of 155 is, of course, not exactly the true form of Edey and his partner: the result seemed due more to the fact that they were up against faster birds than they have generally been in the habit of meeting, an extra fast lot having been supplied for this match. There were some amusing features in the day's sport, the majority of them furnished by Kitty, the bull-terrier, and the "scouts" down by the barn, who blazed away at everything in sight. As for Kitty, she can run almost as fast as a pigeon can fly, and when she chases one out of bounds, as she did Reynal's 36th and Floyd Jones's 66th and 71st birds, if there's any fly in them, she won't come back until she's got them.

The collapse of the Country Club team in the eighties was a very bad one, Edey losing three out of the ten, while Reynal went him 100 per cent. better, dropping no less than six. The day was by no means a good one for the birds, although there was a fair breeze from the north and northwest, both at the beginning and during the last 25 birds. The absence of a strong wind, combined with the presence of a cold drizzle, is usually enough to make any birds slow. These birds, however, were a capital example of birds well chosen and well trapped. The time occupied by the match was just 4 hours and 33 minutes, divided as follows: First 100, 65 minutes; second 100, 70 minutes; third 100, 94 minutes; fourth 100, 64 minutes. A curious incident was furnished in both the 87th and 89th rounds, when Knapp, Edey and Reynal each missed their birds.

The traps fell to each shooter as follows:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.
Floyd Jones	23	20	24	18	15
Knapp	13	22	22	19	24
Edey	22	16	28	22	12
Reynal	26	14	22	16	22
	84	72	96	75	73

The flight of the birds shows them to have been an extraordinarily good lot considering that the wind was at no time strong. The following table gives the direction of the birds and the number of each drawn by the individual shooters: *

	D	RQD	LQD	RQ	LQ	RQI	LQI	I	H	T
Floyd Jones	23	25	13	22	7	5	1	4	0	0
Knapp	24	25	13	13	8	5	4	6	2	0
Edey	31	17	12	18	4	5	6	5	2	0
Reynal	14	22	11	20	8	10	2	11	1	1

* D, driver; RQD, right-quartering driver; LQD, left-quartering driver; RQ, right-quarterer; LQ, left-quarterer; RQI, right-quartering incomer; LQI, left-quartering incomer; I, incomer; H, hoverer; T, towerer.

The above table shows that no less than 230 out of the 400 had an outgoing tendency, 82 of that number being drivers; there were 73 right-quarterers, 27 left-quarterers, while only 64—that is, 16 per cent—had an incoming tendency; there were also 5 hoverers and 1 towerer.

Floyd Jones shot an Atkin gun, his powder charge being 44 grains of American E. C.; Knapp was shooting 45 grains of hard grain Schultze, his gun being a Francotte Purdey; Edey's gun is a Francotte, while Reynal's is a Purdey; Edey used 45 grains of Schultze, Reynal pinning his faith on 31 grains of Walsrode in U. M. C. special Walsrode shells.

Score:

EDWARD BANKS.

The Knoxville Gun Club.

KNOXVILLE, Tenn., Jan. 7.—*Editor Forest and Stream:* The fourteenth annual meeting of the Knoxville Gun Club was held Dec. 29 for the transaction of general business and election of officers. The old officers of the club were unanimously re-elected for the year 1895 as follows: S. B. Dow, President; T. C. Eldridge, Vice-President; S. Van Gilder, Captain; J. C. White, Treasurer; R. Van Gilder, Secretary.

The annual report of the secretary was read and approved. It was the consensus of opinion of the members present that the Knoxville Gun Club received and disbursed more cash than any other gun club in the country.

It is a well conceded fact by all that the club is the "livest" one in the country, and has done more in past and present to elevate and build up the great sport of the trap than any other gun club.

What club was it that four seasons ago started the added money scheme with $500 in '92, then $1,000 in '93, then $1,000 in '94, than $1,500 in '95, or a grand total of $4,000 in four seasons?

Now, boys, show up your record; and see where you "air at" and where you ought "to be at."

We wonder if the dealers and manufacturers fully appreciate the past and present efforts of the club for their profit.

We know, we are glad to say, that the vast concourse of gentlemen who attend our annual meetings are pleased and happy beyond question with our endeavors to give them a shoot that is "equalled by none." They all say so, so don't get "green-eyed," my brother shootists. A shoot that one can go to and be treated as a gentleman, and where dropping for place (the now agitating question of the day) is but little known but by few and far between scores—thanks to Mr. Fulford for his compliments, as well as all others.

Now, to the dealers and manufacturers we say we are going to give them a chance soon to see how very liberal they can be toward advancing the cause, and say by their —— how they appreciate the efforts of the club, backed up for May '95 by over 100 of the representative shooters this country can produce. Dealers and manufacturers who are friends of the club, come to the aid and assistance of a club which has been the direct and indirect medium of putting thousands of dollars in your pockets by increased sales of ammunition supplies!

We are glad to note in the past a few liberal friends; but this season of '95 the club wants the largest meeting ever held in this country. The scheme, you say?

The club adds $1,500, 100 men will give $10 each, making $1 000, and now all we ask is for ten manufacturers to subscribe the small proportion, $500, making a grand total of $3,000 added money. Who are the first to put themselves on record and show by gift and deed they are our friends? Our friends the shooters (those 74 men enrolled on the famous list), what say you? Don't you think you are entitled to some consideration? Our friends the dealers and manufacturers, what say you? Will it not be money well spent for the good will of over 100 representative men of this country? Now, I am sure such an appeal will not go unnoted, because the time is ripe and the cause just for the best meeting ever given by any club. Our club has the entire confidence of the shooting fraternity at large of knowing how to run a tournament conducted upon business principles. The Knoxville Gun Club was the only club for years that had "the sand" to add $1,000 to its purses. When other clubs saw our success and consulted our methods, they commenced in '94 to go and do likewise. This season of 1895 has ushered in, so far, more large added money events than ever before known in the history of trap-shooting. Such are some of the good results that have been brought to light by the direct influence of the Knoxville Gun Club.

The club feels proud to be enabled to say that such results are due to the great labor not only of the club members, but also of its many friends over the whole country by their always saying a good word for our boys. And our boys always feel toward them the very kindliest feelings of gentlemanly sportsmen, as the aid of all the shooters is needed to make a meeting a success. With the assistance of the boys in May, '95, our meeting will be "a daisy."

Already 74 names are enrolled on the $10 list, payable March 1, 1895 (send it to R. Van Gilder, secretary). All who want to get on that list, and for $10 be able to participate in a $3,000 shoot, had better hustle along mighty quick with their names, as *no one will be allowed to shoot who is not down on the list and has paid his* $10. *This is final.* Boys, you know what that means. Don't delay the game, but send in your names at once, if you are coming to Knoxville.

But to other matters pertaining to the club. The accompanying table is self-explanatory:

One Certificate Weekly 25 bluerocks, known traps, unknown angles	Weekly Certificate Wins.	Challenge Wins.	Challenge Loss	Order Merit: Certificate Left.	Order Merit: Total No. Certificate Won.	Average Per cent. Weekly Wins.	Average Per cent. Challenge Wins.	Mean Average. Per cent: Weekly and Challenge, Wins.
J W Conner	15	26	16	25	41	95.20	93.00	94.10
R Van Gilder	13	23	14	22	36	93.85	94.61	94.23

F S Mead	1	0	1	0	1	96 00	96 00	96.00
L D Tyson	1	0	1	0	1	96.00	96 00	96.00
J W Slocum	1	0	1	0	1	76.00	76 00	72 00
Summary	52	82	82	52	134	.....	.....	.....

The club decided at the '94 meeting to hold weekly shoots and issue a certificate of merit to the highest score made. The member holding at the end of the year the greatest number of certificates won to be given $50. Any holder of a certificate could be challenged by any other certificate owner upon depositing with the secretary a challenge fee of 50 cents for second and third prizes. This plan has done more to create rivalry and interest than any yet devised. Upon examination of the table we find the following winners:

John W. Conner, first prize, $50, holding 25 certificates.

R. Van Gilder, second prize, $35, holding 22 certificates.

A. E. Mead, third prize, $6, holding 5 certificates.

The fight for first place was close between Conner and Van Gilder, Van Gilder holding up to the last two shoots 25 certificates to Conner's 18. Conner, by magnificent form, breaking 216 out of 225, won 7 certificates on different challenges, and reduced Van Gilder to 23 to his 25, which, with only one more shoot, virtually gave him the match, amid much excitement and applause, as such form is rarely shown.

A further examination of the table shows that A. E. Mead has developed some (?) speedy shooting. The table shows his percentage is highest for the number of his wins. A further examination shows that Conner and Van Gilder shot at 1,925 targets and averaged 94.16 per cent.—a pretty fair average for any two amateurs. Mead comes along with 95.91 per cent. at 650 targets; or making the three men shooting at 2,575 targets averaging 94.75 per cent. What club can show up to this bona fide record? All who have shot at the targets as thrown on our grounds know they are screamers. Ask them.

But I must bring to a close this resume of the Knoxville Gun Club for the year of '94, else the editor of this great and most enjoyable companion to the sportsman may grow aweary and consign this "much ado about nothing" to the waste basket.

Brother secretaries, send in your reports, as we all like to read what you are doing especially to build up this great sport of trap-shooting. I am sure the columns of this paper are alwa s open to news of interest. R. VAN GILDER, Sec'y.

Boiling Springs Gun Club.

RUTHERFORD, N. J., Jan. 5.—The following scores were made at our regular monthly club shoot this afternoon:

Club shoot, 25 targets, unknown angles:

Richmond	0101011110011110111101111—18
James	1111011110111111110111111—22

J L Brewer (35)	021*0222222**2201222w —14

DUTCHER.

Rye Gun Club.

RYE, N. Y., Jan. 1.—The New Year's Day shoot brought out a goodly number of shooters, chiefly gentlemen from Stanford, Bridgeport, Coscob and Yonkers, who as usual made the leading scores. The 10-target match shoot between P. Eat and "Captain" was won by the Captain in a walk. The Captain surprised all of the boys, including P. Eat with his easy manner of shooting, "gun below elbow" style. P. Eat, as loser, had to pass around the cigars, remarking that he was an easy mark this time, but look out for the results of the next match. Scores:

Five birds:	No. 1.	No. 2.	No. 3.
S Gedney	12000—2	01002—2	....
J Moller	10210—3	01100—2	12002—3
L Ganum	01022—3	10002—2	10020—2
H Hill	21120—4	12211—5	....
G Valentine	11121—5	00211—3	....
E J Pope	....	....	12201—4
H Billington	....	....	012**—2

No. 4, same: Sanger 5, Valentine and Hill 4, Lockwood 3, Moller 2.

Target events were as follows:

No. 1, 3 pairs: Hill 4, Ganum and Valentine 3, Moller and Gedney 2, Pope 1.

No. 2, 5 targets: Hill 5, Valentine 4, Moller 3, Ganum 1, Gedney 0.

No. 3, 10 targets: Lockwood 9, Valentine 8, Sanger 7, Moller and Hill 6, Anthes and "Granger" 5, Field and Hodgins 4, J. Gedney 1.

No. 4, 10 targets: Sanger 9, Valentine 8, "Granger" 7, Hill 6, Lockwood, Billington and Pope 5.

No. 5, Match, 10 targets: "Captain" 7, P. Eat 3.

Jan. 3.—The match shoot at 15 live birds between Mr. Lewis and "Doctor," two prominent members of the Park City,

Bridgeport (Conn.) Gun Club was shot on the club grounds Jan. 3 and was won by Mr. Lewis. A large number of the Bridgeport and Coscob gun clubs' members witnessed the match and entered the sweepstake target events which followed:

Ten targets, Interstate Manufacturers' and Dealers' Association rules:

Tuttle	1101101001—6	0111110101—7
Blakeslee	1001111100—6	.....
Cummings	0011010101—5	1110110100—6
Clarkson	0001011100—4	1000100000—2

A sweep at 4 live birds was also shot, the following being the scores: Beers 3, Tuttle 1, Cummings 0. E. J. Pope, Sec'y.

The Cleveland Programme.

The programme for the second annual tournament of the Chamberlain Cartridge and Target Company, of Cleveland, O., is to hand, even at this early date. It is composed of such material that it is likely to be read and re-read many a time before June 19-21, the dates of this tournament.

Seven pages are devoted to what is practically a review of the history of target shooting in this country, together with many valuable hints as to running tournaments, getting up gun clubs, etc. This makes good reading, and Paul North has handled his subject well, and has illustrated his work with some capital half-tones. The cut of "A Model Trap House," alone is worth a good deal as a hint to gun clubs how to make a practically safe, and at the same time, neat trap house. The one in the illustration is now in use on the grounds of the Rochester (N. Y.), Rod and Gun Club.

The events in each day's programme are precisely similar; Nos. 1-4, 15 target events; Nos. 5-8, 20 target events; unknown angles and a uniform entrance fee in each and every event. The programme thus provides for 140 shots for $24. On the first day $250 is added; $340 on the second, and $380 on the third; a total of $970. In addition to this amount special prizes are offered, details of which appear below. These prizes bring up the total of added money to $1,200. The following are the rules and regulations governing the tournament:

Shooting will commence promptly at 8.30 A. M. each day. Latest revised A. S. A. rules (rapid fire) to govern, except that ten gauge guns will shoot from reverse traps; that is, contestant standing at No. 1 will have No. 5 trap sprung; at No. 2 score, No. 4 trap; at No. 3 score, No. 3 trap; at No. 4 score, No. 2 trap; and at No. 5 score, No. 1 trap.

All shooting will be at known traps and unknown angles. There will be no handicap applied to events No. 1, 2, 3 and 4, each day. Events No. 5, 6, 7, and 8, each day, will be shot under the Blue Rock handicap, as described elsewhere in programme.

No dropping for place will be tolerated, and we mean it.

A $50 diamond watch charm will be given for best average in all events. No one barred. Fifteen cash prizes of $10 each ($150) will be given to the next fifteen high averages in all events. Manufacturers' agents will be barred from winning any of these prizes.

We would request contestants to enter for all day, the first thing in the morning, and, as far as possible, to make up squads and shoot together during the day, as this greatly facilitates the running of a tournament. If, for any reason, any one desires to drop out, entrance money for all uncontested events will be refunded.

Chamberlain cartridges of all kinds will be for sale on the grounds at reasonable prices. Write for instructions in regard to special railroad rates. Traps will be open for practice, Tuesday, June 18. American House, headquarters, rates, $2 to $3 per day.

The Climax Club's Tournament.

The two days' tournament of the Climax Club, which was held at Plainfield, N. J., on Jan. 10 and 11, would have been a very great success had the weather on the first day been anything like decent. When 17 shooters can be found who will be willing to enter in a 25 target race and stand outside in a driving rain there is surely something for a club to be proud of. Thursday, Jan. 10, was about as bad a day as it possibly could be; dull, lowering sky, driving rain, and a wind that at times almost approached the dignity of a gale, was the distinguishing feature of the weather.

Among those present were: The Bennett Bros. from Boston; Oscar Dickey, Wellington, Mass.; B. "LeRoy" Woodward, Brockton, Mass.; V. D. Kinesson and J. T. Mascroft, Worcester, Mass.; H. G. Wheeler, Marlboro', Mass.; Rollo O. Heikes, "the Daddy of them all;" F. V. Van Dyke, Charlie Helbane, "Dutchy" Smith, Neaf Apgar, "T. K." Keller, Tom Brantingham (still thinking about his New London, Conn., trip last September), W. R. Hobart, W. N. Drake, W. Fred Quimby, M. F. Lindsley, Dr. Jackson, W. H. Manning, president of the Climax Club, etc.

So bad was the weather that the management proposed several times to stop shooting, but the boys said "No, we're here to shoot; let's keep at it." J. T. Mascroft, "the Mayor of Sutton," as he is duly entitled, helped materially to enliven the day's proceedings. By dint of some good shooting he beat T. H. Keller in a private match which was shot off in the 25 target race. The honors are now even, Keller having won at Worcester; the stakes are $12.50 a side, and the only condition is that the match must take place whenever they meet at any tournament during 1895, the result depending upon their scores in the 25 target race on the day's programme.

Scores for the first day on the programme events are given below, over 3,000 empire targets being thrown during the day:

No. 7, 25 targets, $3:

Keller	1110011101110111111111010—19
Jones	0110111111111111101111101—21

Wheeler	121011210211101—12		

No. 1, 10 targets, $1.20: Keller 10, Jones 9, Dickey 7, LeRoy 8, Kennerson 8, Van Dyke 7, Heikes 6, Mascroft 9, Wheeler 10, Brantingham 8, Shaaber 6, Smith 8, Manning 7, Bennett 8, Drake 7, Hobart 10, Hebbard 8.

Second Day.

This day's programme contained three live bird events—a Jersey sweep, a six bird race, $5 entry, and a $1 miss and out sweep for a horse valued at $65. In the latter event no shooter was entitled to shoot off more than five chances. As it was darkness put a stop to the shooting when there were 19 clean scores of 7 birds each, divided as follows: Bennett 4, Kenesson 3, Wheeler 3, Mascroft 2, Astfalk, Heikes, Dickey, Elliott, D. Terry, LeRoy, Dickson, Folsom and J. Benner 1 each. There were altogether 30 shooters who took between them 77 chances. The names of these shooters, together with their handicaps, were as follows: John Lee (25), T. H. Keller (27), J. T. Mascroft (26), Charlie Zwirlein (29), Eddie Hill (31), Van Dyke (31), N. Astfalk (26), Folsom (27), Bennett (29), Goodman (25), Hobart (28), Dickey (30), Heikes (30), J. A. R. Elliott (32), V. S. Kennerson (27), "Dutchy" Smith (29), M. F. Lindsley (30), H. G. Wheeler (28), B. LeRoy Woodward (29), W. Terry (27), Scott Terry (28), W. Fred Quimby (30), J. Benner (26), D. Terry (29), W. Drake (29), Wood (26), Dickson (28), Aaron Woodruff (31), Geo. H. Taggart (29), Turner (26). Some of these handicaps seem a little hard on certain of the shooters, but then it is always a difficult matter to correctly place men in a hurry. The scores in the other two events follow:

No. 1, 4 birds, $3; No. 2, 6 birds, $5:

	No. 1.	No. 2.		No. 1.	No. 2.
Jones	0222—3	011*20—3	Smith	2222—4	111221—6
Heikes	2211—4	211111—6	Keller	2111—4	111121—6
LeRoy	2212—4	222220—5	D Terry		110212—5
Mascroft	1210—3	022202—4	Van Dyke		202122—5
Kennerson	0202—2	011222—5	Hobart		*02222—4
Dickey	1112—4	122122—6	Thomas		101112—5
Wheeler	2120—3	121212—6	Lee		*12000—2
Bennett	2222—4	221212—6	Zwirlein		011111—5
Elliott	1222—4	220222—5	Hill		221121—6

No. 3, miss and out, $1 entrance, no one shooter to take more than five chances; horse valued at $65 donated, and all surplus added: Turner 0, Lee 4, Keller 1, Mascroft 0, Zwirlein 0, Hill 2, Hill 0, Van Dyke 0, Astfalk 7, Folsom 3, Bennett 1, Goodman 2, Hobart 0, Dickey 5, Heikes 7, Elliott 0, Lee 5, Keller 6, Mascroft 7, Zwirlein 4, Kenerson 7, Hill 5, Van Dyke 1, Astfalk 3, Dutchy 5, Lindsley 0, Bennett 7, Dickey 7, Elliott 7, Kenerson 7, Lee 3, Keller 1, Mascroft 0, Dutchy 2, Bennett 7, Kenerson 7, Keller 5, Mascroft 1, Dutchy 5, Bennett 7, Kenerson 3, Keller 6, Mascroft 7, Dutchy 3, Bennett 7, Kennerson 2, Wheeler 5, LeRoy 5, W. Terry 1, Scott Terry 1, Quimby 5, Folsom 7, Benner 7, D. Terry 7, Drake 2, Wood 0, Dickson 2, Wheeler 3, LeRoy 5, Benner 0, Wood 4, Dickson 7, Wheeler 7, LeRoy 0, Benner 6, Wheeler 7, LeRoy 7, Benner 6, Wheeler 7, LeRoy 0, Zwirlein 5, Taggert 0, Quimby 3, Taggert 0, Taggert 1. (Woodruff took two chances, but declared forfeit on learning his handicap.)

Live Bird Scores in 1894.

Below will be found a table giving the date, place, number of birds shot at by each side, and winners' and losers' scores of all the important live bird events in 1894. The Carver—Elliott series; the run of victories scored by R. A. Welch, of Philadelphia, in defense of the Riverton (N. J.) Challenge Plate; T. W. Morfey's 13 wins without a single loss credited to him—all these results and many others will be found tabulated below:

Date.	*Place.*	*Winner's Score.*	*Loser's Score.*	*Shot at.*

New Jersey Trap-Shooters' League.

The following is a copy of Secretary W. R. Hobart's annual report, which will be read at the fourth annual meeting of the New Jersey Trap-Shooters' League, which will be held Jan. 21 at 1 P.M. at the office of the Winchester Repeating Arms Company, 312 Broadway, New York:

During the period covered by this report there have been one meeting of the delegates and five of the governing committee. At the former, which was held at the office of the W. Fred Quimby Co., the clubs represented were the Union, Endeavor, South Side and Maplewood. Mr. Miller of Union presided. Applications for membership were received from Climax of Plainfield and Brunswick of New Brunswick, and those clubs were duly elected members. Mr. P. A. Jeanneret of Boiling Springs, the president of the previous year, tendered his resignation, which was accepted with regrets. The election of officers and governing committee resulted in the choice of Messrs. R. M. Pettitt, Brunswick, President; W. R. Hobart, South Side, Secretary-Treasurer; E. D. Miller, Union, Manager, and C. W. McPeek, Endeavor, and S. B. Tillou, Maplewood, Governors. The first tournament of the season was to take place in February, and the choice of club to hold the same fell to the Endeavor Gun Club of Jersey City. The other meetings were held on the grounds of the various clubs, and were simply for the drawing of the clubs to hold the following tournaments:

The tournaments held during the year were Feb. 28, on the grounds of the Endeavor, at which all the teams were present and 4,205 targets were thrown; March 22, Maplewood, had all the teams, and 3,225 targets scored; South Side drew the next tournament, which was held on April 26-27, the teams shooting on the second day, the targets thrown being 2,185 and 4,421, or a total of 6,606; May 9 was chosen by the Climax for their day, when all the teams were on hand and about 3,500 empires slid from the traps; on June 26 Union had the call, with one absent team (Myrtle Park), when 2,710 targets were thrown.

There was no tournament held in July on account of the intense heat and the absence of shooters. Brunswick drew the card but exchanged with Myrtle Park, which club held the tournament on Aug. 30, with four teams present, and the club threw about 2,000 targets; Sept. 20 was the date selected by Brunswick to hold the final contest, when seven teams were on hand and 3,500 targets scored. Total number of teams present was 45, the men composing them shooting at 5,625 targets, and the total targets thrown in sweepstakes was 20,121, or a grand total of 25,746 used in all the tournaments held by the League in 1894. The figures in some cases are approximate, in the case of the third, sixth and seventh meetings being estimated on the basis of 100 shots for each team man present. No return of this has

ever been made to the League secretary, who based the other figures on an actual count of the sweepstakes reported by the sportsmen's journals. No one who has never undertaken to get up such a report has any idea of the labor involved, and it would be a good thing if the secretaries of clubs would make a brief summary of the targets thrown in their tournaments. This would prevent mistakes and put the clubs on record.

The following is the standing of the clubs in the League contest:

Clubs.	Shot in.	Total score.	Average.	Standing.	Best five.	Average.	Standing.	Best four.	Average.	Standing.
Maplewood...	7	760	86.86	1	567	90.72	1	462	92.4	1
South Side....	7	746	85.26	2	550	88	2	444	88.8	2
Union.....	6	630	84	4	534	85.44	4	433	86.6	3
Climax.....	7	738	84.34	3	538	86 08	3	432	86.4	4
Endeavor.....	6	591	78.80	5	485	77.60	5	398	79.3	5
Myrtle Park..	6	542	72.27	7	461	73.76	7	379	75.4	6
Brunswick....	6	548	73.07	6	463	74.08	6	378	75.3	7
Total.....45		4,555	80.98		3,598	82.24		2,926	83.6	

In the above it will be seen that both the best four and best five scores have been figured. This was done because the secretary needed the advice of the governing committee before paying the prizes, and each computation alters the standing of four clubs. The by-laws require that in order to qualify a club shall shoot in one more than one-half of the total number of contests held during the season.

It is therefore necessary for the committee to decide under which computation the prizes shall be divided, the secretary believing it should be on five, as four is not one more than half seven—the number of tournaments held. The secretary would also call attention to the case of the Union Club, which shot on their teams in contests Nos. 4 and 5, men whose names did not appear on the roll. If these scores are thrown out as required by section 11 of the by-laws, it will also affect the standing of two clubs, making a tie between Climax and Union and throw Endeavor into fourth place. And if the committee decide that five scores shall be necessary for qualification Union will be disqualified. Other clubs (Maplewood and Myrtle Park) were also guilty of the same offense, but their action did not affect the result. Climax shot two men in contest No. 7, Scott and McGinty, neither of which appear on the roll, but the secretary believes them to be assumed names. The final result would not be affected, however, but it should be understood that in shooting on a team a man should be required to use his own name and so prevent confusion.

In the individual scores the shooting was of a high order in many cases, and among those who shot at 100 targets or over in the team contests, one scored over 95 per cent, seven 95.90, nine 85.90, five 80.85, four 75.80 and three 70.75. The individual scores above 90 per cent. are below in the order of merit:

	Shot at.	Broke.	Total average.	Best five.	Average.	Best four.	Av'ge.
Van Dyke.....	150	140	93.33	118	94.40	95	95
Brantingham....	175	162	92.57	119	95.20	96	96
Yeomans.....	125	114	91.25	114	91.25	93	93
Miller.....	150	136	90.66	115	92.00	93	93
Sickley.....	175	158	90.39	118	94.40	96	96
Drake.....	175	156	89.14	116	92.80	94	94
Geoffroy.....	175	157	89.71	115	92.00	94	94
Ed Collins.....	150	134	89.33	113	90.40	92	92
Hoffma.....	150	128	85 20	110	88.00	91	91
Sigler.....	150	131	87.33	112	89.60	91	91
Breintnall.....	175	152	86.86	112	89 60	90	90
Thomas.....	175	151	86.28	111	88.80	90	90

In regard to the scores kept during the year, the secretary has to say that the last was never forwarded to him by the manager, but was copied from the files of the *American Field*. The score of contest No. 6 was sent in by the courtesy of Mr. C. H. Townsend, late of FOREST AND STREAM. It is to be regretted that no solicitation of prizes was made as in previous years. At the last annual meeting the matter was generally discussed and it was requested that each delegate should interest himself in that regard.

All of which is respectfully submitted.

W. R. HOBART, Sec'y.

New Year's Day at Elgin, Ill.

ELGIN, Ill., Jan. 4.—Inclosed find the scores of the Elgin National Gun Club, made on the club's grounds on New Year's Day. The weather was delightful, and there should have been a much larger attendance. We were glad to see three of the cracks from Rockford, Buker, Bean and Helm, also the Dunnell brothers and Pitzen from Fox Lake, and several shooters from Aurora, Chicago and Burlington. The Rockford boys rather had the best of it, Buker breaking his 50 targets straight.

The live birds were fair flyers only, but lack of practice was apparent when our club men toed the mark. Hard times have made shoots scarce here lately.

No. 1, 10 bluerocks, unknown angles, $1: Pitzen 6, B. Dunnill 10, W. H. Doe 5, McGough 7, A. W. Church 2, Kelley 5, Mallard 5, Webster 5, H. Dunnill 7, Nish 8, Fletcher 5, Tilden 6, West 7.

No. 2, same: Pitzen 8, B. Dunnell 9, Tilden 6, McGough 8, Nish 9, Doe 7, H. Dunnell 7, Mallard 4, C. Howard 7, Webster 5.

No. 3, 5 live birds, 28yds. rise, $2:

Pitzen	110*2—3	H Dunnill	11122—5
Doe	22001—3	B Dunnill	21110—4
Nish	22121—5	Tilden	01022—3
Mallard	21002—3	West	11000—2
Webster	1*122—4	Adams	21110—4
Brewer	20011—3	Church	*0010—1
McGough	0211*—3		

No. 4, 8 live birds, $3:

Pitzen	21200222—6	Adams	*0112012—5
H Dunnill	12100201—5	Nish	20*12222—6
Howard	12222*02—6	McGough	02 10110—4
Webster	10021120—5	B Dunnill	21122111—8
Buker	22101122—7	W H Doe	00112011—5

ELGIN.

Trap at Salt Lake.

CHICAGO, Ill., Jan. 5.—In the course of his interesting letter from Salt Lake City, Mr. John F. Cowan has the following pleasant little comment on trap and trap-shooters in that section of the mountains. It will be news to very many.—E. HOUGH.

Away back in the seventies, when the name of Bogardus was the synonym of the champion shot of the world, and when the old plunge trap was the only one known to the pigeon shooters of America, Salt Lake boasted a shooting contingent which would be considered fast company in any land. But for some unknown cause the sport fell into disrepute, and one day a moral spasm took possession of the law-makers of Utah and they passed a act making it an offense against the law to shoot pigeons from the trap, and thus it stood until last winter, when, by a determined effort, the sportsmen of Utah had the law repealed. And as a result the interest in trap-shooting is growing rapidly. There is no place in the land more favorably situated than Salt Lake from a sportsman's standpoint. Pigeons can be had in an abundance at 25 cents per pair.

On Christmas Day a goodly number of the sportsmen from Salt Lake and vicinity assembled on the grounds, which are located on the military reservation and just below the picturesque and beautiful Fort Douglas. Mr. Brockbank, of the Salt Lake Club, furnished the birds, and a splendid lot they were. Among the visitors were the Browning brothers of Ogden, the men who for the last eight years have kept the Patent Office busy, and they do say they keep the Winchester Arms Co. broke buying their patents. It is a fact, however, that to the inventive genius of John Browning the Winchester people are indebted for every patent which has made their guns so popular in the last eight years. It started with the new breech block in their rifle in 1886, then came the single-shot rifle, then the magazine shotgun, then another magazine shotgun, and now Mr. Browning has a magazine hammerless repeater which is simply perfection. It isn't on the market yet and it may be a breach of confidence for me to mention the gun at all, as Mr. Browning was kind enough to show me the arm at his shop in Ogden. This gun works so smooth and easy that any one can use it, and when it is put on the market, which it will be shortly, you will see the king of repeaters. Both Nat and John Browning are of the quiet, unassuming type of the Western sportsman, always pleasant and mild in manner, but holy terrors when it comes to raking down geese ann ducks and grinding up bluerocks. The pigeons were a nice fresh lot, just caught, and the corkscrew curves they made as they left the traps caused the oldest shots to fall down.

The light, too, was bad—the shooting was toward the south, the bright sun shining on the snow made it very difficult to judge a towering straightaway bird. Below are the scores: M. Browning 7, Bigelow 7, Cowan 8, J. Browning 5, J. Sharf, Sr., 6, W. Young 7, Ellerbeck 3, Brockbank 7, Tremayne 8, Ward 3, Picknell 5, Sheldon 1, J. Sharf, Jr., 1.

Scattered all over the range were ready gunners, who had considerable sport picking off quite a number of the 56 birds which escaped. Without delay the second contest was opened, and this time 53 pigeons flew outside the bounds and were lost to the marksmen. The score was as follows: May 4, Anderson 8, Cowan 8, Becker 6, Brockbank 7, Tremayne 8, Ward 4, M. Browning 10, J. Browning 6, W. Young 2, J. Sharf, Jr., 6, J. Sharf, Sr., 8, Ellerbeck 4, Bigelow 5.

Then the game was switched and bluerock traps were set in position at the usual rise. Ten singles, individual sweepstakes, were the only combinations shot. The scores of the first, second and third shoots were as follows:

	No. 1.	No. 2.	No. 3.		No. 1.	No. 2.	No. 3.
Cowan.....	8	10	7	W Young.....	8	..	..
J Browning.....	10	9	10	Bigelow.....	8	9	10
Sharp, Sr.....	8	7	..	Ensign.....	10	9	9
Brockbank.....	9	7	7	Ellerbeck.....	5	..	..
May.....	8	7	9	Picknell.....	8	10	8
M Browning....	10	8	9	Anderson.....	9	10	10
Sharf, Jr.....	9	7	1	Daniels.....	5	5	8
Becker.....	9	9	9				

All of the gunners but seven here dropped out and another sweepstake was shot with the following result: M. Browning 9, J. Browning 9, Bigelow 10, Becker 10, Daniels 10, Ensign 10.

JOHN F. COWAN.

Rifle Range and Gallery.

St. Louis Defeats Rochester.

The telegraphic rifle match between the Missouri Rifle and Pistol Club of St. Louis and the Columbia Rifle and Pistol Club of Rochester, on the night of Jan. 10, resulted in a victory for the St. Louis men by a score of 4368 to 4105. The details, German ring target, are:

H. M. POPE, Sec.

Zettler Rifle Club.

The winter gallery shoot of the Zettler Rifle Club is rapidly developing a red-hot struggle between the past masters of the club for the main chance in the final "round up" in April. Messrs. Dorrler, Ross, Holges and Flach are the high men in the race for the first place on the list of prize winners. The shoot last night was the eleventh event of the twenty-seven that comprise the whole number of shoots on the programme of the winter series. Each man in the competition is allowed five scores of ten shots each at each shoot, or 135 scores for the entire series.

The situation of affairs between the four leaders at the present moment is as follows: Dorrler, Ross and Holges are tied on a total of 13,452 points, Flach is 27 points in the rear, each man having shot 55 scores. An interesting feature in the struggle between the four is being developed by Louis Flach, who at the start was in hard luck with his rifle, being at the finish of the third shoot 65 points behind the leader. Since then he has reduced the lead to 27 points, his present position. Max Engel, one of the old veterans of the club added a little riffle to the already agitated conditions last night by making a total of 1,241 in his five scores. Up to the present time Engel has not been looked upon by the four leaders as a factor to be considered in the struggle. Engel's work created a momentary panic in the ranks of the quartette until the record was gone over to see what his position was. The research brought relief to the quartette, for Engel was far in the rear.

Flach won the championship medal with the score of 246. Engel was second with 245. Engel was high for the best single as well as the best five scores. Scores:

Champion medal, first entry: Louis Flach 246, M. B. Engle 245, M. Dorrler 244, H. Holges 243, F. C. Ross 242, B. Zettler 242, C. G. Zettler 241, Dr. Grosch 239, F. Schmidt 236, J. Blumenberg 236, H. Munz 236, H. D. Muller 234, G. Nowak 234, A. Klein 228, S. Buzzini 225, G. W. Downs 225.

Best 10-shot score: M. B. Engel 249, L. Flach 248, H. Holges 248, F. C. Ross 247, M. Dorrler 248, G. Nowak 245, B. Zettler 245, C. G. Zettler 246, F. Schmidt 242, H. D. Muller 241, Dr. Grosch 240, P. Feigel 244, H. Munz 236, A. Klein 233, S. Buzzini 235, J. Blumenberg 236, G. W. Downs 232.

Best five scores:

M B Engel	245	249	242	249	246	—1231
L Flach	246	248	248	245	242	—1229
H Holges	243	244	244	244	248	—1223
F C Ross	242	245	246	247	245	—1225
M Dorrler	244	246	248	246	248	—1232

Schlicht Rifle Club.

WEST NEW YORK, N. J., Jan. 8.—The Schlicht Rifle Club held its annual election of officers last night. The new board is as follows: J. Dedrick, Captain; G. Reichert, Assistant Captain; Gus Tribout, Secretary; Geo. Schlicht, Treasurer; Jacob Diehl, First Shooting Master; Fred Lambrix, Second Shooting Master; W. Schlicht, Sergeant-at-Arms.

Following the election came the competition for the class; the scores are appended: Geo. Lautenberger 232, Geo. Schlicht 244, C. Meper 234, Aug. Tribout 219, Fred Stambrix 220, Geo. Reichert 234, Wm. Schlicht 225, Jacob Schlicht 206, C. Schlicht 207, H. Aufderheide 219, Capt. J. Dedrick 226, Jacob Diehl 231, Aug. Meyer 231. Medal winners: Jacob Diehl, champion medal; C. Meyer, first class medal; Geo. Reichert, Second class medal; Capt. J. Dedrick, third class medal.

The Farmers Win.

GREENVILLE, N. J., Jan. 10.—The club house of the Greenville Rifle Club was the center of interest to Hudson county riflemen last night, at the first match between the Our Own Rifle Club team of Hoboken and the junior team of the Greenville Club, ten men a side. The scores are appended, 10 shots per man, German ring target: Greenville team—Agneau 231, Chorlock 228, Lutz 228, Chase 229 Graef 222, Dodds 222, Reuker 207, Gotthardt 2030, Spahn 224, E. Wuertner 220; total, 2243. Our Own team—Henken 221, Dilger 221, Kruse 235, Murray 217, Broeser 209, Seymour 193, O. Lone 199, Struhman 191, Molkenbor 193, Steuber 236; total, 2,115.

RIFLE NOTES.

The Elite Schuetzen Corps is growing in membership at a prodigious rate. The figure now stands 165. The corps begins its weekly gallery practice for 1895 on Mertz's gallery on Friday night of this week.

The New York Schuetzen Corps holds its fifth bi-monthly gallery shoot on the Zettler range on Friday night.

The first of the series of team matches between the Empire Rifle Club, of New York, and the Greenville (N. J.) Rifle Club, comes off on Thursday night. The contest takes place on the Greenville range.

It is reported that the shooting season for 1895 will be opened at Cypress Hill Park, Long Island, on Decoration Day (May 30). A liberal programme will be put up for the New York and visiting riflemen to compete for. It is intended to have the same style of targets that will be in vogue at the Bundes fest.

Barney Koenig says he will have the new target house and range at Glendale ready for practice shooting in the early part of April.

Work for Terriers.

SAND LAKE, MICH.—*Editor Forest and Stream:* If "Terrier's" dog ever follows a muskrat to his native lair it will be necessary to provide the dog with a rubber suit as he will otherwise get wet. What angler but has watched with interest these busy little water dogs, and as he became more acquainted with their habits found something worth remembering even in the humble muskrat?

As winter approaches, these untiring workers begin operations by selecting a bog or old log a few rods from shore, in about two feet of water, and gathering reeds, grass, sticks, etc., build a house thereon, resembling a small potato pit, perfectly tight at the top with an opening inside into the water, and here a nest is built just above the water line. Meanwhile another stronghold is located in the bank or shore where commodious rooms are formed, nicely lined with dry moss and leaves. This is also entered by a channel beneath the water and is the home of the family consisting from two to a dozen. Perhaps across the lake are a dozen other families with houses like the first and, approach the house on the ice ever so carefully you will hear a "plunk" and our friend has taken a header for shore.

Now if "Terrier" will persist in killing our harmless muskrat we must say, put in your dog, we'll risk our friend, and in fact we almost agree that a hole in the ice is nearly the proper place for a family with no honest vocation or visible means of support.

Why not talk of spaniels? We see very little of those lately, and this recalls our Dow—peace to his ashes, boyhood companion. I taught him and he taught me to hunt partridges, and I fancy the smile of contempt of the owners of blue blooded Irish, Gordon and plain setters and pointers when I say he was the most level-headed dog I ever knew. I could march him straight up to a covey, two steps at a time and he was always steady. In my eagerness as I cracked away at the buzzing meteors, scoring misses at every crack, he would look over his shoulder at me as if to say, "Steady yourself, you're the one that's 'rattled', what are you talking steady to me for?" and when it was all over how he would display his natureal instinct as a retriever, and as he laid the prize at my feet and looked up for the expected word of praise I could almost read his thought—"Golly! but we ought to have got a couple more, you must hold about four feet ahead of those fellows, old man." We all mourned when the dog poisoner got him, and have never owned a dog since; when we do, it will be a lemon and white spaniel with eyes that almost talk and we will name him after Dow.

JAMES H. BRAYMAN.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JANUARY 26, 1895.

VOL. XLIV.—No. 4. No. 318 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page iii.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order Make orders payable to

FOREST AND STREAM PUB. CO., New York.

NON-RESIDENT DISCRIMINATIONS.

The Forest and Stream is on record as being opposed to those fish and game laws which discriminate between the citizens of different States. Broadly stated, the objection to such statutes is that being sectional in spirit and application they are contrary to the American idea. Instead of promoting among traveling sportsmen the feeling of brotherhood and citizenship in one great and common country, they nullify that sentiment and tend directly and strongly to intensify sectional jealousy. No sportsman citizen of one State may go into another State and be taxed there as a foreigner without feeling that he is a foreigner, and that the people who have imposed the non-resident tax upon him are foreigners. That this consideration is in no wise fanciful is demonstrated by the actual experience of those who have thus been subjected to such discriminations. At the meeting of the New York Association in Syracuse the other day indignation was freely expressed on the part of New York gunners who had been compelled to pay license fees in Canada for the privilege of shooting and fishing, and it was proposed to adopt retaliatory measures in order to "get even" with the Canadians. Something of this feeling has frequently been expressed by those who have gone from one State into another and have there been treated as aliens. Because of this radical and inherent objection contained in all non-resident laws, we believe that they are unwise. No matter how effective they might be for game protection, even this would not justify them if they are in essence unpatriotic and un-American.

In many instances non-resident discriminations are of the-beam-and-the-mote order. They are restrictions sought to be put on strangers by communities whose own residents know no limit to their own excesses with gun or rod. In nine cases out of ten no one thinks of outlawing the foreigner from a sister State, until the game or fish supply has been ruined, not by foreigners, but by natives. If reasonable fish and game laws, applicable to all men alike, without respect to residence, were enforced impartially and only half-way thoroughly where they are now not in effect in the slightest degree, we would never hear of non-resident restrictions. It is so much more easy to raise an outcry about the wrongs perpetrated by outsiders than it is to curb the lawlessness and greed of the folks at home.

A non-resident law will accomplish nothing which may not be secured much more effectively in other ways. If market shooters from other sections invade a country to kill its game for market, laws against shipping to market and prohibiting export from the State will afford the ample remedy. Witness Minnesota; and inquire of Executive Agent Andrus as to the market shippers who seek to evade the law of that State, and whose business has been broken up by the enforcement of the law, whether they are foreigners from other States or residents of Minnesota. If shooters who come into a State from outside kill an inordinate amount of game, limit the number of birds or quadrupeds permitted to any one gun, whether the arm be in the hands of a resident or non-resident. In short, restrictive measures, which apply to all men alike, have been found amply sufficient when enforced and in so far as enforced.

It goes without saying that game and fish are unprotected for the most part because the laws which are now on the statute book are regarded as dead letters, applicable neither to resident or non-resident. Entirely too much time and attention are expended in discussing the theoretical working of regulations which might supersede present statutes. The good which might be effected by enforcement is lost, while men are looking for other statutes which will in some miraculous way enforce themselves. Talk of the utility of non-resident laws and of taxes on guns and of various other expedients is often loudest and longest in sections where there are more than sufficient laws already to answer every purpose if they were given half a chance.

Are laws which discriminate against sportsmen from other States constitutional? This is a question which has been asked many times; and when we put it to Hon. J. M. Rose of Little Rock, Ark., the other day, like every good lawyer he refused to answer it off hand, although he himself had been chiefly instrumental in drafting such a law himself. After investigating the subject Mr. Rose expresses an opinion that some laws of this character may be constitutional and others not. Where it is expressly provided by statute, as in Arkansas, that the game and fish are the property of the commonwealth and that their taking is a privilege accorded by the State, the State may impose a non-resident limitation and it will be upheld by the courts. On the other hand where legislation is not based upon this foundation of the State's declared property right in its fish and game, a similar non-resident provision might not be upheld.

SNAP-SHOTS.

So "Piseco," in the person of Rear-Admiral Beardslee, has sailed away in the good ship Philadelphia on his mission to the Sandwich Islands. If he encounters there one of those little blue and white signs, which enjoin to "Report your luck with rod and gun to Forest and Stream, New York," and which are gradually finding their way over the civilized and uncivilized world, we hope that he will let us hear from him about the fishing out there. The last report from "Piseco" was of fishing in a Georgia River, where the mode was for the fishermen to plunge into the water and drive the prey into the nets. They do this better out in the Sandwich Islands. A native method is to dive down and place among the stones at the bottom baits of a plant named anhuhu; this intoxicates the fish and they are then caught by hand by the divers. If "Piseco" will study this mode he can give his Georgia friends points on their favorite methods.

United States Consul DeKay sends home from Germany to the State Department a report setting forth the cheapness of venison in that country, and suggesting that the same food might have a more important place in the economy of the United States if deer parks and forest preserves were established here.

Slightly Utopian, perhaps, yet the next generation may see it. The next generation is destined to witness many changes from the game conditions now prevailing; and it is by no means improbable that in those days there may be more deer confined within private parks than there will be out of it. Of one thing at least Americans appear to be convinced; this is that the time has come for him who can to get control, either individually or in association with others, of as much hunting territory as possible from which the public is to be excluded.

We invite the attention of the authorities of Idaho to the showing made in our columns to-day by a correspondent who writes from that State of the havoc the netters and jiggers and spearers have made with the trout supply. A few more seasons of this unrestrained drain on the stock will practically make the end of fishing in these waters. It is a shame and a disgrace that such things are permitted in these days of enlightenment. Idaho and every other Western State should have advanced beyond this primitive stage of improvidence just as they have advanced beyond the condition of mind which made a joke of blowing up the Indians with dynamite. It is astonishing that the Union Pacific Railway should advertise fish spearing as among the attractions for tourists.

THE CONTROL OF TRAP-SHOOTING.

For some weeks past the trap columns of Forest and Stream have contained letter after letter, written by shooters of all classes and from all sections of the country, each one upholding the stand taken by this paper in the matter of the purification of trap shooting.

It cannot be denied, and never has been denied, that a considerable amount of questionable work is carried on at the tournaments of the present day. The one cry has been: "Stop it." The agitation of these few weeks has done much to strengthen the hands of the gun clubs themselves in their efforts to do away with that which robs the sport of the healthy rivalry which has had much to do with the popularity that the sport of trap-shooting now enjoys.

The call for a convention of trap-shooters to be held in this city on January 24, signed by twenty-four well-known shooters whose reputation is above suspicion, has appeared in these same columns. The feeling that something must be done to rescue this sport from becoming a purely money making machine is widespread; it is not confined to any one section.

Neither is it intended that any organization of trap-shooters, such as that contemplated in the call for the convention in question, shall be in any sense otherwise than national, in fact as well as in name. Attached to that call are the names of shooters prominent in the North and in the South, in the East and in the West. Those names are a guarantee that there will be nothing sectional in anything they may undertake to do for the present benefit and future welfare of their sport and pastime. The cause of purity at the trap may be safely left in their hands.

THE SPORTSMEN'S EXPOSITION.

The committee of the Sportsmen's Exposition make an interesting report of progress, which is printed on another page. As a business measure the association has been incorporated, and there is some probability that out of it may grow a permanent organization which, if planned and developed on right lines, cannot fail to be of direct and lasting benefit to the several interests concerned.

It is gratifying to learn that the exposition spaces are being taken up, and that manufacturers and dealers appreciating the opportunity the exposition will afford them, are preparing to make adequate and effective displays. The educational and advertising possibilities of the Sportsmen's Exposition can hardly be overestimated. In Madison Square Garden next May will be gathered thousands of visitors, intent upon seeing and studying the development of sporting goods in all the variety and perfection there set out. The effect will be not alone to stimulate the interest of those who are already enrolled in the roster of sportsmen, but to bring in a multitude of recruits to swell the army of shooters and anglers. If rightly conducted—as the list of managers gives promise that it will be—this first annual sportsmen's exposition will mark an era in the history of field sports in America.

The exposition will be in progress just at that particular season of the year at which, ever since the time

When Adam dolve and Eve span,

the thoughts of the young man and of the old lightly turn to thoughts of fishing. It will be the season to study rods and flies and all the angler's outfit; and if the tackle houses make the displays they ought, to meet this demand, we may expect to see no parts of the great exposition surrounded by denser throngs than those devoted to the angler's art. The nature of angling supplies is such that with the decorative devices which naturally accompany them, exhibits of these classes may very easily be made the most attractive and enticing in the entire exposition. In no other classes is there likely to be so immediate and generous returns as with these.

The Sportsman Tourist.

AN OUTING IN ISLAND PARK.

In days gone by I had some rare outings, as the old files of Forest and Stream bear witness, but somehow during the past few years I have felt that they did not "pan out" as of old. I sometimes, however, think the fault is in me and not in the outing. The declension of enthusiasm is one of the penalties of age, and it may be that I am beginning to suffer in this respect. I was in the full vigor of mature manhood before I took an outing worthy of the name, and that was before I ever read Forest and Stream, and I read it from the beginning. My fellow campers are beginning to call me, though irreverently, as I sometimes think, and yet truthfully, as I am bound to concede, "the old man," and not infrequently I detect the rascals planning in the kindness of their hearts how to make it "easy for the old man." "Confound you," I say on such occasions, "I can carry each of you and his load!" Nevertheless, I let the boys have their way. I appreciate their kindness and am always careful to let them know it. I am afraid that from this introduction the reader will imagine me to be older than I really am. The truth is that which I set out to say was that while my own outings of late years are not characterized by that indescribable pleasure that used to fairly make me tingle from head to heel, nevertheless I find as great pleasure in the narratives of others' outings, as printed in Forest and Stream, as I ever did. That I have so long been debtor for these narratives is my excuse for this paper.

In the summer of 1892, in company with a sportsman friend, I made the journey in a two-horse wagon from Great Falls, in Montana, down through the State and into and around the usual traversed route of the Yellowstone Park. The trip was so delightful, and the things to be seen the park were so wonderful, that I planned and carried out another trip in company with my wife and daughter the following year.

On this trip we took tickets to Beaver on the Utah and Northern road to the west of the park, whence we traveled by wagon to and through the park and thence back to the railroad at Beaver.

But it is not of the park I purpose writing at this time, however fruitful the time might prove, but of certain outing experiences I had midway between the railroad and that place. It is about three days' journey from railroad to park, and after one has traveled about forty-five miles from the former place he comes to the valley of Short Gun Creek, an affluent of Snake River. Here lives George Rae, a veteran hunter, trapper, miner, with a smart sprinkling of Indian fighter thrown in, who is, or was, in 1892 engaged in the more peaceful and prosaic business of improving his water privilege on the Shot Gun, with the view to the propagation of fish.

This Shot Gun Valley lies cradled between two cast and west parallel ranges of mountains, tha tare ten or twelve miles asunder. According to Mr. Rae it was at one time marvelously well stocked with game of all kinds peculiar to the country, but now nothing remains save a few antelope and many sage grouse. I was greatly surprise at the great plentifulness of this truly magnificent bird. About the time of our return from our park trip the females were down in the valley with their broods ready for the shooting. A party of Chicago sportsmen were at Rae's place, and I had ample opportunity to witness the slaughter of the young grouse. Their mode of hunting was for two, three or four hunters to hunt the plains in a two-horse wagon. When the ground over which they wished to hunt was reached, the dogs were sent out and the men followed, while the driver with his team brought up the rear. As the birds are shot they are thrown toward the center of the line, where they are picked up by the driver, who draws them and then throws them into the wagon. The sage hen is not difficult to shoot. It is as large or larger than a barnyard fowl, and when once up it flies straight from the hunter. It presents an easy mark to hit. By invitation I accompanied the hunters on one of their excursions. There were three guns, mine counting one. After firing sixteen cartridges, I ceased, and thence only two guns did execution. On our return after having been in the field not over three hours, if so long, there were over seventy-three birds in the wagon.

How long the sage grouse will last at the rate they were being killed off in the Shot Gun in 1892 a very few years more will determine. The birds killed by the Chicago party and not eaten by them and others at Rae's, were given to old Tom Somebody, a mossback living hard by, who hauled them over the mountain into Montana, where he sold them. But sometimes, as I was told, the birds were left in piles by the roadside to rot. It is in Idaho, as it seems to be everywhere else, no man can ever kill enough. Some of the Chicago party would shoot till it was too dark to see a bird.

But the grouse shooting was only an incident to my outing. Wife and daughter wanted to go home as soon as they had seen the park, but I did not, and so they went, and I stayed. Over the mountain from Rae's to the southward was a region known to fame as Island Park. I heard a great deal said in praise of Island Park. Snake River ran through Isiand Park, and I knew that Snake River was a superb trout stream. Geese and ducks were to be found in abundance in Island Park, everybody said, and so to Island Park I determined to go, and hired Mr. Rae to haul me and my little camping outfit over the mountains to the new promised land.

Island Park I found to be a most charming spot. It was a sort of enchanted land. Never will I forget the view as we came through the notch in the low mountain range, and looked down the valley in which clumps of pines and sage brush plains alternated, and through which the river ran, making many a loop and fold, but ever broad and shallow and fairly green with its hundreds of islands—islands ranging in size from a breakfast table to an acre. It was literally a river of islands flowing through a park-like valley, the whole as beautiful as an Eden.

Down close by the river I found a pine tree with a wide spreading top, and in the shadow of that tree I set my tent. A hundred springs, fed by the melting snows on the surrounding mountains, for all I knew, were to be found within half a mile from my home, and the nearest, seventy-five yards distant, answered my purpose. I lived alone two weeks in Island Park, and many were the hours I sat in the shadow of my pine and looked out upon the surrounding world of beauty. To the southward, rising high above the mountain range and rim, and peak, were the Tetons, their heads white with the everlasting snow, and although seventy-five miles away, through the glass could be seen the track of a great canyon, extending from the lower rim of the snowcap far down toward the base—a canyon that zigzagged its way down the tremendous heights, and whose great masses of snow and ice imprisoned within its rock walls, looked like a chalkline against the far distant background.

Island Park contained about sixty square miles, it was said, and there were living with its precincts two families and one bachelor. One family lived two miles westward from me and the other a like distance to the southward, while the bachelor, Tom Ball, lived less than three quarters of a mile away, and with him I neighbored.

I think that the best trout fishing with which I was ever blessed was in Island Park. It required but few fish for the tables of myself and Tom, but that did not stay my fishing. One, two, three and even four pound trout rose to the fly, and I had no motive for withholding my flies, but I remember my fish in mercy, and let the uninjured go as fast as they were caught.

The river was in general wide and shallow, so shallow that it was easy wading, but there was an abundance of deep water in places where the trout never failed. A mile or less below my camp a ledge of volcano crossed the stream, through which the waters rushed in a narrow channel, and below which they widened out into an extensive and deep pool. Into this I made a cast one day, and were I to tell the truth as to the hour's fishing which followed, my story would not be believed.

As I sometimes dream over my Island Park outing and come to that day's sport, I can scarcely believe the story myself. The last cast I made that year was at that place. I had on two flies, and as they fell upon the swirling water there was a splashing and a commotion, and I knew that there were two fish fast. How many failed to strike the hook I did not know. At once the fun began. All I could do was to save my rod, a seven ounce split bamboo rod, which if not of any great value had, nevertheless, served me many a good turn. There was no one to witness the sport, but I enjoyed it none the less for that. I remember that as my two captives fairly lashed the water into a foam in their efforts to escape, I "hollered," "hollered" for very joy. Presently, however, the smaller of the two kicked loose, taking the dropper with him, whereupon the other gave up the battle and allowed me to take him up on the shingle without any resistance. It was a magnificent cut throat and if it did not weigh four pounds, it ought to. I guessed it off at that and don't think I missed my guess. After examining its markings and stroking its plump body to my heart's content, I put it back to its native element with my blessings upon its head. I don't think I ever caught a fish that did me quite so much good as did that Snake River trout. And what is more it survived to tell the story of its awful experience to the others of its tribe.

Ducks? Yes, and geese, too, and plenty of both. But that does not mean that many ducks fell to my gun, or any geese. It was too early in the season for the ducks to be on the wing to any extent, and as the river banks were low and clear of trees and bushes, and I had no one to drive for me, I found duck shooting uphill work. Still, I had no trouble in supplying my own table, and what more ought I to have done?

The geese gave me the good-by on all occasions. Any one who has anything like a true conception of the wariness of a wild goose can readily understand why I did not fool away any time trying to do the impossible thing of shooting a goose in Island Park.

What, with fishing and duck shooting, and tramping and exploring, and looking at the mountains, some near by and some afar off, and reading novels and cooking and sleeping, my alloted time went swiftly by. It was with some misgiving that I ventured into my Island Park camp alone. "What if I should become lonesome?" I asked myself before making the venture. Lonesome is a state or condition of which I had little knowledge, experimentally, and I must say that when I struck my tent in the Island Park, I was still without that experimental knowledge. The days were too short for all my plans, and as for my night, did I not make up for all the wakeful tossings of a whole year?

Tom Ball's mother lived in the valley of the Shot Gun, and she, learning of my contemplated visit to the neighborhood of her son, had admonished me before crossing over to the park to stop with him. Motherlike, she was concerned about him living alone, and in the same wagon in which I and my outfit were hauled over, she went, carrying for her hopeful's use a couple of loaves of bread and bag of doughnuts. In my simplicity I thought her mission a bread-and doughnut one altogether, but I might have learned better my first night in camp had I cross-questioned the young man as I might have done. It was Tom who did the cross-questioning on that occasion. He called at dusk with a can of milk, and had I known him then as well as I came to know him ere I left him, I would have known there was something on his mind. It struck Tom at once that I would "chance to get very lonesome, not having no man nor even a dog" with me. Conceding the possibility of it, I asked how he managed to endure being alone year in and year out.

"Well, it's this way. During the summer, when a feller can be out of doors it's all right. But in the winter, when he has to be in, it's jist awful!"

"Well, why don't you get some one to stay with you?" I asked.

"I did have a boy, but the sucker ran off. He couldn't stand it no longer, I allow, gol darn him."

Then why not get a wife?"

"A wife," says Tom. "Women's as hard to find in this country as gold mines, and when you do find one ten chances to one she won't pan out. I cal'late you know all about them. You've had lots of experience! Aren't they apt to be sort of flickety like? And do you think one would stay inside a durn place as this, and if she did wouldn't a feller be better off without than with her?"

I did not deny but what I had had some experience, but I stood up for the fair sex, declaring that none of them were "sort o' flickerty," though I did not know just what that meant, and I assured Tom that he would do the fair thing by one, she might be induced to live in his clay roofed and dirt begrimed shack, though I did not use precisely those words.

I did not know then what I knew before I left the country. Tom's mother was on a weightier mission the day I moved over than the bearer of bread and doughnuts She was on a matrimonial mission. Jane, a virgin of peculiar beauty and of marriageable age, had come into the Shot Gun valley and was at that very time abiding at the home of the mother. "Now, here's the very chance for Tom," thought that good woman, and the mission over the mountains was to acquaint Tom with the fact. Here, then, was Tom's chance. Would he take it?

The second evening after Tom's visit to my tent, I went to his shack after milk. It was dark, and as I approached I heard voices and saw a light through the window as two lanterns were burning. On entering I found myself in presence of company. Jane and a gentleman I had seen at Rae's place before I left, and one or two others besides were with Tom, at the table.

Jane had evidently ridden over the mountain to see the "durn place," and the shack and for aught I know its owner. She was availing herself of her privilege and was radiant, charming, and had evidently made up her mind.

As for poor Tom, it was plain to be seen that ho had been hunted into his hole.

As long as his mother and the young woman were on the other side of the mountain Tom felt himself able to maintain somewhat of a defense. He could meditate upon "flickety" female nature and gravely discuss the question as to whether it would pay to have a woman around or not. but now, Oh, Tom! no more discussion for thee, I fear.

I saw little of Tom after that, until the time came for me to start for home. Where he kept himself I never knew. His cows were neglected. His cat became wild and his dog went to the neighbor's who lived over the river, while his horses ranged the plains and ate grass and waxed fat.

The day my two weeks' stay was out Tom came by my tent early in the morning on the hunt of his horses and said he was going in the afternoon to see his mother, and he proposed hauling me over. I jumped to the conclusion at once that he was on a lover's errand bent. At the appointed hour he came after me, and driving back to his old home who should come out and take her seat in the wagon but the blooming Jane.

Six weeks after my return home Tom wrote me that he was married, but whether his marriage had taken place before I left Island Park or after he did not say. Nor need I have concern as to that. Idaho romances are like all other romances. It is enough for us to know that Tom is a downright good fellow, that he drives a jam up good team and that he will make it pleasant for all fishermen who will stop at his place in Island Park.

D. D. BANTA.

THE SPORTSWOMAN.

It is said that the young women of to-day are gaining in stature and robust qualities, and while this applies probably chiefly to the class possessing wealth, leisure and opportunities for physical development, it is a hopeful sign of still better things to come. It is only what might be expected from the tendency of the times. For out-of-door sports are finding greater favor each year, and in tennis, wheeling, golf and various other athletic exercises the ladies are vieing with the men and dividing with them the benefits if not the prizes thereto appertaining.

That this physical improvement will continue we have little reason to doubt, because the various forms of open air sports are becoming fashionable and popular, and are brought, in one shape or other, within the reach of all. Now that the common prejudice against women engaging in these recreations has been removed, we may expect to see them following up the advantage they have gained until they are excluded from nothing less violent than football or other contests calling for great strength and endurance.

I can see no good reason why the ladies should not become ardent and successful disciples of Nimrod and Isaak Walton. Certainly enough of them have already demonstrated their skill with the gun and rod to warrant others in making the attempt. And the men, if they are wise, will encourage them in it, even from no better motive than selfishness.

Rip Van Winkle is not the only man in tale or history whose wife regarded hunting and fishing as a waste of time and money, and fitting texts from which to preach lengthy and acrimonious sermons. Possibly, if Rip had induced Mrs. Van Winkle to go along with him and had permitted her to participate in the triumphs of the chase he and his dog would have had a warm place by the fireside instead of being driven out of doors. I presume that many a man since the days of Irving's hero might have found an added pleasure and been spared a domestic infelicity if he had taught his wife to shoot and fish. It is not to be imagined that "sporting blood" runs in masculine veins alone, or that women are incapable of inheriting or acquiring a fondness for those things which lend a zest to the lives of men.

I have in mind an example to support my theory, and I advise men to follow it, because I myself followed it with the most satisfactory results. An enthusiastic sportsman, whose leisure had always been spent in hunting and fishing, married a wife who not only disclaimed any taste for these barbarous amusements

herself, but also deprecated them in others. She was not especially strong, and this model husband made a martyr of himself throughout one season, heroically devoting himself to purely social festivities, while his former comrades shook their heads sadly and took to the woods. In the following spring, however, his longing for the old delights were too strong to be ignored, and he finally persuaded his wife to join him in a few hours' quest of trout, where the fishing was good and the traveling was easy. He studiously pointed out the beauties of the scenery, baited her hook and taught her how to land the fish properly, taking good care to stop before she became satiated or fatigued. With some show of reluctance he permitted her to repeat the experience under less favorable conditions, and craftily allowed her to catch more fish than he did. And so he lured her along by easy stages, until she became proficient with the rod, and could climb brush fences and wade through bogs without any assistance. From that time on his deep laid scheme worked beautifully, and the logical relation of the gun to the rod was easily eastablished. The last I heard of this couple they had gone to the Rocky Mountains in search of big game. The little lady, who had been somewhat fragile and incapable of great exertion, was then strong and well, and from what I heard of her skill with the rifle I have no doubt she gave a good account of herself and made her husband hustle for his laurels.

This case appealed so strongly to me that I decided to copy the experiment, not, however, without some serious misgivings as to its success. I purchased a seven pound Marlin rifle, and other necessary accoutrements, and sent my wife to a primitive little hotel, far in the Adirondacks, where the quarters were comfortable and the game was plenty. Six weeks later I followed her into the mountains and learned to my supreme satisfaction that she had killed a fine buck, by very creditable shooting, and had acquired a genuine taste for camp life. In the reminiscences of delightful days spent together on lake and stream, or still-hunting, in the forest, and in the anticipations of similar joys in store for us, we have found a double pleasure. I have ventured to relate this bit of personal history in the hope that others may profit by it.

It was a revelation to me to discover that those of the so-called weaker sex are by no means so feeble as we think, and that, when properly dressed, they are capable of vigorous and sustained exertion without fatigue in the bracing air and wholesome surroundings of the woods and mountains. By proper dress in this connection I mean plenty of warm woolens, short corduroy skirts and leggings. A costume of this sort is ample protection against the night air, which, in high altitudes, is cold even in summer. Thus clad the woman of average strength can tramp unimpeded through the forest and along rough trails which would look impossible to the uninitiated in long skirts. As a result of wearing strong, comfortable shoes, short skirts and easy fitting garments the hampered, mincing step so natural to women gives place to a free, graceful stride; the unconfined muscles perform their proper functions and Dame Nature proceeds to reward this good sense in dress with an elasticity of nerve and sinew, a heightened color and a roundness of body and limb which are a pleasure to behold and a luxury to possess.

Women are credited with a love for novelty and a keen appreciation of the beautiful. They are therefore peculiarly qualified to enjoy the lively experience and charming scenery which are the usual accompaniments and accessories of hunting and fishing. Why, then, should they not engage in these sports, to their everlasting profit and advantage. Why should they deprive themselves of pleasures which are productive of healthy bodies and sane minds? If they hesitate to make the test, let them remember that

"Our doubts are traitors
And make us lose the good we oft might win
By fearing to attempt."

NEW JERSEY. ARTHUR F. RICE.

It must be said that a new element is gradually being introduced into the hunting camps of our northern border which in the end may work favorably for the big game. I mean the presence in increased numbers of sportswomen in camp. The sweet things, having learned some time ago that young men of nerve and mettle do not frequent the fashionable watering places —only the dudes go there—have been on the search for the nobler lads they long to win, and they have not been slow in discovering that in the numerous sportsmen's clubs and hunting camps there some stalwart youths betake themselves betimes.

To be sure, they are always chaperoned by somebody, and everything pertaining to their scheming is laid out in orthodox fashion, but the truth remains that henceforth the boys are going to be hunted by the dears with only one result, namely, the dears will bag the sportsmen and perhaps create a little diversion in favor of the antlered, ruminant quadrupeds.

CONNECTICUT. C. H. GLEASON.

Massachusetts Luck in Maine.

Boston, Jan. 9.—My shooting partner, G. J. Brann, of Revere, came home last week from a five weeks' hunt in the jungles of Aroostook County, Maine. He was accompanied by a friend, Mr. Carver, who secured two deer and came back to Boston, but Mr. Brann was like young Oliver—he yearned for more. He hunted for a week and failed to secure a shot; but he is blessed with an abundance of that spirit that makes successful hunters. On the eighth day he was gladdened by the sight of the noble game he was in quest of. A fine bull caribou was the first tribute the woods of Maine offered to him. Two shots were required to bring him down, and there was a four mile jog back to camp to secure help before his prize could be moved to safe quarters. He hunted over Mt. Katahdin and ascended to the summit. The tramp up the mountain was a bitter one, as the cold was intense. He secured three more deer and he returned to Boston a happy man. Vickary of Lynn has the four heads, which he is mounting. JAY PEE.

AN ENGLISHMAN'S EXPERIENCE OF FLORIDA FISHING.—IV.

BY ALFRED C. HARMSWORTH.

Next day I was up early, prepared for my attempt to capture a small tarpon with a phantom minnow. A part of the jaws of the tarpon are of great power, and able to cut through any ordinary material, so I attached a wire trace to the minnow and fastened that to an ordinary spinning line.

Our habits down in Southern Florida were primitive. The ordinary hour for breakfast was 7.30, but the healthiness of the climate was such that even at that hour one could tackle a large meal. And here let me say a word in favor of your American breakfast. With us breakfast, except in country houses, is, as a rule, a scant repast, not more than sufficient to carry us along till the snack that we call luncheon. Throughout most parts of the United States breakfast is a much more serious affair. The charming manageress of the Naples Hotel, Miss McLaughlin, was a Kentucky lady, and Kentucky is famous not only for its fine horses and handsome dames, but for its curious and many kinds of bread. I never could manage the names of all these breads, but I remember that we had five or six kinds every morning, nearly all of them hot, many of them sweet, all of them pleasant. Venison was one of our staple dishes, with sea trout, and sheepshead, of which fish more anon, grape fruit, oranges, bananas, coffee and the inevitable iced water, without which no American table is complete.

Breakfast over we sallied forth with our rods and guns to the boathouse by the river side. Naples Hotel is so situated as to afford seafishing in front of the house and river fishing behind. To-day we were after tarpon, and our goal was the Gordon River. We pulled slowly up stream, looking about carefully, but could see no sign of the school of the previous day. I cast from side to side diligently for an hour or so, with here and there a lusty trout, and here and there a lady fish, but these were not what we wanted.

For five hours did we toil in the fearful heat until our hands and necks were so scorched that they were absolutely painful. I killed over 35 pounds of fish before mid-day, by which time we were quite ready for lunch and rest. We drew up as usual under the shade of a mangrove tree, and varied the proceedings by a short stroll.

A few yards from the river side we found, snugly ensconced under the big cypress trees and the palms, a hunter's hut, or shack, as they are called there. These Florida shacks are peculiar to the country. They are light structures, composed almost entirely of dried palmetto leaves. They are cool, self-ventilating and at the same time water-tight. Many a man who in better days has lived in snug 'varsity college rooms and dined in hall is living out his life in a palmetto shack in Florida; indeed, one of the saddest features of Florida life is this human driftwood from the whirl of wealth and life of the old country.

The under-gardener at the Naples Hotel was an English public school boy; a youth who ran the post boat up the Indian Settlements is a relation of a well-known English peer; a man now well on to middle age, who owned a small boat for taking garden produce up the coast, had done well at Jesus College, Cambridge.

One finds these isolated Englishmen all over the world, but in Florida they seem to be more numerous than anywhere. It is not that they are ne'er-do-wells. I can safely say that all I met there could have done well at home. One at my suggestion has returned to England, and has already proved himself able to engage in an arduous business.

We cannot too sufficiently blame the parents who condemn their sons to such a hopeless country as Florida. For a man with a small income and a taste for sport Florida is, I admit, unique; but in a country so unnaturally bereft of capital and natural resources, it is impossible for a young Eastern man or Englishman to do nearly so well as he could in London.

Over and over again in our journeying through Southern Florida we passed these palmetto shacks, sometimes inhabited by living scarecrows, who it was hardly impossible to recognize as Englishmen of good birth, sometimes deserted and desolate.

An hour's rest from the noon-tide sun and I was keen on killing my tarpon. How often it is in fishing that the first cast does it. It seems to me to be especially so in the May-fly season. If you can get your fly well over your fish at first cast there is that delightful ripple, the fascinating strain on the line and all the bending of the rod and the disturbance of the water that makes angling one of the things best worth living for in the world.

We rode to the center of the stream, when Hart's keen eye discerned dark fins heading the stream some fifty yards off, looking for all the world like trailing trout.

We were naturally all excitement, for they were unmistakably tarpon. Hart pulled slowly up to within seven or eight yards of them. My minnow was out and over them in a moment, and then, as I reeled in the line, there was a few seconds of delightful uncertainty, followed by the most delicious run of line I ever remember. I was in for a tarpon at last. One of the great charms of angling is undoubtedly one's great anxiety at the moment of hooking a big fish. This was one of the great moments of my angling life. I was fastened to a fish I had come between five and six thousand miles to kill, and in the capture of which there was all sorts of delightful possibilities. If I had the fish it would prove that after all a young tarpon could be caught on a light tackle, and I should be the first tarpon fisher of the season on that coast, and there was all the glorious sport of paying him in store. Only one horrid, gloomy thought came across me. When I saw the mighty jump that he gave I knew that no landing net on earth would hold him unless he were thoroughly killed, and to kill a tarpon I knew to be a big task.

Out and out went the line, until it became necessary for the sake of safety to stop this reckless extravagance, so I checked him, delicately, but firmly. A description of a tarpon leap into the air in strong sunlight has been written over and over again, but no account that I have ever read has done justice to the silvery splendor of the king of game fish. Those who have seen a tarpon scale will know that it is silvered over with what looks like artificially applied metallic paint.

Pinned on the wall in the room in which I write is a tarpon scale from the first tarpon caught with rod and reel, sent me by my friend, Mr. A. N. Cheney. Years have elapsed since Mr. W. H. Wood captured that fish, yet all the friends who see the scale say to me, "but surely that is not natural." Indeed, had I not taken scales from tarpon I could hardly have believed it myself. This particular scale I may mention, though it is by no means the biggest, is exactly seven times the superficial area of a 50 cent piece.

It was not until we saw the silvery mass rise into the air some three or four feet that we were quite sure I had a tarpon. There was no mistake about it once it had come down. In its confusion of falling into the water again I was able to wind in a little, when it went up again. Hart rowed for dear life that I might wind in line, and I did so until we got so close that the fish saw us and was off once more in one of his wild rushes. On we went after it down stream for a quarter of a mile or more, by which time it became necessary to either loose him or check him. I checked him, and there was the same leap, a higher one this time, showing that far from being fatigued the fish had awakened to a full sense of its danger, and was even more active than at first. All the time the difficulty of landing my prize without a gaff was in my mind. About a couple of hundred yards further down stream there was a shallow, and we plotted that we should get him down there, that Hart should leap out of the boat and try and take the fish in his arms.

It was easier said than done, for again and again he rushed and leapt. How my rod stood the strain I have never been able to ascertain, but it did so, and is none the worse. It seems to me that light tackle will stand a great deal if it is not jerked. He had leapt eight times by actual count when we got him down beside the shallow bank where we hoped to finish him. His eighth leap was a poor one. He was weak. I got him almost up to the boat and he was on his back. Hart was out into the water in a second. He was up to his waist, but he is a sportsman, every inch of him, and would have swam any distance after that fish. No sooner did Master Tarpon catch sight of this human foe than he made one more rush and gave one more jump. This last run of his, however, was ill judged; for it took him into water little more than a foot deep, and as Hart pursued him he ran on to a shallow where he was scarcely covered by his proper element. The boat was meanwhile drifting down stream, and I was getting further and further away from the fish, which presently began to follow the strain upon the line. Soon I had him up to the boat. Hart had waded after, and seeing the tarpon well played out he was ready with his hands, which he cleverly passed under the fish's gills, and threw him well into the boat. In the excitement of the moment I shall never remember how I managed to keep him there. He leapt and struggled and leapt again. A dexterous use of my hunting knife finished his struggles, and I had him there absolutely unscratched and a perfect specimen for mounting.

After that I had no desire to fish more that day. We gathered a large number of palmetto leaves, covered him from the sun, pulled him down in triumph to the boathouse, placed him on a board and carried him up to the hotel, where, I need scarcely say, his arrival created much interest. His size, as I pointed out, did not detract from the excitement, for the capture of a small tarpon is a rare occurrence. Except, indeed, at Naples, I did not hear of them elsewhere, and, as the writer of the article on "American Game Fish" says, young tarpon appear to be more wily than the older ones.

I have been asked over and over again by the salmon fishers whether or not tarpon can be caught with a fly. I believe it is not possible to kill large tarpon with anything but a bait that can be gorged. Small tarpon have risen to salmon fly, but it was the usually accepted belief of all the tarpon fishers I met in Florida that the mouth of a big fish is not strong enough to stand the strain of the almost inevitable power of its pulling and leaping. The reason the tarpon were not captured with rod and line until recently was that early tarpon fishers struck immediately the tarpon took the bait, with the consequence that the line came back in their faces.

So far these papers on angling in Southern Florida have dealt with fly-fishing and spinning. There are many anglers who, while they prefer the use of the fly-rod, heartily enjoy a day with the float or ledger, and I am one of them, though by no means of the "roach fishing a fine art" school. Many anglers are devotees of fly-fishing, and dry fly-fishing in particular, merely because they have not given a fair trial to float-fishing. An extremely accomplished dry-fisherman once told me that any one could catch fish with a float. I demurred. Not long afterwards the angler in question had a chance at some particularly good carp, and though he adopted old Izaak's special injunction with regard to this branch of the sport, he had an absolutely blank day, while a friend of his killed some seventeen fine fish. If difficulty is the point at issue, I am bound to say that, in my humble opinion, carp, trench and some other fish require as much ingenuity in their capture as trout.

Unfortunately, we did not have proper tackle for float fishing in Florida, but what we took with us afforded very good sport. One of the most delicious fish in those Southern waters is the sheepshead. It is difficult to describe this fish, because I know nothing like it on our side. In shape it is like a perch with a hump back. It takes its name from its mouth, which is with teeth exacty like those of a sheep. For the most part it lives on shell fish resembling our limpets, and it can bite through a shell fish as easily as though it were an egg.

We found these sheepshead to be capricious creatures. As a rule they feed near piers, old stumps of trees, and in any place where their favorite food abounds. The first day we tried for them were not successful, because we did not know that in order to catch them it is necessary to strike very quickly and with great vigor.

I hired a naphtha launch, which we anchored some yards from a place where there were a number of dead trees in the water. For bait we placed a small piece of mackerel at the end of a large perch hook sunk some four

feet from the float. Bites were numerous enough. Occasionally one of the fish gave a fine run, but that was all the sport we got.

When we went down to Naples we found people there who taught us how to catch sheepshead properly. Mr. Conroy had supplied me with two or three kinds of suitable hooks, some attached to double gut, some to gimp, others to wire. The wire seemed to frighten the fish, and we stuck to gimp. One afternoon, tired out with fly-fishing, we came back to the hotel, and after a siesta went out to the end of the pier at Naples, where we found that people were catching sheepshead at a tremendous rate.

For some reason or other the sheepshead were as madly on the feed as trout are supposed to be at Mayfly time. Three kinds of bait were in use, tiny crabs, known as "fiddlers," in those parts, a small silver fish, like a bream, called a "minnow," and the legs of large crabs. This, of course, is salt water fishing, but, as I pointed out, many game fish in the southern parts of the United States inhabit the sea and the mouths of the rivers. The sheepshead cannot be called a game fish, but it is a very strong one. As one peered down the turquoise blue water one could plainly see myriads of these large grey fish wandering about. Then was the time to drop one's hook carefully over them and strike at the first indications of a bite. It was most tantalizing. Time after time I missed fish, while an American lady by my side whipped them out every minute, but presently I learned that it was necessary to strike at the actual instant of a nibble. From that time all went smoothly. There were a number of barrels at the end of the pier, and as we caught our fish we threw them into them until we had enough to last the hotel several days, when we desisted.

It is by no means always possible to catch sheepshead. We tried on another occasion for a couple of hours without any success. Split open and grilled, our friends in the barrels proved most excellent eating. Catching sea trout with a live bait was by no means bad sport, terrible as it sounds. There were days when these fish absolutely refused to take a fly. In cold weather I imagine them to go to the bottom, and then one's only chance of capture is to fish deep with a float or "bobber," as they call it in Florida. The best trout killed during our visit to Florida was taken by my wife in this way.

Among the natives of Florida fishing is merely regarded as a means of filling the pot, and they have no delicate scruples on the subject. The Seminole Indians fish with a handline passed through a hole in a sunk stone. I saw some of these stone sinkers that had been found in a disused canal, a canal believed to date back to the Egpytian Pharaohs. The Indians were adroit in casting small nets.

It struck me as being curious that in a land where a man can catch as many fish as he wants for a day's supply in an hour or two fish diets should not be more popular.

We have a great many faddists on this side of the water who believe there is as much nourishment in fish as in meat, but I was assured by Englishmen who have lived long in Florida that they had grown utterly weary of fish food. The inhabitants of Florida, who certainly eat more fish than any other people I have encountered, are not healthy specimens of humanity. Thin and attenuated, the "crackers" are despised even by the negroes. I write this statement considerably more safely here in London than I should down in Florida, where firearms are used on the slightest provocation.

We regard the Buffalo Bill style of life as a thing of the past; many of us doubt whether it exists at all. Down in Florida, and especially in Southern Florida, human life is held at a discount. A "shooting" is an almost everyday occurrence. With that extraordinary capacity for humbug, which the Anglo-Saxon in Florida shares with his brothers in Great Britain, the lawlessness was absolutely denied by many Floridians to whom I spoke on the subject, yet almost every village has its tale of a recent "shooting" and always a cowardly one. This is not a pleasant thought for the Englishman who goes to the remoter parts on a sporting expedition, and for this reason I would advise any Britisher, or man from the Northern States, to take a revolver with him, and have it in his pocket at all times.

It is easy to point out the swift and sure methods of British justice, but on the other hand, I do not think that even our detective force would be able to do much in a country like that we were visiting. The fugitive from justice, armed with a repeating Winchester rifle, hides himself on a small island, some four or five miles from the nearest civilization, and as soon as the sheriff comes along with his warrant, tells him plainly that his magazine contains fourteen rounds, and that he will "pump lead" at the first man who moves forward another yard.

Under the circumstances it is natural that a large number of villains escape, and even when brought to trial, juries dare not return a verdict against them, for fear of revenge on the part of their comrades. This state of affairs I consider to be a great drawback to Southern Florida as a health resort, but, doubtless, as civilization advances and population increases, we shall hear of fewer of these dreadful tragedies which are now a blot upon this fair land.

Fishing with a float has one sterling advantage in hot climates. Whipping a stream with even a four ounce rod is no joke with the temperature at 100 degrees, and, added to the physical discomforts and fatigue, there is the chance of sunstroke. When I next go to Florida I shall take a large white umbrella and plenty of tackle for float and ledger fishing. For a couple of hours in the evening several species of fish rise splendidly to the fly. At the time of sunset one could kill, on the five evenings out of seven, fish of many kinds and considerable size on a big Jock Scott.

I fear I have already tried the patience of your readers, so I will wind up my line, put away my rod, and go home, remarking as I go that more frequent exchange of visits between English and American anglers would do a great deal to remove a little of the vast amount of international ignorance which appears to be a bar to more friendly relations.

Natural History.

OUR FEATHERED FRIENDS.

Auburn, Cal.—In The Forest and Stream columns, under date of January 5, there is an article by Arthur F. Rice, which I have found great pleasure in reading. Anything about birds captivates my attention at once, and this writer shows such sympathy with the subject as to prove that he is a genuine fellow lover of "God's earthly angels."

With some of his conclusions, however, I hold friendly difference, and with all due deference will attempt to show where we are at variance. I will first quote his passages wherefrom I differ and then give examples to sustain my opinions.

"These feathered messengers are always on time, and there are no delays nor mistakes in the train service which conveys them to their destination." Oh, yes, there a great many mistakes in this train service! Birds, from their own experience, and, for want of a better term, from what is termed inherited memory, make their migrations at a time when the seasonal average calls for the arrival of spring or winter. If the season is not an average one, but is either hastened or delayed, their plans, like those of mice and men, "gang aft agley." Did you never hear the old song about the pair of birds that arrived ahead of time, and without proper foresight.

> . . . "too soon in life they started.
> Their nest was filled with ice and snow;
> They had a tiff, and parted!"

I have on more than one occasion found song sparrows dead that undoubtedly perished from a premature arrival in spring. On one occasion, many years ago, a pair of robins made a nest in a corner of a post and rail fence, and began the raising of a family too early in the year. A cold term came on, and one morning I found the female cold and stiff upon the nest, a victim to her maternal instinct, and a misplaced confidence in the weather.

I am speaking now of my eastern experience, of many years ago, near the northern borders of Vermont, on the Canadian side. Of course, the season is later there than in New Jersey, but as I have lived in both places I know that the season is as liable to befool the birds in one latitude as in the other

In the locality I speak of the crows do not winter, but leave for the seashore, and more southern parts, in the late autumn, returning about the first days in February. One day when I was a lad my father observed a crow picking up dead bees from the surface of the snow near the bee house, and going out caught him in his hand and brought him in. There had been some warm, sunny days, which had brought the crows and enticed the bees from their frosty slumbers. Many of the bees fell and perished in the snow. The weather changed and a long cold term ensued, and even that sagacious bird the crow got fooled and no doubt many of his kind perished. The one in question was almost starved, and so reduced in strength by cold and hunger that he stupidly allowed himself to be captured rather than to desert the feast he had providentially found.

Again, when a season is abnormally early, we miss our feathered friends for a time, but at the average time their train arrives and our eyes and ears are once again gladdened with the sight and sound of our longed-for harbingers of spring.

That is the one sensation of the year that one misses in California. Here the seasons vary so little, one from another, and merge so gradually into each other that the absence of one friend is scarcely missed, as his place is supplied by another.

Again I quote: "Nature is consistent in all that she does, and to put a sweet song into the throat of a bird of prey would not coincide with the eternal fitness of things." This is in the main correct, but not altogether so. Show me a fiercer, a more rapacious or insatiable fiend than the shrike, and yet how innocent and engaging is his song? you would think, while listening to him, that according to the old saying, "butter would not melt in his mouth." But let him spy some innocent warbler, and he will drop his song to slay the victim and to impale it upon some neighboring thorn—not because he wants or needs it, but simply to gratify his cruel appetite for slaughter.

Did my friend ever hear a mother owl talking to her babies? If not, he has yet something to live for. I believe it to be a maternal lullaby, although by some it is believed to be a love song uttered by the male. I have heard it in the depths of the forest, in the still night hours, when my nerves fairly quivered with delight at the soft and pleasing notes. And perhaps the jade had a poor field mouse grasped in her ugly crooked talons at the moment.

Again I quote: "Sweetness of song, however, is rarely accompanied by brilliancy of plumage." Not so rarely. Many exceptions come to mind. What about our burion, or house finch, so conspicuous in his scarlet head and neck? Our orioles, with their gaudy uniforms? Our cardinal birds, especially the Texas cardinals that are poems in color? The bob-o-link in his nuptial dress is a brilliant looking fellow and very showy with his marked contrasts of color! The nonpareil is quite a little dude, and even the common robin is no inconspicuous object, while his western brother, the Oregon robin, is a perfect dandy. The blackheaded grosbeak is a gaudy bird, with a whistle that entrances.

A far larger number of plain and inconspicuous birds have harsh or unmusical voices than do those of brilliant plumage, because the number of soberly dressed birds greatly preponderate in numbers of species.

I heartily argee with Mr. Rice as to the educational abilities of birds. They can put two and two together and find that four is the result, just as well as their haughty neighbor—man!

In these columns, some months ago, I noted the fact that I had never observed the nest of an Arkansaw tyrant flycatcher without finding several nests of more inoffensive birds in its near vicinity. These latter undoubtedly reasoned that they would receive incidental protection by building in the neighborhood of this courageous species of kingbird, and that the jays and other predacious birds would be made to keep their distance. I have thus observed this bird's nest, with orioles, chipping sparrows, Arkansaw gold finches and tits, all living in security around it in the same tree.

If you will notice any small island in a lake or river you will find it populated with birds to a greater excess than ten times the same amount of ground on the mainland. What but its freedom from the presence of predatory animals and snakes leads the birds to choose such a nesting place? They have to seek all their food upon the mainland. Then, why not nest there? Because they reason that the island is the more secure place. Take note of this. You will find it true.

The observation of birds and their ways is the most charming occupation in the world, and I delight to greet a congenial spirit in Mr. Rice. AREFAR.

Some Big Moose Heads.

St. John, N. B.—I had the pleasure of an interview with Mr. J. H. Carnall, the well-known taxidermist, on the subject of moose heads. Mr. Carnall stated that he mounted every year about fifty moose heads. Last year he handled sixty-eight heads, and he thought the total this season would run up to seventy-five. He is of the opinion that the supply of moose and caribou in these eastern provinces is on the increase. The widest spread of moose horns of which he has any knowledge belonged to the head of an animal shot by Sir Harry Burrard, at Canaan River, in this province fifteen years ago. They measured 5 feet 4 inches. After being taken to England they were presented by Sir Harry to the Prince of Wales. Last year Mr. Carnall mounted a pair of antlers for Mr. F. H. Hale of Woodstock, N. B., that measured just 5 feet. This moose was shot on the Tobique River. He has never mounted a head, whether of bull or cow moose, that did not carry the bell at the neck. A moose shot in Maine by Captain Sears, an English sportsman, had a bell 18 inches long. He has mounted one cow moose head that is adorned with two perfectly developed bells. He claims that all caribou cows have horns, which statement, in view of his large experience, ought to just about settle this disputed question. At all events, it drives the hornless cow into a hopeless minority. PROWLER.

A Blue Jay Pet.

I think that few people know what a nice pet a blue jay makes. One summer while walking through a swamp I found a young jay, which evidently had left his nest but a day or two before. After quite a chase I caught him, and bringing him home, put him in a large cage. At first I fed him from my hand with corn meal, bread and insects of all kinds, but he soon began to eat for himself.

In about a month he was fully feathered, and I found he had become so tame that I could let him go out of doors, and he did not attempt to leave. He would sit on my hand while I walked through the grass, and as soon as I started up a grasshopper would chase it and catch it, then return with it in his beak to my hand to eat it. All the small birds around the place hated him, and he would often be surrounded by half a dozen different kinds, all threatening, but none of them having the courage to really touch him. He occasionally came in my bedroom window, and would sit on the bureau and amuse himself by picking up pins or anything bright which caught his eye. Toward winter I caged him again, and left him to the care of another person, but to my sorrow he died in a few months. I would be interested to hear through this paper from others who have had blue jays as pets. MAC.

Lake Champlain Ducks and Gulls.

Essex, N. Y., January 14.—Lake Champlain is still open at Essex, and, in fact, seldom closes until February. The lake here is 399 feet in the deepest part. Many ducks and gulls, driven to the open water by the ice both north and south, are every day seen, sometimes alone sometimes sporting in company among the whitecaps, from which the gulls can hardly be distinguished, when the sun strikes them fairly, making them seem as white as foam, but in fact they are more grey than white. They are much more wary than the ducks, seldom being seen less than half a mile from shore. C.

Camp-Fire Flickerings.

"That reminds me."

Another Turkey That Got Away.

The interesting article of P. O. S. in your issue of the 12th inst., entitled, "The Turkey I Didn't Get," reminds me of a turkey I didn't get. It is sometimes even pleasant to be reminded of any unpleasant event that has happened to us so long ago, that, like the uncut diamond, the sharp edges have worn off revealing the light and laughter.

The years of 1848-9 found me down on the White Mountains in Greene County, Ind., helping to build the Wabash and Erie canal, built to connect the water of Lake Erie with the Ohio River, but which was never completed, and I think the section (101) which my brother and I built was never used at all, though the upper portion down as far as Terre Haute was used for a time. But what a country that was for game in those days—and what a paradise for the sportsmen would it be now if it only remained as then! I wrote the postmaster at Bloomfield a few years ago inquiring for some of the old settlers who were there then, and also about the game. The answer was, Gone, gone, all gone! No deer and turkey left; and the old settlers whom I knew had crossed the river one by one and others had taken their places in the moving ranks of progress.

But to return to the turkey I didn't get. I did not get much spare time for hunting, for with looking after the 100 or so men we worked and the stock, carts, tools, etc., I was pretty well tied up, for we did our own bossing. One day it had rained too hard for work, but when it cleared up toward evening I took my gun and started for the bluff skirting the bottom lands. I had followed along about half way up the bluff, and just below where Uncle Zed Adams lived (I hope some one

may read this who knows the locality, for I see it just now as it was then), when I heard the lively barking of a little dog, two or three hundred yards off down in the bottoms; and about the same time I began to hear and see the turkeys fly in all directions. One big fellow lit in the top of a tree about 150 yards away and about on a level with me and after tetering a little got his balance and sat quietly. Of course I said that's my turkey, and getting a tree top between me and him, picking out the tree from which I should ring out his death knell, began very cautiously creeping down the hill to my vantage point. I knew the gobbler would be interested in the yelping of the little dog which kept up his yip yip in the opposite direction. I had reached the butt of the tree from which I was to shoot, about 30 yards from the one on which my turkey sat—had taken off my hat and peering cautiously out could see his head and neck back towards me. Oh, how I gloated over my prize, and how carefully I raised my gun to bear upon it. But, alas, just at the supreme moment I heard the crack of a rifle and saw the big beauty come crashing down through the branches striking the ground like a bag of meal.

Did I go to see how big he was, or who shot him? No, sir! I picked up my hat, turned my back on the whole business, and wended my way homewards, a wiser and sadder man A.

CONNECTICUT.

Uncle Lee's Big Bite.

Uncle Lee Watkins, as the boys called him, was one of the best fishermen that ever wet a line in Elkhorn Creek, and that is saying a good deal when one remembers that General George B. Crittenden and Hillary Bedford, and Dr. Will Morris and Llewellyn Halton and Todd Sullivan were wont to entice the wariest bass from its pools and rocky shallows. Uncle Lee was one of the patient sort, and knowing every shelving rock and projecting crag beneath the surface, he was only satisfied when his baited hook dropped in the exact spot where he knew the fish should be. Then his favorite plan was to insert the end of his rod in a crevice, or push it in the soft bank, and lighting his pipe, await a bite.

One day he had been wading the creek catching minnows, and after baiting and casting his hook to the right spot, he stuck his pole in the bank and went off a short distance to change his wet clothes for dry ones. Two anglers from Frankfort—Jimmy Gibbons and Wiley Williams—were fishing near by and close enough to observe events. Suddenly there came flying down the creek that awkward, ungainly bird called "shite-poke" or "water hen." Seeing Uncle Lee's rod projecting conveniently near the water it lit on the end, and after balancing itself with some difficulty and looking around, it walked down the rod somewhat as a boy walks a "teterplank," stepped over the rail and disappeared in the grass.

Just at this moment Uncle Lee caught sight of his pole that continued to bob up and down from the "shite-poke's" balancings. "Thar's a bite," he exclaimed.

Holding up with one hand his pantaloons, not yet fastened, he made his way to his rod and loosening it from the bank waited for the line to run out.

Gibbons and Williams, convulsed with laughter, laid their rods down and rolled on the ground.

"Jerk him, Uncle Lee, jerk him!" exclaimed Gibbons as soon as he could get his tongue.

"Not yet, not yet," said the old man. "Wait till he runs a bit."

After a five minutes' wait Uncle Lee wound in his line and found the bait intact. "Singular," said he, "mighty singular—never saw anything like that before—a big bite and bait ain't touched." Replanting his rod, he proceeded with deliberation to complete his toilet, while the two spectators went off, leaving him none the wiser. OLD SAM.

FRANKFORT, KY.

Another Fisherman's Dog.

J. M. R.'s note of a lazy man's fishing dog in your last issue recalls an amusing incident of last summer's fishing. Judge Wm. B. Guild and myself were enjoying ourselves at that fascinating sport of snapper fishing at a point on Shark River where the channel sets in near the bank, making connection from our boat to the there an easy matter. Seated contentedly on the bank and engaged in his favorite sport of plaice fishing was the familiar figure of Archie Applegate, known to everybody as one of the most persistent fishermen in Southern New Jersey. By his side, and evidently as intent as his master, lay his dog, a nondescript mongrel, possessing no noticeable virtue other than the deep interest manifested in Archie's endeavor to secure a bite. "Say you fellers are in jest about the exact spot where I made my big haul of weakfish several years ago," he drawled out.

"Now you will hear something," exclaimed the Judge in an undertone, and then to encourage the story, "Caught them with hook and line, I suppose, Archie?"

"Yesseir! I had been pounding round all over the river the hull day and jest no luck at all and was fagged out and ready to go home when I chucked anchor 'bout where you are, and heaved my line overboard, when, ker slop! somethin' catched holt and lit out for the inlet like all possessed. After a scrimmage in which he jig-sawed my fingers almost off, I landed the all-firedest weakfish you ever see, as big as a cordwood stick; and every time I baited up I got one of 'em, till the bottom of my boat was covered and I had to stand on the seat; and afore that school of fish petered out I was standin' with one foot on each gunnel of the boat to keep from mashin' the fish. I got so tuckered out I had to take my boat ashore or I could have sunk her right where I was in a few moments more.

"How long were you making your catch," I interposed.

"Jest about an hour, I think! Jest about an hour."

At this point his dog began to evince uneasiness by moving around and whining impatiently.

"The dawg is gittin' unesay," exclaimed Archie, with his indescribable drawl, "if I could hook a fish now I'd show you a trick he learnt himself. Soon as ever I hook one and get him to the edge of the water, that dog will grab him and pull him back where he is safe. Then he'll jest put his hind feet on the fish's head and with his paws he'll make the scales fly till the air looks like a March snow squall. Then he'll turn the fish over with his nose and dress the other side the same way. Why, I don't think me nor the old woman has had to scale a fish in five years."

As we raised anchor and drifted slowly away with the tide I turned to the Judge, who with a look of mingled disgust and amusement on his kindly face remarked, 'That fellow beats Ananias." LEONARD HULIT.

Foxes and Porcupines.

Last Sunday Winston Harris came down to see me, and read Forest and Stream. After reading about the foxes climbing trees he said: "Of course they climbed trees; thought everybody knowed that. When I was a boy I saw one in the fork of a swamp ellum, 'bout 60 foot high. I wanted that fox mighty bad, but hadn't any axe or gun, 'n I knowed if I went after 'em the fox'd git down and run off, so I just out with my knife and cut the bark at the foot of the tree 'n then peeled it up in long strips, 'n jerked 'em loose up at the fork, leavin' the tree slick as ice. Then I went away and hid, and the fox tried to climb down, but he slipped off and the fall killed him."

I showed Winston some porcupine quills and asked whether anybody knew what a porcupine was good for.

"Yes," said Winston, "they used to be mighty handy to pick up cider apples. There was lots of 'em round here in an early day, and we had a big orchard right on the edge of the woods. We had a tight fence round it to keep the porcupines out, till we had picked the keepin' apples. After that we opened holes in the fence, and of nights the porcupine would come in and scrape a lot of apples together, then roll over them till their quills were stuck full, when they walked off. They looked just like a half bushel full of apples sliding along the ground. They took them to a big hollow log, rubbed them off the quills with their feet and then stored them in the log. When it got full we split it open and took the apples. Then we put the two halves of the log together and they would fill it up again."

I asked Winston if he hadn't been drinking some of the cider made from those apples.

O. H. HAMPTON.

Game Bag and Gun.

MONGOLIAN PHEASANTS.

The annual report of the Massachusetts Fisheries and Game Commissioners gives these particulars of the proposed stocking with Mongolian pheasants:

Immediately after the passage of the resolve appropriating $150 toward the introduction of these birds, we opened correspondence with everyone we could find who had them or was supposed to have any knowledge of them. Porf. John Hudson of Washington State, who had agreed to obtain some for us, could not get them. We found one or two dealers who claimed to have them asking exorbitant prices, which we might have been tempted to pay had we not discovered at the last moment that they were the ordinary ring neck, a very different phesant from the Mongolian. Our investigations led to the conclusion that there were no pure Mongolian pheasants this side of the Rocky Mountains.

Mr. Woodward of New York proposed to import some from China, and obtained orders amounting to twelve hundred birds, at ten dollars a pair. We put in an order for as many as he could spare. They were shipped and reached Gibraltar all right, but soon after the steamer encountered a cyclone, and from that time the birds began to die, and when New York was reached all had died. There are thirteen or more varieties of pheasants in China, and, unless some one who knows about them is on the ground to look after them there is no certainty as to what will be shipped.

The law against exporting pheasants from Oregon is so severe that no express company would take them. We had nearly given up our efforts to obtain them this year, and had accepted a setting of English pheasant eggs from Mr. Samuel Hanson of Boston, one of the exectuive members of the Liberty Hill Club of Connecticut. This cub has been very successful in raising these birds, and we have no doubt that in some parts of the State they would thrive; but they are not so prolific, and are more tame and logy than the Mongolian, and would therefore more easily fall a prey to the unskilled marksman. The experience we have had with them will be of advantage in rearing the Mongolian, for we are satisfied, after careful investigation, that the latter is the most desirable, and perhaps the only variety adapted to our woods as a game bird.

Finding that they could not be obtained at any price in sufficient numbers for stocking, our only alternatives were either to abandon the experiment or to provide for breeding them. Believing that it was for the interests of the State that they should be introduced, we chose the latter, and have constructed nine large aviaries, covering about two thousand square feet, vermin proof and securely roofed over; a number of hatching boxes with small yards have been made, and about twenty-five bantams secured as mothers. To complete the plant there should be more hatching boxes, and the enclosure of about a quarter of an acre of grass land for the young birds to forage in.

In confinement the Mongolian lays from sixty to eighty eggs duriing the season, and by using bantam hens as setters the phesants are not depended on for brooding.

For the breeding birds we have we are indebted to the energy and generosity of Mr. Samuel Forehand of Worcester, president of the Forehand Arms Company. While in Oregon and Washington State last summer, Mr. Forehand, at the suggestion of Mr. Buffington, spent several weeks in investigating this matter, and is thoroughly satisfied of the importance of introducing them into this State, both as a game bird and as a source of food.

The bird he obtained, and those he is still to receive, have cost him hundreds of dollars. He presented them to the chairman of the commission, with the understanding that, if the State saw fit to encourage their introduction, they were to be used for that purpose.

During Mr. Forehand's stay in Oregon he formed the acquaintance of Judge Denny, who introduced the Mongolian pheasant into that State, and from letters received from that gentlemen since we are permitted to make the following extracts:

Twenty-eight birds were sent to Oregon in 1881. Their phenomenal increase is apparent, when I tell you that the game warden, Mr. McGuire, estimates the number killed last season in three months, in Linn county alone at thirteen thousand; and that a year ago last winter, when the sleet and snow were on, twelve hundred dozen of these birds were sent to one dealer in San Francisco. This is not only a first-class game bird, but a delicious morsel of food; hardy, and belongs clearly to a survival of the fittest. They have, besides, proved a great benefit to the farming and other agricultural pursuits in this State, in that they feed on the pests and enemies of the crops, including worms, grubs, borers, flies, cutworms, codling moths, aphis, and other insect life, including their larvæ, without doing damage to agricultural and garden crops. O. N. DENNY.

We fed our young pehasants every kind of bug and larvae we could find, and they ate evergything except the potato bug. As they search the trees as well as the ground for their food, they may yet be found a factor in the destruction of the gipsy moth.

In answer to the query as to whether they drive out other game birds, Judge Denny says: "No, it is not true that these pheasants drive out other birds. On my farm the grouse and partridge are as plentiful as ever, and I often flush grouse and pheasants from the same cover."

The arrangements, now nearly completed, will enable us to raise hundreds of pheasants for disribution all over the State. An excellent plan for the distribution is to furnish breeding birds to game clubs and public spirited individuals, who are willing to build aviaries and hatch and liberate young pheasants on public grounds. If the young birds are allowed to go out when from six to eight weeks old they will return to the coop to feed for several weeks, thereby establishing a locality which otherwise they might not obtain.

Should this plan be acceptable the commission would furnish breeding birds and information to such parties, and in this way the stocking would be greatly facilitated. There would be no difficulty in finding any number of public spirited persons who would be willing to contribute their share of the work.

As these pheasants belong to the fields as well as to the woods, living in summer on grubs and injurious insects, the farmer will find it to his advantage to protect them.

THE LAST DAY OF THE SEASON.

One could scarcely say that December 31 was an ideal day, such as you read of, but it was the last of the Indiana open quail season, and that certainly covers a multitude of faults.

With about five inches of snow and the thermometer fooling recklessly with the zero mark, the conditions didn't savor much of that bracing November air that seems so invariably connected with the quail hunt tales. The opportunities for a day off this season had been mighty few, and this last one had been longingly looked forward to. After discreet remarks with our farmer friends as to how the "hunters were treating them," and "if they had any birds left," we thought the vicinity of Milroy, twelve miles north of us, held our best chances.

That meant a breakfast before daylight, but we were equal to it, and without daring to look at the thermometer, we started—my fifteen-year-old brother and myself, and our much-thought-of son of Robin Adair, Pedro. Pretty cold drive that. To thaw out we took a brisk run from our friends' barn to the woods, where we felt we would find them. A short walk there soon showed us that we had struck the right cover. Those tell-tale tracks were fresh, and we followed the trailing dog as closely as the thick growth would permit.

Presently much sought whirr told us they were up. "Did he flush?" I thought; but a few steps showed the dog firmly pointing a tree top twenty yards ahead.

An hour's hunt through that patch was rewarded by the sight of one lone bird, which flushed very wild and headed for another woods three hundred yards away. The rest were turned to snow for all we knew. We concluded to hunt up the single one, especially as it went in about the right direction. That's where we struck it.

I was on the fence trying to locate the bird when I saw Pedro stiffen out close to a big brush heap. I called Ed, and after telling him to keep cool, I kicked the pile and a fine covey got out instead of the single one we expected. Guess I needed the advice most myself, for Ed. got in a cracking good double, and I had to be content with one.

Those birds scattered throughout the thicket. Mean shooting? Well, I rather think so. About that same kind as when one flushes an old woodcock in late September and gets a glimpse of him as he twists around a clump of willows. But how good you feel when you see the bird fall.

The lad had two the best of me when we worked around toward where a corn field joined the woods. Here Pedro pointed, Ed. stopped and I went next to the fence. To my surprise three birds flushed thirty yards in the corn, and after an upward flight that started over my head, looking to me for all the world like a bumble bee race to a pet clover field.

When the little gun cracked twice and Ed. yelled, "You got 'em both," I don't think you could have handed me a ripe peach. The dog still held, though, and after a quick loading up I kicked two more up, in front of me. We saved them nicely—Ed. one and I the other.

A hunt through the upper end of that woods found us two more coveys. These scattered badly, and it took time to get them out. Then, too, the birds always had a happy faculty of having a convenient clump, or tree top, to twist around, and they did it. But we had sport, and several times that brother of mine showed me that his first season's shooting was mighty near phenomenal. Nine birds in that cover was mighty good for a fifteen-year-old lad.

We scored up 21 birds and two rabibts. True, not a large bag, but a well earned one, and the memories of a delightful day W. T. WEST.

ROUND ABOUT NEW ORLEANS.

[*From a Staff Correspondent.*]

Trout Cultivation.

General F. F. Myles, always progressive and alert, has recently attempted the cultivation of rainbow trout in this section, by stocking some spring-fed ponds with one thousand fry, at the Retreat, near Lafayette, La. where he keeps his large kennel of dogs, and where he seeks relaxation from business in the sports of rod and gun.

Should the experiment prove a success, it will undoubtedly be an incentive to further and greate: at empts in fish propagation.

General Myles recently took a shooting trip to the Retreat, after having made a visit to the great salt mines of his company at Avery Island. The mines are a wonder in their way, consisting of a lump of pure, solid salt, large enough to supply the needs of the world. General Myles reports quail in abundance and snipe scarce

Duck Weather.

The long drouth was broken at last. Monday of this week it started in to rain, gently at first for a few hours, then after dark it started in earnest. The downpour during several hours of the night was constant and heavy. There is no cessation. The heavy big drops almost touched each other and came straight down. Intense lightning and heavy thunder were mixed with the storm. The din of falling water could be heard everywere in all its variety of sounds of roof, sidewalk and waterspouts. All the water channels were soon overcharged and their fussy rushing soon grew to a steady overflow, which later filled the streets from walk to walk in some sections; in others the sidewalks were submerged to a depth of one or two feet. Belated pedestrians waited in vain for the flood to subside. The returning theatregoers caught the storm at its worst. After waiting to no purpose, at last the men would take off shoes and stockings, then wade through the deep water to the opposite side. The example once set, was followed in general. The ladies were not afraid to wade. But, alas! there were many mishaps in the black water and its white contrasts. As everyone knows, the drainage of New Orleans flows on the surface, in the gutters on either side of the street. Although a sidewalk may be ten or fifteen feet wide a single slab of stone, or at most, two, covers the gutters at the cross walks. To walk accurately across the streets and strike those slabs submerged as they are in water, was a task which all could not accomplish. As a consequence, many were the ones which toppled over into the water. One gentleman, gallant and zealous, attempted to carry the idol of his heart across. He took her up in his arms and started forth boldly, not to say proudly. According to all the forms of romance he should have succeeded. But he didn't. They both went down into the dark and chilly waters together. In romance the heroine shrieks, but this one squealed.

Improvised bridges were soon up, built by enterprising bootblacks and gamins. They enacted five cents toll for passage, and did a good business for several hours. The reporter of a local paper, with the winning audacity of the guild, without any questions, started to go across one of the bridges. The promoter of the syndicate demanded five cents.

"Have you a license to build a bridge and demand toll?" said he, as his thin lips curled in lofty contempt. Not a word in reply, but the bridge was instantly kicked from under him and he was raging in the water in the glare of the electric light.

He accumulated himself quickly and paced swiftly out of sight amidst the ha! ha! of the populace.

But it was great duck weather. Nearly all the ducks had been driven to the larger bodies of water, which had not been dried out by the drouth. There was no flying in and out to feeding and roosting grounds, for the sloughs and smallest streams of the prairie were dried up. From being shot at a great deal, they became wise and stayed out near the center of the lakes.

Still, a great many ducks were marketed notwithstanding the shooting disadvantages of the season.

An old duck shooter told me yesterday that he never saw so many mallards and pintails in the big lakes as there were this season, which he said was easily explained: The mallards (called French ducks here) and the pintails (called pinion queue) preferred the swamps in the woods and the sloughs and small water holes so numerous in the prairie, but all these being dried up this season they were forced to frequent the larger lakes. Since the heavy rain of this week they have betaken themselves to their favorite haunts in prairie and woodland.

The Duck Grounds.

All the southern portion of Louisiana is peculiar in relation to both its features of land and water. It is supposed that in times past the whole southern part of the State was made by deposits from the Mississippi River, making an alluvial soil of great depth and richness—that is, the section of country south of the hill country, and bounded on the east by Pearl River, a boundary line between Louisiana and Mississippi, and on the west by the Atchafalaya River, which in itself is not a river proper, but is a part of the intricate bayou system of the State. It has its source in the Mississippi at the northern point of Pointe Coupee Parish, and it carries an immense body of water from that river in a shorter and straighter course to the Gulf. Indeed, a few years ago, so great was the widening and deepening of the Atchafalaya year after year, particularly during the period of springtime flood in the Mississippi, that the greatest apprehension was felt lest the latter stream should change its channel permanently to the Atchafalaya and leave the cities below with nothing but a great river bed to mark where once was the Father of Waters. Had it done so, New Orleans would have lost much of its commerce. Still, the Atchafalaya now serves to relieve the Mississippi of a great pressure during the heavy spring floods when the Ohio and Missouri and the Mississippi above the snow belt break up from their winter rest. Between the Atchafalaya and the Pearl River are numberless bayous which tap the Mississippi, chiefly on the southwest side, as the river swings on a southeast course to the Gulf. They really form deltas within delta. They undoubtedly assisted in forming the alluvial soil of the State.

Many of the bayous are higher than the outlying adjacent country, the surface of the ground sloping in a gentle watershed away from the bayou. This is contrary to all one's preconcieved ideas of streams and valleys. A stream running along the backbone of a ridge seems anomalous. However, it should not be forgotten that these are not streams having their source at the head of some valley and depending upon its water shed for their supply, but streams having a constant supply at their head in the greater stream.

They run very even in depth and width and fall, as might be expected of streams which inverted the common order of cutting their way through the soil, by building its own bottom and sides instead. But how could a river build its own bed and sides? It could not ordinarily, but it could under the peculiar conditions of the lower Mississippi. In the time of flood, that river is laden with sediment, the detritus of the great valleys of the Ohio, Red, Missouri, Tennessee and of the Upper Mississippi and its tributaries. When it reaches Southern Louisiana the watershed is not great. The water rushes into the bayous and overflows them. The greatest deposit is near the bank, gradually growing less and less as the distance from the banks is greater. When the water recedes, the bayou has built its banks higher than the outlying country. Of course it could not build them up in a sharp slope, as such would make a swift fall and naturally cut itself away. This action repeated for centuries, would gradually build the outlying country higher and higher, though of course it never could be higher than the level of the original water supply. From this peculiarity one sees the paradoxical sight of a steamboat plying through some of the bayous of the interior, the steamer seemingly being higher than the level of the surrounding country, as indeed it often is. This highness of the bayou is greatly increased sometimes in the smaller bayous, more sluggish of current from being laden with sediment. The bayous being unable to overflow and deposit it on the surrounding soil, a large part of it is deposited on their bottoms, thus raising them. As the bottom is raised it necessitates a corresponding elevation of the levee. Of course, all the bayous are not so. Some have settled to steady channels and permanent banks.

Any one who cares to do so can see the same work going on at the delta of the Mississippi. Any map will show the manner of its working.

It will show the river running through a long tongue of land into the Gulf. The wonder is how it should follow the tongue of land to its extremest point. The explanation is simple. It made the land itself. The same process of land formation is incessantly going on at the delta. What are now North Pass and South Pass and Main Pass and Grand Pass, may centuries from now be great streams, ramifying from the Mississippi as the Atchafalaya, Bayou Lafourche and others do now.

As might be gathered from the foregoing, the alluvial land is quite flat. Along the Atchafalaya and the coast there are thousands of acres of marshes. In some of the building up process, the freaks of the water left numerous lakes. The alluvial bottoms and marshes produce food in abundance, and with water, marsh and food supply, and a mild climate that section is the natural winter home of the duck. It is a vast winter resort for them. The network of bayous along the coast and thousands of square miles of marsh and lake, all well stored with food, could harbor and feed comfortably all the ducks of America.

But even in a marsh country, all the surface is not marshy. Some of it is dry and fertile. When cultivated it produces enormous crops. Still, in extremely high water, large sections, ordinarily, are in danger of inundation. In an overflow an astonishing quantity of sediment is deposited, sometimes one or two feet in places favorable to it. No healthier climate, however, can be found than that of Louisiana.

Lake Catherine.

Last Wednesday Captain J. K. Renaud called on me with the pleasing information that a duck shoot had been arranged for me at Lake Catherine, and that General Myles had intended to accompany me, but business of importance intervening, he was forced to forego his kind intentions.

But the ducks were there and in abundance, he said, and he gave me much information as to where the best points on the lake were situated, and other needed information. I thought instantly that there was every reason why I should go duck shooting.

At 3.25 I was on the L. and N., when it started eastward on its run to Mobile. Lake Catherine is a station twenty-six miles east from New Orleans, named after the lake near which it is situated. The road runs through a very flat country, largely marsh with its heavy growth of coarse grass, or woods with an impassable undergrowth of palmetto and heavy, rank swamp growths. Along much of the way a deep and wide ditch had been dug along the right of way to get earth to raise the roadbed above the heavy tides or water driven in from the sea in heavy storms. Lake Catherine is a famous resort for duck shooters. It is at the extreme easterly point of Lake Pontchartrain, between it and Lake Borgue, and connects with the Rigolets, which connects Lake Pontchartrain with the ocean. It is about seven miles long, of varying and irregular widths, the widest being three miles.

Captain Renaud gave me a letter of introduction to Captain C. A. Jacquet, who lives about a mile and a half from the station. Thence the trip is made by boat, one mile of which is by the railroad, about thirty feet wide and ample depth for a boat, and the rest of the way by the bayou which leads to Lake Catherine. I found Mr. Jacquet's son, Mr. Peter, awaiting me through the prearrangement of General Myles or Mr. Renaud.

On landing, Mr. Jacquet received me with the grace and affability which only come from true kindness. Near the landing was a shed which, containing dozens and dozens of decoys, pirogues of different sizes, boats, etc., gave every evidence of sporting practices.

Now, it is not considered good form for a man to go into ecstacies over a good dinner, though he may caper as nimbly about good duck shooting as he pleases. But that dinner of gumbo file, black bass cooked to a turn, roast duck of delicate flavor, flaky biscuit, cold ham, claret and desert, followed by black coffee, is worth mentioning.

A dish of genuine gumbo is fit for any man, even though he be without sin. It is good in itself, but place a fiery, small green pepper in the middle of it, stir it up and it becomes the best dish either to tickle man's palate or rejuvenate his strength. Duck shooting is a great and enthralling attraction, but as between duck shooting and one of Captain Jacquet's dinners, give me the dinner. You don't have to get up at 4.30 o'clock in the morning to eat gumbo, either.

Soon after 5 o'clock we made the start for the ducking grounds. Mr. Fred Cober and Mr. Peter Jacquet, two as companionable and obliging young men as one would meet in a lifetime, and myself comprised the party.

The wind had blown hard during the night, and in consequence the lake was very rough. We were to make the trip in pirogues, the two young men in one and I alone in a smaller one. The boats to me looked all right as they lay high and dry on the shore. When they were put in the water they didn't look so large. When a dozen of decoy ducks were in one end and I in the other, a few feet apart, it looked still smaller. I was questioned about my knowledge in handling a pirogue, kindly but firmly. I confessed an ignorance of the pirogue, though I thought I knew a good deal of the properties of water.

They seemed to think I would do, so we started across the water into the night. The water looked awfully cold. I recalled many instances of the tenderfoot who tempted fate by getting astride bronchos and stepping into canoes and pulling lions' tails and so on. They all came to an unhappy ending.

The pirogue still looked smaller and the water colder. It was two miles and one-half to the shooting grounds. I wondered if duck shooting was really good sport when sought with a pirogue. I put my gun close to the bottom, for I had an idea that some ballast would not be a bad thing. Then I placed the cartridge box close on the bottom—they were safer there. The boat seemed to have no visible habits.

The pirogue is the nervousest boat imaginable. Some people may not know what a pirogue is, but if they learn to ride in one after they have passed their boyhood years by a score or two, they will never need a reminder of it It is simply a log dug out and sharpened at both ends, and as some logs are bigger and longer than others so it is with the pirogue, though they have the generic property of aground, slippery bottom and hair-trigger sensitiveness of perpendicular when in the water. Now, in riding a pitching broncho you have a firm, hard seat, a known quantity, a point of resistance, always; that is to say, it is not of the evanescent character demonstrated by stepping on a banana peeling. If a fellow cannot stay on he can at least look on where he had been. He can see where he was at. Not so with a pirogue.

After paddling awhile the boys waited under the lee of some rushes for me, and said they would give me a tow. I thought this was real nice of them and I said so, whereupon Mr. Coben told me they would rather do that than wait for me out in the lake. We started then across wind into the open lake, getting the full force of the wind and waves. We were in the trough of them, though they would not be considered big if a fellow were in a bigger boat. Then the little pirogue was in its delight. It would slip around in any direction regardless of natural laws. When a wave struck it sideways it would give me an unpleasant sensation that the boat and I could not agree and would part soon. Finally I learned that when a wave struck me on the windward side, I could steady the boat by giving a hard stroke on the leeward side. But when it reached the top of the wave it would land as lightly and feel as insecure as if one were astride a big soap bubble sliding down a cloud. All the time it was necessary to keep the whimsical craft in a straight line with the craft ahead, lest otherwise a sudden jerk of the tow line might throw the fairy boat over. I kept up a lively study of perpendiculars, indeterminate perpendiculars, ones attached to nothing, ones chasing each other about—it was too dark to see any fixed point and a fellow had to furnish his own center of gravity or go into the cold water. Coben shouted that we were in water forty feet deep. That was reassuring. It might have been eighty. At last we got across. We paddled down the Bayou Jeanne near where it empties into Lake Jeanne, not far from the Rigolets.

The east was flushed with crimson and gold as we set out our decoys, and prepared for the slaughter. We remained till midday.

How many ducks did we get? Peter got 23. As for how many Mr. Coben and I got it is better to let that matter rest. Some things don't improve by being too curiously investigated. We might have got 100 and we mightn't have got any. But at all events we had a good appetite when we returned to the house, and a good dinner made the world plesanter again.

But about the pirogue. It is easy to ride when you learn how. Do not sit in it too stiffly, but let the body move easily from right to left to maintain the center of gravity as the cranky thing skates around sideways, and don't get scared The latter must be strictly observed. Mr. Coben confesses he felt scared going across the lake, at which I marveled much, for there is nothing about a pirogue to scare one except the water. The pirogue is easy.

In the bunch of ducks killed by Peter were pintail, widgeon, (ziu zin), saw bill (beque seil), blue bill (dos gris), spoon bill (maque reuse) and grey ducks (canard gris). Mallards (French duck) had been in abundance. The local names are in the parentheses. Ducks were not flying much that day, though they were plentiful.

Some Fishes.

I had quite an interesting talk with Mr. Jacquet about the fishing resources of the section. The lake contains both salt and fresh water fishes. Redfish, sheepshead, black bass and speckled trout. It is fished with seines for commercial purposes and great quantities are shipped every day in the proper season.

Tarpon

But one piece of information will be of great interest

o tarpon fishermen in respect to their favorite fish. It s] commonly supposed that the tarpon frequents deep water. Captain Jacquet assured me that they had been often seen in the lake in shoal water not over a foot or two deep—great fellows, too. Several times they have been caught in the big seines only to break through to the great damage of the seine, or they escaped by leaping high over the seine. Only once did they succeed in capturing one, a big fellow 7 ft 9 in. long. Once they got a whole school in the net, fourteen in all. They escaped by jumping high over the net. Two nearly struck Mr. Jacquet, and one barely missed his son. The coast along Louisiana and Mississippi thereabouts abounds with them. One incident was most melancholy in its ending. The captain related the circumstances. A party of three young men were fishing from a boat near shore on the Gulf coast. Bait running short, two volunteered to seek bait ashore while the other one fished. After being put ashore they noticed that their companion had fastened a big fish. They encouraged him to hold on. Suddenly a big tarpon jumped out of the water straight at the lone fisherman, struck him in the chest with his head, smashing his chest in and killed him instantly.

Captain Jacquet scoffs at the idea of the tarpon being strictly a deep water fish. Mr. Cardona informed me they are abundant off Biloxi in the Gulf waters.

NEW ORLEANS, La., Jan. 11. B. WATERS.

THE CANVAS-BACK DUCK SUPPLY.

The author of an interesting and brightly written article on "The Ducks of the Chesapeake," in the January number of Lippincott's Magazine, predicts deploringly the extermination in fifty years, "of that finest of wild fowl in the world"—the canvasback.

He gives in circumstantial detail the premises from which he draws such conclusions. The present writer sympathizing deeply—as will all sportsmen—with him in his anxieties in this matter, proposes to examine into his premises to see whether they really afford grounds for his gloomy inference.

To do so it will be convenient to quote entire, from page 81 of the number, his paragraph in that behalf, marking alphabetically, in the order of their occurrence, the basic propositions therein. He says:

(a) "The breeding places of the Chesapeake ducks are in Canada, (b) where they are being destroyed in vast numbers by the cutting away of the forests which shelter the lakes and pools where they harbor, (c) and by the use and sale of their eggs. (cc) Thousands of these eggs are annually marketed, and by these methods, rather than by the numbers actually shot, they have been greatly diminished. This condition of things seems to be beyond remedy, since a State cannot make a treaty with a foreign power, and the general government is not likely to interfere on behalf of what is practically a Maryland industry, or to (d) provide such compensation as Canada might see fit to ask if a proposal was made to her to protect the ducks in their native habitat. So the prospect is that fifty years will see the extermination of the finest wild fowl in the world, and one of the most prized delicacies of the table."

From his context it is to be presumed that by "Chesapeake ducks," at the beginning of the paragraph, he means specially the canvasback, and possibly also intends to include the redheads, though the closing phrase "one of the most prized delicacies of the table" would seem to confine the application of the paragraph to the canvasback, certainly excludes the other common or inferior ducks. With this preliminary clearing of terms we will take up the lettered propositions.

(a) Canada extending conventionally to the apex, at the North Pole, of a wedge shaped slice of the terrestrial orange, the birds leaving the United States and going northward in spring, and returning thereto in winter only, may safely be affirmed to have their breeding grounds in Canada somewhere. We may therefore pass (a) as being correct.

(b) That they are being destroyed in vast numbers by "cutting away of Canadian forests which shelter lakes and pools where they harbor"—meaning by "harbor" live and breed—is news indeed to the present writer, who has spent nearly forty years in outdoor life in Canadian forests and prairie, from the Gulf of St. Lawrence to the Pacific Ocean, and has been observing and shooting wild fowl and other game every year of that time; and news to scores of shooting men in Canada of similar experience.

It would astonish such to meet one man, white or red, who could say he had ever seen a canvasback, or redhead either, nesting in lake or pool in the Canadian forests, whether of those forests that are being cleared away in the progress of settlement, or even in what could properly be called Canadian woods beyond settlements. Far to the north, where the forest dwindles down to scrub birch, spruce and willow, is, in my opinion, the summer habitation of the canvasback and red-heads that fly northwards along the Atlantic coast in spring from Chesapeake and other southern waters of that coast. But as, at the farthest north I have been (some hundreds of miles north of any Canadian settlements, and on waters of Hudson Bay) they arrived in autumn flying southward, i. e., from farther north. I affirm no personal knowledge of their breeding ground, and would have to refer inquiries to the Esquimax as probably knowing more about it.

(c) The Esquimax aforesaid may "use" and "sell their eggs," and (cc) for aught I personally know to the contrary, have markets where "thousands" of these eggs are annually disposed of, but, as the transactions would by the circumstances necessarily be of similarly profitable nature to those that occurred between the two small boys who tried to make a fortune by swapping knives all day while confined by rain to the barn, I fear that the industry would, notwithstanding the complete protection it must enjoy in that region, soon die a natural death.

(d) On this score Chesapeake sportsmen need not be stimulated by the Lippincott author to take any diplomatic action towards inducing Canada to legislate in protection of wild fowl.

They may, after perusal of that author's remarks, be surprised to learn that no State in the Union has more rigid laws protecting wild fowl and their eggs than those in force and strictly administered in Canada. The game laws of some of the States are, or were, I should judge, more lax than those of Canada, if personal experience, when South, of what I could shoot and when—on authority of hospitable and kindly local sportsmen—is to count.

The summing up, therefore, is that if the extermination within fifty years hence of the Chesapeake canvasback hinges—as affirmed by the author quoted—on the methods of its destruction practised in Canada, indicated by him, the sportsmen and epicures of the United States, and elsewhere, may consider the time limit of such extermination as indefinitely extended.

MONTREAL. COUREUR DES BOIS.

TEXAS AND THE SOUTHWEST.

A Pot Shot.

The Corpus Christi correspondent of the San Antonio Express is again suffering from an attack of drawing the long bow, or he has accidentally stumped his toe against a full grown truth. He says, January 12, that Ed. Grant, pot hunter and ragtag and bobtail par excellence, killed 60 ducks in two shots while hunting on Mustang Island.

The most abominable thing on earth to my thinking is a pot hunter that kills for profit. I have met market hunters, lots of them. Some were very bad, but I have met some of whom a good word might be spoken. This was a fair man. He paid his debts and always killed his birds on the wing, and his neighbors never knew him to pot anything. But here is a fair sample of the coast pot hunter, and he has killed sixty ducks. The daily press, always anxious to record great deeds and daring feats, puts a three-story heading over it and says to the world that Ed Grant has killed 60 ducks in two shots. Corpus Christi should hide these things. The fair little town should know that she loses caste when she announces to the world that such a thing exists as "Ed Grant."

But while I am under the pot hunting heading, let me say a few words about the city high-toned gun club men whom I saw "potting" a few weeks ago on a favorite duck shooting resort. There was a pair of them—and a precious pair they were—and they went hunting on the premises of one of nature's noblemen without even indulging in the courtesy to ask his permission to do so.

For at least half an hour the pair were heard across the lake. They were endeavoring to hire the privilege of shooting from a pot hunter's blind and over his decoys. The P. H. wanted $2. They offered $1, and spent an hour trying to jew down the price. They finally offered $1.50, which was reluctantly accepted. Ah! They are off! They reach the blind and the business begins.

About the first thing that comes along is a nice bunch of blue bills. They pass over the flight shooters, a pair of birds are killed and the birds fly down to the occupants of the pot hunter's blind, and as they hover over the decoys the precious pair empty their guns at them. Presently a pair alights and the birds swim amidst the decoys when the murderous discharge cuts them down. Can the pot hunter do worse?

He does not shoot nitro-powder, and he lets the ducks gather in larger numbers than the city club pot hunters do, but are they any better than he is? Guess not. I should have said two pairs, instead of a precious pair in the beginning of this narrative, for besides the pair spoken of there were two others. They were said to be Chesapeake Bay retrievers. One thing is certain, however. Their education had been sadly neglected as far as water was concerned. It was great fun to see the owner of one of these dogs giving him a lesson in retrieving. The owner undoubtedly thought it strange when the animal resented having a blue bill stuffed down his throat and his middle pounded on as if it were a drum. Suffice it to say that the dog didn't retrieve worth a cent, and its owner returned to the blind to "pot" some more ducks.

There are pot hunters and then some—we'll let it go at that.

The Gun Was all Right.

Last week one of our popular gun stores was visited by a farmer of Teutonic persuasion. He was grisly with whiskers and his embonpoint gorgeous. He wanted a gun—a cheap one He was shown several modern engines of game destruction, but the prices were all out of reach of his finances. He didn't like the place. He couldn't do well there.

The gun store man happened to think of an old Zulu gun which had been exchanged for a more modern arm, and desiring to rid himself of it offered it to the old farmer for $2. The price was all right and as the hayseed clutched the 15 pound hammer and raised, a widespread look of satisfaction settled on his complacent features as gracefully as a belated green head drops his legs in a puddle at nightfall. He blew in the muzzle and got red in the face. With a look of withering scorn he handed the gun back to the store man remarking that the gun wouldn't shoot. It was stopped up.

"Oh, that's all right," replied the merchant as he place a big new hat cap on the nipple. It is a little dusty on the inside. This will blow it out."

I should think it did. When the smoke cleared away the horrified gun man found that the hidden load had ruined about 10,000 much advertised top wads, blown out of existence a whole row of petmecky cleaners, to say nothing of the hole in the wall and the fine of $10 which he had to pay in the morning.

The farmer was the first to recover his equilibrium. His extended hand contained $2, which he gave to the dealer. Then he grabbed the Zulu and waddled out with the air of a farmer fully convinced that the gun could shoot.

Pneumonia Killing Fish.

About two months ago the Crystal Ice Factory, located on the upper part of the San Antonio River, had its ammonia vats cleaned out and the contents emptied in the river. The experiment killed thousands of fish and wagonloads of the stupefied denizens of the deep were carted away.

Mr. Lanning, a visitor from Chicago, who is a devoted disciple of Isaak Walton, procured a boat near the Lone Star brewery, where the water is deep and blue, and tried the depths for black bass.

As he floated down the stream he passed a fair specimen of the broad-jawed loafing-fishing "nigger" and asked him, "What luck?"

"Lor', massa. Ise jest been fishin' hyar fo' mo' den fo' hours an' nevah did get a bite. Evah sence the Crystal ice factory put dat noomonia in de water day ain't bin no fish in de ribbah, sah."

En Route to the Coast.

Jolly Charley Willard of the Colts Firearms Company, accompanied by Messrs. Marvin Hughitt and Mark Cummings of Chicago, passed through San Antonio in a private car en route to the coast, on the 14th. They go to Rockport, from where they will sail for Kemp's place, where they are sure to find plenty of canvasbacks and red heads.

Messrs. Ernest Stevens and A. C. Guessay of San Antonio will join Colonel Sam Allen and his two sons at Houston for a week's frolic on the Galveston Bay. This is an annual party which never kills much game, but, oh! how they live and how much fun they seem able to pound out of life. That's just the party Hough would like. They'll do well

Dog Stories.

I don't like to inflict them on an unoffending people, but there is a man in San Antonio who always bores me by relating some impossibility performed by his old dog. I have warned him repeatedly not to do it again, but he gathers himself together, takes a fresh hold and then gracefully slides to second. Here is one of them:

Scene, depot. Train coming at full speed. Dog on track, tail up toward the train. Doesn't wag his tail sufficient to flag the train. No time to lose. Remembers the dog obeys every command. "Charge!" the owner suddenly commands and the ever faithful pedigree-as-long-as-your-leg-Llewelyn setter "charges" between two rails. Train thunders over dog, passes, and master and dog are merged into one crying, suffocating mass.

TEXAS FIELD.

CORPUS CHRISTI.

NEBRASKA'S GAME FIELDS.

Omaha, Neb., Jan. 19.—The committee consisting of J. B. Miekle, Frank Parmelee and Fred Montmorency appointed at the general sportsmen's meeting some three weeks ago to go to Lincoln and see about getting the new game and fish laws in the hands of interested members. report that they were cordially received, and have even reason to hope for a favorable consideration of the matter in hand. The bill providing for the protection of game and fish was entrusted to Representative W. H. Harrison of Grand Island, one of the most prominent and enthusiastic sportsmen in Nebraska; the bill providing for a State game warden to Representatives Hargrave of Sutton, another old sportsman, and the bill providing for a license for non-resident sportsmen to Representative Crow of this city, which is guarantee enough that it will not be neglected.

The wild fowl shooters are becoming apprehensive that the coming spring will afford but meager sport in this line. Most all of the most famous feeding grounds last fall were baked as hard as cement, and the shooting was the poorest known for years on this account, and as up to date we have had absolutely no rain or snow here this winter the shooters are making up their minds for another disappointment. The flight of the wild fowl last fall was all down the Mississippi Valley, hundreds of miles east of here, and if the same conditions prevail this spring they will assuredly return north by the same route. Last March I spent two weeks at Goose Lake, four hundred miles west of here. The water averaged ten feet all over the lake and our bag reached over a half hundred canvasbacks and redheads. I put in another two weeks at the same place last October. The water was not a foot deep in the deepest place, and our bag summed up 26 canvasback and probably 150 mixed. The Sandhills people, however, claim that their lakes are not dependent upon rain and snow for their supply of water, but upon the countless springs with which the hills in a lake country are filled. They claim that after a long summer, and with no extra rain or snow falls during the following winter, the lakes will be recharged through February and March from this source to their normal depth. I take little stock in this, however, and still it may be true. I heard just this week from both of my favorite haunts, and in neither was there any more water than there was in October.

If the ducks and geese were scarce in the sandhills this fall there was one beautiful game bird that wasn't, and that was the avocet. One afternoon in the upper shallows on Blue Lake, which is one of a chain on one which I do a great deal of shooting fall and spring, I saw them by the thousands and tens of thousands. They were feeding upon the tiny mollusks with which these waters teem; and the whole upper end of the lake, possible two or three hundred acres, was dotted with them as thickly as you ever saw sea gulls. I got a good position in the reeds, and in one hour's shoot killed something like seventy birds.

The first shot put them in noisy flight, but they decoyed well to the dead and wounded, kept circling, and for the period mentioned furnished unexampled sport. The avocet, as is generally known, belongs to the grallatorial family. It has a long bill turned up at the end like a sickle bill curlew. It also has very long wings and exhibits a general white color, but the back and wings of the male are a deep velvety black, while those of the female are a brownish-black.

They are extremey plentiful in the Sandhill lake country, and are a capital table bird, especially if skinned before baking or broiling. Unless this precaution is taken or unless the bird has been killed and neatly dressed for many days it is quite apt to be a trifle strong for epicurean taste.

Geogre Strong, while rabbit hunting west of Bellevue Friday killed a handsome specimen of the Artic owl, also a garter snake, and with the thermometer at the freezing point at that. SANDY GRISWOLD.

CHICAGO AND THE WEST.

Maybe Not.

Chicago, Jan. 19.—The press reports for this week state that the celerbated outlaw, Bill Cook, has been captured near Roswell, New Mexico. The despatch is sent from Fort Stanton. This is all country where I used to live once, and at that time I used to think that if I had committed any crime and wanted to escape I would hide in that country so that no one on earth could ever find me. But study of the past shows that a great many intelligent young men in the outlaw business have come to grief in that country, and since Col. Bill Cook's nabbing, before he had time to learn which way the Pecos River was running, leads me to feel less confident in my ability to pull the hole in after me in the mountains of my old hunting grounds. A fellow might, but maybe so not. This country is all going to the dogs. That corner of the world used to be a real nice place in the days of Billy the Kid and before Pat Garret's time.

Compliments to Conan Doyle.

Mr., or Dr., A. Conan Doyle is the last Englishman to strike the American pocket in a good place. Mr. Doyle writes some mighty good stories, and some not nearly so good as that. Of course he writes of America, and uses American dialects. For all this one can forgive him, but when he comes to writing of Arizona and Montana as being slap up against each other and speaks of Arizona as a country where the deadly upas tree and the tropical jungle and all that sort of thing grow on the low, damp morasses and the hot, humid air, I think A. Conan is off his trolley a whole lot. But A. Conan wrote that before he came to America. Perhaps now that he has come he is sorry he had not come before he had wrote it. These Americans are such extraordinary persons!

Hardy Bill Hamilton.

Mr. J. D. Losekamp writes from Billings, Mont., as below in request to a late illness of our old friend, Uncle Bill Hamilton, of whom I have lately written so much. It seems that he can't learn that he isn't as young as he used to be. Mr. Losekamp says:

"No doubt you will be interested to hear about our friend Bill Hamilton. Bill has been quite sick. A letter from Col. Ike Allen received this morning states that our old pioneer friend has about pulled through. Owing to the very fine weather Old Bill was over confident, so one day he donned his straw hat and with a pair of carpet slippers on he went down on the ice near his house and began fishing for the festive trout, lingering unusually long to catch the last fish, when all at once he was caught with pneumonia. It gave the old man a close call, notwithstanding he took it in his uusual lighthearted way.

"From letter under date of January 12 I am informed that fishing through the ice is good, but my time is too much occupied to enjoy the sport."

A Whack at the Nobility.

I was speaking of Colonel Doane, or Conan Doyle, a moment ago, and before I forget it must have another whack at his country. There is a theatrical company in town this week, "Gaiety Girl," all the way from Lunnon, seeking en passant, as we say in Chicago, a few more American piastres. There are not many jokes in the performance, (which, I believe, in England is called a comedy, but ranks here as a tragedy), but there is one thing which is strange if true. One sweet thing says to another sweet thing:

"Of what use are the nobility at any rate?"

"Oh," says the second s. t., "if it weren't for the nobility and their shootin', how would the game markets be supplied?"

There were only a few bright beings like myself who fell on to their joke, But it cawn't be, now cawn it, that the nobility of England are all market shooters? If so, we will be obliged to reclassify some grades of our society and set right a great wrong which has long been done a member of our social system, to wit, the market hunter.

Curling Irons at Milwaukee.

All this week there has progressed at Milwaukee the biggest curling bonspiel ever known in this country, and apostles of the broom and stone have gathered there from all the cold country of the western and northwestern States, and from all over Canada and Manitoba. Winnipeg has sent down her best men, including the famous team of which Mr. Thomas Johnson, well known to the kennel and sporting world, is a member. By the way, it was the Winnipeg rink that came into the last competition with the Statesmen yesterday for the international championship emblem, and Winnepeg lost to the Yankees by just one solitary, lonesome point. That, I feel sure, was because Thomas was not elected to make that last shot, which should have scored four, and only scored a miserable little one. But Mr. Johnson is coming over to Chicago this week, and he will tell me how it happened.

The Great Lone Land.

Speaking of Manitoba, reminds me of a late clipping from a Winnepeg paper kindly sent me by Mr. Johnson, which describes the return of Mr. J. B. Tyrrel of the Dominion Geological Survey, and Mr. Ferguson, extra A. D. C. to the Governor, from a seven months' trip through the great lone land of the sub-artic country. These gentlemen had traveled probably 3,000 miles by canoe, sledge and snowshoe, and had traversed country never before visited by white men. They walked 700 miles in the last month. Mr. Tyrell spoke as follows of their hazardous journey:

They started out on the journey from Selkirk on the 15th day of last June, and went from there to Cumberland House. Going up the Saskatchewan one of the canoes upset, resulting in the loss of some trifling articles, among which was a pair of carrier pigeons.

From Cumberland House they went northward over the Hudson's Bay Company old canoe route by way of Big Frog portage to Churchill River. Following this adown stream they reached Deer River, which took them into Deer Lake. Across this they paddled until they reached a trading post at its northern extremity. From this to Churchill on the Hudson's Bay was a barren expanse, with not a white man to be seen. It was an entirely new country, one in which they were particular to make careful geological surveys. Having reached White Partridge River, Mr. Tyrrel knew that of necessity its outlet should be in Hudson's Bay, for the year before he had navigated a river still further north and had found that to empty itself in the bay. Accordingly they followed the course of the stream until it brought them to Neville inlet, which is about 300 miles north of Fort Churchill. For three weeks prior to reaching Neville inlet they didn't see the sun. The weather was quite wintry like, with northeast and southwest winds blowing the drifting snow. This was on Sept. 18. The shores of the bay were then skimmed over with ice in some places, for winter had set in. Navigation was not a thing to be desired, in a light canoe. Paddling down along the western shore of Hudson's Bay for a distance of 300 miles they arrived at the mouth of Churchill Bay and enterad the fort on Oct. 1. Here they remained for two months. They were too late to undertake the return trip by canoe, and too early to go a foot, as the rivers had not yet frozen solid enough to allow of crossing upon the ice. The two months spent at Fort Churchill were not lost, on the contrary the gentlemen had an opportunity of studying the nature of the surrounding country, watching how the traders carry on their work, procuring trinkets from the Esquimaux and the Chippewa Indians, and in many other respects of gathering interesting data. At Fort Churchill the only business is trading. Twice each year the Chippewa Indians come in to the fort with skins, furs, etc., for which they receive in exchange some provisions, though not very much, clothing, ammunition, etc. During their stay here the semi-annual visit of the Indians and Esquimaux was made and the explorers were thus enabled to purchase a team of five Esquimaux dogs for the return trip. Dogs are very scarce here, in fact, it would have been impossible to procure them had they not been brought in by the natives. At Churchill there are about forty white people, all English-speaking. There is also here a representative of the Church Missionary Society.

On Nov. 30 they set out on foot for home and struck across country to the Nelson River, thus avoiding the circuitous route via York Factory. They struck the Nelson at Split Lake, not far from Norway House. On Christmas Eve they reached Norway House, where they met the first white people they had seen since leaving Fort Churchill The tramp down Lake Winnipeg was fraught with much hardship. The wind was constantly blowing and the cold was intense. The first ice that formed on the lake more or less melted, and thus when the second coating came, the surface was very much roughened, making travel exceedingly laborious. The entire distance from Fort Churchill to Dog-Head, some 700 miles, was covered on foot.

North Dakota Sportsmen's Association.

The sportsmen of North Dakota will hereafter have an organization, the first of its kind in the history of the State. Few States need such a body more than North Dakota, for in few States has the game been more ruthlessly and disastrously destroyed, in no wise so much as by the illegal non-resident shooters. The young association will have plenty of work to do, and I hope it will not lose sight of its original aims and become a mere trap shoting body, as so many other State associations have done.

The meeting of permanent organizations was held January 15. The first annual meeting will be held at Fargo. The following officers were elected to serve until the next annual meeting: President, C. E. Robbins; first vice-president, J. A. Rankin of Jamestown; second vice-president, W. L. Wilder of Grand Forks; secretary, W. W. Smith; treasurer, H. E. Magill; attorney, Judge W. H. Winchester of Bismarck.

The president appointed as a board of directors, August Roberts, chairman; J. A. Rankin, S. S. Lyon, G. A. Carpenter and G. E. Bowers As a law committee, S. S. Lyon, chairman; P. Blewitt and A. B. Guptill. As a tournament committee, G. E. Bowers, chairman; C. Smith and G. A. Carpenter. It was decided to hold the membership list open till the first annual meeting, and that all persons elected and subscribers to the constitution and by-laws by that time shall be considered charter members of the association.

Among the gentlemen present were: A. J. Schirrman, G. W. Garrett, H. E. Payne, W. H. White, J. J. Rentschler, H. E. Magill, B. D. Schofield, G. A. Carpenter, G. E. Bowers, J. D. Henning, F. B. Manning W. F. Cramer, G. B. Schofield, C. W. Bowers, A. B. Guptill, Nick Paul and C. E. Robbins.

Duck Island Club.

The Duck Island Fishing and Shooting Club, whose famous duck preserve is in the old Spring Lake tract of the Illinois River and whose membership is made up of men from that country and from Chicago, held a meeting at Peoria, January 15. Reports and routine business took up most of the time and the treasurer showed a good record. The following officers were elected: Ferd Luther, president; W. L. Shepard, vice-president; N. E. Huggins, secretary; H. A. Fahnestock, treasurer. The above, with addition of W. H. Shaw, also make the directory.

A singular thing has happened in the record of this club. They were troubled with low water, which of course hurt their shooting, so the directors resolved to take the weather into their own hands. They put in a great pump, which transfers a stream about a foot square steadily from the Illinois River over the bank and into the club marsh. This fall there were fifteen inches of water all over the marsh, and the members are hugging themselves over the way they solved the low water problem so effectually and permanently. Now they have plenty of feed, plenty of water and plenty of ducks.

What show has a duck got against a man, anyhow?

Proposed Illinois Law.

The executive committee of the Illinois State Sportsmen's Association met at the Sherman House Thursday evening, January 17, present Mr. Shepard, president of the association, chairman; R. B. Organ, Messrs. Abner Price, F. M. Hamline, C. S. Wilcox, A. C. Patterson, also Mr. Herman Meyer, secretary of the association. Most of the evening was taken up in careful discussion of a game law drafted by State Warden Charles Blow, which was approved with some few small additions and changes, which were annotated on the printed copy. This bill would open the shooting date on all game birds, except quail, on September 1, closing it January 1, thus cutting off spring shooting. The open date on quail would be October 1—January 1. The sale of game would be forbidden except between dates extending five days after the opening day and five days before the closing day of the season. This would stop early shooting and late selling, and would cut off January, one of the greatest game selling months. No game would be exported, and all confiscated game would be turned over to charitable institutions. No rifle would be allowed used on lakes or open waters. No hunting on enclosed grounds without first obtaining owner's consent would be allowed. The most noticeable feature of the bill is the clause requiring any shooter to pay $1 for yearly license. A scientific or collector's license is set at $20 yearly. The license fees are to be turned into a game fund, to be used in paying a salaried chief warden and assistant wardens, also in propagating game birds.

Mr. Price thought much good could be done even if the present law were enforced. The committee resolved to do all they could to that end. Mr. Hamline thought the daily press should have news of the committee meeting in protective matters; the secretary was instructed to furnish proper reports to the city papers.

Mr. Patterson called attention to the fact that at the last convention a $10 assessment was laid on each club of the association to raise funds for protective work, and that only a few of the clubs had paid this assessment. It was made the sense of the committee that all such delinquent clubs should be at once notified once more, and if they did not pay up immediately that they should then be dropped from membership in the association.

On motion of Mr. Price, it was put on record that the committee would rigidly enforce the rule against dropping for place in the touranment shooting. The members of the executive committee all expressed themselves as vigorously opposed to crooked shooting.

And Still They Go to Texas.

The tide of Forest and Stream travel to the happy hunting grounds to Texas still continues and increases. The last party to start from Chicago for Rockport is made up of Messrs. W. D. Boyce, a well known publisher here and owner of the new Boyce Building; Mr. Wm. McKnight of the Briggs House, and Sheriff James Pease. These gentlemen will go direct to Rockport, and I have sent them to our old friends, the Bludworth boys and the yacht Novice at that point. If they do not have a good time there they will be the first ones who have not.

The Butte Fatality.

So far as known at this writing no sportsmen were injured at the great Butte casualty of the present week, in which so many lives were lost by the explosion at the depot fire. One old-time hunter by name of Johnson is reported killed. He was just preparing to take a party into the mountains—for what reason I cannot say.

909 Security Building, Chicago. E. HOUGH.

THE SPORTSMAN'S ASSOCIATION.

New York City, Jan. 19.—Editor Forest and Stream: The Sportsmen's Exposition Association recently held a very interesting and important meeting. On January 8 the officers decided to have the association incorporated. The necessary papers were prepared, and I have the pleasure of reporting that the inccorporation of the association is now consummated. The association will be known hereafter as the Sportsmen's Association. The particular business of the corporation, or the operations for the conduct of which it is incorporated, is the study of field sports; the holding of expositions promotive of field sports; the establishment of assembly rooms or headquarters in New York City, where those interested in field sports may assemble; and incidentally the founding of a sportsmen's library in such headquarters for the use of members and visitors The principal office of the corporation is to be in New York. The names of the incorporators are: Charles Daly, John S. Wise, J. A. H. Dressel, Jacob H. Studer, Frederic S. Webster. The names of the trustees for the first year are: Charles Tatham, Charles Daly, Frederic S. Webster, J. A. H. Dressel, J. Von Lengerke, John S. Wise, Jacob H. Studer, Archibald Rogers.

The intention of the corporation is to acquire as large a membership as possible, and a vigorous effort will be made to enroll every sportsman as a member. This may seem a herculean task, and not possible of accomplishment, but the support of hundreds of sportsmen can be reasonably expected. When the constitution is made public the advantages to be derived from membership will be evident to all sportsmen who have the general welfare of the fraternity at heart. It is believed that much permanent good will result from the founding of an association of this character. The policy of the trustees will be all that could be desired.

The interest in the forthcoming exposition of the association is daily increasing. The spaces are more than half taken by the leading firms and associations. Many of the exhibits are very unique and attractive and prepared especially for this occasion. The historical and educational features enter largely into the character of the displays.

The first annual trade convention of the corporation will be held May 16, 1895, at 3 p. m., during the week of the exposition.

Special arrangements will be made with all the railroads in the United States for one and one-third rates to all persons attending the convention.

Full particulars will be furnished by all local ticket agents at the proper time. This is an arrangement which will enable all sportsmen and people who desire to visit the exposition to do so at a reasonable expense, and this opportunity, and the splendid and elaborate character of the displays, and the benefits to be enjoyed should ensure a rousing gathering of sportsmen from all parts of the country. FREDERIC S. WEBSTER, Sec.

ALLIGATOR HUNTING IN MISSISSIPPI.

Alligators are known to be very fond of young pigs, and they are quite a nuisance to the farmers who are eking out an existence along the banks of Black River. During the fall of 1894 there was quite a drouth in that locality, and the swamps were about as near void of water as they had been for years. As a consequence the alligators had taken to their winter quarters, which were holes made in the bank of some slough or low-lying lake. These holes frequently extended some thirty or forty feet back from the opening, which is usually very little larger than the alligator. These places contain water when everything else goes dry, and the alligators take to them and get their living as best they can. Sometimes a pig will come along, and finding a good wallowing place in the soft mud at the mouth of one of the watery dens, will proceed to root out a good place to take a quiet snooze. But usually it is not long before the 'gator discovers that there is something eatable at the mouth of his den, a pair of bright eyes may be seen taking in the situation, and then a huge mouth opens and the pig goes sliding back into the water to be eaten at the leisure of his captor.

This irritates the farmer. When he finds his "raisor back" being bodily taken away from him he organizes a posse and procures munitions of war, consisting usually of a long pole with a steel hook securely fastened to one end, a ball of traut line cord and an axe; and the posse proceeds to the holes, pokes around with the hook and finally raises the ire of the tough skinned monster within. He gets mad and bites the pole, and finally gets the hook fastened in the tender part of the lower jaw, when all hands get hold and pull. It is only a question of strength then, for the stronger is the master. Usually the alligator comes out with his legs set like those of a young bull being pulled by a rope against his will. As soon as the 'gater's head is fairly out of the hole he is dispatched by a single blow of the axe between the eyes, and the farmer returns merrily home, thinking not of the brutality, and with the exclamation that, "That old red-eyed rascal will never get another of my pigs."

Those who hunt the alligator for their hides and teeth pursue an entirely different method. The favorite way is to hunt them with a headlight at night in a bateau or dugout. The little craft is paddled close to the pair of glistening eyes and as soon as the distance is near enough a load of shot is sent into the skull between the eyes; and as soon as possible a sharp hook is thrust into the alligator, he is towed ashore and the desirable parts of the hide and teeth are taken and the carcase left to the buzzards to devour. PLUMB BOB.

PARSON UZZELL'S RABBIT HUNT.

December 19, 1894, late in the evening a party left Denver on a special train, under the direction of Rev. Thomas Uzzell of "The Tabernacle" for the second annual rabbit hunt on the Arkansas River. By the time the train reached Lamar, a hundred and forty miles southeast from Denver, the party had been increased by additions at Colorado Springs and Pueblo to about one hundred men, with shotguns. The instructions directed each man to have two hundred cartridges, so the party was well provided with ammunition.

The train next morning on its arrival at Lamar was met by fifty or more ranchmen with conveyances of various kinds, and the hunters were at once taken to the farms up and down the river, being scattered a distance of fifteen miles. After breakfast the hunting commenced. Each party of two, three or four hunting on, and in the vicinity of the ranches, where they were taken as guests, and paying no attention to any one else. It was not a general organized hunt by surrounding the country and driving the rabbits in, the tendency being rather to scatter than to corral the rabbits. The farmers turned out in their wagons and helped by gathering up and bringing in the rabbits as shot, but they did little, if any, shooting leaving this to their guests. The hunt continued two days, the party meeting again the second evening, bringing in the rabbits by the wagon loads. A summing up from the reports of the different parties showed by actual count five thousand one hundred and forty-two (5,142) rabbits killed and brought in, the result of the two days' shooting. They weighed over fifteen tons, and were brought to Denver the following day on the fast freight, making a full car load.

Mr. Uzzell is the pastor of "The Tabernacle," a large mission in the lower part of the city. The rabbits were distributed to those who applied for them, principally to the poor, and undoubtedly a great deal of good was done thereby. All who participated in the hunt were fully repaid by the sport.

This article will give an idea of the enormous number of these animals, and the rapidity with which they are increasing. The Alfalfa fields, becoming so numerous and extensive in Colorado, are particularly attractive to them.

Other hunts by smaller parties have been made in other parts of the State with excellent results. The farmers everywhere are glad to have hunters come and kill these animals, as they have become almost, if not quite, a pest. They furnish good sport, and although they make a large target, it takes quick shooting, as they go in a hurry when they start. GEO. HARPER.

Home Made Skis.

Okonagon, Wash.—I will tell the boys how I make my skis. I take a fir board 4¼ in. wide, 1¼ in. thick and 12 feet long; shave the front end down to 3-8 in. thick and back 14 in., and from there back I groove the bottom out 5-8 in. Then I shave the top off to a sharp edge in the center, leaving a place 18 in. long where the foot rests. Then steam them well and put in a press and let them dry. Then take a piece of natural crook ½ in. thick 1 in. wide and fasten to the front end with screws. This keeps the shoe point always in its proper shape; and when the shoe runs away and strikes a tree or any solid object the point cannot break off. I put the toe strap on so as it will come back to the big point of the toes. I put a piece of hard wood on for the shoe or boot heel to come against and leave a small shoulder on each end of the piece. Then I put a stiff piece of leather on each side from the toe of the boot back 2 inches farther than the heel 7 or 8 inches wide and put a piece of leather across in front. This will keep loose snow from falling in and packing under the feet, which without these you will have to stop quite often and clean out your shoes. For dope I use paraffine and lard oil. Melt two or three paraffine candles in a quart of lard oil and put it on smoking hot. When the shoes are properly grooved out they will not sink half so deep in soft snow as those that are flat, and unless the snow is as hard as ice they will not slough.

While I am not an expert on shoes, I am very fond of the sport and have had some splendid rides every winter for the last forty years. LEW WILMOT.

Sea and River Fishing.

THE FISH FESTIVAL OF JAPAN.

The war between China and Japan has aroused in the minds of the whole civilized world an interest in everything that pertains to the habits and customs of these peculiar people, especially to the everyday affairs of the Japanese.

A traveler making a tour through Japan is strongly impressed with many of their strange festival days, no one of which interests him more than the "Boys' Fish Festival," commencing each year on May 5, and lasting several days; the whole population giving up their time to make ths festival an impressive one to the young. Ths festival is destined to keep fresh in the minds of the youth the importance of perseverance and the surmounting of all obstacles which they may have to encounter from youth to manhood. One of the principal features consists in flying paper fish. The festival originated many hundreds of years ago, and is both historical and traditional.

Nineteen hundred years ago, tradition says, Japan and Corea were on very friendly terms, the friendship continuing until the reign of the Emperor Chuai, when their friendly relations were severed. About this time the Emperor died and his wife, the Empress Jingo, with her minister of state, To-ke-uchi-Su-kune, was obliged to go to war and punish the Koreans. Before starting on warlike expeditions it was the custom of the rulers to go to the river and cast in a hook. This the Empress did, and to her great delight, she drew out a large carp, which at once was taken as an omen of her sucbess in the battles thatwere to follow. The koe (carp) is famous for leaping up waterfalls over rocks and surmounting all obstacles in its progress up the stream. The army was successful and conquered all Korea. At this time the son of the Empress was born. The prince grew strong and beautiful, and to honor and perpetuate his memory, as well as to celebrate the conquest of Japan over Korea, the Empress established the "Boys' Fish Festival," sixteen hundred and ninety-one years ago, which has continued until the present time and is general throughout Japan, but more particularly is the celebration observed by flying paper fishes in the province of Joshiu.

These fish are made of strong native paper, and are constructed in imitation of the carp. They are of various sizes, from one to over thirty feet in length, hand painted and decorated in a highly artistic manner, Japanese artists being very skillful with the brush. The head, fins and even the scales of the fish are made to appear quite real. The paper is cut out, firmly joined and pasted together to form the body, after which they are painted. The colors used are red, yellow, black and blue, with a touch on the scales and eyes of silver and gold. Separate pieces are added to form the dorsal, pectoral and abdominal fins, and a circular piece of rattan is pasted in front to make the open mouth, an aperture being left at the end of the tail, allowing the air to pass through and inflate the fish. To the mouthpiece are fastened strings, which are tied to long bambo poles or rods, which are then placed in the ground and fastened to the housetops. At the extreme end of the rod they attach the red rising sun of Japan with streamers, upon which are painted pictures of hideous, terrifying warriors. One fish after another is added, indicating the number of boys in the household. (When a baby boy is born the relations present the family with a paper fish.) If the wind is brisk the fish become distended like a balloon and float about in the air, much as they would swim in their native element, making a pleasing and striking appearance.

When the older residents are questioned as to what is the meaning of all this great display and festival, they will in most instances reply, "We do not know." When we reflect how many hundreds of years back the origin of the ceremony dates, the answer is not strange. We can readily realize that even in one hundred years from now many people then living in the United States may not be able to tell what great event in our history the Fourth of July commemorates.

Should you be so fortunate as to occupy a house commanding an elevated view in any city in the province of Josiuh on the morning of May 5, you would be startled by the gorgeous and beautiful sight presented to your vision. The city would seem to be covered with a brilliant cloud floating above the low roofed houses, which upon closer inspection would prove to be myriads of flags, streamers and fishes of all sizes fluttering in the air. You would at once try to reassure yourself whether you were really in the sea breathing salt water or whether the fishes had left the water and had taken wings and were flying about the city. J. B. KING.

An Artist's Grayling.

The beautiful illustraiton of Michigan grayling in our issue of December 22 last was from an original water color by Mr. Robert Porteus, and credit should have been given at the time. The work is one of the best fish pieces we have in a photograph, and of course the photograph loses very much of the original, for the curiously shaped and placed dark spots do not show well, and the stripes on the ventrals do not show at all. The caudal is well shown, also the great dorsal fin. The iridescence of the fins and the beautiful tints of the body are of course impossible in a photograph.

BLACK BASS BY NIGHT.

Editor Forest and Stream:—I was very much interested in the point raised by Dr. Alfred Hinde in his letter which appeared in your paper of January 5, as to the nocturnal habits of black bass. The doctor states that he "made microscopic sections of the eye of this fish," and that he has been led to think that the black bass (large mouth) "does not swim around in the dark," and that he does not "think it can do so." In speaking of the results of his microscopic examinations he says: "If my conclusion should prove to be correct it would be interesting to know that with the microscope alone we can decide the nightly habits of this fish. Will Mr. A. N. Cheney or some other naturalist-fisherman kindly throw sufficient light upon this subject to decide the matter?"

While I am not a naturalist, and cannot therefore reach any scientific conclusion, yet I have had considerable experience fishing for black bass during the past eleven years, and have naturally acquired considerable information regarding the daily and nightly habits of this grand fish. For many years I labored under the delusion that black bass could not see after dark, and for that reason did not make any effort to find out to the contrary. But last summer I had an experience which satisfies me beyond the shadow of a doubt that black bass (both varieties) not only move around at night, but can see very well. I will briefly relate the experience.

Last August a party of seven, including myself, were camping at the narrows between Six Mile and Crooked Lakes, which are located near the Georgian Bay, Canada, between the mouths of the Severn and Muskosh rivers. One beautiful moonlight night, about 11 o'clock, several of our party were lying on the rocks exchanging fish stories, when it occurred to me that I would try and catch a "channel cat," which fish can be taken better after dark than at any other time. I aroused my Indian, who had gone to sleep, and told him of my desire. Without a complaint he cheerfully got up and put a canoe on the water. In reply to the question whether there was any bait, he said there were three or four small frogs, but that he would take along a piece of smoked venison. He paddled out about one hundred yards from the shore and told me to drop in my line, which I did. The bait had not sunk more than six feet before I got a savage bite, and immediately hooked a very lively fish, which was landed as soon as possible, and imagine my surprise when the Indian said it was a small mouthed bass. Casting the line again, I told the Indian to move on to the narrow channel which connects the two lakes.

At this time a Mr. Stephenson of our party, who was still lying on the rocks, having become excited over the catch of a black bass at night, waked his Indian, got a canoe, and started for the same point in the channel to which we were going. He got to the spot first, and cast his hook baited with a small piece of venison. The moment the bait struck the water it was taken by a large fish, and when I came up and inquired what the noise was about he replied that he thought he had an immense bass. Without waiting for him to land his fish my Indian paddled up alongside and I threw in my line, which was immediately taken by a fish. Both of us were using light lines, rods and reels and the fun began. The fish would make the most terrific runs, then leap out of the water, then under our canoes, almost doubling our rods, and then the reels would sing out those songs which make the fisherman's heart leap for joy. We did not know what kind of fish they were, but we knew they were the hardiest and gamiest fighters we had ever had on our lines. Both fish were successfully landed, and behold they were the genuine black bass weighing about four pounds each.

I then followed Mr. Stephenson's example, and baited with smoked venison, and as soon as our lines were cast again each had another bass. In one hour at that place we landed 26 of the handsomest bass I ever saw, all of which were the large mouthed variety except three or four. There was not a small one among them; not one that we thought would weigh less than three pounds, and others we estimated at four and one-half pounds. We only camped there one other night, and I took advantage of it by trolling for fish at night. The result was that I caught one bass and one wall-eyed pike in about half an hour. I have no doubt I would have caught more had we kept along the shore, but the Indian was afraid of snags and rocks and kept well out in the lake.

Every statement made can be proven by witnesses if Dr. Hinde is at all incredulous. Upon my return home I told a friend about the experience I had had, and the following month (September) he went to the same place, and had a similar experience fishing for bass at night. He states that in some places the bass were swimming so near the top surface of the water that their fins were sticking out, and they seemed to be in large schools. He caught bass at night as fast as he could cast his line, and as he could make no use of the fish returned them to the water. So I concluded that black bass can move around at night, and can see perfectly well. From close observation last summer I am convinced that black bass go on to the shoals at night to feed and can be caught then more easily than in the daytime, when they are frequently in hiding in deep pools under the edge of the rocks.

PENNSYLVANIA. EDWARD O'NEIL.

Alabama is Hospitable.

Jerseyville, Ill., Jan. 14.—Moses Collenberger, one of Illinois, noted trap shots, and Amos Pessings, both of this city, have just returned from a month's shooting in Alabama. The party were located about sixty miles northwest of Mobile and report very fair sport and a most enjoyable time. They hunted quail principally, but killed also three deer and a number of turkeys. The quail and turkey were numerous, but deer were scarce.

These gentlemen speak in the highest terms of the hospitality shown them by all classes with whom they came in contact. Their camp was visited by numerous parties, some of them staying all night and all coming well supplied with eatables. Mr. C. gives it as his opinion that they are the best feeders he ever saw.

Invitations to shoot over their lands came from everybody, and each seemed to try to outdo the others in the efforts to entertain the "Yanks" as the party were called, and make their trip pleasant. L. S. HANSELL.

ANGLING NOTES.

Drawing Silk Worm Gut.

A gentleman in Philadelphia writes me as follows: "That part of your article in last issue of Forest and Stream relating to silk worms used for leaders has interested me to the extent of inducing me to write to you for the purpose of asking how this gut is drawn out. I presume the cocoon is the part used, and I would like to know how the chrysalis is extracted, and how the cocoon is prepared and how the gut is drawn."

Before I could write a personal reply to this letter I eceived another somewhat similar one, and previous experience in such matters warns me that still others will be coming along later after the contents of that particular issue of Forest and Stream have been fully digested, and possibly I can answer all who may be curious about drawing of gut from native silkworms at one time.

The gut is not drawn from the cocoon, but from the worm or larva. The cocoon is of silk, which the worm spins about itself, but that particular silk is like the water that is passed and with which you cannot grind, for it will not make leaders, as leaders, or gut of commerce. comes from the silk sacs of the worm at about the time that it is ready to spin the cocoon. What follows is taken chiefly from an article which Mr. C. F. Orvis wrote at my request after his experiments with American silk worms, and I will be as brief as possible. The two moths with which Mr. Orvis experimented were the polyphemus and cecropia. The cocoon of the former is attached to a tree by a slender thread of spun silk, usually wrapped around the stem of a leaf, and because of its slight fastening is frequently blown to the ground by the wind, and it is more difficult to find than the cocoon of the cecropia, which is firmly bound to a small twig. The cocoon of the polyphemus is about two inches long, one inch in diameter, cylindrical in shape, both ends round and closed. That of the cecropia is considerably larger, being from three to four inches long, one and a half inches in diameter and pointed at either end. These descriptions are sufficient to enable the seeker to distinguish one cocoon from the other. The cocoons when gathered may be kept in a spare room, although Dr. Garlick kept them in his parlor. The moths emerge from the cocoons, the cecropia quietly, giving no warning, and the polyphemus after a struggle extending over days, and then they should be transferred to cages of cheese cloth or mosquito netting, placed over a framework of wood. In the cages the moths must be mated, and this is sometimes difficult to do unless one has a large number of cocoons. Of perhaps a dozen cocoons that I had in a drawer of my dressing bureau every one was a male. During their short lives the moths take no food. The male lives from six to twenty days. The female lays her eggs the second or third day after leaving the cocoon, and dies a few hours later. The male moth may be distinguished from the female by the greater breadth of his antennæ, it being not only wider, but feathery as compared with that of the female. The female moth is less brilliant in coloring than the male, and the spots on the wings are smaller, but her body is much larger and fuller. The moth lays from 250 to 300 eggs. The cecropia a round, slightly flattened egg of deep cream color, with a small depression in the middle of coffee color; the polyphemus, a tiny kidney shaped egg. The moth is from four to six or even more days in laying her eggs, and they hatch in about twelve days. The larvæ when first hatched are about one-eighth of an inch long, and must at once be placed on the food prepared for them. The larvæ of the cecropia grows to a worm 4½ inches long. I went to Manchester, Vermont, to witness Mr. Orvis's experiments when they were in different stages of development, and I shall not soon forget his great crop of larvæ of the American silk worms. I shall not refer here to the food of the larvæ but in the article in Forest and Stream to which both of my correspondents refer the types make me say "cotton ball bush," when I wrote button ball bush, and by which I meant the button bush or water sycamore.

The treatment of the worm for the purpose of drawing the gut is the same as with the Chinese silk worm, from which the gut now in common use is obtained. Silk and gut are both obtained from the same substance at different stages of development. Each worm possesses two silk sacs, each of which produces a strand of gut. When the worm is about ready to spin, which it indicates by refusing food, the sacs are ripe for drawing. The worm is placed in vinegar or acetic acid, which instantly kills it, and is left for a few hours, then it is placed upon a board and with a sharp knife the head is severed. By gently pressing the lower end of the body of the worm the two silk sacs, which are of gummy consistency, are forced forward until, in the case of the American worm, they can be seized with the fingers and carefuly drawn out, stretched on a board between two pins and left to dry. With the Chinese worm, the silk sacs being much smaller, the sac is drawn out with a pin. The worms vary in size and consequently the gut is longer or shorter as the worms may be large or small, and the fineness of the gut is dependent upon the amount of stretching that it gets. When the gut is drawn and dried it has not the appearance of the gut that is bought in the hanks in the tackle shops.

For a long time I kept on my desk a lot of "unbleached" gut, as the crude article is called, and of all the many anglers that I showed it to not one of those knew what it was. The crude gut is covered with a yellow skin when it is dry and it looks like anything but the strand of a leader. Formerly this skin was removed by girls who drew the gut through their teeth and thus peeled it, but now it is done with a chemical of some sort, and occasionally I imagine it is over done, which will account for the fact that we sometimes get a fine, strong-looking hank of gut that is not worth a baubee.

In Spain the drawing of the gut is done by women, and according to "Mona," a writer in The Fishing Gazette, London, a couple of years ago, the worms are not previously dipped in acid. Of the washing of the gut after drawing "Mona" says:

"The links are gathered by children and brought to the sorters. They deftly separate the precious, perfectly cylindrical links from the rest and hand them over to the washers and stainers, who subject them to a long process of bathing, which imparts to them the well known tint of the gut of commerce and develops that bark which renders this gut so valuable. This is the rare and expensive undrawn gut which only kings and editors use. * * The composition of the washing and dressing baths is a strictly guarded trade secret, though amateurs unacqaintedwith it have frequently been known to turn out a very well dressed gut with preparations of their own."

This washing and dressing, I imagine, is nothing more than the proceess of removing the outer skin that I have already mentioned, and the dealers have hedged it about with a mystery for purposes of their own. Remove the skin and you have the gut of commerce, and that is all there is of it. And you have it with its "bark" or enamel if the gut is drawn at the right time, and washing will not add to or take from it. "Mona" says one thing which is of interest: "All the remainder of the gut (i. e., all but the cylindrical sort used by kings and editors) is therefore flawed, and constitutes by far the largest portion of the gut produced. Flaws are caused by flattening and attenuation."

This flawed gut is then worked up into "drawn" gut, and I will explain what this means, for comparatively little drawn gut is used in this country, although it is common enough in England, where it is largely employed in dry-fly fishing. After the gut is drawn from the worm, or the silk sacs are stretched as described, it is natural, or "undrawn" gut, to distinguish it from "drawn" gut, which is produced from the flawed strands or links exactly as wire is drawn, by pulling the strands through holes in metal plates, which scrape or cut the gut down to cobweb-like attenuation. Therefore, be it understood that "drawn" and "undrawn" are terms applied to the gut after it is taken from the worm, stretched and dried.

Gut being nothing more than "silk in a certain stage of arrested development," it is claimed that "the action of sunlight upon it causes a sort of obscure revival of the metamorphic process which disintegrates the gut tissue." I have long believed that sunlight is not good for gut; and I do know positively that gut may be kept for years in oiled paper, placed in a dark place, without losing its strength, so I cannot understand why anglers persist in wearing leaders around their hats all summer unless they are intended for hat leaders and not fishing leaders.

A. N. CHENEY.

THE STORY OF OLD JACK.

Old Jack is a trout (or was, for he is no more). His home was in little Diamond pond, N. H., that empties into a tributary of the Magalloway, which in turn is a tributary of the Androscoggin River. We have no means of arriving at his exact age, but our acquaintance with him extends over several years.

He was readily distinguishable from others of his species by an abnormal elevation of the back directly beneath his dorsal fin. Mr. Kendrigen, veteran fly fisherman of Waterbury, Conn., is supposed to have hooked on to him several times within the past ten or fifteen years. This hump in the back was the seat of tremendous muscular power, for as often as he was hooked leaders, lines or hooks were smashed "all to flinders." He was never known to bite at worms or sunk hooks of any description. He is supposed to have risen to flies out of "pure cussedness," for the waters of this pond teem with minute animalculæ which furnish ample sustenance for all the fish.

The methods of this fish were peculiar to himself. For instance, he would never leap and thrash in and out of his element as his very name indicates (salmo fontinalis). So soon as he was struck he would dive immediately to the muddy bottom.

No coaxing, no pulling, hauling or prodding would suffice to move him from his position, for there he would remain till the sportsman, wearied with his quest, lifted a little too strongly on his line, when, lo! the tackle would be found to have divided itself between the man and the fish.

Every sportsman, truth teller or otherwise, frequenting these waters would always affirm whenever he lost a hook or leader that a tussle with old Jack had been the cause of it all.

Everybody said the trout was a "whele," that he would weigh at least five pounds. Harvey, the guide, said that he was as big as a "dog," but as there are dogs and dogs, the idea of weight under this title was somewhat confusing, but the thought to be conveyed was that the fish was a monster in size.

These facts (?) concerning old Jack were narrated to me in cold blood by Mr. Shurtleff, game and fish commissioner for the State of New Hampshire, and the facts were sworn to also by J. H. Dudley, Esq., of Colebrook (though Mr. Dudley is no fisherman, but his wife is). The personality, habits and whereabouts of old Jack were more accurately defined when Mr. Shurtleff determined to sweep Diamond pond with nets to secure fish for spawning purposes. When this work was thoroughly done old Jack "turned up" in more senses than one. Finding himself entangled in the delicate meshes of the silken net used for the purpose he fought so desperately that the very first year he came near killing himself before coming to hand to be squeezed. To be sure, he was not weighed—it is just as well not to weigh the fish of phenomenal size—but the commissioner affirms that old Jack would easily weigh five pounds or more!

Now, I had from time to time fished in this pond without ever getting snagged by this old fellow, and you must understand that I had become a little skeptical regarding some of the details of the foregoing description. I therefore sought out Mr. Keyes, who is always called in to manage the netting business in the spawning season, to learn from his own lips whether these things were so. When I had approached the aforementioned gentleman I was politely led by the buttonhole out into a by-street of the town, when, in a very oracular and dramatic manner, he proceeded to discourse about old Jack. "To be exact," he began, "old Jack weighed precisely three pounds and two ounces."

"But," I said, referring to what had been previously told me that he had never been weighed, "how can you be so minute on this point without a pair of steelyards?"

"Old Jack is dead," he continued under his breath. "He struggled a little too hard the last time we got him in the net. But it is a profound secret, for the commissioner and everybody else supposes he is still swimming in his native element—and of course we weighed him before we ate him."

Mr. Keys stated then and there what I had not known before, that it is easer to handle females, expressing their spawn with less danger to life as they are the more tractable when caught, than the male trout.

I may add that the work of restocking northern New Hampshire with trout goes forward in a very satisfactory manner under the guidance of Mr. Shurtleff and Mr. Keys.

C. H. GLEASON.

Humoring Finicky Trout.

My friend Mr. G. A. Riley, a most persistent and successful fisherman, was induced by that very readable illustrated article in your paper a year ago of "Jim's" visit to the Penobscot Lake region to make the trip for himself with a company of gentlemen. He was more than pleased with the results of that trip, but he found a pond near at hand where trout were very numerous, but would bite neither worm nor fly. The fact that everybody else failed to catch trout out of this pond did not deter him from making the tria . He indeed found, as others had before him, that trout were jumping everywhere, but that the ordinary lures were unavailing. On close observation he discovered that an insect, peculiar to these waters, alighted on the surface of the wate:, deposited a grub, and then flew away. His trained eye saw at a glance that the trout were waiting for the grub to materialize, when, presto! it was seized as the one dainty morsel. Having along some No. 10 flies—no bigger than a house fly—he caused these to float near the grub and by so doing caught after long labor and watching 13 trout. He secured a specimen of this grub, and has had artificial ones made which he will bring into use on that pond next season, no doubt with good success.

C. H. GLEASON.

Game and Fish Protection.

Report of the New York Senate Committee on Fish and Game Laws.

The Senate Committee on Fish and Game Laws, which, by resolution adopted by the Senate, was authorized and empowered to sit during the time intervening between the adjourning of the Legislative session of 1894 and the convening of the Legislature in January, 1895, and to visit various portions of the State for the purpose of taking testimony and making inquiry as to any needed changes or modifications of the existing fish and game laws, respectfully reports as follows:

That pursuant to the above-mentioned resolution the Committee gave public hearings in various portions of the State, to wit, at Freeport, Queens County, on July 12, 13, and 18; at Bayville, Queens County, July 19, 1894; at Islip, Suffolk County, July 26, 1894; at Oyster Bay, Queens County, August 1, 1894; at Schroon Lake, Essex County, August 16 and 18, 1894; at St. Hubert's Inn, Keene Postoffice, Essex County, August 20, 1894; at Saranac Lake, Franklin County, August 21, 1894; at Rochester, Monroe County, August 28, 1894; at Jamaica, Queens County, December 3, 1894; at New York City, New York County, December 3, 1894.

That at such public hearings the testimony of a great number of witnesses was taken, consisting of guides, experts in fishing and hunting, hotel keepers, officers of associations devoted to the preservaton of fish and game, and such of the inhabitants and residents of the various localities referred to as had special knowledge of the matters coming within the scope of this Committee's inquiry. The testimony of the witnesses and a large number of written communications on the subject in question, are filed herewith.

From the evidence produced before this Committee and the information obtained, it would appear that the present general game law, so far as it is intelligible and capable of being easily understood, is, in the main, acceptable to the people of the State, and no radical changes in substance are necessary. Nor is it, in the opinion of your Committee, desirable that a law to which the people have become accustomed should be heedlessly or unnecessarily altered. Most of the defects in the present law and its accompanying amendments or modifications are matter of form rather than substance.

The most frequent adverse criticism passed upon it is that the law is often obscure, sometimes contradictory, giving rise to great uncertainty as to what constitutes a violation of the law and what is the present penalty for such violation.

Much of the difficulty in this respect has arisen from the power conferred upon local Boards of Supervisors to modify or amend the game law in a restrictive manner at their discretion. The power thus referred has resulted in alterations of dates for the close and open seasons for hunting and fishing to such an extent that each locality has practically a law for itself, and in some cases where a body of water covers portions of two adjoining counties we have the anomaly of one body of water entirely within the State governed by two conflicting laws. This has lead to jealousies and ill-feeling between citizens of neighboring counties and townships, has encouraged violations or evasions of the law, and brought about a general disrespect and disregard for its provisions.

There is also a widespread feeling apparently that much of the legislation passed in recent years for the protection of fish and game has been adopted in the interests of associations of private individuals forming themselves into sporting clubs, and that too little regard has been shown for the interests of the mass of the people, who rely upon food fish for part of their sustenance, or upon the proceeds of hunting and fishing as a means of livelihood.

There also seems just ground of complaint that the creation of private preserves by the purchase of State lands, has, by reducing our State forest area, worked a serious detriment to the game interests in which all the people of the State are concerned.

Suggestions were made by witnesses in different portions of the State that the open season for black bass should, by the general game law, be made to commence on the first of July, instead of the 31st of May, as under the present law. But due consideration for the interests of other localities, especially what is known as the St. Lawrence River Section, renders this change unadvisable. The slight advantages which would accrue from such change in some portions of the State would be more than offset by the serious business loss which would ensue in the sections last referred to.

The testimony taken in the Adirondack region developed the fact that the permitting of still hunting under the present law for a period of two weeks previous to and for
days following the expiration of the hounding season, is in very large measure used as a cover for illegal hounding. It has been proposed to abolish the separate still-hunting season entirely, making the season for the killing of deer by hounding and still hunting identical, to wit, from the first day of Septem

ber, to about the twentieth day of October. If these suggestions were adopted, thus abolishing the still hunting season between August 15 and September 1, it would result in a practical abolishment of "jack" hunting, which cannot be successfully carried on after the cold weather of September begins. This has been strongly urged by many people interested in the preservation of game. But in the opinion of your Committee, there is no need for the adoption of such a stringent measure; for though "jack hunting" perhaps does not involve a very high degree of sportsmanship, it still is a popular sport, and furnishes a strong inducement for many people to visit the Adirondack regions during the closing weeks of August, and is thus a source of very considerable profit to the people of that locality, furnishing employment to many of the citizens; and the recent marked increase in the total number of deer in that region, as shown by the evidence, renders the abolishment of "jack hunting," unnecessary for the protection of that species of game. As a compromise on this point it would be well, in the opinion of your Committee, to continue to allow still hunting from August 15 to September 1, and make the open hounding season from September 1 to October 20, both inclusive, at which latter date the hunting or killing of deer by any method should be prohibited. The adding by this course of ten days to the end of the hounding season would more than compensate the people of the Adirondack region for depriving them of the privilege of still hunting for the period from October 20 to November , and would not result, in the opinion of your Committee, in the killing of any greater number of deer.

The testimony is uniform that no material change is needed as to the open season for trout fishing; though in the opinion of your Committee, it is desirable that there should be a uniform open season for the entire State (with the exception of Long Island and adjacent counties), to wit, from the fifteenth day of April to the first day of September, on Long Island and the counties adjacent thereto the open season should commence on the first day of April and close on the fifteenth day of August. There is strong testimony to the effect that more stringent measures should be adopted to prevent net fishing and to construe a stricter infliction of the penalty for such violation of the law.

A demand is also made for a bounty upon foxes and owls, which, according to the testimony, are very destructive of various kinds of game.

A most serious conflict has arisen in connection with the shell fish industry between citizens of some of the board towns and private corporations who, according to the testimony taken before this Committee, appear to have recently occupied much of the best natural oyster and clam beds for their private business purposes to the serious loss and detriment of such of the inhabitants as formerly followed the calling of clamming, or clam digging, and who, by reason of such appropriation of the natural oyster and clam beds have been largely deprived of their means of livelihood. If it were possible by statutory enactment to furnish a remedy against this encrouchment by monoply upon the rights of individual citizens; but the situation is very much complicated by the fact that under ancient charters the county of Suffolk and some of the townships in the county have vested rights covering the control and management of lands under water, with which rights the Legislature has seemingly no power to interfere; and it does not seem possible to suggest any legislation which would offer adequate remedy in this regard. In the opinion of your Committee this matter must be left for local adjustment.

Relief to the people of these localities, however, and a great benefit to the general public would result from the establishing of one or more places by the State for the propagation of oyster seed. This by placing the cost of oyster seed at a nominal price, would enable individual baymen to loose and cultivate oyster grounds of unlimited area, which they are now practically precluded from doing, by the difficulty in obtaining oyster seed except through a large outlay of capital.

There is no respect in which the propagation of food fish is of greater importance to the entire people of the State than in connection with the furnishing of shell fish.

It appears from the evidence, as would be apparent from a consideration of their respective geographical positions that the southernly portions of the State, consisting of the counties of New York, Westchester, Kings, Queens, Richmond and Suffolk, and the salt water adjacent thereto, differ so materially in point of climate and other respects from the other portions of the State that those counties should, in many respects, be governed by a separate game law. The spawning season for fish and the visits of migratory birds occur there at an earlier period than in the more northern portions of the State; and the shell fish interests which are of such great importance to the people of those counties are a matter entirely foreign to the rest of the State.

It is gratifying to notice the progress made in the science of fish culture; and the attention which has been paid to the propagation of food fish is especially noteworthy and commendable. In 1885 and 1886 ten millions of fish were hatched and distributed at a cost of six cents and ninety-seven one hundredths of a mill per fish; in 1888 and 1889 thirteen millions of fish were hatched at a cost of 158 one hundredths of a mill per fish while in 1893 and 1894, one hundred and thirty-six millions of fish were hatched at a cost of thirty one hundredths of a mill per fish, and of this number 134,000,000 were food fish.

As a result of the evidence brought before us, and a very careful consideration of the matters involved therein, we would respectfully recommend the following:

First, That the main features of the present game law should remain unchanged except in the instance herein after referred to, or where changes are needful to make the law clear and more readily comprehensible.

Second, For the purpose of making the law more readily understood, we recommend that at the end of each section of the law the penalty for its violation should be distinctly set forth without requiring, as at present reference to various other sections.

Third, Penalties for ordinary violations of the law should not be made unduly harsh for first offenses; but for the more serious violations of the law an additional or increased fine should be imposed for repeated offenses.

Fourth, The killing of the fish by the use of dynamite or other explosives should be punished with the utmost severity, including imprisonment, and this should be made mandatory, and not discretionary with the acting magistrate.

Fifth, That the use of nets for catching fish of any kind in fresh waters of the State should be prohibited, except at a distance of one mile from the main shore, or from the shores of any islands in said waters.

All nets used in the fresh waters of the State, except scap-nets, or other small nets used for the catching of bait, should be licensed by the Fish Commissioners, who should be authorized to seize and destroy all unlicensed nets.

Sixth, The season for the killing of deer in all portions of the State except Long Island and the adjacent counties should be from August 15 to October 20, both inclusive; hounding should be permitted only from September first to October 20, both inclusive; and the killing of deer between October 20 and August 15, by any method should be prohibited throughout the entire State. In Long Island and the adjacent counties a close season of two years, prohibiting the killing of deer should be established, after which an open season from the first to the sixth of November, both inclusive. should be permitted.

Seventh, One or more places should be established at State expense for the propogation of oyster seed.

Eighth, The special enactments by Boards of Supervisors heretofore adopted modifying or amending the general game laws should be repealed, and, except in connection with the shell fish industries, where vested charter rights are involved, the Board of Supervisors in the respective counties, should have no power to in any way modify or amend the game law.

Ninth, The unlawful transporttion or possession of deer by any person while ostensibly engaged in the employ of a common carrier should be made an offense on the part of such common carrier and punishable as such.

Tenth, The law should be made as liberal as possible in permitting the spearing of suckers and the taking of other common food fish in waters throughout the State not inhabited by trout, in order that the rights of the people in this respect may not be unnecessarily interefered with.

Eleventh, Without reflecting at all upon the present Board of Fish Commissioners, against whose administration of their office no complaint of any nature has been made to our Committee, we feel that the protection of fish and game is of such vital importance to all the people of the State that at least one of the Commissioners having charge of this department should be paid a salary sufficient to compensate him for the time and labor which the proper performance of his duties involves. We should also recommend that the number of Commissioners be reduced to three.

Twelfth, That the number of game protectors be increased from twenty to forty. All of which is respectfully submitted.

Assemblyman Husted has introduced a bill providing: "It shall be unlawful to kill or attempt to kill any deer swimming in the water of any lake or pond, or, while hunting any deer, to use a boat in pursuing or heading it off while so swimming, or to use any jack light or other artificial light in hunting or killing or attempting to kill any deer."

Fish and Game in Idaho.

Editor Forest and Stream:

In a recent issue of FOREST AND STREAM I noticed a communication headed: "A Paradise for Poachers," by "Salt Lake," relating to the wholesale destruction of trout in the north fork of Snake River. The writer hits the nail on the head; but he does not tell half the story, undoubtedly because he is acquainted with a small part of this beautiful stream only.

The unlawful catching of trout by seine, spear, dynamite and fish traps has been carried on successfully by a whole community for the last ten years or more, without any serious molestation for the fishermen. True enough, at rare intervals arrests have been made, but not once have any of the lawbreakers been convicted. The attorneys for the defense have succeeded in demonstrating that the old law was unconstitutional, and under the new law the only case that has come up had to be dismissed for want of sufficient evidence.

Prior to the new State law of 1893, trout could be caught at any time during the year, and spearing and seining were carried on openly, so much so, that the U. P. Ry. in its "folder," describing the pleasures awaiting the tourist going into the Yellowstone National Park by way of Beaver Canon, advertised the spearing of trout as one of the great features of the trip, speaking of catches of a thousand pounds in one night.

There is no more spearing done at the old Snake River Hotel, the property having changed hands some five years ago, but even to this day the U. P. continues to advertise the spearing of trout, as one of the tourist's pastimes, though it is contrary to the law of 1893.

According to this new law trout can be caught between the 15th day of April and the 15th day of November, and that with hook and line only, and the selling and shipping of trout is prohibited. Notwithstanding this stringent law the unlawful fishing has been continued the same as of yore. Not only is spearing carried on in an extensive scale at the Upper Crossing, but there is not a hole in the river between that place and the lower end of Island Park, a distance of about twenty-five miles, that is not seined out as regularly as the contracts for the supply of the markets of Helena, Butte, Salt Lake City and Denver demand it. All the tributaries to the North Fork are depleted of trout and as thoroughly cleaned out as the warehouses of dry goods merchants by means of their "bargain days." Buffalo River, which in years gone by was beaming with heavy weights of from 3 to 5 pounds, is a barren stream now. Shotgun Creek, Mack Creek, Icehouse Creek, and Sheridan are, everyone of them, considered by the fishermen as their prviate property.

The demand for large trout has decreased considerably—they are worth only about 15 cents for the seined and 10 cents for the speared fish—whereas small trout, brook trout, is worth 25 cents. These are in great demand; hence the smaller creeks have to supply the markets. The different forks of Camas Creek are seined out periodically by an old "sportsman," who, I am told, is a contributor for one of the sporting papers, and the Pacific Express agent in Beaver Canon is kept busy shipping as salmon-trout, the fish which come in wagon loads twice or three times a week.

Icehouse Creek furnishes its quota, which is marketed by the fishermen in Shotgun Valley. One of these boasts of a "fishery," covering 600 acres, most of which is dry land through. He has never made an attempt to stock it in a legal manner; it is nothing else but a huge fish trap for the trout of Snake River.

Island Park, besides being the favorite resort for the fishermen of Upper Snake River is also much fancied by certain parties from around Egin and Rexburg, who get in their work and spear. I have been told that these same parties have been going as far as Jackson's Hole, and Jackson's Lake, and have done their work in such a business-like manner that the settlers in that part of Wyoming have given them warning not to show themselves any more under penalty of being handled without judge or jury. (These Jackson's Hole fellows appear to be put up of the right kind of stuff and it looks as though the Fremont County people might buy some of their pluck.)

Notwithstanding the closed season from Nov. 15 to April 15, the winter fishing at Henry's Lake was carried on last year as usual. "Salt Lake" speaks of 70 tons (seventy tons) having been taken out of that spawning bed. One hundred tons would be nearer to the truth as last winter's catch. The markets of Butte and Helena were so overstocked with trout last winter from Henry's Lake, that thousands of pounds spoiled on the fishermen's hands.

The fishing is not so much done with the spear, as related by "Salt Lake," as with hook and line. They do it quite comfortably, too. A board shanty is built on the ice; a small stove keeps the person warm (women fish as well as the men), a hole is cut through the ice inside the shanty, and another hole on the outside. The light reflecting through the outside hole enables the person inside to see the trout through the inside hole and as they congregate in large numbers underneath the air hole, and are so hungry that they will bite at a piece of red flannel as bait, the fish can be hauled out as fast as they can be unhooked. Grub worms are also used as bait; they are worth two cents a piece but one worm does for a number of fish. Three hundred pounds per day is about an average catch.

Another way to catch the trout is by means of the gaff. For the sake of the uninitiated, let me explain that a gaff is composed of three large hooks, fastened together to a line on a short stick. Above the three hooks is a smaller hook which is baited. When Mr. Trout comes to examine the bait, the line is suddenly drawn up and the fish is pulled up with one of the three hooks imbedded in his belly.

One would naturally wonder how such a state of affairs is permitted to exist. The solution is a very simple one; on account of the interests centered in the salmon-trout fisheries in the Northwestern part of Idaho, the new law was not made applicable to salmon-trout. The fishermen were not slow in taking advantage of the wording of the law. They procured some of the largest specimens of the Rocky Mountain trout—cut-throat trout—*Salmo mykiss* and sent them to the Governor of the State and to the U. S. Fish Commissioner in Washington; and they have claimed ever since that both these authorities decided that the trout sent them were salmon-trout, though every one knows that there is no salmon-trout in Snake River above Shoshone Falls, for the simple reason that they cannot ascend the falls. Besides, there is as much difference between a salmon-trout and a Rocky Mountain trout as there is between a pike and a herring.

So far then the fishermen have had things all their own way, and as "Salt Lake" correctly remarks, nobody seems to care, and the State authorities are either too busy to enforce the law or else they are asleep to one of the best interests of the State. Instead of preserving the fish for the benefit of the residents of the State, and of encouraging the visiting sportsmen from all over the United States to bring into Idaho part of the money, which, as a rule, is freely spent by them, year after year, in less favored localities, the State and county authorities permit a few to infringe upon the rights of the people at large, by allowing those few to destroy a source of revenue without the State receiving a dollar in return.

The class of people who carry on the unlawful fishing as a business are, as a rule, neither a benefit to the community nor are they themselves benefitted by their vocation. They despise manual labor of any kind, they sow not, neither do they reap, they are just as poor to-day as they were ten years ago, for they spend what they get in way of returns for the fish shipped, as easily as they catch the fish, many of them not having enough at the end of the season to buy their winter's "grubstake" with. The amount of taxable property owned by them amounts to very little if anything. The people who live on their spoils are a few saloon keepers, the Pacific Express Company comes in for its share, but those make the most on the fish are the dealers, in the adjoining States, who know full well what a hold they have on the fishermen, and who make to them such returns only as they please. In the meantime the trout is rapidly disappearing, and the white-fish, which, next to the fishermen, are the trouts' greatest enemy, are flourishing and increasing rapidly.

I have fished in many streams but I have yet failed to find Old Snake River's equal for the sport it has afforded hitherto and which, unless radical measures are taken for the preservation of the trout, will soon be a thing only to be looked back upon with both pleasure and regret. BOISE.

Genesee Valley Association.

The annual meeting of the Genesee Valley Fish and Bird Protective and Propogatory Association was held in Rochester, Jan. 9, a good attendance being present. Secretary Amsden read the report of the Executive Committee, as follows:

"Your Executive Cmommittee is pleased to report that the past year has been very satisfactory; our waters have been better protected than ever before, the prospect for good fishing is excellent.

"Our protectors, Messrs. Schwartz, Marshall, Brooks, and DeLaverne, have been most efficient and deserve the praise of the community and our association. Their arrest of violators and destruction of illegal devices have been so general and numerous, as to thoroughly discourage the miserable fish pirates.

"We believe that the good fishing in our waters around our city next season will so convince the public of the wisdom of our efforts that this association will be more than ever appreciated; that sentiment in favor of protection is growing we are confident; that fish in public waters belong to the people, and laws have been enacted to protect the fish. The laws must be enforced is the motto of our association. We look for the time when any citizen, rich or poor, can take a rest from his labors and catch a fine mess of fish for his table.

"The ponds west of Charlotte, the bay, the river and the lake at Charlotte, Black Creek, and the upper river are grand fishing waters and fine breeding places for fish, if kept free from violators, and can be made alive with fish. From reliable sources we learn that the fishing in the bay and ponds has shown a decided improvement during the past season.

"The Park Commissioners have joined with us in the work, and are determined that the water under their care shall not be poached. If their efforts prevail, the upper river will again be what it once was, a choice water for anglers and a blessing to our hard-working clerks and mechanics, giving them an opportunity for a quiet and successful angle after the day's labor is over, and furnishing another added charm to our system of parks.

"The New York State Fish Commission, appreciating our work, has been very liberal to us in the distribution of fry for planting, and the coming season we are promised another large supply. Hemlock and Conesus lakes, both resorts for many of our citizens, have been well looked after by the local organizations, and the people in the vicinity, who at first were in opposition, now see the benefits and give these organizations their support.

"While looking after the fish we have not been forgetful of the birds, for the association was formed to not only protect fish but birds—song birds as well as game birds. One section of the State laws prohibits the railroad and express companies from transporting birds unless accompanied by the one who shot them; this is an excellent provision and will do much if enforced to stop the shooting for market purposes. Your committee has been giving the matter special attention. We have also in a careful manner tried to plant or introduce the Mongolian pheasant and quail; this has been left to our Special Bird Committee, which will make a separate report.

"Our funds have been limited, as you will see from report of the Treasurer, but we have been careful to live within our means.

"The preservation of forest, fish and birds is attracting attention in almost every State of the Union. Tracts of land are being set apart for public preserves, by the State and National governments, numerous fish and game commissions have been formed and better laws enacted, and State and local protective clubs organized which have resulted in a greatly increased public sentiment."

Teasurer H. D. McVean's report showed receipts for the year of $322.58, and expenditures of $222.22, leaving a balance in the treasury of $100.36.

Chairman Thomas W. Fraine, of the Bird Committee, reported that a hundred Mongolian pheasants' eggs had ben purchased last June from Verner De Guise, of Mahwah, N. J., and that fully one half of these were successfully hatched. These birds, he said, were being cared for by Thomas Toogood, of this city; J. Hitt, of Penfield, and L. D. Ely, of Brighton, and were all doing well. He said that the committee expected to have at least 150 pheasants for liberation this year. The report showed that eighteen dozen quail had been imported from the South and that the birds had been liberated in Genessee Valley Park, Seneca Park, Penfield, Wheatland, Brighton and in this city. Mr. Fraine said these quail were all doing well. Specimens of both the pheasants and quail were exhibited for the inspection of the members.

A resolution recommending that the Legislature pass a law prohibiting rabbit shooting after the first of January was adopted. Secretary Amsden said that this would do away with the "accidental" shooting of game before season while huntsmen were ostensibly out for rabbits.

The following resolution commending Game Protector George M. Schawrtz in his efforts to enforce the game laws was then adopted:

"For the past eighteen years Goeorge M. Schwartz has acted as one of the State Game and Fish Protectors of this State. During all of that time his record as a Game Proctector has been open to the scrutiny of the public and has at all times met with the unqualified approval of all persons interested in the enforcement of the game laws.

"His record as a State Game and Fish Protector is excelled by none of the game protectors of this State and is equalled by very few, if any. We acknowledge our appreciation of the

work done by him in the past in the enforcement of the game laws and we pledge him our hearty support in the future in the enforcement of said laws.

"We deem it but just to Mr. Schwartz to place this testimonial upon our records in appreciation of his past services, and we earnestly recommend that in the event that any change is made in the personnel of the Commissioners of Fisheries, Mr. Schwartz be retained in office as one of the State Game and Fish Protectors of this State, knowing that the enforcement of the game laws in this vicinity may be safely entrusted to his hands."

A like resolution, acknowledging the services of Chief Game Protector J. Warren Pond and recommending his retention in office was also adopted.

W. S. Gavitt, of Lyons, advocated the passage of a law allowing the shooting of quail in the season following their liberation. L. E. Gates, of Honeoye Falls, said the quail liberated by the Genesee Valley Association in and about Lyons three years ago had rapidly increased.

The election of officers resulted as follows: President, Herbert Wadsworth; First Vice-President, A. Emerson Babcock; Second Vice-President, Harry S. Woodworth; Treasurer, H. D. McVean; Secretary Frank J. Amsden; Executive Committee, John B. Y. Warner, Daniel C. Bascom, H. M. Stewart, Thomas W. Fraine, Dr. David Little, James H. Brown, H. H. Widener.

The Adirondack Deer.

WEST PORT, N. Y.—*Editor Forest and Stream:* I see that Gov. Morton in his message, in speaking of the hounding of deer, in substance says: "The dogs do no harm to the herds of deer; the mischief done is the driving of deer to water, where it is so easy to kill them by the merest novice."

This is true so far as the water killing goes, but it is also well known that the dogs really do great harm to the deer aside from driving them to water. I have lived and hunted in the Adirondacks for fifty years, and respectfully beg to differ from the Governor's statements in some respects.

The Governor must remember that there are dogs and dogs. Some are slow, some are fast, and some are very fast and savage too. It must be remembered that a woods deer is not a fast runner when compared to a deer brought up in the open country. The woods deer of necessity learn to jump high when they run, as they have to clear the underbrush, logs, etc. The deer of the Adirondacks jump very high, even in the open, which very materially reduces their speed. A full-blooded hound, that runs with his nose close to the ground most of the time, ordinarily will not catch a deer on soft ground, but let the ground be frozen, the deer slips and soon gets lame, when the hound, if a good one, can catch and kill him, especially if the lakes and streams are frozen over.

It has been a practice among hunters to use mongrel dogs. They are considered better. Cross a hound with a bird dog, and he will run mostly with his head high, thereby making immensely better time than the full-blooded hound. A dog of this kind has been known to start his deer on soft ground and catch him before the deer had gone a half mile.

I have known a hunter to put out a mongrel hound when there was an inch or two of snow on the ground; after the dog started his deer the hunter would follow on the track to get the deer that the dog hardly ever failed to kill. This hunter got quite a number of deer in this way.

The present game law is very lax in regard to hounds. It does not require the owner to confine or take care of his dogs. It simply says he must not let his dog run at large in the woods where the deer inhabit. One hundred game protectors cannot keep the dogs out of the woods or catch them. The dogs do most of their hunting at night. Hounds if not confined will take to the woods to hunt as quick as ducks will take to the water.

The law says a dog found chasing deer can be shot. I have yet to hear of a dog being shot under the present law. It is not comfortable or safe to shoot a man's dog in the Adirondacks. I think the regular guides in the interior of the Adirondacks confine their dogs better than they do near the borders.

I know that on and near the borders there is no pretense made of confining the hounds at any time. I also know that the dogs chase deer at their own sweet will out of season a great deal. Last winter two fine bucks were found dead—killed by dogs—near a place called New Russia. I heard also other reports of deer killed by dogs out of season.

Some men who hunt deer out of season use what they call deaf and dumb dogs. That is, they take a hound out and muzzle him just enough to keep him from barking; then go to some retired place or pond in the woods, put out their "deaf and dumb" dogs, get their deer and no one the wiser.

I think the law should look to it and either banish all deer dogs from the Adirondack region or compel the owners to strictly confine their dogs, when out of season. GOSHAWK.

INDIANAPOLIS, Ind.—*Editor Forest and Stream:* I see from the dispatches that it is purposed to amend the game laws of New York State in the line of prohibiting the jack-hunting of deer, if not to prohibit deer hunting altogether. It is a mystery to me and to hundreds of other hunters, that legislators will persistently ignore facts and conditions, and as persistently seek to do the wrong thing. I do not uphold jack-hunting, but I do say that it is far less a menace to the Adirondack deer than is hounding. Three deer are killed with the aid of hounds in that glorious region to one killed with the aid of boat and jack. And it is also a fact that the hounded deer has less of a chance for his life than is the case in any other character of hunting. If it is desired to preserve the deer, jacking and hounding should be stopped forever. If only one step toward preservation can be taken, then hounding should be prohibited.

I have had the pleasure of many trips to the Grosse River country with C. R. Egbert and Emmett Lathrop, old deer hunters, and I think they will bear me out in the statements I make. The past year the three of us camped for three weeks in that country. In all six deer were killed. Of these two were killed with the aid of a jack light. The others were shot in the woods while members of the party were still-hunting—the only sportsmanlike method of hunting deer. Only the "dude sports," as they are called, use hounds. They cannot, in a contest of wits and care, enter into a contest with a deer and win. They must secure an advantage over the animals, and once the latter are driven to water, as is invariably the case, it is no difficult matter to complete the slaughter. The dogs do the hunting—the dude does the killing only.

Talk with any of the conductors on the Adirondack Railway—who are in a position to know whereof they speak—and they will tell you that the hounding parties are the ones who shed the most deer blood. They will tell you that during the hounding season last year hundreds of deer were carried out of the woods, while before and after that season the shipments were small. They will tell you, further, that almost invariably a hounded deer is shot through the head or neck, and that the fur is powder-burned. Do the legislators call this sport in its truest sense? Heaven forgive them if they do.

In all my experience in the woods—and this statement I also believe Egbert and Lathrop will indorse—I have known more deer to escape death or murder at the hands of a jack hunter two to one than fell a victim to his bullet. I believe this is the rule the woods over. Still I make no defense of jack-hunting. The hounded deer invariably dies. He can't escape from dog and man in broad daylight. The jack-hunted deer has the benefit of darkness and he can't be pursued. He also soon learns the meaning of a bright light at night and goes away from it.

Do you know that guides—residents of the mountain regions—are, next to hounders, the greatest enemies of the deer? It is true. They kill in season and out, many of the lumbermen do likewise. If what I heard is true, many deer were killed last summer in the vicinity of Childwood station. The residents make sausage, mincemeat, etc., of the flesh. They know no law. A year ago this winter two hounds were run along Grasse River by the meanest man in all that region, I am told. They pursued two deer to Burnt Bridge Pond and then killed them on the slippery ice. Yet hounding is prohibited in St. Lawrence county. Ask Uncle Hi Hutchins, an honest, law-abiding old hunter, what he knows about such matters and he may startle you, if he will talk.

Mr. Egbert informs me that he has heard of "guides (hogs) who boast of having killed twenty and twenty-five deer last season!" Think of that! The laws are not severe enough. They are not enforced. The meanest curs in the woods are not the hounds. These are the facts that should be considered in making laws. All kinds of curs should be found out. Then there will be deer in plenty.

Another thing: The proposition to prohibit the killing of does is another bit of buncombe. It would be a dead letter. There are probably twenty does to one buck in the woods now, if not more. The average hunter sees fifteen does to one buck. The best hours for deer hunting are in the early morning and just before dark at night. The light then is uncertain. The body of a deer can be plainly seen, but it is impossible to discover whether or not it has horns. Do you suppose the average hunter would leave his larder empty in such an event, simply because he did not know the sex of his quarry? Such a law would be silly, simply because it could not be observed. It is but a sample of the persistency with which game-law makers go after the wrong idea. Stop hounding first. Stop guiding second. Stop the sale of game third. And there you are, with game preservation assured. FRED LESLIE.

Pennsylvania Fish Protection Association.

The annual meeting of the Pennsylvania Fish Protective Association was held at the rooms, 1020 Arch street, Philadelphia, January 12, and was well attended.

The reports of the Treasurer and Board of Trustees showed that the Association was in a prosperous condition financially.

The joint committee on codification of the fishery laws, reported that the time intervening between the meeting of the committee and the assembling of the Legislature for business is so brief that it is doubtful whether a codification of the fishing laws could be made in time for passage at the present session of the Legislature. The committee should, however, be continued for the subsequent performance of this desirable work.

The following emendations of present laws, and new enactments should be recommended for passage by the present Legislature, and with their enactment much of the inefficient working of the present laws would be obviated.

1. In section 1 of the Act of May 22, 1889, the clause "Provided," "That the provisions of this act shall not apply in the open season to the catching of suckers, eels and catfish in streams other than trout streams partly or wholly included in the survey of farm lands owned by any citizen of this commonwealth, but nothing contained herein shall permit fishing by seines at any time," shall be stricken out.

2. To make all penalties in this act mandatory and not subject to the discretion of the magistrate or court.

3. To amend section 4 of the Act of 1889 so as to prevent the taking of black bass or pikeperch, under nine inches in length.

4. To make it illegal to have trout in possession or for sale under 6 inches in length under a penalty of $10 for each fish so taken or kept.

5. To introduce the bill preventing the pollution of streams endorsed by the several Commissioners of the State.

6. That the Act of May 23, 1887, establishing a close season for German carp be repealed.

The report was unanimously adopted and the committee instructed to proceed.

The following was adopted and forwarded:

To the Hon. Robt. E. Pattison, Gov., of the Commonwealth of Pennsylvania.

The Petition of the Pennsylvania Fish Protective Association, Respectfully that it has come to the knowledge of the Petitioners that certain persons are about to become incorporated under the laws of the Commonwealth for the purpose of building one or more dams in the Susquehanna River within the limits of the State.

Your Petitioners hereby enter their earnest protest against the granting of Letters Patent creating such corporation, unless restrictions be imposed upon such corporation buildings such dam or dams, requiring the erection of fishway or fishways therein for the passage of shad or other seagoing fishes.

If such restrictions are not imposed the fisheries on the Susquehanna River will become valueless and the rights of the citizens in such fisheries will be seriously impaired.

H. O. Wilbur, President. M. G. Sellers, Secretary.

The Secretary of War, having re-opened the movement to bridge the Delaware River, it was decided to bring the attention of the Fish Commissioners to the matter, that all necessary precautions could be taken to protect the fishery interests, during its completion.

A special committee on Legislation was appointed to keep fully informed on all bills introduced to the Legislature relating to fish, and to co-operate with the State Fish Commissioners in bringing its influence to bear upon the Fish and Game Committee of the Legislature to secure the better protection of fish.

A resolution was adopted to notify the public that blank applications for trout fry could be obtained on application to the Association.

A lengthy communication was read from Hon. S. B. Stillwell, Fish Commissioner, of Scranton, advising the arrest and conviction of persons erecting wing walls and washing culm in the Susquehanna River.

Officers elected were: President, H. O. Wilbur; Vice-Presidents, Edwin Hagert, Dr. Bushrod W. James, Howard A. Chase; Secretary, Marion G. Sellers; Corresponing Secretary, J. Penrose Collins; Treasurer, Wm. S. Hergesheimer; Executive Committee, Henry C. Ford, Geo. T. Stokes, C. H. Fitzgerald, Wm. P. Thompson, Col. John Gay, Henry A. Ingram, F. W. Brown, Dr. W. W. McClure, Geo. W. Reader; Trustees, Collins W. Walton, Bernard L. Douredoure, R. M. Hartley.

President H. O. Wilbur addressed the meeting at some length in regard to the work to be done.

M. G. Sellers, Secretary.

National Association.

PRESIDENT BORTREE'S REPORT.

In brief the president's report was as follows: "The mission of the Association, he suggests, must be advisory rather than competitive. Its work must lie in the direction of arousing among those who shoot and fish active interest in the cause of protection. Legislators, in framing laws, will do well to follow, as nearly as possible, those which have been confirmed by the Supreme Courts of the several States. Every State should have a game warden system. Efforts to enforce laws without wardens will prove failures, as experience has shown. The sale of game should be prohibited everywhere. If this be done, the farmer will get more for his poultry and the game dealer can sell more poultry if he does not keep game. There is hardly a time during the open season in Chicago when the markets are not overstocked with game. Stopping the sale of game stops the inducement to kill large amounts, and to cut off the market supply would be to reduce the annual killing of birds and animals one-half. The markets, if there must be game markets, should be closed on Jan. 1, particularly in New York, Philadelphia and Boston. Most of the game sold in the Chicago market has been shipped in violation of the laws of some State. To provide funds for the enforcement of the game laws, the revenue laws should be amended so as to place a tax on all guns owned by sportsmen, this tax to be $1 on each gun. The Western States should have license laws requiring the payment of a fee by sportsmen coming into the State for shooting or fishing. Sunday laws should be strictly enforced, that the game may have one day of freedom from pursuit. The success attained in the propagation of Mongolian pheasants in various parts of the country is a promising indication that this bird will be permanently counted among our game supply. It is hoped that pheasants may be introduced into Virginia, Tennessee, Kentucky, Missouri and Arkansas. Public sentiment is growing in support of game protection. Members of the National Association should be alive and active on behalf of its objects. All violations should be brought to the knowledge of members and should be prosecuted by him or made known to the proper State officials."

The Kennel.

FIXTURES.

DOG SHOWS.

Feb. 19 to 22—NEW YORK.—W. K. C., Jas. Mortimer, Supt.
Feb. 26 to March 1—DETROIT.—City of the Straits K. C., J. W. Garrison, Sec'y.
March 5 to 8—CHICAGO.—Mascoutah K. C., J. L. Lincoln, Sec'y.
March 12 to 15—DENVER.—Western K. C. Co., E. T. Weiant, Sec'y.
April 16 to 19.—BOSTON.—New England Kennel Club. D. E. Loveand, Sec'y.
May 7 to 10.—SAN FRANCISCO, Cal.—Pacific Kennel Club.

FIELD TRIALS.

Feb. 5.—NEW ALBANY, Miss.—Southern F. T. C., T. M. Brumby, Marietta, Ga., Sec'y.
Feb. 11.—SALINAS, Cal.—Pacific Coast F. T. Club.
Sept. 10.—MORRIS, Man.—Manitoba F. T. C., John Woolton, Manitou, Sec'y.

Cincinnati Dog Show.

The show held in the Music Hall, Jan. 11 to 15, was a success; during the last two days the building was very crowded. A good class of dogs was shown, and in all there were nearly 300 entries. The catalogue must have been slightly confusing, as the dogs seemed to have been given numbers without regard to their classification, probably just as they were entered. Further notes of the show have been promised us, but the report is not yet to hand. The judges were: A. G. Eberhart, mastiffs, St. Bernards, great Danes, all spaniels, bull-terriers, Boston terriers, bloodhounds, Newfoundlands, dachshunds and all other non-sporting classes not assigned to other judges; Roger D. Williams, English greyhounds, deerhounds, barzois, foxhounds; J. Taylor Williams, English and Gordon setters and pointers; W. L. Washington, Irish setters; J. W. Mack, pugs, Italian greyhounds, Yorkshire and black and tan terriers; J. Englehardt, fox, Scotch, Irish, Skye and Dandie Dinmont terriers; R. I. Carter, poodles and bulldogs; J. S. Rockwell, Irish water spaniels, Dr. Harry D. Heywood, beagles; Billy Gale, King Charles and Blenheim spaniels; John Hawkes, collies.

Al. G. Eberhart was the superintendent and worked hard, contributing no little to the success of the show.

The bench show committee was composed of R. I. Carter, Al. G. Eberhart, W. J. Wallingford, Louis H. Finch, J. W. Mack, J. S. Rockwell, J. Englehardt, Frank J. Vincent, Dr. H. Heywood, and Dr. A. H. King was the veterinarian.

LIST OF AWARDS.

MASTIFFS.—Dogs: 1st, H. Assel's Clifford; 2d, S. J. Murray's Grover; 3d, W. Bankemper's Grover; 4th, J. Spengler's Nero. Very high com. reserve, A. L. Stevens's Rex. Very high com., H. Tuch's Jack, E. Puthoff's Howard. Novice—Dogs: 1st, H. Rainforth's Cæsar. Puppies—Dogs: 1st, M. A. Frank's Lion; 2d, P. Corrigan's Campbell.

ST. BERNARDS.—ROUGH-COATED—Dogs: 1st, A. Froembling's American Cæsar; equal 2d, H. Hartig's Eden Justice and C. W. Baker's Duke; 3d, G. Fox's Eden Aristocrat; equal 4th, G. Fox's Sir Edendale and W. Biedenbender's Brusch. Reserve, L. Remke's Grover. Very high com., A. Wessel's Hector, G. Sprenger's Prince George II., H. E. Boyd's Duke, T. E. Smith's Don. Bitches: 1st, Mrs. J. L. Rice's Arline; equal 2d, G. Ewald's Silverro and G. Fox's Chequasset Lucretia; 3d, H. Fisher's Venus; 4th, G. Ewald's Cleo. Very high com., J. Beck's Gipsy Girl, Dr. A. Hoeltge's Autumn Queen. Novice—Dogs: 1st, S. A. Stephan's Mardo; equal 2d, H. Hartie's Eden Justice and G. Fox's Eden Aristocrat, 3d, W. Biedenbender's Brusch; 4th, G. Sprenger's Prince George II. Reserve, H. E. Boyd's Duke. Very high com. res., A. Wessel's Hector. Bitches: 1st, S. A. Stephan's Belle of the Zoo; equal 2d, G. Fox's Chequasset Lucretia and J. H. Weiss's Donna Palos; 3d, J. F. Dorger's Queen; 4th, W. M. Thompson's Aurilla T. Reserve, Dr. A. Hoeltge's Autumn Queen. Very high com., H. O. Kimball's Lady Sherwood II. Puppies—Dogs: 1st, G. Fox's Edenton; 2d, W. H. Botley's King Botley. Bitches: 1st, J. T. Dorer's Queen; 2d, E. B. Pfau's Dixie, Jr.; 3d, J. Beck's Gipsey Girl.—SMOOTH-COATED—Dogs: 1st, A. Van Bibber's Lord Keeper. Bitches: 1st, A. Froembling's Audubon Marguerite; 2d, J. Deberby's Daisy E. E. Novice—1st, A. Van Bibber's Lord Keeper; 2d, W. W. Parker's Don Vulcan. Very high com., S. Holmes's Rover. Puppies—Dogs: 1st, C. A. Mull's Montezuma.

BLOODHOUNDS.—Bitches: 1st, Rockwood Kennels' Vigilant.

GREAT DANES.—Challenge—1st, H. D. Johnson's Major McKinley. Open—Dogs: 1st, F. S. Anderson's Anderson's Sandow; equal 2d, E. C. Buck's Hector and J. Yeckel's Napoleon; 3d and very high com., M. Eichler's Tony and Flock; 4th and reserve, S. J. Kreig's Nero and Nigger. Puppies—Dogs: 1st, H. D. Johnson's McKinley's Son; 2d, Col. J. Frye's Nero.

ULMERS.—1st, C. Fleischman's Cæsar; 2d, S. Klein's Bismarck.

RUSSIAN WOLFHOUNDS.—Dogs—1st, Rockwood Kennels, Danicheff.

ENGLISH GREYHOUNDS.—Dogs—1st, C. A. Robinson's Monk Bishop; 2d, A. C. Carpenter's Rome Marble; 3d, C. E. Miller's Montezuma; 4th, H. Ohler's Sanco. Very high com., Col. A. Davezac's Fountain. High com., Mrs. F. D. Stayton's Towser and W. F. Hill's Cæsar. Bitches: 1st, C. A. Robinson's Maid Marion; 2d, D. A. Smith's Daisy. Novice—Dogs: 1st, Dr. H. D. Heywood's Nero; 2d, R. J. Holmes's Hidalgo. Puppies—Bitches: 1st, C. E. Miller's Fannie Davenport.

AMERICAN FOXHOUNDS.—Dogs: 1st, J. Donohue's King Ferguson. Bitches: 1st, F. Unnewehr's Nellie. Puppies: 1st, J. Donohue's Pilot.

NEWFOUNDLANDS.—Bitches: 1st and 2, E. Weis's Flora and Rose.

POINTERS.—Challenge—1st, Eldridge Kennels' cham. Rush of Lad. Open—Dogs: 1st, W. H. Clark's Stanley; 2d, B. H. Whiteley's The Sheriff. Bitches: Equal 1st, W. H. Clark's Stella C. and J. A. Durrell's Queen Kent; 2d, Lord & Hall's Beauty D.; 3d, Dr. H. L. Retter's Lady of Rush; 4th, T. Anderson's Pet. Puppies.—Dogs: 1st, Lord & Hall's Ben Hur. Bitches: 1st, J. M. Scarborough's Graphic Girl; 2d, Dr. H. L. Retter's Lady of Rush. Novice—1st, Fishbach & Baught's Daisy Kent; 2d, T. Anderson's Pet. Black—1st, G. F. Brown's Dock.

ENGLISH SETTERS.—Dogs: 1st, W. H. Wallingford & W. P. Biddle's Ben Hur, Jr.; 2d, W. J. Beck's Chesterford Surprise; 3d, L. F. Hobart's Major; 4th, E. Armstrong's Pride of the Ridge. Reserve: Lord & Hall's Don L. Very high com., Fishback & Baughn's Jeans Val and H. Stephens's Buster. High com., B. Knight's Baille and L. F. Hobart's Mac. Bitches: 1st, Wm. J. Beck's Miss Pick; 2d, M. Clark's Birdie Clark; 3d, H. Stephens's Nettie S. Novice—1st and 2d, W. J. Beck's Chesterford Surprise and Miss Peck; 3d, M. Clark's Birdie Clark; 4th, L. F. Hobart's Major. Reserve, Miss E. Condron's Tony. Very high com., Fishback & Baughn's Jeans Val and L. F. Hobart's Mack. High com., W. H. Palmer's Spartacus. Puppies—Dogs: 1st, A. M. Klein's Spike Wakefield. 2d, W. H. Palmer's Spartacus; 3d 4th and reserve, J. Becker's Mark of Ichtfield, Monk of Ichtfield and Count of Ichtfield. Bitches: 1st, Lord & Hall's Lady Nell; 2d, J. Becker's Nell of Ichtfield.

IRISH SETTERS.—Dogs: 1st, T. N. Lupton's Ben Harrison; 2d, Wm. T. Hill's Sargent. Bitches: 1st, G. Strietman's Rose; 2d, J. Schinider's Sport; L. Rinninsland's Lily. Novice: 1st, J.

H. Grasse's Nellie G.; 2d, E. McClintock's Ned; 3d, T. N. Lupton's Ben Harrison; 4th, E. T. Fries's Duke Elcho IV. Puppies—Dogs: Equal 1st, E. T. Fries's Duke Elcho IV. and W. B. Jones's Bruce Minor.

GORDON SETTERS—Dogs: 1st, F. Kardel, Jr.'s Rye. Bitches: 1st, M. Clark's Hussey.

CLUMBER SPANIELS.—1st, J. Moerlin's Friar Monk.

COCKER SPANIELS.—1st, Eberhart Pug Kennels' Fannie.

IRISH WATER SPANIELS.—Dogs: 1st, Lord & Hall's Irish Pat.

SPANIELS.—Dogs: 1st, M. A. Frank's Baby. Bitches: 1st, H. Walkenhorst's Daisy; equal 2d, C. W. Kobb's Bell and E. Wise's Fanny. Puppies: 1st, O. Rogers's Vic.

COLLIES.—ROUGH-COATED—Dogs: 1st, F. S. Anderson's Toronto Wonder; 2d, L. F. Menken's Duke of Westminster; 3d, J. E. Dougherty's Scotilla IV.; 4th, W. J. Davi'ss Moray. Bitches: 1st, G. Ewald's Alexine. Novice: 1st, L. F. Menken's Duke of Westminster; 2d, W. J. Davis's Moray. Puppies—Bitches: 1st, J. E. Dougherty's Dazzle.

BULLDOGS.—Dogs: 1st, F. Hassureck's Toby. Bitches: Eberhart Pug Kennels' Lorna Doone.

BULL-TERRIERS.—Dogs: 1st, W. Crellin's Dick. Bitches: 1st, W. Crellin's Nellie. Novice: 1st, C. C. King's King.

DACHSHUNDS.—Dogs: Equal 1st, M. K. Bonsall's Schnapps and A. Froembling's Reinecke's Pick. Hound type: 1st, E. Brunhoff's Faldman; 2d, F. Weinheimer's Dick. Bitches: 1st, V. Gluchowsky's Fanny. Novice—Dogs: 1st, A. Froembling's Dreadnaught; 2d, C. Kenning's Grover; 3d, M. K. Bonsall's Schnapps. Puppies: 1st and 2d, E. Brunhoff's Pluto and Don Quixote; 3d, Dennison Hotel's Clem. Novice puppies—Bitches: 1st, E. Brunhoff's Tressie II.; 2d, Dennison Hotel's Katie.

BEAGLES.—Dogs: 1st, 2d, 4th and reserve, T. J. Ellis's Little Dick, Blue Billy, Little Mack and Joe; 3d, Lyons Kerans's Seppo Racket. Very high com., E. D. Fox's Howard's Dan. Bitches: 1st, H. Buning's Queen of Rockland; 2d, J. J. Banahan's Lady Keen; 3d and 4th, A. Jones's Miss Flue and Miss Ripper. Reserve, T. J. Ellis's Speck. Very high com., L. Keran's Dollie Varden. Novice—Dogs: 1st, H. Bunning's U. S. Eagle; 2d, E. L. Fox's Hustler. Bitches: 1st and 2d, H. Buning's Queen of Rockland and Little Dot. Puppies—Dogs: 1st, A. Jones's Hoosier Bornce; 2d, 4th and very high com., H. Buning's Spotty Campbell, Corbett and McKinley; 3d, T. J. Ellis's Joe. Bitches: 1st, H. Buning's Lady Taylor.

FOX-TERRIERS.—Smooth—Dogs: 1st and 3d, Dr. J. F. Belt's Hillside Royal and Wawaset Baron; 2d, G. Ewald's Domo; 4th, L. D. Meader's Bubele. Reserve, B. C. Thomas's Audubon Wang. Bitches: 1st, G. W. Price's Quaker Lass; 2d, F. J. Vincent's Madge II.; 3d, T. W. Tuggle's Peg Woffington; 4th, J. F. Belt's Columbia. Novice—Dogs: 1st, Dr. J. F. Belt's Wawaset Baron; 2d, E. C. Buck's Freddy; 3d, C. Hoffman's Patsy; 4th, Dr. L. D. Meader's Bubele. Reserve, B. C. Thomas's Audubon Wang. Bitches: 1st, G. W. Price's Quaker Lass; 2d, H. B. Pohlman's Snow P.; 3d, T. W. Tuggle's Peg Woffington; 4th, Dr. J. F. Belt's Columbia. Puppies—Dogs: 1st, W. A. Manser's Nip. Bitches: 1st, T. W. Tuggle's Peg Woffington; 2d, F. J. Vincent's Rosanna; 3d, W. A. Manser's Tuck.

SCOTCH TERRIERS.—Equal 1st, W. H. Clark's Highland Boy and C. E. Mull's Jamie II.

RUSSIAN POODLES.—Dogs: 1st, Eberhart Pug Kennels' Bounce.

FRENCH POODLES.—CURLY—Dogs: 1st, Eberhart Pug Kennels' Black Jack, Jr. Bitches: 1st, Eberhart Pug Kennels' Queen Zip. Puppies: 1st, Dr. Insley's Lord Moughlow.

FRENCH TOY POODLES.—Dogs: 1st, Mrs. Bernard's Poli; 2d, C. Dilg's Christie. Bitches: 1st and 2d, J. Weisner's Topsey and Queenie. Puppies—Dogs: 1st and 2d, J. Weisner's Frenchie and Tip. Bitches: Eberhart Pug Kennels' Jessica.

SKYE TERRIERS.—Dogs: 1st, J. H. Brinkman's Dan.

YORKSHIRE TERRIERS.—Challenge—1st, J. Farley's champion Teddy. Open—Dogs: 1st, L. Finch's Prince of Norwood; 2d, J. Farley's Victor; 3d, C. H. Dilg's Tom. Bitches: 1st, C. Hudson's Lady Fern; 2d, N. Hirsch's Nellie Grant; 3d, C. H. Dilg's Daisy. Puppies—Dogs: 1st, C. Herrmann's Teddy, Jr.; 2d, J. Smith's Bob. Bitches: 1st, O. Elzemann's Bess; 2d, J. Smith's Daisy; 3d and very high com., C. H. Dilg's Kate and Bettie. Novice—1st, Mrs. Sol Sharp's Sport; 2d, 3d and 4th, J. Smith's Bell, Kitty and Dot.

KING CHARLES SPANIELS.—Dogs: 1st, F. A. Bradley's Pasha 2d, Mrs. J. A. Frazer's Tory.

BLACK AND TAN TOY TERRIERS (under 7lbs.).—Dogs: 1st, W. Sullivan's Dude; equal 2d, D. Brannon's Dandy and His Royal Nibs. Bitches: 1st and very high com., J. Q. Dobell's Tootsy and Lucy; 2d, W. Sullivan's Daisy; 3d, M. Juelz's Tutsy. Novice—Puppies: 1st, W. Sullivan's Daisy; 2d, J. Farrel's Minnie.

ITALIAN GREYHOUNDS.—Puppies—Bitches: 1st, H. Eichler's Cyrene.

ENGLISH PUGS.—Challenge—Dogs: 1st, Eberhart Pug Kennels' Eberhart Cashier. Open—Dogs: 1st and 3d, Eberhart Pug Kennels's Patsy Bolivar and Sir Douglass; 3d, J. Englehart's Trot; 4th, E. Pelstring's Cip. Bitches: Equal 1st, Eberhart Pug Kennels' Queen Zitka and Mabel E.; 2d, J. Englehart's Ruby E.; 3d, Miss M. I. Kykin's Toy. Novice—Dogs: 1st, Mrs. T. N. Eller's Cedric Errol; 2d, E. Pelstring's Cip: 3d, G. F. Brown's Max. Bitches: 1st and 2d, Eberhart Pug Kennels' LaBelle Senora and Cyrene; 3d, Miss M. I. Dykin's Toy; 4th, J. Gerrard's Cute Lady. Reserve, Fishback & Baughn's Pet. Very high com., T. E. Smith's Bunnie. Puppies—Dogs: 1st, J. Gerard's Romeo; 2d, Eberhart Pug Kennels' The Boss. Bitches: 1st, Eberhart Pug Kennels' Vera. Black—1st, Miss L. Leonard's Francis.

DALMATIANS.—Equal 1st, S. C. Barhite's Nellie and D. A. Smith's Cora.

MISCELLANEOUS.—Equal 1st, C. Fleischman's Herr Feltman, Peter Sonn's Hans and M. Kahn's Osman.

ENGLISH SHEEPDOGS.—1st, J. E. Dougherty's Nabob.

ANGORA CATS.—1st and 2d, R. P. Thrasher's Fuzzler and Plume. 1st, R. P. Thrasher's Sweet Marie.

SPECIALS.

Best pointer dog (2), Rush of Lad. Best bloodhound, Vigilant. Best St. Bernard, American Cæsar. Best greyhound, Monk Bishop. Best bulldog, Lorna Doone. Best Poodle, Eberhart's Bounce. Best Italian greyhound (2), Psyche. Best English setter (2), Ben Hur, Jr. Best pug dog, Eberhart's Cashier; best bitch, Nancy; another one Nancy and Queen Zitka divided. Best Yorkshire terrier bitch, Lady Fern. Best curly poodle, Queen Zip. Best great Dane, Major McKinley. Best kennels.—Pugs, Eberhart Pug Kennels; English setters, J. Becker; St. Bernards, Eden Park Kennels; dachshunds, Ed. Brunhoff; beagles, T. J. Ellis; Yorkshire terriers, J. Smith; French poodles, Eberhart Pug Kennels. Best Irish setter, Rose. Best fox-terrier, Hillside Royal.

More Challenge Proposals.

HICKORY VALLEY, TENN., Jan. 10.—*Editor Forest and Stream:* In your last issue I read with interest Major J. R. Purcell's challenge, and must say that it sounds as if he means business, and I am proud to say that the major is no part of a would-be sportsman. The major has a good pointer and he is not afraid to run her against good pointers and setters. All I will make a match with the major for is just to accomodate him, and for a chance to win the money that is up. I will run Chevalier aganist Lady Margaret, the exact race that the major is dissatisfied with, if the Subscription Stake of Easter Field Trial Club, the race to be 2 hours, under the Easter or U. S. Club rules, to run first suitable day after the U. S. trials, B, are over and on their grounds at West Point, Miss. I will select Mr. F. R. Hitchcock as my judge, the major can select one, and they can select the third. The judges to have full control of all details not mentioned. If Mr. Hitchcock cannot act, I will select someone who has acted as judge, and is thereby competent, and I hope the major will do the same. The amount of purses to be $300 a side, or as much more as the major wants to make it, up to $5,000. I name Mr. P. T. Madison as stakeholder, and have mailed him check for $150, half of the amount, as a forfeit, showing good faith. As Chevalier has no stake that he can run in, I hope the major will cover my forfeit at once before I spend any of my time on him. I mail the major a copy of my challenge. If the major beats me I will shake and congratulate him on his success.

J. M. AVENT.

DOG CHAT.

Mr. Geo. H. Hill, the superintendent of the coming Mascoutah Club show, has taken up his quarters at 952 Monadnock Building, Chicago, and to this address all communications in regard to the show must be sent.

It was rumored recently that old Mr. Spracklin, of Woodstock, Ont., the spaniel man, had departed to the happy hunting grounds, but we are glad to state that he is very much alive at present. He has taken a farm and has 127 spaniel puppies, 27 brood bitches and 6 stud dogs! He has also launched out into mastiffs, and has some bull-terriers and collies. To manage such a kennel as this he must be a pretty lively man.

An executive committee meeting of the Spaniel Club was held at Dr. Bradbury's, 110 East Twenty-second street, New York, on Jan. 12. Those present were A. C. Wilmerding, president, R. P. Keasbey, E. M. Oldham and Dr. Bradbury, the new treasurer. The treasurer's report showed a balance of $170 in the bank and dues to come from members amounting to $130. All bills have been paid and the club has a membership of 65. The annual meeting is to be held at Madison Square Garden on Feb. 20 at 4 P. M., and the annual club dinner will take place afterward. Messrs. Oldham and Keasbey were appointed a committee to make all arrangements for this interesting function, and communications in reference to it must be sent to Mr. Oldham, 166 West Seventy-ninth street, New York. On the call for new business Mr. Oldham arose and startled the president with the following speech: "Mr. Wilmerding, it is my pleasant office this evening to wish you on behalf of the members of the American Spaniel Club every conceivable happiness that the interesting and holy state on which you are about to enter can confer. You have, as we all know, from the first formation of this club always used your utmost endeavors to advance its interests. To-day we are pleased to think it stands second to none in the kennel world, and we feel that, as it has been in part through your efforts that this desirable end has been attained, so should the voice of the club be heard on an occasion when you are about to take the most important step of your life. In the name of the American Spaniel Club I beg to present you with this little souvenir commemorative of this occasion, wishing you and your intended bride health, wealth, and last, but not least, happiness." Mr. Oldham then presented Mr. Wilmerding with a handsome siver cake salver and knife, on which was engraved: "Presented by the members of the American Spaniel Club to their president, A. C. Wilmerding, January, 1895." Mr. Wilmerding responded in the following words: "Mr. Oldham and gentlemen: I am indeed quite overcome and hardly know how to reply. Your very beautiful token has taken me completely by surprise. While I have always served the club with my best efforts—as I think you all know—yet I do not feel that I deserve so handsome a remembrance at your hands. I shall always cherish it highly as coming from a body of men whom I can never do aught else but respect and esteem. Accept my thanks." The meeting then adjourned. Mr. Wilmerding was married Jan. 22, at Trinity Chapel, New York, to Miss Bache, of Morristown, N. J.

A rather interesting question arose at the last meeting of the American Spaniel Club regarding specials offered by a certain exhibitor who, since the specials were offered, has been disqualified by the A. K. C. These specials have to be won a certain number of times, and while the donor was in good standing they were put up twice and consequently the temporary winners have an interest in these specials. The club, therefore, feels that in justice to them it would be proper to submit the question, as to whether they may be offered, to the A. K. C. at its next meeting so as to get a ruling on the point. There should be no difficulty in this as the specials in question are now controlled by and in a sense are the property of the Spaniel Club.

Another meeting of the Montreal Kennel Association was held last week with Dr. Mills in the chair. Mr. James Lindsey read a paper on "The Smooth Fox-Terrier," and Mr. J. A. Pitt gave a dissertation on the St. Bernard. Both gave interesting particulars regarding the origin of the breeds and the different well known dogs that have been exhibited. Several of the members were accompanied by dogs of these breeds and these were used to illustrate the standards.

Mr. Geo. W. Runton's promising young bull-terrier Tarquin, that came out at the Saratoga show, met with an aggravating mishap in a disagreement with his kennel mate Edgewood Tipsey, a couple of weeks since. The roots of one ear were torn and the ear now falls over on the head when the dog is excited. With care the injury may be remedied.

In England those who dock a dog's tail are liable to a penalty of $25.

The crack collie Ormskirk Amazement has been sold by Mr. Stretch to a Mr. C. Lymott, of Australia, and sailed for his new home on the last day of 1894. Such a dog should have a great influence for good on the breed in the Antipodes.

The pointer Kent Elgin completed his cure at the Pasteur Institute, New York, on Thursday, Jan. 17. He has taken his medicine like a man, and has received during the fortnight about thirty-four injections altogether and as many as four a day toward the end of the period. On the day he was shipped to Birmingham, Ala., the dog shook paws with us from his recumbent position on Dr. Gibier's knees. The dog's good nature and intelligence have made him a general favorite among the doctors, and that he had made a good friend at court was evident from the fact that we found Kent quite at home in the Doctor's study. He has gained in flesh and to every appearance is in perfect health. That Mr. Ashford felt justified in placing Kent under treatment may be gathered from a recent letter, in which he says: "There is now no doubt in my mind about the dog being mad that bit Kent. A few days later two dogs were taken to French & Drummond's Veterinary Hospital and developed full-fledged cases. I have also heard of other dogs being killed, supposed to be mad. We have had an epidemic of mad dogs here for the past six or eight months. The Pasteur Institute in New York had a young man patient from here the past year. He was bitten by his pet terrier; I saw the dog every day during his confinement, and before being confined he bit his owner and dozens of dogs. During last year I have seen a dozen cases at the Veterinary Hospital. I write you this to show you I had good grounds for feeling alarmed for Kent's safety. Dr. Posey, a gentleman with whom I frequently hunted and fished, and who lived ten miles from here, died from hydrophobia last year. Though a rich man and able to go to New York, he did not think the dog was mad. Three children bitten at the same time and by the same dog are still living." We trust that Kent Elgin will be one of the excepted ones, and that he will live out his natural life, ready at any time to meet the Strideaways of his breed in the field.

The marriage of Miss Maie Byrne to Mr. Harrison, of England, and late M. P. for the mid division of County Tipperary, Ireland, on Jan. 16, will be of interest to the members of the Bulldog Club from the fact that Mrs. Harrison will now reside in England. Her well-known bulldog Found It will probably not be seen at future shows in America. Found It was placed second to His Lordship at New York last year.

In view of many valuable dogs shot, poisoned, lost, stolen and otherwise made away with lately in different parts of the country, would it not be advisable to organize a National Dog Protective Association, with branches in all the principal towns where valuable dogs are owned? Grand Rapids, Mich., has an association of this kind and a dispatch to the Chicago *Tribune* from Minneapolis, Minn., says: "A plan is on foot for the formation of a canine mutual protective association which if carried out will save for its owner many a valuable dog. The scheme is outlined by O. B. Clarke of this city and it is proposed to have a small annual due. Each member will be furnished with a list of the dogs owned by the other members and a basis of identification will be arranged. Lost or stolen dogs can be traced and dog thieves can be caught. The dues will be used as a fund to prosecute persons caught with stolen canines. It is expected a thousand members can be obtained." If such an association as this could be organized in New York, cases like the shooting of Mr. Bateman's beagles, for instance, could be dealt with in a manner that would probably have a deterrent effect on a large class of individuals who seem to think that the best way to treat a dog is to kick it, if they can do so with safety to their own precious skins.

The New England Kennel Club will hold its eleventh annual show at Mechanic's Hall, Boston, April 16 to 19, rounding up the spring circuit as usual. When Mr. Loveland remarks, "Things are booming," we may take it for granted that the Boston show will be a success.

A Bedlington Terrier Club.

The American Bedlington Terrier Club was organized at the office of FOREST AND STREAM, Jan. 19, by Messrs. Martin A. H. Thelberg, Thomas Pearsall, John Hopkinson, Harris R. Childs, Justus D. Smith and H. W. Lacy. Under the constitution adopted the following were elected an executive committee: Messrs. Wm. Henry Russell, Thomas Pearsall, Martin A. H. Thelberg, John Hopkinson and Harris R. Childs, with Mr. Russell President and Mr. Pearsall Secretary-Treasurer of the club. The English club's standard was adopted. The annual meeting was set for the week during Westminster Kennel Club show.

A vote of thanks was given Mr. Lacy for his courtesy and assistance to the young club. The club intends to have an attendant in uniform at the New York show, and the club offers $10 for the best American-bred Bedlington at that show. The members already number ten, and if the enthusiasm of the breeders present at the meeting is to be taken as a guarantee, the breed is bound to be well supported by the new club.

Last week a letter on "Work for Terriers" found its way into the Rifle columns. Rifle butts are the last places one would look for work for terriers.

Death of Kent Elgin.

All field trial men and pointer breeders generally will sympathize with Mr. Ashford over the loss of his noted pointer, Kent Elgin, by rabies. Our readers are familiar with Kent's visit to Pasteur Institute, in this city, and his treatment. When we saw the dog at the institute on the 17th, the day he was shipped home, he showed not the slightest sign of such a dreadful end. He was bright and seemed in perfect health. Mr. Waters' telegram shows that the dog must have died the day after his return home. Mr. Ashford has the slight consolation of knowing that he did all that lay in his power to save his dog.

The Mercer-Mills Case.

In our issue of May 26, 1892, appeared a letter from Dr. Mills in which he stigmatized as a fraud Mr. Mercer s action in entering, unknown to the owner, Mr. Little's clumber Newcastle, in view of the fact that this entry completed the number necessary for a division of the challenge class at the Ottawa show in 1891, in which Mr. Mercer's dogs were entered. Mr. Mercer then brought a libel suit against Dr. Mills. On the case coming to trial, the prosecuting counsel had scarcely commenced his speech when the judge exclaimed, "It is a fraud," and dismissed the case. Mr. Mercer appealed on the ruling and got a decision on the ground that the judge had no power to throw the case out before it had been considered by the jury. Several dates were fixed for the new trial, but the case was postponed on account of Mr. Mercer's illness. Finally on June 16 and 17 the case was tried at Ottawa in the Supreme Court before Chancellor Boyd and a jury. Mr. Little went up from Boston and gave his part of the story. Dr. Mills testified that he still was of the same opinion. The entry blank and letters which passed subsequently between Messrs. Mercer and Little were produced and evidently influenced the jury. Alfred Geddes was also called on behalf of the show committee. Each counsel consumed an hour in summing up and a fair hearing resulted. The judge's charge was fair, but against Mercer. In ten minutes the jury returned a verdict for the defendant in both cases. The judge accepted this and added costs.

Mascoutah K. C. Premium List.

"Heard anything from Chicago?" has been the question among fanciers the past week, and many were the surmises as to who would don the ermine, and while we were informed as to the names of two prominent judges we preferred to follow the Mascoutah Club's lead and wait until the full list could be sprung at once. The list will furnish a surprise to many, for the club has made a commendable move in looking around for fresh judging material, and the selections as a whole are good. R. J. Sawyer, Menominee, Mich., takes St. Bernards; Arthur Trickett, Little Rock, Ark., mastiffs; G. Muss-Arnolt, New York, great Danes; B. F. Seitner, Dayton, O., pointers; W. B. Wells, Chatham, Ont., English setters. Then the old reliable veteran John Davidson will have his work cut out considering the many breeds he assumes. They are Irish setters, Gordons, Newfoundlands, Russian wolfhonds, deerhounds, greyhounds, bloodhounds, foxhounds, Chesapeake Bay dogs, beagles, all terriers except foxterriers, Yorkshires and bull-terriers—Schipperkes, old English sheepdogs, Dalmatians and miscellaneous; J. A. Long, collies; August Belmont, fox-terriers; Andred Laidlaw, all sporting spaniels; E. A. Woodward, Chicago bulldogs; Wm. Mariner, Milwaukee, Wis., bull-terriers; Jos. Wedekind, Chicago, dachshunds, and T. Farrer Rackham, East Orange, N. J., poodles, pugs, Yorkshires, toys, King Charles, Blenheime, Prince Charles, ruby and Japanese spaniels and Italian greyhounds. The latter has the distinction of being the only one who is not particularly identified with the breeds he will adjudicate upon, but we know not what a man can do until he is tried, and we trust he will be successful. Mr. Rackham has been judging acceptably in the South during the winter.

From advance sheets of the premium list we find that 205 classes are provided. In mastiffs and St. Bernards the prizes are challenge classes $15 and $10; open classes, $15, $10, $5 and $; puppies $5 and $3 and the same in the one novice class. Great Danes have the same classification and prizes except that puppies compete together; deerhounds, greyhounds, foxhounds (types divided), field and cocker spaniels, Irish water spaniels (open classes only) Dalmatians (open classes only) bulldogs, bull-terriers, beagles, smooth foxterriers, Irish, Scottish, black and tan, Bedlington, Dandie Dinmont, Skye and Yorkshire terriers and pugs are given $10 in challenge classes and $10, $5 and $3 in open classes, and most of them, except the rough terrier breeds, have puppy and novice classes, with prizes ranging from $5 and $3 to $10 and $5. Wire-haired fox-terriers, dachshunds, Irish terriers, Scottish, Dandie, Syke, Yorkshire, King Charles, Italian greyhounds, bloodhounds, dachshunds and foxhounds have one challenge class. Those breeds with $10, $5 and silver medal in open classes are poodles and Boston terriers. Smooth fox-terriers have a bronze medal for fourth prize in open classes. The toy spaniels, Italian grey-

hounds and miscellaneous get $5 in the challenge classes and $5 and $3 in open, King Charles and Blenheims getting a third prize of a silver medal. Pugs get a bronze medal for fourth in open classes. Kennel prizes ranging from $15 to $10, according to importance and size of breeds, are given by the club. The array of specials is very noteworthy, the Mastiff, St. Bernard, Spaniel and Boston Terrier clubs being especially active. The Mascoutah Club also donates a number of club medals, and there are a good many cash specials, given by outside people, to be picked up in the different breeds that time and space, however, compel us to omit particular notice of this week. Entries close Feb. 16, and the fees are $3 each. In the additional rules we notice that the club draws attention to a very commendable clause, "No exhibitor will be permitted to change the number or location of the stall allotted to his dog." This is a move in the right direction, and is one that FOREST AND STREAM has continually urged. All communications regarding the show should be sent to Geo. H. Hill, Monadnock Building, Chicago. Spratts Patent will bench and feed, and Sanitas Co. will disinfect.

POINTS AND FLUSHES.

[*From a Staff Correspondent.*]

In a letter under date of Jan. 5, Mr. Thomas Johnson, of Winnipeg, writes me as follows- "You will be sorry to learn that distemper, in its most malignant form, struck my kennel, and cleaned it out of every pointer I had."

I am indeed sorry that Mr. Johnson has suffered such a severe loss. He had an exceptionally healthy, trim-built, gamey and well-bred lot of pointers, all in the pink of condition when I saw them in Winnipeg last fall. From their energetic ways and with the blood which they possessed, I expected that they would make a record among the first in the canine world, but that terrible disease of the dog, distemper, has destroyed them as it has thousands before. The disease, being of germ origin, would seem to be amenable to treatment similar to that applied to other germ diseases, and is worthy of the investigation of veterinarians from that standpoint.

Mr. G. T. Cullins writes me that his English setter bitch had a remarkable litter of fourteen puppies, eight of which were dogs. Dr. Rogers's Andrew Dixon is the sire. B. WATERS.

The Baltimore Field Trials.

The ire and indignation of the members of the Baltimore Gun Club, one of the leading sporting organizations of this State, has been aroused by the following article which appeared in one of your contemporaries the other day:

"The Baltimore Gun Club seems to have been having some amateur field trials, which is not in itself anything marvelous; but it is extraordinary to learn that the trials were run 'within the city limits,' when for the last few years the public has been gradually taught to believe that a medium-sized country is hardly big enough for the high-class field trial winner. The Baltimore *News* has this to say about the trials: 'A special permit was granted the members of the Baltimore Gun Club by Mayor Latrobe to hold their first field trials yesterday at the country place of Mr. John S. Gittings, on the Liberty Road, which is within the city limits. The trials were not particularly successful, as the dogs showed up in comparatively poor form. Three dozen partridges were used in the trials and most of them were finally shot.' What is meant by 'three dozen partridges were used,' etc.? Can it be possible that the members of the Baltimore Gun Club went out to the suburbs, turned down three dozen partridges, and proceeded to run field trials on vacant lots and among the sign boards of real estate dealers?"

Now, what object a paper whose mission, it claims, is to build up sport and encourage it, could have in publishing such a misstatement of facts and try to ridicule the Baltimore Gun Club is more than any fair-minded lover of the dog and gun in these parts can account for. In the first place there was nothing amateurish about the trial. The gentlemen who entered their dogs were all expert shots both in the field and at the traps, and should the father of that article think otherwise he can call at the club's headquarters, 15 St. Paul street, and find plenty of coin to shoot for.

As to "vacant lots" and "signboards of real estate dealers," we cannot be clear on that point. The "lot" on which the trial took place comprised 100 acres of an estate containing 600 in all. One part of the "lot" was covered with sedge grass, while the balance was composed of woodland and plowed ground.

During the trials no less than four rabbits were kicked up, and a number of field larks were also killed.

Now, if the cities of Chicago and New York have 600-acre town lots with rabbits and field larks on them, their ideas and those of the people of this section differ considerably on the words "town lots."

While the grounds were within the city limits, the nearest house was a roadside inn. The city proper is some three miles from Mr. John S. Gittings's estate, on which the trials were held, this portion being known as the annex or belt. But as it is under the jurisdiction of the city officials a permit had to be secured from the mayor to use firearms.

As to the Baltimore *News* statement that the "trials were not particularly successful," there was no representative of that paper present, and in fact there never is at any sporting event of any character, to use a slang phrase, the young man who wrote it was "talking through his hat." The only newspaper representative present was Mr. H. L. Clarke, of the Baltimore *Sun*, who was delighted and so expressed himself through the columns of his paper.

Now, as to the dogs: We flatter ourselves that we know a dog when we see one, and there was not a single pointer or setter out of the whole fifteen on the field that day that could be bought for a $50 note. In fact, the next day one of the dogs exchanged owners for the sum of $105.

The dogs all found birds, dropped to shot or wing, back stood and retrieved. What more a man could want, unless a circus dog, is hard to say.

As to the killing of the birds, some few were shot to try the dogs on retrieving, but every bird was given a fair chance for his life. Out of the thirty-six birds thrown out six were known to have sought refuge in a large pile of wood, and yet were not disturbed.

The result of this "amateur field trial" was such that it has created great interest in a sport that has been quiet in Maryland for years.

Next season we propose to hold one on a larger scale, and will invite owners of dogs from other States to participate, but will not solicit any aid from those that call a 600-acre farm a "town lot." Our ideas of an American field are vastly different.

WM. L. STILES.

United States Field Trials B.

WEST POINT, Miss., Jan. 21.—*Special to Forest and Stream:* The Pointer Derby has nine starters—Delhi, Roderick T., Tippoo, Tamarack Jr., Lad's Lady, Staunch George, Hempstead Don, Rex Faust and Louis Kent. Heavy rain in the forenoon prevented a start; the afternoon was clear and pleasant. Grounds were wet and heavy. Birds were found in abundance; fourteen bevies were found by horsemen and dogs. Sedge grass is rank and dense. Seven were kept in the second series—Rex Faust, Delhi, Tippoo, Tamarack, Jr., Hempstead Don, Louis Kent and Lad's Lady. Quite a number of visiting sportsmen are in attendance. Kent Elgin died of rabies last night at Birmingham, Ala. Weather raining and unsettled. The work was commonplace. Judges are Maj. J. M. Taylor, J. M. Freeman and St. Marc M. Mundy, who takes the place of Mr. Royal Robinson.

B. WATERS.

Chevalier—Lady Margaret.

INDIANAPOLIS, IND., Jan. 17.—*Editor Forest and Stream:* I am in receipt of $150, from Mr. J. M. Avent, as forfeit money, to bind a match between his English setter dog Chevalier and Major. J. R. Purcell's pointer bitch Lady Margaret. Said match to be run at West Point, Miss., immediately after the conclusion of the trials of the U. S. F T. Club.

P. T. MADISON.

Hunting and Coursing.

FIXTURES.

Feb. 12 to 14.—BUCKFIELD, Me.—Monmouth Fur Club's winter meet.

Monmouth Fur Club Meet.

MONMOUTH, Me., Jan. 5.—*Editor Forest and Stream:* The mid-winter meet of the Monmouth Fur Club will be held at Buckfield, Me., Feb. 12 to 14. All fox hunters are cordially invited to join us in a grand hunt and to bring their dogs. There are good hotel accommodations at reasonable rates, plenty of foxes and fine hunting grounds. The club headquarters will be at Hotel Long. WESLEY PRESCOTT, Sec.

* * *

HUNTING AND COURSING NOTES.

A correspondent kindly sends us the following clipping from the *Daily Local News*, of West Chester, Pa. It is merely another proof of the resources of American fox hunters who, unlike their English cousins, bid defiance to "Jack Frost" and even make the latter an accessory to their sport: "Perhaps one of the most novel and exciting fox chases ever witnessed in Chester county occurred on the old Brandywine battlefield yesterday (Jan. 3). Shortly before noon about one dozen members of the West Chester Fox Hunting Club, each and every one of whom was equipped with either a pair of skates or a sled, started on a tour of the country lying south of town, accompanied by the pack of eager hounds. The earth, clothed in a thick coating of snow covered with a crust sufficient to bear almost the weight of a horse, was in good condition for a day's hunt, but no steeds could be used. Upon arriving at Noble's woods, about a mile south of town, the hounds jumped a trail, and the hunters scudded merrily across the fields on their steel runners, and were thus enabled to get a good view of the run. The dogs furnished lots of music and made things decidedly lively for reynard, which immediately headed toward Painter's bridge. Arriving at the latter point, the fox turned in a southerly direction and ran toward Chadd's Ford, in which country he circled about for a considerable length of time and finally retraced his steps again. The sport was kept up until the shades of night were falling, when the hounds were called off and the hunters returned. The ice-covered snow was in excellent condition for a chase of this character, and the hunters were enabled to make good time on the runners adopted for the run. The scene, as viewed from an eminence in Birmingham, was a very pretty one, and the hounds could be observed until they neared Chadd's Ford. This was the first big hunt of the kind on record, and should the weather remain cold it may be repeated in a few days."

* * *

Mr. O. F. Joslin was elected delegate to the A. K. C. at the meeting of the Brunswick Fur Club, held at Barre, Mass., Jan. 9.

* * *

On his way home from the Brunswick Fur Club trials, Mr. Turpin went to see Mr. A. H. Morse, of Qunniebaug, who has the noted Clyde, who is still looking well and hearty, and is full of hunt. So are the other dogs, including Lady Novice and Blossom, the field trial winners; but the rabbits are of the Oxford type—"hole darters."

* * *

Mr. John H. Wallace, Jr., of Town Creek, Ala., secretary of the Dixie Red Fox Club, sends us an account of a novel hunt, in which it is shown that Alabama foxes can climb trees as well as their Florida and Texas cousins: "While out hunting with the Kittikaski pack a few days since his hounds struck a warm trail, and were soon moving at a lively clip. When the hounds had trailed perhaps a mile through fields and timber, all came to a dead stop. He had a friend whom he requested to go down into the thicket of scrub oaks and blackjacks and attempt to ascertain the cause of the check. His friend soon called to him that he had found the fox. Mr. Wallace went down, and was astonished to find a large red fox securely perched in the forks of a bending blackjack tree. Upon close examination, he discovered two foxes up the tree lying side by side, apparently very unconcerned, in a bed built of leaves. A negro boy was called and sent up the tree, being cautioned, if possible, to make only one jump out. The hounds were called away, and soon Reynard No. 1 came down. After a start of several minutes the hounds were put on his trail. He made a large circle to the north and was caught in forty-five minutes. The hunters then came back to the place of starting, called the boy, and soon fox No. 2 was going, with the pack at a Salvator clip uncomfortably close at his heels. He made a large circle to the south, and was caught in fifty minutes, not a hundred yards from where the first fox was caught."

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

G. DE C., New York City.—You can have a veterinary surgeon cut the ears so that they will fall perfectly, but of course you will not be able to show the dog, as that is considered "faking." It is not necessary to register a kennel. If you wish to claim a kennel prefix you must apply to the American Kennel Club and pay a fee of $3, and if the name is not already claimed yours will be allowed and no one who shows under A. K. C. rules will be permitted to use the same name or a similar one.

C. T. B., New Bedford, Mass.—The pedigrees of the Gordon setters are: Champion Flash—Sire, Crown, by Brownell's Dash out of Handy Trix, by Dorris's Don out of Rodman's Nellie; Dash by Doane's Tom out of Doane's Chloe. Dam, Dell's Cute, by Rosa's Don out of Kirby's Nellie, by Chandler's imported Sailor out of his imported Fannie. Don, by Polhemus's Duke out of Bramster's Queen Bess. Major S. Stockton's Dash and J. W. White's Fly are not registered in either stud book. Pansy, by Howe's Fritz out of Gay's Gipsey; Fritz, by Howe's Ranger II. out of his Fanny II.; Gypsey, by Howe's Fritz out of his Nellie. Marble's Grouse, by Duke of Buccleugh's Grouse out of his Flora, further pedigree is not given, as Grouse is not registered. Nellie Horton, by Duke of Gordon out of Dream; Duke of Gordon, by Shot out of Maud; Dream by Ranger out of Juno.

C. S. M., Battineau, N. D.—This is rather close breeding, but under the circumstances, providing both are healthy and have no hereditary defects, there would be no harm in doing so.

C. R. C., Belfast, Me.—My Irish setter has a kind of skin disease, which causes him to itch and constantly scratch himself. There are many small places on him that break out and form dry, hard scabs, and where he scratches so much occasionally it bleeds. Ans. Wash in a solution of creoline (1 to 60 of water) once or twice a week. Give the following mixture:

Rx Pot. citral.....drs. ii.
Liq. sodii arsenicalis.....drs. i.
Aq. ad.....oz. vi.
Mix. Give one tablespoonful twice a day.

J. A. B., Chicago.—I have a pointer pup one year old who is losing his hair in spots. Tar and usual remedies applied have failed. Treat for worms. Ans. Apply tincture of iodine to the spots. See answer to "C. R. C."

H. C. D., New York City.—Try manganese di oxide given in the form of tablets, each containing one grain. Give one three times a day after food.

G. DEC., New York City.—1. Is there anything I can do to make my fox-terrier's ears hang right? 2. Also, please give a cure for external canker on a spaniel's ears. Ans. 1. First try "weighting" them down with small pieces of lead placed between layers of adhesive plaster and then stick on (inside) tips of ears. 2. Apply balsam of Peru to the sore and remove the collar; put a cap on to prevent the dog shaking his ears.

P. H., Albany, N. Y.—My Gordon setter for two years past has had a sort of irritation which commences in the fall and lasts through the winter. Is continually licking his paws and back, in fact every part within reach, and the places become raw sores. The odor is offensive. Ans. Try some of the advertised mange cures and give the following powders:

Rx Antim. tart.....grs. i.
Hydrang. sub. chlor.....grs. ½
Sacch. lact.....drs. i.
M. et. div. in pulvo. xxiv.
Give one three times a day shaken on the tongue.

C. E. R., Waltham, Mass.—My beagle puppy, nine months old had distemper and an abcess formed over his eye. I opened it removed the pus, and he seemed to be doing finely; was smart, ate well and recovered his flesh, when he was taken with pains. It seemed like colic; I gave him a dose of castor oil and he got over the pains in about a day, but has seemed weak since. His belly is tucked up as though his intestines were drawn up into his stomach and he vomits if he has meat or anything hard to digest, and cannot retain castor oil. He shivers almost all the time, is rather costive and likes to lie near the stove. He is not feverish, his coat looks well, his eyes are bright, but when he walks his hindlegs seem stiff and weak and he arches his back slightly. I have been giving Nestle's food three or four times a day. Ans. Give an enema. In addition to the Nestle's food mentioned give a little raw meat chopped up very finely, or raw meat juice. Give following powder:

Rx Bismuth sub. nit.....scr. ii.
Cerii. oxalis.....scr. i.
Pepsin.....grs. xxiv.
M. et. div. in pulvo. xii.
Give one three times a day shaken on the tongue.

H. B. W., Long Branch, N. J.—About two weeks ago my English setter dog, 2½ years old, came to me crying without any apparent cause, and shortly afterward I noticed that he whimpered a little when he stretched himself. I find no distension of the stomach or anything to indicate the trouble, and no soreness, but upon moving either hindleg to the side, that is, spreading them, he cries and is evidently in pain. Ans. Rheumatism. Give the follwing mixture:

Rx Sodii salicylas.....drs. iss.
Syr. simple.....drs. iv.
Aq. ad.....ozs. vi.
Mix. Give one tablespoonful three times a day.
Apply this liniment to back:
Rx Spts camph.....ozs. iss.
Chloroform.....drs. iv.
Lin. saponis ad.....ozs. iv.
Lini. Apply to back and sore places two or three times a day.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

☞ **Prepared blanks sent free on application.**

Spencer's Julia. By H. Spencer, Marysville, O., for black, white and tan English setter bitch, whelped Feb. 7, 1894, by Hazel Lem (Duke Boy—Sue Ellen) out of Gipsey Cambridge (Count Paris—Nellie Cambridge).

BRED.

☞ **Prepared Blanks sent free on application.**

Topsy F.—Ezra Noble. C. F. Trethar's (New York city) English setter bitch Topsy F. (Roderigo—Lee Gladstone) to J. E. Borden's Ezra Noble (Count Noble—Alphonsine), Jan. 8.

My Lady Jane—Jasper. F. W. Kitchel's (Perth Amboy, N. J.) cocker bitch My Lady Jane (champion Doc—My Lady Betty) to his Jasper (Red Roland—Floss), Sept. 6.

Gertie—Jasper. W. Batts's cocker bitch Gertie (Beau Brummel—Bijou) to F. W. Kitchel's Jasper (Red Roland—Floss), Jan. 11.

Jessie—Jasper. Dr. Lyman Clark's cocker bitch Jessie to F. W. Kitchel's Jasper (Red Roland—Floss), Dec. 8.

Lady Bug—Jasper. F. W. Kitchel's (Perth Amboy, N. J.) cocker bitch Lady Bug (Rollo W.—Brown Gyp) to his Jasper (Red Roland—Floss), Nov. 18.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Lizzie M. G. G. Williamson's (Muncie, Ind.) English setter bitch Lizzie M. (Antonio—Ruby's Girl), Jan. 3, seven (five dogs), by Blue Ridge Kennels' Gath's Mark.

Tootsey Davenport. Oak Ridge Pug Kennels' (Brookville, Pa.) pug bitch Tootsey Davenport (Daisey—Topsy), Jan. 5, four (two dogs), by Eberhart's Bradford Ruby II. (champion Bradford Ruby—Puss B.).

Peggy Pryde. Oak Ridge Pug Kennels' (Brookville, Pa.) pug bitch Peggy Pryde (Eberhart's Cashier—Flossie II.), Jan. 1, two bitches, by Eberhart's Happy Toby (Spokane—Nelly T.).

My Lady Jane. F. W. Kitchel's (Perth Amboy, N. J.) cocker bitch My Lady Jane (champion Doc—My Lady Betty), April 22, six (four dogs), by A. Laidlaw's Commodore (Red Roland—Ula).

Ladybug. F. W. Kitchel's cocker bitch Ladybug (Rollo W.—Brown Gyp), June 8, five (four dogs), by Othello (Pat—Ruby).

Cleopatra. F. W. Kitchel's cocker bitch Cleopatra (Obo C.—Black Cherry), June 16, seven (one dog), by Jasper (Red Roland—Floss).

My Lady Jane. F. W. Kitchel's cocker bitch My Lady Jane (champion Doc—My Lady Betty), Nov. 6, seven (three dogs), by Jasper (Red Roland—Floss).

Ladybug. F. W. Kitchel's cocker bitch Ladybug (Rollo W.—Brown Gyp), Jan. 15, six (four dogs), by Jasper (Red Roland—Floss).

SALES.

King of Hessen. Liver, white ticked, pointer dog, whelped June, 1891, by Duke of Hessen out of Hedge Rose, by H. T. Longnecker, Allentown, Pa., to Dr. J. M. Hoffman, same place.

Answers to Correspondents.

W. W., Philadelphia.—It is a bad practice to shoot shot from any rifled barrel. If your barrel is leaded, plug up one end with a cork and pour a small quantity of mercury into the open end. Then plug this also, and shake the gun so that the mercury comes in contact with all parts of the bore. In this way you will generally be able to remove the lead. Another method is to warm the barrel and push through a rag anointed with mercurial ointment, which makes an amalgam with the lead. In either case clean the barrel carefully before putting away. Professionals of the class who shoot repeating rifles from horseback have the barrels of their guns bored smooth, as the rifling causes the shot to scatter and makes close shooting an impossibility.

J. H. L., Buffalo, N. Y.—The rifle you mention should prove satisfactory for your purpose.

G. M., Denison, Tex.—1. The Krag-Jorgensen rifle cannot be bought. 2. Charleston, W. Va.

W. H. G., Saratoga Springs, N. Y.—The target forwarded to FOREST AND STREAM counts thirteen bulls and two centers, 73 points Creedmoor count.

SANCHO PANZA, Patterson, Pa.—1. Goldsmith, in his "Animated Nature," says all of the deer kind lack the gall bladder. Is this true? If it is what organ performs the function? 2. Is the liver of the deer eatable? Ans. 1. The gall bladder is absent in all deer. The matter is not well understood. 2. Yes.

Trap-Shooting.

FIXTURES.

All ties divided unless otherwise reported.

Send notice of your shoot like the following:

Jan. 30.—PITTSBURGH, Pa.—Second match, W. G. Clark vs. W. M. C. Jones, 100 live birds, $100 a side.

Feb. 1.—BURNSIDE, Ill.—Kleinman vs Carver, 100 live birds, championship of America and a stake of $200

Feb. 5-7.—UTICA, N. Y.—Two first days, targets; last day, live birds. Open to all. Send for programmes to E. D. Fulford or H. L. Gates.

Feb. 22.—ALBANY, N. Y.—First tournament of the Eastern New York Trap-Shooters' League, of the series of 1895, under the auspices of the West End Gun Club. Henry A. Kratz, Sec'y.

Feb. 22 —MAPLEWOOD, N. J.—All-day shoot of the Maplewood Gun Club; targets. O. L Yeomans, Sec'y, Orange, N. J.

Feb. 27-28 —ELIZABETH, N. J.—Second bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds. Events open to all.

March 5-7.—RUTHERFORD, N. J.—Three-days' tournament of the Boiling Springs Gun Club; first two days targets, last day live birds. Wm. H. Huck, Sec'y.

April 3-5 —WILLARD PARK, Paterson, N. J.—Interstate Manufacturers' and Dealers' Association's third annual Grand American Handicap at live birds, at New York; $1,000 guaranteed, all surplus added. All ties in Grand American Handicap must be shot off; three moneys, three high guns.

May 8-10.—WEIR CITY, Kas —Ninth annual owl shoot of the Amateur Trap-Shooters' Association of Missouri and Kansas; $300 in cash added. W. W. McIlhany, Sec'y.

May 9-11.—NEWBURGH, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec'y.

May 14-16 —DAYTON, O —Ohio Trap-Shooters' League annual meeting and tournament under the auspices of the Buckeye Gun Club, of Dayton, O. Ed. Taylor, Sec'y, 8 West Third street, Cincinnati.

May 21-24.—Knoxville (Tenn) Gun Club's fourteenth annual tournament; $1,500 added to the purses.

May 29-30.—CANAJOHARIE, N. Y.—Two-day's tournament of the Canajoharie Gun Club; targets. Chas. Weeks, Sec'y.

May 30-31.—GRAND RAPIDS, Mich —Valley City Gun Club's annual tournament; targets; added money announced later. C. F. Rood, Sec'y.

June 3-8.—CHICAGO, Ill.—Illinois State Sportsmen's Association annual tournament. Convention at Sherman House June 4.

June 4-7 —MEMPHIS, Tenn.—Memphis Gun Club's annual tournament; $2,000 added money.

June 19-21 —CLEVELAND, O.—Chamberlain Cartridge and Targe Company's second annual tournament; $1,200 in bash added.

June 25-26.—ALTOONA, Pa —Third annual tournament of the Altoona Rod and Gun Club at Wopsononock; targets. W. G. Clark, Sec'y.

Aug. 29-31.—HOT SPRINGS, S D —Hot Springs Gun Club's second annual tournament

Oct. 3-6 —Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League of Philadelphia, John C. Shallcross, Sec'y, Frankford, Pa.

Oct. 9-11.—NEWBURGH, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec'y.

CONTROL OF TRAP-SHOOTING.

Thursday of this week is the day set for the meeting of trap-shooters for the purpose (inter alia) of organizing a national association for the protection of the sport of shooting at the traps.

The call for a convention, published in these columns, has met with a hearty response and there is every prospect of a thoroughly successful meeting. A full report of the doings of those present will be given in our next week's issue.

The letters received from those who are unavoidably detained by business, and who therefore cannot be on hand at the convention, are full of the most hearty good wishes for the success of the organization.

There is no question about it, "dropping for place must go."

The Hamilton Tournament.

A midwinter tournament for trapshooters is always slightly risky on account of the variableness of the weather. Trap-shooters think two or three times before they leave home, if the trip they have to make is a long one, and the weather is at all doubtful. For that reason the success of the Hamilton Tournament last week, both in point of weather and in the number of shooters, was all the more remarkable.

When I left New York, en route for Rochester, N. Y., on Sunday, Jan. 1, at 9 P. M., the thermometer, according to the official score, was registering 9 degrees above zero. Inside the sleeper, Jack Frost was decidedly not in it, although the trainmen said that it was the coldest night of the season. Rochester, N. Y., was reached on time; it was at this point that we first found traces of the blizzard which had swept across Buffalo, and was even then raging in that city. John L. Brewer was booked to shoot a 100 live bird race with "Sim" Glover, of Rochester, the match to take place on Monday, Jan. 14. The story of that match is told eslewhere in this issue, the detailed score, however, being incomplete, as I had to leave at the end of the 75th round. Brewer was finally defeated by the score of 94-90.

At Buffalo, on that Monday night, snow was still whirling around corners and filling the New York Central Depot with feathery flakes. A force of men was busy loading the snow that had found its way into the station on to gondolas. Judging from the number of car loads in sight, they must have had a touch of a real old-fashioned winter during the previous 6 hours. The 9.10 P. M. train carried me that night as far as Niagara Falls, the accounts I heard of the winter effects at that place, being too tempting. By getting out of bed in good time I was able to sandwich in an hour and a half's sleigh ride through Prospect Park, etc., before being landed at the Niagara Falls station on the Canadian side in time to catch the Toronto train at 9.40. The river below the falls was full of ice and the natives were looking forward to the formation of the ice gorge which always draws a crowd during the dead season.

The only shooter on the above train was E. H. Rounds, of the Burgess Gun Company, Buffalo, who on his arrival on the Canadian side, shipped his gun in bond to Harte & Lyne, of Hamilton, Ont. This was the plan suggested by the management of the tournament, and it worked well, doing away with all the bother attending the transportation of a gun through the Custom House. Mr. Rounds' presence was a godsend to me, the car being so overheated that it was impossible to read a newspaper; the very words danced in hot air. A couple of argumentative politicians also served to keep the atmosphere of the car unfit for quiet enjoyment. In talking about the Burgess gun, Mr. Rounds mentioned an addition that had been made to it since I last handled one of their "pumps"; this addition is a flat rib on top of the barrel. When later on I saw his gun, it seemed to me that the rib added very much to the appearance of the weapon; many men will find it a great help to accurate work. He also told me that the company has gotten out a weapon built for the purpose of protecting express messengers, etc., in the West; this weapon is a gun with 20 inch barrels, so hinged to the stock that it can be doubled up and put away in a leather case of less than 24 inches in length; at the same time the magazine can be left loaded with perfect safety. All an express messenger, or anyone else who is in a tight place, has to do is to pull his gun from the case, snap it together and start pumping lead into anybody and everybody.

Hamilton, Ont., is about one of the liveliest cities of its size on this Continent. Situated at the head of Lake Ontario, some 40 miles from Niagara Falls, it is not very far removed from being an American city. Its 50,000 inhabitants are just now enjoying all the sports and festivities incident to a Canadian winter; every vehicle is on runners, and the sleighing last week was just about perfect. Snow and ice are such common articles to the youthful Kanucks, that the sleds so much fancied by young Americans are but little patronized. It may be that the level streets of Hamilton don't offer the same facilities for enjoying "belly-whoppers" that those of more hilly cities do; that may account for the extreme rarity of a boy with a sled in that city, at any rate on one of the main streets. Hamilton boasts justly of her driving park; it is all that one could wish, and its mile trotting track, mile-and-an-eighth running track, which encircles the course for the harness horses, its grand stand, stable, etc., are of a class that is unusual even in far larger cities. The concourse of trotters to be held there next month is being anxiously looked forward to, and every effort is being made to make the meeting a success; the trotters' mile has been flooded, and sleighing behind a fast horse on Hamilton's race track is something that we in New York can't realize. Another thing that Hamilton is blessed with is a system of trolley cars that run in all directions, and transfer passengers to all parts of the city without further cost. The company is very accomodating in that respect, so that the luxury of street car riding doesn't come high. In the matter of transfer checks a policy of strict economy is practiced; instead of giving each member of the party a transfer, the conductor finds out how many of his passengers want to be transferred, at any one point, punches that number on a single check and hands it to the most responsible looking member of the party. I got the check as a rule.

The Hamilton Gun Club leases a level field just across the turnpike from the driving park; it also has club rooms at the Park Hotel. An unpretentious frame work of scantling and boards does duty for a club house in the shooting field; extra accomodation for the tournament was provided by a temporary shed-like structure of planks, while a large and well-warmed tent erected just back of the live bird traps also did duty as a protection for the visitors and their hosts from the cold and penetrating air that whistled around the spot during the three days of the tournament. A small tent for the purpose of sheltering the birds, and a little shanty for the trap pullers at the live bird set of traps, completed the list of structures on the grounds of the Hamilton Gun Club.

As live birds and target events were shot off simultaneously, a double set of officials was necessary. James Crooks, Vice-President of the Hamilton Gun Club, acted throughout the meeting as referee in the live bird events, while J. A. Wigglesworth, scored the kills and misses. The target shooting was very slow, interest being centered in the live bird events, and no squad hustler and no referee being on hand. Secretary Harry Graham and his assistant, Albert Smith, looked after the cashier's department, and got through their work satisfactorily. Although the Hamiltonians seemed to look upon target shooting as of secondary importance, a little more organization in that department would have enabled the club to throw from 4,000 to 5,000 targets each day; the boys were there to shoot, they had shells, and they had money. This is a hint to the management for their next year's tournament. There's money for the club in target shooting.

Dinner was provided at the hotel, but the "'ot pie" man got his share of the trade that was going; at a nickel a piece the "'ot porkpies" were full value received. How grateful and comforting those pies were may be judged from the fact that when someone said to Capt. Money, who was busily munching one of the pies, "I wouldn't eat one of those things; you don't know what's in them; it's probably dog!" the captain replied with his mouth full of the article in question, "If this is dog, then let me eat dog many times." The captain's sentiments were mine, and apparently Seth Clover's also.

FIRST DAY, JAN. 15.

The programme for the first day contained but three target events: a 20 target race; a 15 target race, $30 guaranteed; and a 20 target, $40 guaranteed; three extras, 10, 15 and 20 targets respectively, were also decided, making 100 targets for each man who shot in all the events. Some hustling on the part of the management would have readily turned this total into 200, as the traps were idle more than half the time, whereas the shooters wanted to be doing something, and only seven men at a time were engaged at the live bird traps. The trapper boys were as good a lot as I've ever seen, while the puller did his work exceedingly well for so young a lad. The club lost lots of money that might just as well have been its own by neglecting this portion of the tournament. The scores made by the shooters show a remarkably high average, the result being that straights sometimes received less than the entrance money paid in. The first 20 target race had four straights and eight men in second place with one less; the second, 15 targets, had seven straight scores; the third, 20 targets, 6 straights and 5 nineteens!

The scores in the first days target races were as follows:

At the live bird traps business commenced at 10 A. M., with the first squad of 7 men in the 20 live bird race, $10 entrance, birds extra, $700 in gold guaranteed. This race had 53 entries, leaving the club $170 to add to the purse to fill the guarantee.

The contestants were divided into eight squads, five of the squads containing seven men, the three others being made up of six shooters. The way the race was shot was as follows: The first squad was called and shot its string of twenty birds; each man shot two birds and then fell back, the squad shooting in rotation in this manner until the 20 birds to each man had been shot at. Then the second squad was called up and shot its string of 20 birds, and so on. The result was that only four squads, numbering altogether 27 men, had shot their string at the close of the first day, and of this number, E. D. Fulford was first alone with twenty straight, Brewer being alone with 19, while there were no less than 8 men with scores of 18 to their credit.

All live bird events were high guns to take the money, and were shot under Hamilton Gun Club rules. As these rules are out of the ordinary, a few extracts and remarks will be of interest. Rule 9 defines the boundary as follows: "The boundary for both single and double bird shooting shall be a 100 yards circle. The circle shall be drawn from the centre trap." There is no dead line as we understand a dead line under these rules, the circle being carried round behind the score. Lots of birds that would, under Hurlingham, American Association, or London Gun Club rules have been unquestionably scored as lost through their flying over the dead line, were retrieved and scored "dead," after they had perched on the tents or other buildings that were within the 100 yards circle. Hence the scores look far better than they really were. Rule 19 provides that, "a bird killed on the ground with the first barrel is a lost bird." Nobody but the referee can call a "no bird." Rule 20 says that "a bird hit with a missle or walking three yards from the trap shall be declared a no bird. The referee may declare a bird refusing to fly when the trap is pulled a no bird." Challenges for flesh shot marks are also permitted.

Under the above rules, notably the boundary rule and its attendant chasing of birds among the tents and other buildings, the no bird rule, and the rule in regard to challenging for shot marks, makes the shooting in such a large event slow work. Only 540 birds were trapped on the first day. In this, the main event of the tournament, the $700 guarantee is divided into 14 prizes as follows:

1st prize, $200; 2d prize, $100; 3d prize, $75; 4th prize, $60; 5th prize, $50; 6th prize, $40; 7th prize, $30; 8th prize, $30; 9th prize, $25; 10th prize $20; 11th prize, $20; 12th prize, $20; 13th prize, $15; 14th prize, $15. With a list of prizes like the above, in which the winners of 13th or 14th actually saved their stake, a larger list than that of 53 entries might have been expected. As it was, eighteen out of the 53 got places, there being three straight scores of 20; three men with 19, and an even dozen with scores 18 that entitled them to something. Instead of shooting off the ties they divided the last eight prizes, each man just about clearing expenses.

Among those who took part in this shoot were: Chas. Wilmot, of Credit Forks; J. Geddings, American Consul at Port Hope; E. Andrews, Sardinia, N. Y.; D. Miller, Woodstock, Ont.; Jack Parker, Des-Chree-Shos-Ka, Detroit; Geo. Briggs, Toronto; Harvey McMurchey, Fulton, N. Y.; J. L. Brewer, New York; T. W. Morfey, Paterson, N. J.; E. Cantelon, Clinton, Ont.; A. J. Bright, Seaforth; Capt. A. W. Money, Oakland, N. J.; J. Wheeler, Paris, Ont.; Jas. A. R. Elliott, Kansas City; A. P. Pope, Olean, N. Y.; H. Bates, Ridgetown, Ont.; G. Margetts, Niagara Falls; Dr. Harrison, St. Catherines, Ont.; George Mosher, Syracuse, N. Y.; C. Charles, Toronto; E. D. Fulford, Utica, N. Y.; F. D. Kelsey, Syracuse, N. Y.; D. A. Upson, Cleveland, O.; F. Van Dyke, New York; J. Wayper, Hespeler, Ont.; H. R. Sweny, Albany, N. Y.; R. O. Heikes, Dayton, O.; M. D. Campbell, Oshawa, Ont.; E. H. Rounds, Buffalo, N. Y. M. M. Mayhew, Utica, N. Y.; Dr. Blackall, Clinton, Ont.; C. ("Cox") Cockburn, Toronto; Sydney Fairbairn, Minnedosa, Man.; T. H. Robinson, Toronto; F. Baxter, St. Catherines, Ont.; H. C. Eddy, Scotland, Ont.; and others. The club members who took part in the main events were J. S. Kirkwood, John Fitch, A. Smyth, Chas. Forsyth, Robt. Stroud, Harry Graham, W. Fitch, Morris Reardon, D. C. Smith, C. "Wilson," John Stroud, John Crooks, W. Stroud, John Smyth and M. Fletcher; all the above members shot in the 20 live bird event, making fifteen entries from the home club alone, a more than creditable entry list when the number of "cracker jacks" is taken into account. W. R. ("Billy") Hobart was on hand, but did not try his hand at the live birds: he devoted himself to targets when he got the chance, and made them suffer as usual. A. W. Cameron, the representative of the Winchester Repeating Arms Company in the eastern portion of the Dominion, was present during the three days of the tournament, looking after the interests of his company. Seth Clover, of Dunkirk, N. Y., didn't do a thing to the boys when it came to targets. Seth has just produced a new expert trap that is a beauty to look at, and apparently as good as it looks, judging from the exhibition of its capabilities that Seth gave the boys during the second day.

When the above list is scanned it will be seen that the Ameri-

can contigent was a hot one. A live bird team composed of Brewer, Elliot, Fulford, Morfey, Heikes, Capt. Money, McMurchy, Van Dyke, Parker, Clover, Mayhew, Sweny, Pope, Kelsey, Upson, and George Mosher, would make it hot for any equal number of shooters. It is very seldom that so many really good men get together before the traps; thus the Hamilton management has another cause for mutual congratulation.

During the afternoon the boys had a good laugh at Brewer's expense. The "Union and Advertiser," an evening daily of Rochester, N. Y., of Monday evening, Jan. 14, had come out with a cut of Brewer in honor of his shoot that afternoon with Glover. The cut was a dandy and caused lots of fun. The following paragraph also from the same paper caused many a favorable comment to be passed upon the fertile imagination of the reporter who was answerable for the article: "The members of the Rochester Rod and Gun Club, under whose auspices the shoot is being held, were early on the ground, and some little time before 11 o'clock a sweepstake shooting began. Among the out of town men to indulge in the sport were Fred Quimbly, "Jim" Elliott, Fred Van Dyke, "Tom" Morphy, Capt. Money, "Tom" Kellar, Charles Smith and Miller Lindsay. Beside these Daniel Lefevre and Harvey McMurchey, of Syracuse, and E. D. Fulford, of Utica, tried their skill. Each man had ten birds and the scores were very good, considering the conditions." There's no doubt about it; "the scores were very good, considering the conditions," seeing that not a single one of the above shooters was in or near Rochester on that day!

SECOND DAY, JAN. 16.

The second day's programme, like that of the first, contained both live bird and target events. At the target traps six events were shot off, five at 20 targets, unknown angles, and one, a 15 target race, at traps in reversed order. Heikes was very much to the front in these events, breaking his first 60 straight, but missing five out of the last 55, his average was 96 per cent. for the day. The scores as a whole were extremely good, the backround not being as good as it might be, owing to some trees that shut out the sky line. All events being at unknown angles, there were fewer straights than on Tuesday; Heikes and Kelsey had three each, McMurchy two, Andrews, Brewer and Hobart one each.

At the live bird traps the $700 guaranteed purse event, commenced on Tuesday, was finished just before dark. Four squads, containing 26 men in all, shot their strings of 20. In the first squad, John Stroud, a Hamilton man, killed 19, while M. M. Mayhew and Dr. Blackall killed 18. By this time it was pretty well certain that nothing but eighteens would be in it, there being now one straight, two nineteens and 10 eighteens for the 14 prizes. The next squad brought out two more straights, Jim Elliott and a young man from Ridgetown, Ont., H. Bates by name, being the two fortunate individuals. The third squad produced another 19, in the person of Sydney Fairbairn, the Mayor of Minnedosa, Man. At one time it looked as if the Mayor was going to make a straight, but he slipped up on a fast driver from No. 4 trap that would have beaten many a good shot. Mr. Fairbairn shoots in the old style, gun below the elbow, bringing his gun to his shoulder in a very easy manner. Quite a groan went up from the crowd when he let his bird go, spoiling his chances of a straight. The last squad had two eighteens, Chas., Forsyth of Aldershot, and G. Margetts, of Niagara Falls. The prize winners therefore were E. D. Fulford, J. A. R. Elliott, and H. Bates, 20; S. Fairbairn, J. L. Brewer, and J. Stroud, 19; while the twelve eighteens divided the remainder of the purse; i. e.: the last eight moneys, a sum of $175.

There being yet a little time before dark, four men, Fulford, "Cox," Sweny and Briggs, shot their strings in the "Grand Stake Race," 15 live birds, $15, birds extra. Entrance in this event had to be made by Nov. 10, a forfeit of $5 accompanying the entry; a second payment of $5 was made Dec. 10, and the final $5 being paid on Jan. 10. There were thirty entries in this event, making the respectable purse of $450 to divide into five moneys, 30, 25, 20, 15 and 10 per cent., high guns to take the money.

Fulford scored 14 out of 15, "Cox" and Sweny 13 each, Briggs losing three out of his 15. This closed the second days' shooting, 580 birds being trapped on this day, as against 540 on Tuesday.

THIRD DAY, JAN. 17.

The target traps were pretty nearly deserted on this day, but very few events, with only a small entry list in each event, being shot off. What shooting was done was varied in character, one event being shot at expert rules, one man up in the centre, and another being at five pairs; in the latter event Heikes was the only straight.

No. 1, 10 targets, $1: Wilson 8, Kirkwood 9, Van Dyke 9, Campbell 10, Dick 8, Morfey 10, H. Bates 8, Lewis 8.

No. 2, 10 targets, $1: Farwell 7, Blackall 10, Greigg 10, Ruth 7, A. Bates 4, Dick 9, Parker 9, Van Dyke 7, Heikes 7, McMurchy 7.

No. 3, 5 pairs, $2:

At the live bird traps things moved pretty briskly, the number of birds trapped in the two events decided being, strangely enough, precisely the same as that trapped on Wednesday, viz.; 580. The remaining 26 entries in the Grand Stake Race shot their strings of 15 birds, Heikes and J. Strond alone killing all the birds; these two divided the two first moneys, 30 and 25 per cent. of the purse. This left 45 per cent. to divide between six shooters with 14 a piece: Bates, Blackall, Elliot, Fulford, Kelsey and Morey.

There being no chance of an international team race, the Canadians being unable to get together a team that would be able to make any sort of a showing against the men from the Unted States, it was decided to put up a sweep at 10 birds, $7 entrance, including birds. This event had nineteen entries, out of which number only four made straight scores; these were: Heikes, Fulford, Upson and J. Stroud. The purse was divided similarly to the purse in the last event, the four shooters above named thus dividing 90 per cent. of the pot, leaving 10 per cent. to be distributed among no less than 9 nines.

J. Strond, the Hamiltonian, need not be ashamed of his record in the live bird events, his total and that of Fulford's being the same, and the best made during the tournament. Each man killed 44 out of 45 shot at. Heikes killed 43 out of his 45, while Bates answered for 34 out of the 35 he shot at.

The scores in all the live bird events decided during the three days of the tournament were as follows:

No. 1, 20 live birds, $10 entrance, birds extra, Hamilton Gun Club rules, 53 entries, $700 in gold guaranteed; shot Jan. 15 and 16:

A DAY OF MATCHES.

Friday, Jan. 18, was a day of matches, as will be seen from the scores given below. The club had about 1,000 good birds on hand and it wanted to get rid of them as far as possible. As a matter of fact the birds liberated on this day, up to the time when I left the grounds, 2 P.M., to catch my train for New York, were the best that had been trapped during the entire tournament.

Among the matches were the following: J. S. Kirkwood versus D. C. Smith, two local men, 25 birds, $25 a side; R. O. Heikes versus T. W. Morfey, 50 birds, $50 a side; both these matches were shot under Hamilton Gun Club rules. Then came a match between Morfey and J. Stroud of Hamilton, 25 birds, 30yds. rise, 15yds. boundary, $25 a side. The last was John L. Brewer versus C. Cockburn ("Cox") of Toronto, 50 birds, $50 a side. Dominion rules, gun below the elbow until bird is on the wing, 26yds. rise.

In the first match Kirkwood easily defeated his opponent, scoring 23 to 21. The second match, Heikes versus Morfey, excited a vast amount of interest, Morfey selling in the pools as favorite, although the Heikes end was very readily taken. The race was a capital one, the score being a tie at the end of the 41st round. Then Heikes lost three birds while Morfey killed straight, winning ultimately by the good score of 47 to 44 on an excellent lot of birds.

The following are the scores of these two events:

Match, 25 live birds, $25 a side, 30yds. rise, Hamilton G. C. rules:

I S Kirkwood	21102212121201212111111221—23
D C Smith	1*21122122020121*22222222—21

Match, 50 live birds, $50 a side, 30yds. rise, Hamilton G. C. rules:

R G Heikes	11222221222221121212222022—24 21221222012*211100221*212—20—44
T W Morfey	22211112101112122221122222—24 22*12222222222*22122222221—23—47

For the balance of this report I must rely on the statements of several acquaintances on whose good faith I can safely rely.

The Morfey-Stroud match passed off pleasantly, Morfey winning by two birds, killing 21 to his opponent's 19. Besides the 21 scored as above, Morfey also killed three birds just outside of the 15yds. boundary, thus making his total for the day 71 out of 75. The excellence of this score will be better appreciated by those who saw the quality of the birds.

The Brewer-Cockburn match broke up the shoot, and made a great big blot on the escutcheon of the Hamilton Gun Club. Brewer of course sold as favorite in the pools, although the Cockburn end of it was taken very freely. Brewer was using a 10-gauge Greener in this match and smashed his birds down with wonderful regularity. He was shooting in great form and when the match was two-thirds over, or thereabouts, he was two birds in the lead. Although it was then a moral cinch that Brewer would win, yet the Cockburn men were just as ready to buy their man in the pools. From the facts that developed later it began to look as though they must have known something.

A few birds from the finish Brewer's load was challenged by his opponent; the referee (whose name I am unable to ascertain) took one of Brewer's shells and the match was shot out, the score standing at the close 44-45 in Brewer's favor.

The shell was then opened and it was discovered that it contained 1¾ozs. of shot! The referee reserved his decision on the match, Brewer claiming that he was told that the shells contained only 1⅛ozs. of shot, which amount he said he understood he was entitled to shoot. The shells were some which had been loaded by the loader for the club and in the club's own room, and I understand that the boy afterward made a clean breast of the whole affair, implicating the pool sellers. I also understand that certain parties who backed Brewer in the pool boxes have instituted legal proceedings against the pool sellers to secure the money they deposited in them, charging fraud.

The whole affair is a most unfortunate one for the future tournaments to be held in Hamilton. It is therefore to be devoutly hoped that the authorities of the club will not let the matter drop but probe it to the bottom, meting out punishment to all who deserve it. That is the only way it can ever hope to hold another tournament as successful as the one which closed so disastrously.

EDWARD BANKS.

AN EXPLANATION FROM HAMILTON.

In regard to the Brewer-Cockburn ("Cox") matter above referred to, Mr. J. W. Bowman, secretary of the live bird department of the Hamilton tournament, writes as follows:

"I regret to say that there is a contest on the Brewer vs. Cox match; this race was a very hot one, and on the 45th bird Mr. Cox challenged Mr. Brewer's shells; the remainder of the match was shot under protest, and as the score shows, Brewer won. Brewer claims that he was told that the only thing he had to do in these old Dominion rules was to hold his gun below the elbow, and Brewer put in 1⅛ oz. of shot. He shot Stroud's 10-gauge gun. I am sending you papers with accounts of match as well. I am very sorry that there has been any trouble, as it is most unpleasant. It is the old story, however. They shot under rules that apparently neither of them were up in."

Harrisburg on Top.

HARRISBURG, Pa., Jan. 12.—For some time quite a rivalry has existed between some of the cracks of Harrisburg, Altoona and Mifflin, a number of events having been pulled off the past year by different shooters from these places with various results. The main event, however, was shot this afternoon on the

grounds of the Harrisburg Shooting Association. The match had originally been arranged as a four-cornered race between Messrs. Clark and Adams of Altoona on one side and Wellington and Sullivan of Harrisburg on the other, but owing to an accident Sullivan was unable to be present. Brewster took his place and held his end up in great shape, the Harrisburg team winning in a canter. The birds were a selected lot furnished by Worden Bros., and they were mainly corkers, not a duffer being among them. The traps were this time not on the brow of the hill, but were placed on perfectly level ground on the southeast side of the club house; the raw north wind blowing diagonally across the traps made the conditions favorable for fast birds. A good crowd of interested spectators were present from Altoona, Mifflin, Steelton and West Fairview, while the home contingent were not lacking. Mr. Adams's setter dog Rock did the retrieving in a very satisfactory manner. A return match will be shot at Mifflin in the near future by the same teams and under the same conditions. Score:

Team race, 50 live birds per man, $50 a side, losing team to pay for the birds, 30yds. rise, 50yds. boundary, Adams being allowed three lost birds as dead birds:

Referee, J. H. Worden. SULL.

New Jersey Trap-Shooters' League.

The fourth annual meeting of the New Jersey Trap-Shooters' League was held Monday afternoon, Jan. 21. The clubs represented were: South Side Gun Club, Newark, W. R. Hobart; Climax Gun Club, Blainfield, T. H. Keller; Union Gun Club, Springfield, E. D. Miller; Endeavor Gun Club, Jersey City, C. W. McPeek; Maplewood Gun Club, Maplewood, W. N. Drake; Boiling Springs Gun Club, Rutherford, P. A. Jeanneret. The Riverside Gun Club, of Red Bank, and the Elizabeth Gun Club, of Elizabeth, were represented by J. P. Cooper and R. E. Chetwood respectively. Both clubs were unanimously elected to membership.

The following is a list of the officers for 1895: President, E. D. Miller; Secretary-Treasurer, W. R. Hobart; Manager, W. N. Drake. The above, together with C. W. McPeek and R. E. Chetwood, form the Governing Committee.

Reports of the secretary and treasurer for 1894 were read (the secretary's report was given in full in the last issue of FOREST AND STREAM). It was also decided that all team shoots should be at known traps, unknown angles; and that the secretaries of all League shoots should render a statement to the League secretary, showing the number of targets thrown at their respective shoots. A committee of three, Dr. Jackson, P. A Jeanneret and W. N. Drake, was appointed to solicit merchandise prize.

Places of the League shoots for '95 were selected by drawing lots, and resulted as follows: February, Boiling Springs; March, Myrtle Park; April, Maplewood; May, Elizabeth; June, Endeavor; August, Climax; September, Brunswick; October, Riverside; November, Union; December, South Side. It was decided not to hold any shoot in July on account of its being such a hot month.

Trap at Little Rock.

LITTLE ROCK, Ark., Jan. 17.—This being the day set for the 13th contest for the Pulaski county medal to take place, the shoot came off despite the fact that the day was the most disagreeable one we have had this year. The sky was heavily overcast, making it dark and gloomy and a very uncertain light for target shooting. The atmosphere being laden with moisture made it altogether a very unpleasant day for recreation of this kind, and one had to be a good deal of an enthusiast to brave such weather for the purpose of shooting targets. Only four shooters put in an appearance, but as the score will show, each one of these seemed to be out for blood. The race was an interesting one, for when each man had shot at 25 targets, three of the four were tied on 23. After this, Dickinson gradually drew away from the rest and won rather easily with 46 out of 50. Dickinson has been doing some remarkably fine shooting of late. He has averaged 46 out of 50 in the last four contests and has won the medal three times. The race has now narrowed down to Dickinson, Duley and French, and one of these three will eventually become the permanent possessor of the medal. As only four more contests will take place for the trophy and each one being determined to win, some interesting contests may be looked for.

Medal shoot, 50 singles, unknown angles:

Dickinson	11111111111101111111011111—23	
	11111111111011111111111101—23—46

PAUL R. LITZKE.

Brewer and Glover.

ROCHESTER, N. Y., Jan. 14.—The match shot this afternoon between John L. Brewer of New York city and "Sim" Glover of Rochester, N. Y., was decided under most trying conditions. The day was bitterly cold, the thermometer below the 'teens and the air at times filled with blizzard-like flurries of snow. The race was at 100 birds, 30yds. rise, 50yds. boundary, Brewer with a 12-gauge, Glover using his 10-guage, a handicap in Glover's favor of quite 2yds.

Brewer looked far from well and complained much of an attack of the grip which had caught hold of him. He was by no means cheerful and was totally unlike his old self. His antagonist, Glover, is probably the best shot in this section. At targets he is the champion of New York State, and is an over 90 per cent. man every day in the week at inanimates. At live birds he is very little known outside of this immediate section, still he has readily found friends willing to match him against one of the best (Brewer would say "the best") live bird shots in the world.

The match was shot right out in the oval formed by the track at the driving park. Not a plank or stitch of canvas was erected to protect the shooters or spectators from the biting cold of a 10 deg. above zero southeast wind. A foot of snow, freshly fallen, covered everything, and at the outset the air was filled with snow that came down wind in an uncompromising manner. It was no day for pigeon shooting with the best of protection provided; with nothing but tramped-down snow to stand upon, and no protection whatever from the weather, it was tempting providence to go out and shoot as Brewer did. He looked blue with the cold, and stood all drawn up by the severity of the weather like a chicken with the gapes.

The birds would have been a good lot had they been given a chance, but everything was against them, and the temptation to fly toward the hotel or the grand stand was more than they could resist. The traps were composed of three triangular pieces of sheet-iron hinged to a board; it required two trappers to trap each bird, one to hold the trap together, the other to fix the catch and put the pigeon in. Two or three times a bird killed by one or the other of the shooters fell on a trap and knocked it open. The pulling was the old way, five cords stretched on the bare snow; the consequence was a dog could not be used retrieving as it would have pulled off the traps over and over again.

Each shooter had a bird drop dead out of bounds in the first 25, Brewer's 23d, an incomer, being let off by the shooter who appeared unable to pull his gun off. The wonder was either Brewer or Glover could shoot at all. The latter has done no live bird shooting for some time to amount to anything; in practice during the past week he showed up well. That he can shoot is proved by his score. No matter how poor birds are, his score would be counted good. But among these birds were several very fast ones indeed, and Glover killed them as easily and cleanly as he did the easy ones. E. C. Meyers undertook the thankless, and on this occasion very arduous, task of refereeing the match. Had the weather been anything like decent, there would unquestionably have been a good crowd present. As it was, there were at least 250 spectators who wandered back and forth between the hotel and the snow-covered waste which was the scene of the shoot in the effort to thaw frost-bitten ears, noses and fingers.

Brewer killed his second 25 straight, while Glover missed one of his; the score at the close of the 50th round being a tie on 48 each. The close of the third series of 25 each found Glover with a lead of three, Brewer having dropped that number while Glover killed straight. The latter was shooting well and made some capital shots; one in particular attracted considerable attention from the fact that he had his safety up and drew a fast right-quarterer. As soon as he found out what was the matter, he shoved the safety up, feathered the bird with the first barrel, but brought it down dead as stone just inside the boundary with a phenomenal second.

The full score up to the end of the 75th round is given below; at that stage of the match I had to leave the ground, being frozen clean through and wanting to catch a train on to Hamilton, Ont., Can. It was then 4:15 P. M., two hours and twenty-two minutes since the commencement of the match. At that rate, with 25 birds each yet to shoot at, the match could hardly be finished before nightfall. Score up to end of 75th round:

Match, Brewer vs. Glover, 100 birds, 30yds. rise, 50 boundary, Glover using 10-gauge gun:

J L Brewer	12222222222222222222*1022—23	
	22122222222212222222222212—25	
	22222*21222212022222222120—22—70	
S Glover	22211122122121211*111111212—24	
	12222122222222121122*112—24	
	22122212222112121121221112—25—73	

(Glover ultimately won the above race by the score of 94-90. The following card has been received, dated Rochester, Jan. 19: "Capt. Brewer and Sim Glover will shoot their second match at 100 live birds per man, Jan. 21, at the Rochester Driving Park grounds; the stake is $150 a side and the local talent is backing Glover to win.—O. S. B."

EDWARD BANKS.

Maplewood Gun Club.

SOUTH ORANGE, N. J., Jan. 12.—The Maplewood Gun Club opened the season of 1895 under very favorable conditions. They have two contests each month, viz: Medal shoot, one for each of three classes—A B and C. Conditions, 25 single targets per man; one man up shooting from unknown traps. This shoot takes place the second Saturday in each month. The fourth Saturday in each month is the day for the silver champion cup, to cost $25, which is shot for under a handicap system, which will be explained later. The shoot to-day was for the medals, and as the score shows the shooting was of a high order, Warren Smith breaking straight (Boiling Springs must look out for him.) W. H. Drake was breaking in a bran-new L. C. Smith (he thinks his score will be examined by Boiling Springs); Dr. Jackson, "old reliable," not shooting quite up to his form on the Maplewood grounds. The B and C class men did well, as the following scores show:

No. 1, 10 singles, keystone system: W. Smith 10, Dr. Jackson 9, Drake 9, Reeves 8, Van Iderstine 7.

No. 2, 10 singles, keystone system: W. Smith 10, Dr. Jackson 9, Drake 9, Reeves 8, Van Iderstine 8.

No. 3, 10 singles, expert: W. Smith 10, Dr. Jackson 7, Drake 8, Reeves 6, Van Iderstine 7.

No. 4, 10 singles, expert rules, 50 cents: W. Smith 9, Yeomans 9, Siggins 10, Quad 8, Dr. Jackson 10, Van Iderstine 7, Reilly 6, Eager 7, Drake 9, Parry 6, Lightipe 7.

W. N. DRAKE.

Passaic City Wins from Boiling Springs.

RUTHERFORD, N. J., Jan. 12.—Below are the scores made on the Boiling Springs Club's grounds this afternoon; the main event was a 10-man team race between the home team and a detachment from Passaic City, in which the latter came out ahead by the score of 196-179, a lead of 17 targets. Several 10-target races were also shot for nominal entrances. Scores:

Team race, Passaic City vs. Boiling Springs, 10 men a side, 25 empires per man:

Passaic City.

WM. H. HUCK.

Mosher Defeats Mayhew.

UTICA, N. Y., Jan. 12.—On Wednesday last, Jan. 9, Geo. Mosher, of the Syracuse Arms Co., and M. M. Mayhew, of this city, shot a race at 25 live birds for the price of the birds. After a very tight race Mosher won by one bird. At the 21st round the score was a 17—16 in Mayhew's favor; the latter then dropped his next three birds, while Mosher killed two out of three. This gave him a lead of one, which he cinched by killing his 25th bird. The pigeons were a very lively lot, going off with a dart as soon as the traps were opened; most of them, too, were drivers. All things considered, the scores made were good ones. Other events followed. Scores:

Match, Mosher vs. Mayhew, 25 live birds, for price of birds:

Mayhew	2211222022100102222210001—18	
Mosher	222111*21221110022002110I—19	

	No. 1, 10 birds, $5:	No. 2, same.

Breamer	1022202210	Richardson	12

FULLER.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

That was a great aggregation of American wing shots that took part in the live bird events at Hamilton, Canada, last week. The three winners on the 20-bird race used the following powders: Elliott and Fulford, E. C. powder; Bates, Wood powder in his first barrel, black in his second. Elliott used Winchester Leader shells, while Fulford was shooting the U. M. C. green trap shell, factory loaded, with 50grs. of powder.

Dr. Carver and Geo. Kleinman shoot for the championship of the United States on Feb. 1. Dr. Carver has accepted the challenge of John Webster of Manchester, England, to shoot any man at 100 English bluerocks for $1,000. Dr. Carver only asks Webster to name date and place and to post his money, giving him (Carver) time to get to England with a few days to spare.

C. Cockburn of Toronto was very anxious to shoot Elliott a race under the same conditions that he afterward shot Brewer a race on Jan. 18. Jim offered to shoot him two races, $250 a side each race, one match to be at Cockburn's game, Dominion rules, etc., the other 30yds. rise, both barrels, 50yds. boundary. They couldn't come together, however.

The Keystone Shooting League of Philadelphia, Pa., has elected the following officers: President, George Cohen; Vice-President, Wade Wilson; Treasurer, George E. Pack; Secretary, John C. Shallcross; Field Captain, Al. J. Rust; Associate Field Captain, W. H. Pack; Trustee, W. H. Wolstencroft; Scorer, Newell Bancroft.

E. D. Fulford has backed himself to kill 45 out of 50 birds at Frank Class's Driving Park on Jan. 23, Wednesday of this week. Brewer and Eddie Hill have both gone down easily before Class' birds.

The following are copies of two resolutions passed at a very recent meeting of the North Side Gun Club, of Pittsburgh, Pa.: "Resolved—That any member of this club who shall intentionally miss a target or live bird in a sweepstakes or prize shoot for the purpose of increasing his interest financially shall be suspended from shooting on the club grounds for such length of time as the club at its discretion may deem just, or he may be expelled. Any visiting contestant who may be found guilty of same offense shall not be permitted to shoot in any future events of the club.—E. O. SCHUSTER, Sec'y N. S. G. C." The second resolution reads as follows: "Resolved—That the North Side Gun Club cordially indorses the scheme originated by FOREST AND STREAM to organize a trap-shooters' association or council for the purpose of controlling, eliminating abuses and the elevating of trap-shooting in the United States.—E. O. SCHUSTER, Sec'y N. S. G. C.

The Endeavor Gun Club, of Jersey City, N. J., elected the following officers for 1895 at its annual meeting held on Jan. 8: President, Z. P. Fletcher; Vice-President, Frank Post; Secretary, J. A. Creveling; Treasurer, C. W. McPeek; Captain, A. R. Strader. Directors: E. Hollister, J. D. Polhemus, A. R. Strader.

The Maplewood Gun Club will give an all day target shoot at its grounds on Feb. 22; programmes will be issued later. O. L. Yeomans, sec'y, 13 North Jefferson, Orange, N. J.

On March 5, 6 and 7, the Boiling Springs Gun Club, Rutherford, N. J., will hold a three days' tournament at targets and live birds; March 5 and 6, targets; March 7, live birds. Fuller particulars will be given shortly.

The Little Rock (Ark.) Shooting Association held a two-days' tournament at targets on Jan. 24 and 25 of this week. Paul R. Litzke, FOREST AND STREAM's correspondent at Little Rock, is the moving spirit in trap matters down there.

Robert Boyle, of Willard Park, Paterson, N. J., writes under date of Jan. 14, as follows: "In the Paterson (N. J.) *Call*, of Jan. 8, Brewer offers to make a match to shoot at 100 trained pigeons and kill 90 of them, for $250 or $1,000. I will make that match with him for $250 a side, and will put $50 up as a forfeit any time that the Captain will do the same between now and Feb. 1. I will back my birds, the shoot to take place on Feb. 22, at 2 o'clock, at Willard's Park, Paterson, N. J. The rise to be 30yds. and 50yds. boundary. If Brewer does not accept, this holds for any shooter in the country."

BOSTON, Mass., Jan. 13.—The Boston Shooting Association held its annual meeting Monday evening, Jan. 7, preceded by an all-day shoot at its grounds at Wellington, Mass., with 25 members participating. The annual dinner was held in the banquet hall of the club house at 5 P. M., after which officers were elected, as follows: Capt. E. B. Wadsworth, President; Wm. Pray, Vice-President; O. R. Dickey, Treasurer; Herbert Federhen, Secretary; the above and W. A. Sanborn and B. L. Woodward, Executive Committee; O. R. Dickey, Captain and Superintendent.—E. B. WADSWORTH.

ALTON, Ill., Jan. 16.—At the annual meeting of the Piasg Rod and Rifle Club, of Alton, Ill., J. N. Drummond was elected President; Chas. B. Johnson, Vice-President; J. M. Ryrie, Secretary; R. F. Seely, Treasurer, and G. H. Lane, Captain of the shotgun division. A lively interest is taken in shooting at bluerocks, and some good scores were made last fall. G. H. Lane averaged 90 per cent. for several months, and some of the others were not far behind.—J. M. RYRIE.

In the accounts given elsewhere of the unfortunate *contretemps* on the last day at Hamilton, Canada, I give the statement of eyewitnesses. Clippings from various papers, evidently United or Associated Press reports, give Brewer's load as 1½ozs. of shot, not 1¾ as it was told to me. It is true that 1¾ozs. seems out of all proportion, but the powder charge was 4½drs. of a nitro powder and the gun was a 10-gauge, not a 12-gauge. Unfortunately Brewer is not in New York just now, so that I cannot give his side of the case.

E. D. Fulford beat S. Fairbairn in a 25-bird race, for $50, gun below the elbow until the bird was on the wing; score 23-21.

New fixtures this week are the Maplewood Gun Club's all-day shoot on Washington's Birthday; the Boiling Springs Club's three-days' tournament on March 5-7, and two-days' shoot at Wopsononock the last week in June. The latter shoot will surely catch the boys, as the Altoona Gun Club always shows their guests a good time.

EDWARD BANKS.

Those Who Do Not Shoot.

CHICAGO, Ills., Jan. 19—In a letter from Davenport, Ia., which place he was visiting when he attended a meeting of the Forrester Gun Club, Mr. Paul North of the Chamberlin Cartridge and Target Company writes me as follows:

"The question of dropping for place came up and it was unanimously decided that it would not be tolerated at their shoot.

"There was considerable discussion as to the best method to adopt to put a stop to the practice and finally on my suggestion they decided to ask each contestant at their shoot to sign a "roll of honor" agreeing not to drop a bird or target intentionally and to assist the management in making the tournament as strictly gentlemanly as possible. Anyone 'dropping' will be invited to leave.

"You know that this is my idea of the best way of stopping the evil, and this will be a good test of the effectiveness of the plan. If it doesn't stop it you can make up your mind that the majority of the shooters that attend tournaments are satisfied with the present plan and that they don't want any change."

Yes. And how would those shooters vote the majority of whom are *not* attending tournaments? Would they like a change?

909 SECURITY BUILDING, Chicago. E. HOUGH.

Keystone Shooting League.

PHILADELPAIA, Pa., Jan. 12.—Prior to the annual meeting of the Keystone Shooting League, held at the club's grounds, Holmesburg Junction, on Jan. 7, a team race at live birds was shot with the following result:

Team shoot for suppers, 12 men to a team, 7 birds per man:

Capt. Rust's Team.		Capt. Wolstencroft's Team.	
A Rust	1121222—7	W Wolstencroft	0122222—6
Landis	2222222—7	A L Lamb	1120110—5
H Thurman	1220211—6	G Elmer	2022122—6
E David	1220221—6	P Flack	2002020—3
J Moore	1221100—5	I H Wolstencroft	1102202—5

N. M. BANCROFT.

The Birds Beat Eddie Hill.

MORRISTOWN, N. J., Jan. 16.—Eddie Hill was out-birded by Frank Class on Wednesday, Jan. 16, at Frank Class's driving park. Hill had taken up Class's offer to bet $50 that he (Hill) could not kill 44 out of 50, Class finding the birds. The birds were a good lot but the heavy snowstorm made them comparatively sluggish; had the day been a clear one Class thinks Hill would have been shot out on 25 birds. The following score shows that the race was over on the 38th round:

Match for $100, Eddie Hill of Trenton, N. J., backing himself to kill 44 out of 50, 30yds. rise, 50yds. boundary:

Hill ..... 1222022222222222201222220—22
2020022222220w — 9—31

In Favor of Handicaps and High Guns.

DETROIT, Mich., Jan. 10.—*Editor Forest and Stream:* The writer does not see how you are to detect droppers with anything like certainty. Why not drop class shooting and adopt an actual handicap, not an imaginary one. A pigeon match was shot in New Jersey the other day, in which one of the contestants allowed his adversary to shoot at two more birds than he himself shot at. Pigeon matches are shot every day at different distances rise. These are both actual handicaps. Does not the expert always break his target yards nearer the trap than the amateur? Why not then move the expert back that distance? I suggest this: All events at twenty targets, same distance. First event, club to handicap contestants, or all to shoot 16yds. rise. In subsequent events add 1½yds. for each target broken in excess of sixteen. Distance in each event to be governed by score in preceding event. This would be the result:

16 targets (or less) broken shoot at 16 yds. in next event.
17 " " " " 17½ " " "
18 " " " " 19 " " "
19 " " " " 20½ " " "
20 " " " " 22 " " "

Or how would this do? All events at twenty targets, same entrance. First event club to handicap contestants or all to shoot at twenty targets. In subsequent events allow each contestant an additonal target for each one missed in preceding event, up to a total of twenty-four targets. This would be the result:

16 targets (or less) broken shoot at 24 targets in next event.
17 " " " " 23 " " "
18 " " " " 22 " " "
19 " " " " 21 " " "
20 " " " " 20 " " "

All scores of more than twenty to be counted as twenty.

These are actual handicaps. Do away with class shooting and dropping for place will go with it. Adopt real handicaps and you can do away with class shooting. C.

Bronx River Gun Club.

The members of the Bronx River Gun Club held their initial shoot of the season on Saturday, Jan. 12, at the club's grounds West Farms, N. Y. The club shoot was at 10 live birds for the "Miller" gold medal, the following being the score:

O T Mackey	2201112012—8	C A Cowen	1112220100—7
G L Nichols	2100011012—6	H Cathcart	2111002212—8
M Herrington	1201111112—9	W L Hall	1010121200—6
G E Greiff	2012112112—9	J Cornwell, Jr	0010011002—4
B G Loomis	2122122112—10	Wm Fisher	1111111120—9
W S Brown	02200021w—4	H Feusterer	2112010101—7
E Ontwater	0012202101—6	Chas White	1011202220—6

The next shoot for this medal will be held on Saturday, Feb. 9.

During the afternoon of Jan. 12, three 10-target sweeps were shot off, each event being for a uniform entrance of $1.50. The next 25-target club shoot for three gold medals will be held on Saturday, Jan. 26. Scores of events shot on Jan. 12 follow:

Ten targets, $1.50:	No. 1.	No. 2.
W S Brown	1101111111—9	1101110101—7
M Herrington	0010101011—5	1010001000—3

Trap Notes from Nebraska.

OMAHA, Neb., Jan. 8.—Frank S. Parmelee, the champion trapshot of this section of the country, forwarded a challenge to Dr. Carver, who is now in Chicago, a few days ago, for a 100 live bird match for $100 a side and the price of the birds, American Association rules, the shoot to take place here on Feb. 8, the day after the Read-Nicolai shoot. A reply came from the alleged "Demon of the Plains" this afternoon, and in it he states that he cannot come to Omaha to shoot, as the city has such a bad record. He said he would accommodate Parmelee, however, if he would come to Chicago, and instead of a single match for $100 a side, he would make it a series of three matches for $50 a side. Mr. Parmelee was exceedingly wrathy at Carver's audacious letter, and this evening mailed him a volume of pyrotechnics in reply.

In defense of Omaha and trap-shooting interests, I would say that all the trap-shooting here is done on the handsome grounds of the Bemis Park and Omaha gun clubs, on the Council Bluffs side of the river, where there is a cosy club house and all modern concomitants to a first-class and perfectly appointed shooting grounds. The membership of these two organizations is made up of the city's solidest and most reputable business men. They are much interested in trap-shooting and could only accord a strange contestant every courtesy and fairness devolving on them as gentlemen and owners of the grounds, which are never rented for private purposes.

There was another splendid meeting of sportsmen at Parmelee's sporting headquarters Saturday evening and the new game laws in their entirety were read and indorsed by a unanimous vote. This morning J. B. Meikle, Frank Parmelee and Fred Montmorency, a committee appointed for the purpose, went to Lincoln to lay the bills before the Legislature. The local sportsmen's association has every assurance that their efforts will be crowned with speedy success. S. G. V. GRISWOLD.

Live Birds at Fanwood.

On Friday, Jan. 18, a shoot at live birds took place at Fanwood, N. J., the following scores being made:

No. 1, 8 birds, $5: Rothacker, Terry and Scott 8, Keller and Smith 8, Piercy, Darby and P. Jay 6, Benner 5.

No. 2, miss and out: Keller, Piercy and Scott 4, Terry 3, Benner 2, Smith, P. Jay and Rothacker (re-entry) 1, Scott and Rothacker 0.

No. 3, 5 birds, $3: Keller and Benner 5, Smith and Darby 4, Rothacker 3, Piercy 2.

No. 4, 5 birds, $3: Keller, Smith, D. Terry and Scott 5, Benner, J. Darby, Rothacker and Piercy 4.

No. 5, miss and out: Keller, Smith, Scott and P. Jay 5, Benner 4, Darby, D. Terry and Bowlby 2, Rothacker 1, Piercy 0, Piercy (re-entry) 0.

Climax Gun Club.

The Climax Gun Club of Plainfield, N. J., held their first club shoot of the season on Wednesday, Jan. 16, on the club grounds near the Fanwood roadhouse. The following were the scores in the club point handicap:

Club shoot, handicap allowance of birds, 25 targets for the scratchmen; unknown angles:

C. Smith, 0	1111111111111111111011111	—24
R. Manning, 2	1110111111111111110111111111	—25
J. Zegler, 4	1100000001010110100100010 1001	—11
P. Jay, 5	1110110101111100100010111111101	—20
Scott, 3	1111101010111110100110111010	—19
J. Darby, 7	0111011110010101111011100110 1010	—20
D. Terry, 1	1110111111110111111010111 1	—22
Squires, 2	1001101111001111101101100 01	—19
D. Darby, 5	0101011111011111011111111111011	—24
W. Terry, 4	1101110110111100111010001 1011	—19
Swode, 6	0110101000101101010011110101100	—16
Goodman, 4	0011001101001000010110011100010	—13
Williams, 5	1101101111011010111111010011 11	—22
Keller, 0	1011101111110110011111111	—20
Brantingham, 0	0111011111011101110111111	—20

At the club's annual meeting the following officers were elected: President, R. B. Manning; vice-president, Charles Smith; secretary and treasurer, D. H. Terry; directors—T. H. Keller, John Darby, Thomas Brantingham, Dr. Zeglio, R. B. Manning, C. Smith and D. H. Terry.

The contest for the prizes donated by the club to those members scoring more points in the regular club shoots last year were won as follows: Joseph Zeglio first, $5 in gold and a pair of Quimby hunting shoes; W. Squires second, receiving the same; R. B. Manning third, $5 in gold and leather gun case; V. Swody fourth, $5 in gold and leather gun case; D. H. Terry and W. Terry fifth and sixth, received a shooting blouse and a gun case respectively; Scott Terry seventh, leather shell box; Charles Smith eighth, a hunting hat; D. L. Darby ninth, a leather vest; Thomas Brantingham tenth, shell box; W. Williams eleventh, hunting cap; Joseph Goodman twelfth, hunting cap; "P Jay" thirteenth, hunting leggins.

The records for 1894 show the following as the standing of the members for 1894:

Name.	Handicap.	Targets Shot at.	Broke.	Per cent.	Points Scored.
T H Keller	0	200	165	81½	10
C Smith	0	250	216	86⅜	26

Team Shoot at Omaha.

OMAHA, Neb., Jan 19.—Frank S. Parmelee and M. C. Peters and George W. Loomis and J. C. Read met in a 50-live-bird match team shoot yesterday afternoon on the Omaha Gun Club grounds for $25 a corner, the price of the birds and a supper at McTague's. Conditions 50 birds to the man, five unknown ground traps, 30 yards rise, 50 boundary, American Association rules. The weather was charming, and a large crowd of ladies and gentlemen witnessed the sport. The score:

Parmalee..21211*12011012111111111112101211121111121111111010—44
Peters....12**21101021102121211*11011212211212102 12*11112111—41
— 85

Read.....21220*12121212002 1*22221121*212111111212*22101121*—41
Loomis....11222222200121211222201212*21202201222100102221112—41
— 82

Referee—Goodley Brucker. Time—Two hours and thirty-five minutes.

A good deal of rivalry exists amongst the various trap shots of the State, and yesterday a match for $25 a side was made between A. C. Connors of Central City and Ted Ackerman of Stanton, at 50 targets each. The date of the shoot has not yet been fixed upon, but it will probably take place in this city Feb. 8, same day as the J. C. Read-George Nicolai 100-live-bird shoot.

S. G. V. GRISWOLD.

Endeavor Gun Club.

JERSEY CITY, Jan. 19.—The following scores were made by the members of the Endeavor Gun Club at their grounds this afternoon:

No. 1, 30 targets, expert rules:

The Emerald's Monthly Shoot.

Thirty-three members of the Emerald Gun Club put in an appearance at Dexter Park, L. I., on Jan. 15, the occasion being the monthly club shoot at live birds for points. The attendance at the Emerald's club shoots is something remarkable, and is probably unequaled by any other club in this country. The birds were a capital lot of strong flyers; as a result only five straight scores were made, R. "Woods," J. H. Moore, T. H. Keller, W. Hartye and H. P. Fessenden being the leaders. N. Maesel officiated as referee, Dr. Hudson looking after the score, which is given below:

Club shoot, 10 live birds, for points, Emerald G. C rules:

N Maesel, 25.....0210112121— 8 L C Gehring, 30..021*001220— 5

New Utrecht Gun Club.

The first club shoot of the year at Woodlawn, L. I., was won by George W. Coulston on Jan. 12, with a clean score of 10 birds; four other shooters were close behind him with 9 each. In his match with Kattenstroth, in which he allowed the latter 4yds., scored 22 out of 25 from the 32yds. mark, defeating Kattenstroth by one bird when that shooter missed his 25th bird. The scores made during the afternoon were as follows:

Club shoot, 10 live birds, club handicap:

Class A.

G Coulston.....1112221121—10 D Deacon.....1201122222— 9

Rifle Range and Gallery.

New York Rifle Club.

NEW YORK, Jan. 16.—The club held its regular shoot to-day at the Zettler gallery. Off-hand, German ring target, distance 25ft., any rifle, sights and trigger pull, two best scores counted:

A H Isbell, 72	247	247	C E Gensch, 59	239	240
F Walters, 61	241	240	R J Young, 68	237	237
M Herrington, 66	240	240	G L Mason, 53	229	231

R. J. YOUNG, Sec.

Our Own Rifle Club.

HOBOKEN, N. J., Jan. 17.—The regular weekly shoot of the Our Own Club took place last night. The medal winners were Dilger and Stuhrman.

Miller Rifle Club.

HOBOKEN, N. J., Jan. 17.—Nine members of the Miller Club participated in the shoot for club medals at headquarters last night. Scores: A. Meyns 244, Dewey 243, Miller 240, Scott 235, Stadler 229, Taylor 228, Gallon 226, Rogers 223, Kammel 221.

A Bright Red Bullseye.

Mr. James S. Conlin sends us specimens of his new red bullseye targets for gallery shooting, with a note saying that the color works well in actual shooting.

Greenville Rifle Club.

GREENVILLE, N. J., Jan. 18.—Fifteen members of the Greenville Rifle Club participated in the weekly gallery shoot this evening. The scores are appended: First class—Purkess 241, Collins 240, C. Boag 238, Robidoux 238, Plaisted 237, Scheeline 237, Agneau 232, Lutz 222. Second class—Chavant 237, Charlock 233, Fagen 230. Third class—Hill 220, E. Wuestner, Jr., 217, F. Wuestner 219, E. Wuestner, Sr., 209.

New York Schuetzen Corps.

NEW YORK, Jan. 19.—The New York Schuetzen Corps, Captain, Henry Offerman, held its fifth bi-monthly shoot on the Zettler ranges last night; 25 members were present and participated in the team competition. Scores:

Lempke's Team.	1st match.	2d match	Tholke's Team.	1st match.	2d match
Lempke, capt	236	232	Tholke, capt.	230	230

Schlicht Rifle Club.

WEST HOBOKEN, N. J., Jan. 15.—The Schlicht Club held its weekly gallery shoot for class medals last night. Scores: Geo. Dorr 238, Geo. Schlicht 243, Charley Meyer 239, Aug. Meyer 231, Capt. J. Dedrick 233, Geo. Lautenberger 231, Jacob Diehl 230, Fred Lambrix 230, Wm. Schlicht 229, Geo. Reichert 230, Jacob Schlicht 222, Andrew Deubline 210. Medal winners—Geo. Dorr, champion medal; Aug. Meyer, first class medal; Geo. Lautenberger, second class medal; Capt. Dedrick, third class medal.

Greenville vs. Our Own.

HOBOKEN, N. J., Jan. 16.—The return match between teams representing the Greenville Rifle Club and the Our Own Club was shot off on the range of the Our Own Club this evening. There was a large gathering of Hudson county marksmen present to witness the contest.

The Our Own team shot in better form than in the previous match, but the Greenville team being reinforced by some of its first class men held the Hoboken team safe and won the match by 35 points. Scores:

Greenville Team—Agneau 222, Charlock 233, Chase 222, Dodds 239, Holzapfel 210, Collins 243, Purkess 237, Chavant 240, J. Boag 240, E. Wuestner 193; total, 2,279.

Our Own Team.—Kruse 223, Sessman 214, Steuber 233, Dilger 220, Malz 234, Heucken 220, Kloepping 228, Murray 226, Stuhrman 219, Meyer 212; total, 2,214.

Zettler Rifle Club.

NEW YORK, Jan. 16.—The Zettler Club held its weekly shoot on Tuesday night for prizes in the winter series; 13 members were present and participated in the competition for high scores.

Philip Feigel made 245 on the first entry for the champion medal; this score remained high for the night. The best 10-shot score was made by Holges and Dorrler who made 49 each. Louis Flach made the highest total for the best 5 scores, 1228; Ross was second with 1225. Scores:

Champion medal: Ph. Feigel 245, F. C. Ross 244, M. B. Engel 243, Dr. Grosch 242, L. Flach 242, M. Dorrler 241, H. Holges 241, H. D. Muller 239, C. G. Zettler 238, B. Zettler 237, J. Blumenberg 235, G. Nowak 234, S. Buzzini 229.

Five best scores:

L Flach	242	248	248	248	242—1228
F C Ross	244	246	243	246	246—1225
M Dorrler	241	243	249	247	244—1224
H Holges	241	240	245	249	242—1217
M B Engel	243	247	241	241	244—1216

Best 10-shot score: H. Holges 249, M. Dorrler 249, L. Flach 248, M. B. Engel 247, B. Zettler 246, F. C. Ross 246, Ph. Feigel 245, G. Nowak 245, H. D. Muller 239, Dr. Grosch 242, C. G. Zettler 243, S. Buzzini 233, J. Blumenberg 235.

A Close Shave.

GREENVILLE, N. J., Jan. 17.—One of the best team contests shot in or about New York in many a day was shot on the Greenville Club ranges to-night.

It was the first of the series of matches between teams of eight men representing the Empire Rifle Club of New York and the Greenville Rifle Club of this borough, locally known as the "Farmers."

The Empire team next to the famous Zettler Club is known as the strongest group of gallery marksmen in New York, and when the match was made it was looked upon as a cinch for the Empire team. But the result of the match proves the old saw to be true: "There's many a slip betwixt the cup and the lip." There was a large gathering of riflemen from New York and Hudson County and the club-house was taxed to its utmost to accommodate the crowd present.

After the members of the two teams had shot their preliminary practice score the match was opened, Barney Zettler of the Zettler Rifle Club was elected referee and C. W. Agneau of the Greenville Club scorer. Wm. Rosenbaum of the Empire team was the first man to enter the contest for his team. This marksman is considered one of the best gallery shots in New York and he was booked to put up a score that would paralyze the Jerseymen. But Rosenbaum was not equal to the task laid out for him. In previous practice he had put up 246, and now he made 234. Another good thing gone wrong. George Purkess of the Greenville team was the first man to lead off for the Jerseymen. Purkess is one of the reliable men of his team and is usually good for an average score. But Purkess was out to the Hoboken match the night previous, where the team did not reach home until the morning light was breaking, tired nature exerted itself and the result was that Purkess quit with a total of 233. So the Empire team started off in the lead.

As the match progressed the men of both teams with few exceptions were a disappointment. When the seventh man of the Greenville team had finished his score, the eighth and last man of the Empire team had finished and the total for the Empire team was 1882 points. The eighth and last man of the Greenville team, M. Dorrler, had yet to shoot and in order to win the match Dorrler must make 243 points; this score would give the match to Greenville by a margin of 1 point.

When Dorrler went in to shoot his score the positions of both teams were decidedly interested in the outcome of the old veteran's labor. Bets were freely offered and quickly accepted that Dorrler would not make the number of points necessary (243), to give Greenville the victory. Dorrler's first four shots had the effect to cool the ardor of many of his friends, for he had six points off. He had six more shots to shoot and to win he must make five forty-fives and one twenty-four. Would he do it?

Dorrler's fifth shot was in the center, a twenty-five. The shout went up, Mike's all right. He's found the shot. His sixth, seventh, eighth and ninth shots were all in the twenty-five ring. The last shot was to come. A twenty-four would win.

There was a long wait before Dorrler consented to press the trigger to let loose the last bullet that was to decide the momentous question. At last it came and settled itself well in the twenty-four ring. Greenville wins! Dorrler is king! Long live Dorrler. A rush was made for Dorrler, and the old veteran perched upon the shoulders of his clubmates was carried around the club-house midst the greatest excitement. There was considerable argument on the part of the Empire's men over the score of one of the men of the Greenville team (Plaisted) whose second shot was a matter of dispute, the Greenville judge claiming it to be a 25 and the Empire judge calling it a 24. The decision was left to one of the visiting marksmen, W. J. Hennessey, of the Excelsior club. Mr. Hennessey decided the shot to be 25. So the Greenville club added one more mark to its long list of victories.

The average of the two teams was low, much below what was expected to be the result of the match But this is accounted for from the fact that the men of both teams were worked up to a high tension. "We must win" was the all absorbing topic of both teams. The usual result followed; low score and individual disappointment. The Greenville club, under the lead of its president, Edwin Barr, had prepared a fine lunch for the visitors, and as "chef" for the occasion, Mr. Barr allowed no visitor's stomach to depart in emptiness. Every one went away with a "deck load." A return match will be shot off on the Zettler ranges, No. 219 Bowery, New York, on Jan. 31. Scores:

Greenville Team: Dorrler 243, Collins 241, C. Boag 230, Chavant 227, Plaisted 236, J. Boag 236, Robidoux 237, Purkess 233. Total 1883.

Empire Team: Rosenbaum 234, Maisenholder 235, Kohn 232, Grimm 231, Buss 245, C. Zettler 234, H. Zettler 231, Zahn 240. Total, 1882.

Zettler Club Tournament.

The three days' prize shoot of the Zettler Rifle Club was brought to a close last Tuesday night. All the prominent gallery experts in and about New York were present and participated in the contest for the prizes. The programme called for fifteen prizes on the ring target. On the bull's eye target there were ten prizes for the best centre shot and two premiums for the most bull's eyes. The shooting was of a first-class order, many full scores being made on the ring target scores:

Ring target, 3 shots per score, two best to count: A. H. Isbell 149, H. M. Pope 149, Louis Flach 149, H. Holges 149, F. C. Ross 149, M. B. Engel 149, M. Dorrler 148, Wm. Rosenbaum 148, Jos. Dodds 147, W. C. Collins 146, C. G. Zettler 146, C. Horney, Jr., 146, B. Walther 146, Ph. Feigel 145. H. D. Muller 144.

Bull's eye target, 10 prizes for best centre: Louis Flach 9 deg., Wm. Rosenbaum 9½, Gus Norook 10, Henry Holges 10½, W. C. Collins 11, B. Zettler 11½, M. B. Engel 12, Philip Feigel 13½, B. Walther 13½, C. J. Zettler 15½.

Premiums: Most bulls, H. D. Miller 26, M. Dorrler 22.

The shooting committee of the National Bund has issued the English edition of the programme for the great festival which takes place in Glendale Park, Long Island, next July. Any person desiring a copy of the programme and rules governing the shoot can procure the same by addressing the secretary, Chas. F. Roedel, No. 12 St. Mark's place, New York city. All rifle associations in the country who are interested in promoting rifle should avail themselves of the opportunity to join the Bund before the entry books are closed. Only members belonging to societies in the Bund can participate in the competition for prizes on the Columbia and German targets. The prize list on these two targets will aggregate thousands of dollars in cash and merchandise.

The Greenville (N. J.) Rifle Club at its last regular meeting voted to join the Bund.

The Williamsburgh Shooting Association, of Brooklyn, E. D., will hold its annual gallery tournament next month.

There will be a meeting of the delegates of the National Bund at headquarters, No. 12 St. Mark's place, on Friday night of this week.

We have received from the New York branch of the Rochester Brewing Company a handsomely lithographed calendar. Around the sides are half a dozen steins of various forms represented as hanging from a door, while in the centre is a picture of three old cronies enjoying their beer.—*Adv.*

Yachting.

YACHT NEWS NOTES.

Lagonda, steam yacht, under charter by Rev. W. L. Moore to D. C. Mantell for a cruise to the West Indies, has been held at Fernandina on charge of carrying munitions of war. It is supposed that she and another steam yacht, the Amadis, chartered by the same party, are to be used in some filibustering expedition.

Yampa, schr., R. S. Palmer, sailed from New York on Jan. 17, for Gibraltar, in charge of Capt. Edwd. Sherlock. On board were Messrs. T. C. and W. I. Zerega, who will be joined later by Mr. Palmer. A broken leg, which is just healing, has compelled Mr. Palmer to make the passage by steamer.

Sylvia, steam yacht, Vice-Commodore E. M. Brown, New York Yacht Club, arrived at New York on Jan. 16, having left Queenstown, on Dec. 20, calling at Madeira on Dec. 26-27, and at Bermuda, on Jan. 10-12. Captain Arthur H. Clark was in command, accompanied by Mrs. Clark. The yacht proceeded to Port Jefferson on Jan. 18, where she is now laid up.

The R. Y. C. Challenge.

The *London Times* of Jan. 8, gives the following report of the meeting of the Royal Yacht Squadron on the preceeding day:

"It is now certain that there will be a contest for the America Cup next fall, between a new 80 foot Valkyrie, designed by Mr. G. L. Watson, for Lord Dunraven, and a Cup defender to be built in America. The members of the Royal Yacht Squadron held a special meeting Jan. 7 at noon at Boodle's Club, St. James's, to consider the nature of the receipt which the New York Yacht Club requires the Royal Yacht Squadron to give in the event of their representative yacht winning the Cup. It was unanimously agreed to give a receipt for the Cup on the terms of "the deed of gift," 1887, without conditions, and thus a mutual understanding between the Royal Yacht Squadron and the New York Yacht Club Committee has been arrived at, the formal acceptance of the challenge being now only required to complete negotiations. The Prince of Wales, Commodore, presided at the meeting, and there were present the Marquis of Ormonde (vice commodore), Lord Ashburton, Mr. R.A. French Brewster, Mr. Godfrey Baring, Sir R. H. Buckley, Mr. E. S. Bowlbey, the Earl of Caledon, Mr. W. R. Cookson, Capt. J. Towers Clark, Lord Colville, of Culross, Mr. W. N. Diggle, Earl of Dunraven, Sir Henry Edwardes, Major Seymour Wynne Finch, Sir John Fowler, Mr. Montague Guest, Mr. Henry Hervey, Mr. A. Harcourt, Mr. F. M. Huth, Mr. William James, Lord A. Gordon Lennox, Lord Lonsdale, Mr. S. H. Montgomery, Admiral the Hon. Victor Montagu, Mr. Philip Percival, Jr., Lord Revelstoke, Major W. H. Roberts, Col. John Sterling, Lord Suffield, Mr. S. Nugent Townsend, Mr. Arthur Verschoyle, Mr. John Wardlaw, Mr. J. Roberts West, and Sir Allen Young.

"Lord Dunraven explained the situation at some length, to the meeting. He alluded to the objections raised by the Royal London Yacht Club in 1887, when the new deed of gift was made public first, to the resolution passed in 1888 by the Yacht Racing Association to express their disapproval of the form of the deed, to the refusal of the Royal Clyde Yacht Club to forward a challenge under the deed, and to the negotiations of 1889. All these matters having been recounted in full by the *Times*, do not require repetition. The position now, he said, was similar to that which had been left open in 1889, the races of 1893 having taken place on the special terms that "should the Cup come into the possession of a British yacht club, it should be held subject to a challenge on precisely similar terms as those contained in this challenge; provided always that the club shall not refuse a challenge in accordance with the conditions laid down in the deed of 1887." In 1894, however, the New York Yacht Club went back to the position in 1889, but held the opinion that the mutual agreement clause would overcome all difficulties. Thus Mr. Smith had written Nov. (15, 1894), "Any agreement that the Cup if won by you should be held open to challenge under precisely the same conditions as those under which you challenge is superfluous, for, under the provisions of the deed, a winner would certainly be entitled to do so, without any acquiescence on the part of the New York Yacht Club, and be perfectly free to publically announce his intention of so doing." The same gentleman had written (Dec. 11, 1894), "We cannot understand why, with power to make any agreements desired for a match with the holder of the Cup, the Royal Yacht Squadron, for example, should expect us to covenant that must do what they can do and want to do, nor why, after all the correspondence which has taken place, there should be any fear in the absence of such agreement with us, of even appearing to expect, as the party challenged terms different from those under which you challenged, as expressed in your letter of Nov. 7, 1892." The New York Yacht Club, Lord Dunraven said, evidently placed a very broad intrepretation on the mutual agreement clause, and further, by proposing to sail in November, had shown that it was possible, in their opinion, to break one of the most stringent clauses in the deed of 1887. Indeed, if this clause could be broken by mutual agreement, it was obvious that no binding clause could be attached to any clause or condition in the deed. For his own part, Lord Dunraven did not think the construction placed upon the deed of gift was correct, and believed that the mutual agreement clause was intended to apply to the details of the races; but if the New York Yacht Club placed their construction on the deed, he saw no reason why the Royal Yacht Squadron should object. They could not be said to be receding from their position if they accepted the New York interpretation, and the sole question for them to consider was whether, having regard to that interpretation, the Royal Yacht Squadron could give the required receipt if the occasion for doing so should arise.

"The Marquis of Ormonde proposed, and the Earl of Caledon seconded, that the following should be telegraphed to America forthwith: "Having regard to the construction placed on the deed of gift of 1887 by the New York Yacht Club, the Royal Yacht Squadron is willing to give the receipt on the terms contained in the deed of gift, 1887."

"This resolution was unanimously agreed to, and subsequently telegraphed to Mr. Smith, as well as the following from W. R. Grant, the Secretary of the Royal Yacht Squadron: "To Smith, Yacht Club, New York—Cabled you to-day result of special meeting of Royal Yacht Squadron; conclude challenge now entirely settled.—Grant, Cowes."

"Subsequently, Lord Dunraven having expressed at the meeting his strong feeling that something ought to be done to prevent the necessity of the long correspondence and to meet in advance the difficulties which had arisen in 1889 and 1894, a committee, consisting of the flag officers of the squadron, Sir Allen Young (who, with Mr. J. Mulholland and Sir James Baring, was on the special committee of 1889), Sir Charles Hall, and Mr. Justice Bruce, was appointed to deal with any questions which might arise.

"The challenge sent on Dec. 2 is subjoined: 'R. Y. S. Castle, Cowes, Dec. 2, 1894 Dear Sir—I am requested by the Earl of Dunraven to forward you a challenge for the America Cup on the terms and conditions of the challenge sent by me on his behalf on Nov. 25, 1892, but subject to any modifications as to dates, courses, starts, and other details which may be agreed to between Lord Dunraven and the committee appointed by the New York Yacht Club to conduct negotiations and arrange details. I, therefore, on behalf of the Royal Yacht Squadron, and in the name of the Earl of Dunraven, a member of the squadron, challenge to sail a series of matches with the yacht Valkyrie against any one yacht or vessel constructed in the United States of America, for the America Cup. The following are the particulars of the challenging vessel, viz.: Owner, the Earl of Dunraven; name of yacht, Valkyrie; length on load water line, 89 feet. The Custom House measurement will follow as soon as the vessel can be measured for registration.—I have the honor to be, dear sir, Richard Grant, Secretary R. Y. S."

The above is the only detailed report of the meeting yet seen on this side. From the above, it is evident that the action of the R. Y. S. in finally indorsing the new deed of gift, was brought about solely by the influence of Lord Dunraven. In presenting the case before the Squadron, Lord Dunraven, still harping on the fact that the races of 1893 were sailed on special terms, and not under the new deed, has evidently glossed over the real issues of the case, as repeatedly summed up in the Forest and Stream, and has dealt at length with the unofficial utterances of Commodore Smith. The result is that the Royal Yacht Squadron has at last backed down completely, and has been forced to recognize and accept the new deed of gift. It is more than likely that the future will disclose that the Squadron has no more idea of what it is doing now than it had when it challenged in 1892-3, but this makes the case no better. The main fact is that the New York Yacht Club has at last received an unconditional challenge under the new deed of gift from the *premier* British yacht club.

The position of the Royal Yacht Squadron in the matter is not one that will add to the reputation of that august body. After having objected on principle to the action of the New York Yacht Club, in 1887, as illegal and unfair, it has at last withdrawn its objections in a way that is an admission that they were groundless. It is true that the New York Yacht Club has, in the present case, granted more favorable terms than ever before, but as far as all the vital issues are concerned, they are exactly the same as in 1887. If, as we believe, the Squadron and other British clubs were right in protesting then, they are wrong now in quietly recognizing the claims of the New York Yacht Club to the ownership of the America's Cup, and to the right to regulate at will the conditions under which it may be sailed for.

As to Lord Dunraven, his position is a peculiar and a most unenviable one. The friends of fair play and of international yachting, on both sides of the Atlantic, have been engaged for many years in the effort to secure to all challengers for the America's Cup those rights as the equal of the holder in making a mutual agreement which were given them by the original donors. Since the making of the new deed in 1887, by which the challenger was deprived of all rights, this work has been still more imperative and more difficult. On several occasions, however, the club has been on the point of repudiating and abandoning the new deed on account of the serious opposition to it, and the failure to negotiate a race.

On each occasion Lord Dunraven has come to the assistance of the New York Yacht Club with an offer to waive all questions of principle, provided the club would grant him such immediate conditions as he wished. It was through his efforts that in 1892-3 the Royal Yacht Squadron was induced, without its knowledge or its will, to endorse the Valkyrie II. challenge, and this year he has gone still further in inducing the Squadron to offer an unqualified challenge under the new deed, with the assurance that it will receipt for the Cup, if won, as required by that document. The position of the Royal Yacht Squadron is a humiliating one to all British yachtsmen, accepting as alms and concessions those things to which they are entitled by right, and looked on by the American public as both greedy and ungrateful. That they must occupy such a position in all future races for the America's Cup is due solely to the long continued and finally successful efforts of Lord Dunraven. The Yachtsman of Jan. 10 has the following editorial on the matter:

We confess to a feeling of surprise, which, we think, will be shared by many British yachtsmen, at the humiliating submission of the Royal Yacht Squadron to the New York Club. After repeatedly refusing to accept the "New Deed" on the score of its invalidity and the base nature of its birth, the club has now seen fit to reconsider its opinion and has claimed itself content to hold the trophy, should it be so fortunate (?) as to come into possession of it on the conditions of that document. Yet the facts of the case remain unaltered since 1887, and the same objections to the action of the Royal Yacht Squadron will hold good should it receive the Cup as have been levelled at that of the New York Yacht Club. It is no palliation to say that the R. Y. S. had no hand in framing the obnoxious document. That is merely to deny to the club what little admiration may have been excited by the acuteness of our friends beyond the ocean.

Lord Dunraven's eloquence, and his ardent love of racing—with a strong predilection for international struggles—have no doubt achieved this notable change. But surely it must have crossed the minds of some of the R. Y. S. committee that Britain and America are not the only nations on the earth which pursue yacht-racing as a sport. We have within the last three years or so seen a great impetus given to French and German yachting, and it is by no means beyond the bounds of likelihood that either of these countries might in a year or two produce an aspirant for International honors. How then, is the R. Y. S. to meet them, supposing that it holds the Cup? By insisting on the terms of the "New Deed," of course. But what if such a Continental challenger should refuse to sail under those conditions, on the ground that they are illegal? Presumably the R. Y. S. would take shelter under the "mutual agreement clause," by way of showing that it walks in the path of right. But the mutual agreement clause, as twisted by the N. Y. Y. C. Committee, has been itself illegally dealt with, even supposing the validity of the "New Deed." The deed has definite conditions which may not be altered, and yet the mu

tual agreement clause has been astoundingly utilized to modify them in every conceivable form. If the Continental challenger (say, Germany) were content to accept such a makeshift arrangement, it is quite within the rights of France to step in and object. The proposed match between Lord Dunraven's yacht and the selection of the N. Y. Y. C. is arranged quite ultra vires, even on the showing of the New Deed itself; and, although neither France nor Germany may covet the Cup while it is in the possession of America, the case might be very different if it were at Cowes, and it would be open to either to raise the whole question of the legality of the "New Deed", by challenging under the only original and valid deed, and, in the event of a refusal (which would be inevitable), sailing over the R. Y. S. course and claiming the Cup. The R. Y. S. would fare badly in that case. It is bound, by its promise, to the "New Deed," and yet it knows full well how hopeless a task it would be to uphold it in a British law court. These are merely possibilities, but they are so very painful to the R. Y. S. that we think it would have been wiser in that body to have weighed the subject more carefully than it has done before committing itself to insist upon any foreign nation accepting conditions which are contrary to the expressed wishes of the donors, and which the club knows and has said are illegal and unfair. Was it intended to be ironical, we wonder, on the part of the Squadron to appoint so distinguished a lawyer as Mr. Justice Gainsford Bruce to serve on its 'America Cup Committee?'

However, apart from the unpleasant contingencies which the proposed match entails, all will be pleased at the prospect of another race. That International sailing gives a spurt to the sport in those countries which indulged in it is very patent, and, although, as we think, a reaction often results from it, our trans-Atlantic friends may well thank Lord Dunraven—it will be a change for him if they do—for yachting in America is in a pitiable state. In England, however, our large class, next season, will not derive a great amount of benefit, for it is stated that Viligant will leave us to test her metal in the trial races for the selection of a Yankee champion. Some trifling difficulties still block Lord Dunraven's way, but no doubt these will be easily overcome in view of the great joy that the R. Y. S. has given to America and the great triumph of the New York Yacht Club.

The *Field* of Jan. 19 says, in speaking of the statement that the Royal Yacht Squadron has promised to hold the Cup under the new deed:

"This, we venture to say, is not the case. It is either a delusion or a misrepresentation. What the British clubs understand is, that the Royal Yacht Squadron accepted as correct the New York Club's interpretation of the sweeping power of the mutual agreement clause, and agreed to give a receipt on that interpretation alone. The Royal Yacht Squadron is thus pledged to accept a challenge upon the terms now agreed for coming matches, and will not hold the Cup according to the deed.

"It would certainly have been more in accordance with our ideas of courage, dignity, and fairness if the New York Club had straightened itself out and obtained a nullification of the deed which has brought so much opprobrium upon its members."

We fear that the *Field* will have trouble in finding any direct interpretation of the new deed on the part of the New York Yacht Club apart from the very indefinite resolution passed seven years since. As the committee's report shows, both the committee and the club are kept clear of committing themselves in any way; they have received and accepted a challenge rom the Royal Yacht Squadron under the deed of gift of 1887, nothing more.

The New Cup Defender.

On Jan. 17 the news was announced that a syndicate had finally been organized to build a Cup defender, the members being W. K. Vanderbilt, E. D. Morgan, and C. Oliver Iselin. The latter gentleman will attend to all practical details, Com. Morgan being now in England, while Mr. Vanderbilt sailed from New York for Europe on Jan. 16. Up to Jan. 21 no contract had been made for a new yacht, but Mr. Iselin had been in close communication with the Herreshoffs, and a new Bristol boat is a certainty. She will probably be a centre board boat, of Tobin bronze, though Mr. N. G. Herreshoff is desirous of building a keel craft, and composite construction has been discussed.

The one man who has been really desirous of going into a syndicate is Mr. George Gould, who has offered to pay one quarter of the cost of a new boat, but there is so much feeling against him within the New York Yacht Club that his offer has not been taken up. Mr. Gould has, however, offered to bring Vigilant over for trial purposes, and to place her at the disposal of the club, which offer has been acknowledged as follows:

Jan. 18, 1895.

George J. Gould, Esq., 125 Broadway, N. Y.

Dear Sir—Since my interview with you I have presented your generous proposal to bring the Vigilant from England to America, and have her fitted for the trial races as a Cup defender in the Autumn contests of 1895, at your own expense, it being your request that the New York Yacht Club should select a committee of one or three, as they may elect, to take charge of her in the trial races and in the match, if selected to defend the Cup. On behalf of my committee, I have to advise you it was accepted with great pleasure. I will add that Vice-Commodore Brown and other leading officials of the New York Yacht Club have expressed themselves to me as highly appreciating your offer, and that they will be glad to know that your intentions in this respect may be consummated.

I enclose to you the circular of the America's Cup Committee, which has just been issued.

I remain, very truly yours,
James D. Smith.

Canoeing.

W. C. A. Midwinter Meet.

[From a Staff Correspondent.]

THE EXECUTIVE SESSION.

CHICAGO, Ill., Jan. 13.—The midwinter meet of the W. C. A. was held at the Grand Pacific Hotel, this city, Saturday evening, Jan. 12, and was an occasion of unusual interest in several respects. Some changes in the sailing rules were made, after discussion over the classification of the racing machine and the all-round canoe. Spirited arguments also took place over the selection of the place for next summer's meet, the vote going to Ballast Island after long discussion pro and con, which narrowly escaped making feeling among the Wisconsin members.

It is the plan of the W. C. A. to hold an open court at its business session, this being really a meeting of the executive committee held with the full membership of the Association present. After their advisory meeting, in which the sense of the majority is well determined, the executive committee holds its private session, its vote being final on any matter.

The open session, at 2 P.M., showed a good attendance. From Madison, Wis., there were Messrs. L. F. Porter, Robt. M. Lamp, F. W. Curtiss, G. E. Gernon, S. C. Hanks and Chas. M. Mayers. Milwaukee sent F. W. Dickens, F. B. Huntington, E. H. Holmes and A. W. Friese. Dayton, O., of course was represented by the stand-bys, W. H. Crawford and A. Woodruff. Mr. C. F. Penniwell came from Detroit; Henry D. Spencer from Bloomington, Ill.; J. Hepburn from Toledo, O.; W. P. Jewett from St. Paul; G. H. Gardner and B. M. Gardner from Cleveland. The Chicago men were out in full force, among them Com. W. B. Cook and his sons Nat and Harry, Mr. J. Herbert Ware, Mr. D. H. Crane, Mr. J. B. Keogh, Mr. J. Turrill, Mr. W. H. Quaw, etc., etc.

The meeting was held with Com. W. B. Cook in the chair, the minutes, officers' reports, etc., taking up the early portion of the time. The regatta committee, by its chairman, N. H. Cook, recommended a number of changes in the sailing rules, which were placed on the table in writing and recommended favorably by vote of the house. The committee submitted a regatta programme of nine events.

BALLAST BY A NECK.

On the question of the location of the summer meet, Mr. G. Harry Gardner spoke at length in favor of Ballast Island, setting forth its well-known attractions. Mr. D. H. Crane, of Chicago, also spoke in favor of Ballast, and Mr. Penniwell, of Detroit, also said Ballast would please Detroit. Mr. J. Herbert Ware read a letter from Mr. W. C. Jupp, president of the Detroit Boat Club, and added his testimony for Lake Erie and Ballast.

The opposition to Ballast, and the element believing in change of site, now took up the other side of the question, Mr. Porter speaking at length in favor of Madison, Wis. He was seconded ably by Mr. Lamp. Nat. Cook responded in favor of Ballast. Mr. Spencer mentioned tentatively the waters near Charlevoix, at the head of Michigan south peninsula. Mr. Crawford, of Dayton, threw a great deal of light on this same country, and spoke of the Cheneaux islands as a fine place for the meet. This created much interest, and Mr. Crawford had everybody about converted for that locality, when he hurriedly corrected himself and said that he thought the meet should go to Ballast this year and the Cheneaux Islands next year. Mr. Lamp, seeing that Madison could not win, and noting the drift toward a good compromise spot, better for Wisconsin than Ballast, withdrew Madison. Mr. Hanks called for an informal ballot to develop the strength of the Ballast and anti-Ballastites. It was learned that twelve were in favor of Ballast and ten opposed. At this Mr. Lamp, thinking it the graceful thing to do, moved the vote be made unanimous, and this was done. Mr. Lamp in this was hasty, for a vote on the Cheneaux Islands was never taken, and it is very likely that if this had been offered as a compromise, it would have brought out over twelve votes.

There was some talk among Western men of making a split on the Ballast question, and organizing a Northwestern association. This I should consider it extremely unwise to do. It would seem better counsel to pull altogether this year for Ballast and have a big meet there, and then go to the Cheneaux or elsewhere the year following. In turn the Ballast men should not selfishly consult their own personal pleasure or preference at the expense of the W. C. A., and should not thrust a personal majority upon that body; but should bear in mind that to insist on Ballast always and every year would mean an association fixed, hidebound, and done with growth and progress. It would still be a pleasant body of summer sailors, but it would not be a great and influential organization of Western canoeists. It would not seem that mere cheapness of building docks and convenience of access should be the determining factors in establishing a canoe camp. In short, there is much to be done by way of careful thought and concession on both sides of this question. It is the best thing, however, to unite heartily and with full vigor on Ballast this year, and give the Ballast men no cause for regret at having voted as they have. Ballast is a pretty place, and there isn't a bad fellow in the lot of those who love it so well and stick to it so faithfully. If the meet fails there again this year as it did two years ago, I don't think the Ballast boys will want to try it there again for a while. If it succeeds, they will feel generous and will be ready to go to some other point. I think by that time they will begin to see that a too steady insistence on Ballast will kill the Association in respect of its best and widest purposes. But it is Ballast this year by vote of the majority, and therefore there should be firm resolution on the part of every man to be there with a canoe and a jolly heart and an unreserved disposition to have nothing but a good time and plenty of it. It is no time to talk of a Northwestern association, and this I feel sure the Ballast boys will prove first of all when it comes to '96.

THE BANQUET.

The members of the banquet committee, Mr. J. Herbert Ware, chairman, Messrs. D. H. Crane, J. B. Keogh and H. B. Cook would all be wearing laurels now if the W. C. A. boys knew where there was a laurel patch. As it is they wear each a vote of thanks tendered by the body in general for as complete and elegant and thoughtfully arranged an affair as ever made glad the heart of sailor, be it of salt water or of fresh. Much of the credit devolves upon Mr. Ware, who knows all about everything in matters of this sort. Mr. Ware was Maker of the Feast. He wore on his breast a large crystal star with a ruby in the middle of it. Mr. H. D. Spencer, who was chosen as toast master of the evening, wore a similar star and sat at Mr. Ware's right at the banquet. Both these gentlemen wore bright, glad smiles, but so did about everybody else. The head of the board was also honored, of course, by the commodore of the W. C. A., the venerable and much-beloved N. B. Cook, who evaded active responsibility for the eloquence of the evening in favor of his usual quietude. Mr. L. J. Marks, of the Chicago Canoe Club, who is justly looked upon as the oratorical *piece de resistance* of the W. C. A., was corraled and kept close by, where the toast master could put his hands on him. Mr. Marks was becomingly garbed in evening clothes of the most correct finish. And his golden hair was hanging down his back.

The menu offered by the Grand Pacific Hotel was perfect as that well-known hostelry can arrange and left nothing to be desired. Everything went merry as a marriage bell, and before long there was a sound of revelry by night. Also, music arose with its voluptuous swell. When it did not arise satisfactorily, some one or other of the canoe boys would be apt to go over to the orchestra and deprive a player of his guitar or mandolin and show him how the thing was done when done properly. Great discrimination and precise judgment in musical matters was displayed by those present, the classical bent of the members being easily apparent. Perhaps the most popular number was the "Little Alabama Coon," which came near ending the banquet, though enthusiasm was scarcely less great when in the middle of one air struck by the orchestra, nearly every man about the table was on his feet melodiously declaring that he loved his love in the springtime, and that he loved his love in the fall, but that, all things considered, he rather believed that in the mellow summer time he loved her best of all, though through all the changing seasons he intended to keep up his lick and continue to love his love *tout le meme*.

Thus matters progressed as they can progress nowhere else in the world but at a canoe banquet, and it had come so far along as *fromage de Brie* and the waiters were trying to take away the debris and leave the *fromage*, as Mr. Marks suggested, when Mr. Spencer served notice that he would begin pestering before long. So after a while he rose and talked nicely about unity, fraternity, equality and Ballast Island, and said everybody must be there next year, which was good advice, too. Mr. Spencer then referred to the respected commodore of the Association, whom he mentioned as being the best all-round canoeist he ever knew, a type for the class, and without doubt the oldest active canoeist in America (Mr. Cook is in the seventies).

Com. Cook said he could well remember the early days of canoeing in this country, when a canoe was a traveling craft and not a racing machine only, and he rather liked that notion of a canoe still. He could remember the birth of the A. C. A. and of the W. C. A. later. He had been at a meet where there were canoeists from California, Canada, New York and Chicago. He hoped the W. C. A. would grow and never lose sight of the essential features of canoeing as a successful amateur sport. He thought Ballast Island an ideal place for a meet and had always thought so.

MR. MARKS AND HIS SWEETHEARTS.

The chairman now called on Mr. L. J. Marks to respond to the honored toast, "Wives and Sweethearts." Mr. Marks arose and asked, "Which ones?" and was assured that any would do. He protested that he had never been married and had never had a sweetheart of his own, never saw one except in a photograph, so they couldn't prove anything by him. At this there were loud cries of "Aw!" and "Come off!" so that Mr. Marks was forced to admit that he had heard other gentlemen tell about wives and sweethearts, and was disposed to think that they might, under some circumstances, be a good thing, though at present to be viewed with alarm, as witness the history of the Chicago Canoe Club, which was ruined by the baleful presence of sweethearts and the pernicious practice of marriage. He could not speak encouragingly of the habit of having either wives or sweethearts. Then Mr. Marks told a story about a married woman who was looking for her dead husband in a morgue, and who thought she had found him till the corpse's false teeth fell out. This latter incident sent her away and so irritated the keeper of the morgue that he thumped the unfortunate dead gentleman on the back, saying: "You blame fool, if you'd just kept your mouth shut you'd have had a christian burial!" Mr. Marks feared that on so delicate a subject, addressing gentlemen each of whom had several wives or sweethearts, it might have been better for him to have kept his mouth shut. But as he swung into a rattling good speech, the boys told him they were glad he hadn't. Mr. Marks wished to deny the assertion that the sailing breeze at Ballast was attributable to the presence of his whiskers. He hurled back the calumny with scorn. Then everybody said "D-z-z-z-z," in imitation of the low, soft soughing of the wind.

The chairman said some nice things about FOREST AND STREAM, and asked its representative to tell what he knew about the press anyway. After this he wanted Mr. Friese of Milwaukee to tell which he preferred, a yacht or a canoe, and Mr. Friese said a yacht was better, because if you stopped to pull a cork on a canoe you tipped over, while on a yacht you didn't.

Grandpa Huntington (the youngest member of the W. C. A.) told what he knew about Milwaukee, and short responses were made by Harry and Nat Cook, when the chairman announced that "civilized man could not live without Cooks," and neither could the W. C. A. Brief remarks followed by Dave Crane on the practice of cold baths. Mr. Penniwell (the Commodore of Lost Island) answered the toast, "Where is Detroit?" Mr. Robert Lamp told a fish story about the Madison lakes, how the bass stopped a threshing machine, but was told that the W. C. A. could not endure fish stories. Mr. R. P. Marks made some remarks, stating that, referring to the gentleman at the head of the table, he considered it unconstitutional to invite a man to a banquet and then expect him to keep his mouth shut.

At this stage of the game Mr. E. H. Holmes, of Milwaukee, was asked to sing, and did so, solemnly asserting that he never, no never, wandered from his own fireside. Whereafter Mr. Gus White informed those present that his bonnie was unavoidably detained from the banquet, being at that writing lying over the ocean, also over the sea. Mr. Gernon told more things about Madison, and Secretary Dickens told about tin-horn canoeists as a class, and Mr. W. P. Jewett spoke of the canoeing situation at St. Paul.

By request Mr. Kitchin, of Chicago, sang verses 1, 5, 7, 13 and 24 of "There Was a Little Man," telling again the story of the hat that was "all bound round with a woollen string." Then everybody sang "Auld Lang Syne," and the pleasant meeting came to an end, after such an evening as only canoeists know how to have.

Those present at the banquet were as follows: Messrs. Geo. B. Powell, Orrin L. Evans, W. H. Quaw, Nat H. Cook, J. D. McWhorter, E. H. Holmes, H. B. Cook, A. W. Friese, G. E. Gernon, F. W. Curtiss, Chas. M. Mayers, F. B. Huntington, L. F. Porter, L. C. Hanks, J. W. Hepburn, W. P. Jewett, O. A. Woodruff, F. W. Dickens, W. H. Crawford, A. Kitchin, C. L. Penniwell, Gus White, Gus Hessert, R. P. Marks, D. H. Crane, G. H. Gardner, James B. Keogh, L. J. Marks, this being their order to the right of Com. N. B. Cook, toastmaster Henry D. Spencer and the maker of the feast, Mr. J. Herbert Ware. One rarely sees a more goodly company of sportsmen assembled.

The executive committee continued its session on the morning following the banquet and made some changes of sailing rules, which will be duly handed in by Mr. Dickens, the secretary.

There is a good healthy condition in the W. C. A. and it is bound to grow. The meet at Ballast next summer promises to be a good one, and it deserves the hearty labor of every member of the Association for its success.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

CHANGES IN THE SAILING RULES.

Following are the changes in sailing and regatta rules determined upon by the committee in executive session, the draft of which being kindly furnished by the urbane efficient Secretary, J. W. Dickens, of Milwaukee, Wis.:

The rules received more consideration and discussion at this meeting than at any previous meeting, and these are the first changes of any importance made in the rules.

The rule relating to sails, which heretofore specified that sails used in all canoes, must be a hoisting rig and capable of being reefed while afloat, was changed to apply to Class "C" canoes only, thus allowing the standing rig to be used in Classes "A" and "B". The four classes of paddling canoes were cut down to two classes, viz.: Class 1—Any Canoe. Class 2—Canoes with same measurements as classes "A" and "B" sailing canoes. In the sailing canoe classes the only change made was in the measurement of centre boards in classes "A" and "B." The change made in this rule was, instead of centre board being measured from garboard streak allowing 18 inches as maximum drop of board, to read, "they must not drop more than 28 inches below the water line when canoes are in light trim, (without crew, sails, deck seat "or ballast.")

The rule specifying that canoes sailing in races must carry flags, numerals or other such marks of identification was dropped out entirely.

A member can enter one sailing and one paddling canoe in the races, the rule before allowed but one canoe to be entered by any one member for racing, but was invariably violated, and the change is a wise one.

The rule specifying seven record events at each meet was cut down to four, and the points in figurnig the record were changed to 5-4-3-2-1 instead of 50-40-30-20-10.

A new scheme for figuring the position or number of points a canoe has earned or entitled to, in the summary of the record, was adopted, which is claimed will prevent two scores from being tied and makes the manner of figuring record positions clear.

The programme of races for next meet is as follows:

No. 1 Paddling Class, 1. 1-2 mile.

No. 2 Paddling Class, 2. 1-2 mile record event.

No. 3 Hurry Scurry (All classes).

No. 4 Sail and Paddle, Class A. and B, 1 1-2 mile, record event.

No. 5 Gardner Cup (Sailing) free for all classes. Best two heats in three, record event for Classes A and B.

No. 6 Trophy Cup (Sailing) Classes A and B only. Best two heats in three, record event.

No. 7 Longworth Cup (Sailing) Class C. Best two heats in three.

No. 8 Passenger (Sailing) free for all. One heat, three miles.

No. 10 Consolation (Sailing) free for all. One heat, three miles.

The allowance of standing rigs in Classes A and B is a departure from the old rules regarding sails, that perhaps will be welcomed by the canoeists owning modern racers.

The rule relating to the measurement of centre boards in classes A and B permits the fin keel, but does not give this class of canoes any advantage over others, so far as depth of centre board is concerned. Heretofore the question of what constituted the garborad streak in a fin keel was always raised and disputed. The rule governing the manner of figuring record points was always a source of annoyance, as there was generally questions raised whereby more than one construction of the rule might be applied.

PELAGIC SEALING.

Complying with the request of the House of Representatives, Secretary Carlisle has recently furnished information as to the result of the articles of the Behring Sea Tribunal, in saving the fur seal herds from destruction, the condition of the seals on the Prybilov Islands, and the relation of the revenues derived from the herds to the expense of enforcing the regulations of the Paris award.

The Secretary stated that 121,143 seals were landed by pelagic sealers from the North Pacific Ocean during the last season, and of that number 55,686 were taken from the so-called Alaska seal herd in that ocean and in Behring Sea, 58,621 from the coasts of Japan and Russia and 6,836 from undetermined sources. The fleet which obtained these skins contained 60 vessels belonging to Great Britain and 35 to the United States. The whole number of seals killed in 1894 was about 142,000, which includes 20,000 probably shipped to London from the Asiatic coast via the Suez Canal.

The Secretary emphasizes the unprecedented increase in the number of seals taken by pelagic sealers with a consequent alarming decrease in the seals on the Prybilov Islands, and an enormous number of pups which presumably died of starvation, their mothers having been killed at sea. The Treasury agent counted 12,000 dead pups on the accessible parts of the rookeries and estimated the total loss at nearly 20,000.

In four or five weeks the vessels in Behring Sea, only about one-third of the fleet, killed more seals than were obtained in four months' sealing on the American side of the North Pacific, and Secretary Carlisle reiterates the conclusion expressed in his annual report to Congress that long before the expiration of the five years, when the regulations of the Behring Sea Tribunal are to be re-examined, the fur seal will have been practically exterminated.

Of the American catch of 26,095 seals, 3,099 were males, 15,976 females and the remainder pups and seals whose sex was not determined. The British Columbia schooners reported 26,425 from Behring Sea, of which 14,702 were said to have been females. The present condition of the fur seal herds on the islands is reported to show a dangerous decrease, the number having fallen off at least one-half during the past four seasons.

The amount to be paid to the United Sates by the lessees of the islands for the year ending April 1, 1895, will be $214,298.37, representing rent and tax and bonus on the skins taken. It costs nearly $200,000 per annum to police the sea, not including the salaries and expenses of agents at the Seal Islands, or the pay and rations of officers and men in the patrol service. Thus the efforts to save the herds have involved enormous expense without preventing the destruction of the seal.

From Collector A. R. Milne's customs report at Victoria we learn that in Behring Sea the catch was made outside the 60-mile protected zone in latitude 55, 56 and 58 degrees, and longitude 171 to 175 degrees from August 1 to the middle of September. On the Japanese coast sealing commenced about latitude 36 degrees, and continued north. In waters adjacent to Russian territory the fleet kept well outside of the 30-mile zone, operating chiefly about 10 miles southeast of Copper Island. On the British Columbia coast sealing began about latitude 37 degrees and extended northward. The vessels returned to port during the close season and at the end of July those equipped with spearsmen put out for Behring Sea.

The white hunters soon learned to rival the Indians in the deadly accuracy of their work with spears. A single little schooner, the "Triumph," took 3,240 seals in Behring Sea, and 1,720 on the coast of British Columbia, so easy is it to paddle upon a lseeping seal and capture it. A naturalist on the "Albatross" has often been within easy striking distance for a spear and has phostographed the sleeping seals. Everything seems to conspire to aid in the senseless butchery of fur seals on the high seas and the speedy exterminations of the race is threatened.

Warned by he letter of Secretary Carlisle, Mr. Dingley introduced a resolution in the House of Representatives (H. R. Bill 8633) entitled: "An act to prevent the extermination of fur-bearing animals in Alaska." This is a proposition to repeal the acts preventing the killing of female seals on the islands, to take each and every fur seal found on the Prybilovs and to provide the means for doing so unless Great Britain will immediately co-operate with the United States in preventing the extermination of the seals by pelagic sealing in Behring Sea.

This measure, harsh and improvident as it may at first appear, is more than likely to become law because of the absolute and disastrous failure of arbitration and other temporizing expedients to prevent the object for which they were ostensibly instituted.

FISH, FORESTS AND POLITICS.

The New-York Senate Committee on Fish and Game, to whom was entrusted the responsible duty of investigating the need of the State as to fish and game protection and fish-culture, and of recommending legislation to meet the need, have failed to perform that duty. Their failure is embodied in a bill introduced by them last Monday evening, which provides for a reconstruction of the Fish Commission on political lines.

The terms of the measure are that the Fish Commission and the Forestry Commission shall be combined in a board of five commissioners of fish, game and forests. The president shall have a salary of $5,000, the others of $1,000 each. Their duties shall be the propagation and distribution of fish, the enforcement of the fish and game laws, and the protection and preservation of the State forests, including the Adirondack Park They shall appoint thirty fish and game protectors, one of whom shall be designated as chief protector, and two others as assistants to the chief. The protectors shall hold office during the pleasure of the board, who may summarily remove any one of them and appoint another in his place.

This plan of reorganization of the Fish Commission does not meet the need of the State; nor shall we be so simple as to credit the Senate Committee with being so simple as to suppose that it does.

One drawback to efficient administration of the fish-cultural interests and of protection is the entanglement of politics. The reform most urgently demanded by intelligent public opinion is the absolute divorce of politics from the work proper of commissioners and protectors The demand is not based on theory. It is the teaching of experience—an experience so costly that it might well enough be profited by.

If, after all the months they had to study the subject and learn the facts, the Senate Committee failed to acquaint themselves with the true nature of these conditions, they were incompetent and stupid. If they di l understand the matter as it is, their recommendations show them to be something worse than stupid. Their report declares that they "came squarely" to their conclusions. The coming may have been square enough, but the conclusions are crooked.

The simplest way to rid the Fish Commission of the curse of politics would be as suggested in these columns to separate entirely the two branches of fish-culture and protection. There is no good reason why the Board of Commissioners should be concerned with the appointment and direction of the protectors. There is one good and sufficient reason for relieving them of these duties. It is that they cannot attend to fish-culture and politics, too.

Under the system proposed by the Senate Committee we shall not have more efficient service in either branch. What we shall have will be a new piece of political machinery. Five commissioners, with their clerical force and thirty protectors, whose heads may be chopped off at will. That is an arrangement perfectly adapted to the schemes and purposes of political bosses. It gives every evidence of having been planned and dictated by a political boss. Its evident intention is not to increase the fish supply nor to render more efficient the protection of fish and game, but to strengthen the machinery of partisanship. Under the pretense of public economy it will provide a system, which, by reason of incompetency and demoralization inseparable from it, will prove not economical but tremendously expensive. There can be no economy in putting the public interests of fish and game and forest into the control of a machine.

We have heard an intimation that this scheme of consolidating the two commissions has been devised with a special purpose to make a $5,000 berth for Mr. Barnet H. Davis, of Wayne County. We have never heard of Mr. Davis's qualifications as a fish-culturist; probably no one ever dreamed of them. He is known as a politician, however, and as such, if we have correctly estimated the purpose of the bill, he might be an admirable man to do the work it is intended to accomplish.

If the citizens of the State of New-York would save their fishery, game and forestry interests, they must defeat the measure submitted last Monday.

SCOUTS FOR THE PARK.

After twenty years delay Congress last spring passed a law for the protection of the Yellowstone Park, but seems still unwilling to provide the means by which the provisions of that law may be carried out. In the Sundry Civil Service Appropriation Bill, which recently passed the House of Representatives, and is now in the hands of the Senate, there is no appropriation to pay for the extra scouts asked for by the Superintendent of the Park. The amount called for was trifling—only $1,800—and the scouts are absolutely needed to enforce the law and to preserve from extermination the few buffalo remaining in the Park. Practically it does not make so very much difference if a few elk are killed now and then; there are plenty of elk in the Park and elsewhere, but every buffalo slaughtered by the poachers who hover about the borders of the Park brings extermination a long way nearer for the greatest animal indigenous to this continent.

The small sum required to pay these extra scouts is greatly needed, and the item in the bill which relates to the Yellowstone Park ought to be so amended in the Senate that funds will be available for this purpose. The Senate has always shown itself more interested than the House in the protection of the Park, and it can now give practical expression to this interest by insisting that means to enforce the law shall be provided for the Superintendent.

There is now only a single scout employed there to look after a territory as large as the State of Connecticut, which in winter can only be traversed on foot and with much hardship and even danger. The Superintendent has asked for authority to employ four more scouts for six months of the year at $75 each per month, and even this force would be miserably inadequate to the needs of the reservation. Five men, however, could do five times as much as one, and the knowledge that the force had been increased would do much to keep the butchers and skin-hunters away from the reservation.

Notwithstanding all that has been said and done within the past few years, the fact remains that the buffalo in the Park are rapidly growing fewer in number, and unless they are energetically protected now, the day of extinction is close at hand.

We took occasion the other day to point out the magnificent showing of Minnesota in enforcing its game and fish laws under the direction of Executive Agent Andrus; and to-day we devote a generous share of space to the report of State Warden Hampton, of Michigan, who is deserving of unstinted credit for the efficient conduct of his office. We trust that his report may have appreciative reading. The record of law enforcement in Michigan for 1894 shows a total of 492 cases of charged violations investigated, with conviction in 324 cases, and a collection of $3,320 in fines. History is making so rapidly nowadays in fish and game protection that at the best one cannot more than keep pace with the accomplishments and results of the present; but as to Michigan we ought not to forget the men—Holmes, Mershon and others—who, by unselfish and persistent effort, prepared the way for the system now in force.

Our fish culture columns contain a summary of the good work accomplished by the California Commission in 1893 and 1894. With a grant of only $17,500 for protection, propagating and distribution, the State planted nearly four and one half millions of trout and black bass in 1894 besides hatching upward of seven millions of salmon eggs furnished by the United States and the prosecution of offenses against the laws was so vigorous as to make fish cultural operations very successful.

The State now has our eastern brook trout, black bass, muskelunge, shad and striped bass and all of them promise to remain permanently thrifty. We cannot foretell the result of introducing black bass into trout waters, but hope it will cause no harm. The brook trout may or may not hold their own with the rainbow, which grows much larger.

The New-York Fish Commissioners have made Mr. James Annin, Jr., general superintendent of hatcheries. It is an admirable appointment. Mr. Annin is a fish-culturist of wide, varied and successful experience, and in every way well fitted to assume the duties and do the work of the new place.

The Sportsman Tourist.

TO THE GULF OF CORTEZ.

About a month ago, my brother, who is a very sagacious physician, advised me to take the fresh liver of a mountain sheep for certain nervous symptoms which were troublesome. None of the local druggists could fill the prescription, and so it was decided that I should seek the materials in person. With me went my friend J. B., the pearl of companions, and we began the campaign by outfitting at San Diego, with a view to exploring the resources of the sister republic in the peninsula of Lower California. Lower California is very different from Southern California. The latter is—well, a paradise, or something of that kind, if you believe the inhabitants, of whom I am an humble fraction. The former is what you may please to think.

At San Diego we got a man, a wagon, four mules and the needed provisions and kitchen—all hired at reasonable rates, except the provisions and kitchen which we bought. Then we tried to get a map, but were foiled. My furniture contained hundred cartridges, a belt I always carry, given by a friend, with a bear's head on the buckle (a belt which has held, before I got it, more fatal bullets than any other west of the Rockies), and my usual rifle. J. B. prepared himself in a similar way, except the belt.

Starting south from San Diego, we crossed the line at Tia Juana, and spent an unhappy day waiting on the custom house officials. They, however, did their duty in a courteous manner, and we, with a bundle of stamped papers, went on. The only duties we paid were those levied on our provisions. The team and wagon were entered free under a prospector's license, for thirty days, and an obliging stableman signed the necessary bond.

The main difficulty in travelling in Lower California lies in the fact that you can get no feed for your animals. From Tia Juana east to Tecate, where you find half a dozen hovels, there is hardly a house, and not a spear of grass for thirty miles. At Tecate there is a little nibbling. Thence south for twenty-five miles we went to the Agua Hechicera, or witching water; thence east twenty-five miles more to Juarez, always without grass; thence south to the ranch house of the Hansen ranch at El Rayo, twenty-five miles more. There, at last, was a little grass, but after passing that point we camped at Agua Blanca, and were again without grass for thirty miles to the Trinidad Valley, which once had a little grass, now eaten clean. Fortunately we were able to buy hay at Tia Juana, and took some grain. Fortunately also we found some corn for sale at Juarez. So, with constant graining, a little hay, and a supply of grass, either absent or contemptible, we managed to pull the stock through.

Besides our four hired mules there was another belonging to our man, Oscar, which we towed behind to pack later. The animal was small in size, but pulled back from two hundred pounds to a ton at every step. Its sex was female, but its name was Lazarus, for the overwhelming necessity of naming animals of the ass tribe either Lazarus or Balaam tramples on all distinctions of mere sex. We started, prepared for a possible, though improbable, season of rain; but we did not count on extreme cold, yet the first night out the water in our bucket froze, and almost every night it froze from a mere skin to several inches thick. To give an idea of the country, I will transcribe from a brief diary a few descriptions. Starting from Tia Juana, we drove or packed for nearly two hundred miles in a southeasterly direction, until we finally sighted the Gulf and the mountains of Sonora in the distance. At first our road lay through low mountains, in valleys abounding in Cholla cactus. From Tecate southward the country was rolling and clotted with brushwood, until you reach Juarez. Juarez is an abandoned, or almost abandoned, placer camp. Here amid the countless pits of the miners the pinons begin, and then, after a short distance, the pine barriers stretch for forty miles. Beyond again you pass into hills of low brush and plains covered with sage and buckweed, until finally you cross a divide into the broad basin of the Trinidad Valley. This is a depression some twenty miles long and perhaps five miles wide on the average, with a hot spring and a house at the southwestern end, walled on the southeast by the grim frowning rampart of the San Pedro Martir range, and on the other sides by mountains of lesser height but equal desolation.

We had intended at first to strike for the Cocopah range, near the mouth of the Colorado River, and there do our hunting. Several reasons induced us to change our plan and make for the Hansen ranch, where deer were said to be plenty and sheep not distant; so we turned from Tecate southward, made one dry camp and one camp near Juarez, and on the fifth day of our journeying reached a long meadow, called the Bajio largo on the Hansen ranch. We turned from the road and followed the narrow park-like opening for four miles, camping in high pines, with water near and enough remnants of grass to amuse the animals. This region of pine barriers occurs at quite an elevation, and the nights were cold. The granite core of the country crops out all along in low broken hills, the intervening mesas consisting of granite sand and gravel, and bearing besides the pines a good deal of brush. Thickets of manzanita twisted their blood-colored trunks over the ground, and the tawny stems of the red-shank covered the country for miles. The red-shank is a lovely shrub, growing about six or eight feet high, with broom-like foliage of a yellowish green, possessing great fragrance. If you simply smell the uncrushed shoots, they give a faint perfume, somewhat suggestive of violets, and if you crush the leaves, you get a more pungent odor, sweet and a little smoky. Also, the gnarled roots of the red-shank make an excellent cooking fire, if you can wait a few hours to have them burn to coals. All things considered, the pine barrier country is very attractive, and if there were grass, water and game, it would be a fine place for a hunter. From our camp at Bajio Largo, J. B. and I went hunting for deer, which were said to be plentiful. We hunted from early morning till noon, seeing only one little fellow about the size of a jack-rabbit scuttle off in the brush. Then we decided to go home. This, however, turned out to be a large business. The lofty trees prevented our getting any extended view, and the stony gulches resembled each other to an annoying degree. At last even the water seemed to flow the wrong way. So we gave up the attempt to identify landmarks, and following our course from the sun, we finally came again to the long meadow and followed that to camp. Here we violated all rules and shot at a mark—our excuse was that we had decided to leave the vicinity without further hunting; and, at all events, we spoiled a sardine-box, to Oscar's great admiration.

In order to get a fair day's journey out of a fair day, we had to rise at four or five o'clock. Oscar once or twice borrowed my watch to wake by, but the result was only that I had to borrow J. B.'s watch to wake Oscar by; so I afterwards retained the timepiece and got up early enough to start Oscar well on his duties.

The question of fresh meat had now become important. We let Bajio Largo and drove to Hansen's Laguna, a shallow pond over a mile long, much haunted by ducks. Here we made a bad mistake, driving six or eight miles into the mountains, only to reach nowhere, and be forced to retrace our steps. Night, however, found us at El Rayo, the Hansen ranch house, and, as it turned out, the real base of our hunting campaign. The Hansen ranch is an extensive tract named after an old Swede who brought a few cattle into the country years ago. The cattle multiplied exceedingly, to the number, indeed, of several thousand, and can be seen at long range by the passer-by. They are very wild and gaunt at present, and will prance off among the rocks at a surprising rate before a man can get within two hundred yards of them. Ex-Governor Ryerson now owns these cattle, and his major-domo, Don Manuel Murillo, a fine gray-haired veteran, learning that I had known the Governor, gave me much friendly advice and sent his son to guide us well on the road to the Trinidad Valley and the sheep land. He also provided us with potatoes and fresh meat, so that we lived fatly thenceforth.

Our track lay past an abandoned saw-mill, built by the International Company. Thence we were to go to Agua Blanca, the last water to be had on the road; for the next thirty miles are dry. The saw-mill was built to supply timbers to the mining town of Alamo, some twenty-five miles south. This camp is now in an expiring state and needs no timbers, but is said to shelter some rough and violent men. The road from the mill was deep in sand, and our pace was slow. The darkness was coming cold and fast when we finally drove on to the water and halted to camp.

Two men were there before us with a saddle-horse each, and no other apparent equipment. When we arrived the men were watering their animals, and at once turned their backs, so as not to be recognized. Then they retired to the brush. We supped and staked out the mules, and then sent Oscar to look up our neighbors. Oscar went and shouted, but got no answer and could find no men. We thought that our mules were in some danger, and J. B., who is a yachtsman, proposed to keep anchor watch. So Oscar remained awake till midnight, when he awoke me and retired freezing, saying that he had seen the enemy prowling around. I took my gun and visited the mules in rotation, till 2:30. Then J. B. awoke chattering with cold, but determined, and kept faithful guard until five, when we began our day with a water-bucket frozen solid.

All our property remained safe, and a distant fire twinkling in the brush showed that our neighbors were still there. After breakfast Oscar again sought the hostile camp and finally found a scared and innocent Frenchman, who cried out:

"Holy Mary! I took you for American robbers from the line, and I have lain awake all nigh watching my horses."

From Agua Blanca we drove across the Santa Catarina ranch, for the most part plain and mesa covered with greasewood and buckbrush. This latter shrub looks much like sage, except that its leaves are of a yellow-green instead of a blue-green. It is said to furnish the chief nutrition for stock in several great ranches. Certainly there was no visible grass, but buckbrush can hardly be fattening. Toward night we crossed the pass into the Trinidad Valley and drove down a grade not steep only, but sidelong, where the wagons both went tobogganing down and slid rapidly toward the gulch. The mules held well, however, and before dark we were camped near the hot spring at the house of Alvarez.

Our friend Don Manuel Murillo had recommended us both to Alvarez and to his sister, Senora Paula, but both of these were absent. Don Manuel had also urged us to get the Indian Anastasio for a guide.

"For Heaven's sake," he said, "don't venture without a guide. You may perish from thirst, as others have done before you."

We tried at first to hire burros and let our mules rest, but the Indian who owned the burros stated that his terms were "one burro, one day, one dollar," an impudent attempt at robbery, which we resented.

We interviewed Anastasio, however, who said he would start at any moment, and after leaving Oscar to guard the wagon, we packed two mules, saddled two more for J. B. and myself, and giving Anastasio the tow-rope of a pack-mule, we started after him. Anastasio was the most interesting figure of the trip, and I must be pardoned if I go into some detail about him. He spoke some Spanish and understood a good deal When he did understand he never stated that fact, but either assumed a stony look or answered at cross-purposes, so that we did not get to know a great deal about each other for some time Aside from his Spanish, Anastasio was a fine representative of the best of the stone age, and as we journeyed on one got an excellent idea of the life of the savage here in early times. About three o'clock in the afternoon we reached the only water spot on the trail. Anastasio parted some withered reeds, and looking earnestly, said "dry." A little further up he repeated the word, and yet again, till, at his fourth attempt, he said, "very little," and we camped. By scraping away the mud and grass we got a little gravelly hole and dipped out the slowly seeping water, a cup at a time. We thus managed to give each of the mules a little in a pan and to get a canteen full for cooking.

Then I noticed Anastasio gathering wood, which I thought at first was for general use, but I found it was a private pile to be used, so to speak, for bedding. Anastasio did not take the ax to secure his wood, but smashed off mesquite branches with a rock or pulled out some old root. He quite despised pinon and juniper logs, saying they gave no heat, meaning, probably, that they burned out too soon.

We turned in soon after supper, and the night was cold. Anastasio said he feared snow. The reason for his fear was soon evident. My bed was about twenty feet from Anastasio's, and during the night I would turn and watch him. He carried but one small blanket of about the texture of a gunny-sack. He lighted a long smouldering fire, stripped himself naked, except a breech-clout, and with his back to the coals and his front protected by his gauzy blanket he slept until the cold roused him, when he put on more wood and slept again. I offered him four pairs of warm horse-blankets to sleep in, but that was not the thing. He said he needed to have the fire strike him in the small of the back, and he slept in that way always. So all night in my wakeful moments I saw the light reflected from his mahogany person. Evidently snow or cold rain would be disastrous to people who need a fire all night, for with no covering against the cold and with fires extinguished by storm, they might easily freeze to death.

We were packed and marching at 7:30 next morning, and to those who know the inwardness of packing in winter that statement means a good deal. It means, for instance, that J. B. got up, at my summons, long before dawn, and cooked a splendid breakfast, and that the mules were caught and grained and saddled, and the packs made and lashed, by the earliest sun.

J. B. was a wonder. He seemed to enjoy giving his fellow mortals the best breakfasts and suppers—for we never had any midday meals—that our supplies could furnish. Always rising at the first call, in the dark, sometimes with an accompaniment of snow or rain, he managed the commissariat to perfection.

I in my humble way packed and saddled and did other necessary work, and Anastasio regarded us with benevolent curiosity, though always ready to get wood or water or mules when we asked him to do so.

We were now approaching the true desert. This term is not restricted to the broad level sand wastes along the Gulf, but includes the arid and waterless mountains adjacent, and this must be borne in mind when the Mexicans tell you that sheep are to be found in the desert.

We passed the last of the brushy hills, and crossing a small divide came over slopes of volcanic cinders to a little water spot with dwarf willows and grass. This was our hunting camp. The country through which our route had lain heretofore was altogether granitic, though one could see hills apparently of stratified material in the distance. Toward the desert we met beds of conglomerate and tractiye and mountains covered with slide-rock ringing iflnty-like clinkers from some great volcanic furnace, but doubtless some accurate and industrious German has described all this in a work on the geology of the peninsula, and I will refer you to that valuable treatise for further facts.

The vegetation had somewhat changed. There were more cactus, particularly the fleshy kind called venaga, though I noticed with surprise the absence of the great fruit-bearing cactuses, the Saguarro and Pitaya, all along our route. The Spanish daggers were very numerous, as were also Mescal plants, both of these forming veritable thickets in places.

This makes the third variety of wilderness encountered in the peninsula. There are four: First and best, the pure barrens; second, the brushy hills and plains covered with sage, greasewood and buckweed; third, this spike-bearing volcanic region, and fourth, the appalling desolation of the acknowledged desert.

The moment we had unloaded and watered our animals, Anastasio and I set out to look for deer. Anastasio wore the spotted and tattered remnant of a frock-coat once green, given him by an Englisman, of whom I shall say more later. He had guarachis, or sandals, on his feet, bare legs, a breech-clout, and on his head a reddish bandanna handkerchief in the last stages of decay, and as he peered over some rock, glaring long and earnestly in search of game, he reminded one of those lean and wolfish Apaches that Remington draws in a way so dramatic and so full of grim significance.

Anastasio was fifty-one years old and had no upper incisors, but the way he flung his gaunt leathern shanks over those mountains of volcanic clinkers, armed with the poisoned bayonets of myriads of mescal, cactus and Spanish dagger, was astonishing.

I told him that I was not racing, and that he would scare the game. In fact he did start one little fellow, but he said he always saw the game first, and for this day I was quite powerless to hold him in; so I decided to return to camp before dark. This disgusted Anastasio greatly. "In this way we shall never kill," said he. "We are going to suffer from hunger." I assured him that we had plentiful supplies, but he had come for meat. Unbounded meat had been the chief incentive for his trip, and hungry he was determined to be.

The next day J. B. set out early with the red man. I arranged camp and two or three hours later took what I supposed was a different direction, but soon encountered the pair returning. J. B. had a painful knee, and Anastasio had started his racing tactics and kept them up until J. B. was quite lame.

The Indian reported that he had seen sheep. J. B. had used the glass without finding them, and then Anastasio captured it and looked through the wrong end, nodding and saying he could count five, very big. This, I am sorry to say, was false and affected on Anastasio's part, and J. B. was skeptical about the sheep altogether; but I knew how hard it was to find distant game when you don't know exactly how it should appear. To reach the supposed sheep the mountain must be climbed and the crest turned, for the wind permitted no other course. J. B. did not feel up to the task, and I directed him to camp. Anastasio and I climbed for about four hours, and reached a position whence his sheep would be visible. He stared long, and said he could make out one ewe lying down under a juniper. I tried the glass. He was right. His unaided sight seemed about equal in definition to my field-glass. On this occasion he declined to use the glass. We could get no nearer unseen, and though the distance was very great, I decided to risk a shot.

I fired in fact, two or three shots at the ewe, alarming her greatly, when from beneath a cliff which lay below us a band streamed out. Two big rams started off to the right. Anastasio and I ran down a bit, and I tried a long shot at the leading ram. The distance was great, and the run had pumped me a little. I missed. The second ram

was still larger. He stopped a moment at a hundred and fifty yards, and I dropped him. Anastasio grunted satisfaction. I swung to the left, where the rest of the band was journeying sighted at the shoulder of a young ram and fired. The ball passed through my intended victim, dropping him, and entered the eye of a yearling ram who stood behind, thus killing two rams at one shot—a most unusual accident.

The rest of the band were now quite distant, and though I fired several shots, at Anastasio's desire—he said he wanted a fat ewe—none took effect.

I cleaned the sheep and skinned out the big head. Anastasio took one small ram entire on his back, supporting it by a rope passed over the top of his head, and I with the big horns started down. It was one o'clock. The head might have weighed thirty-five pounds fresh. It grew to weigh fifteen hundred pounds before dark. Stumbling down through the slide rock with legs full of venomous prickers, I passed below camp without noticing it, and was well on the other side, when I thought I had gone about far enough, and shouted. J. B.'s voice answered across a small hill, and I found that he had never found camp at all, but had found a water spot, and wisely decided not to leave it without good reason.

I scouted a bit to the west, but found unfamiliar country, and as the sun had set we were seemingly about to stay by that water all night, when I turned around and saw a pale column of smoke rising above the crest of the ridge against the evening sky.

At once we marched around the ridge, and as we rose over the divide we saw the whole hillside flaming with signal fires. Our dear old Anastasio had become alarmed, and set fire to fifteen or twenty dead mescals in different places to guide us home. God bless a good Indian!

The next day I spent the morning in washing, resting and cutting spikes out of my legs. Anastasio packed in the second small ram, and ate ribs and slept. Then, in the afternoon, we got the rest of the big fellow down. Anastasio, to make his load lighter, smashed off the shanks with a stone, although he carried a knife in his belt—a striking trick of heredity.

And then we talked. "The Trinidad Valley is not my country," said Anastasio; "this is my country. Yonder, under that red rock on the mountain-side, about five miles away, there is a spring in the gulch on the edge of the desert. I was born there and lived there twenty years with my father's family. Here where your camp is"—about twenty feet square of slide rock level enough to stand on—"we sowed crops. We scraped a hole between the stones with our hands, put in squash seeds, watered them by carrying water from the spring in our hands, and raised several hills."

So he went on, not in so connected a way, but showing, bit by bit, his manner of life. His tribe, which he called the Kil-ee-ou, must have been very restricted in numbers at best. His territory was a few leagues of desert, or almost desert, mountains, every yard of which he knew by heart, while just over the ridge dwelt the Cocopahs, his mortal enemies. Sometimes a score of men armed with bows would start a tribal hunt for deer, though the sheep were beyond their means of attack. Sometimes they journeyed a few leagues to the Gulf to eat mussels. We could see the great blue sheet and the leagues of white salt incrusted on the hither side, and at one spot on the horizon the blue peak of some Sonora mountain rose out of the seeming ocean.

But a few deer and mussels and a half dozen hills of squashes could not fill the abyss of the Indian appetite. The stand-by was roasted mescal. These plants grow in great numbers, and at every season there are some just right for roasting. The Indians selected these and cooked them for two or three days in a hole in the ground by a process called tatema, similar in principle to a clam-bake. This roasting converts the starchy leaves and heart into a sugary mass, so that the resulting food is something like a sweet fibrous beet. The Indian's life really lay in gathering and roasting mescal. And when a storm prevented the necessary fires, the tribe passed days, often many days, without food.

So much for Anastasio's early life. A year ago, he told us, he went hunting with two Americans. One of them came from under the earth, where there were six months of night, and had passed two seas and been a month on the train. We supposed, from this, that Anastasio had served as guide to an Englishman whose home he described at the Antipodes. The six months of night were, perhaps, represented by the London fogs and if he passed a month on the train he must have come by the Southern Pacific. The Englishman had presented Anastasio with the very undesirable gaberdine I have before described. Anastasio said that the Englishman shot quail in the head every time with his rifle, but on meeting a band of eleven sheep he fired nine shots without hitting. Anastasio said he trembled, but I incline to think that the Indian had run him out of breath. Finally the Englishman secured two ewes and a lamb, after three weeks of hunting.

Look at my fortune! A single day on the mountain, and three rams to show for it; one with horns that are an abiding splendor—seventeen inches around the base and forty-two inches on the outer sweep."

I thought at first that the horns made more than one complete spiral, but on levelling them carefully I saw that the entire curve would not be complete without the points, which were smashed off. In this connection it is only fair to consider that I carried my lucky bear's head belt, and invariably sacrificed to the sun, as several ragged garments hung on spikes and branches may still testify.

The weather threatened storm. J. B.'s leg would not permit him to hunt. Anastasio was full of meat, eating roasted ribs night and day, besides his regular meals, and we decided to retreat.

I noticed that the sheep hides had little of the under wool that the northern sheep have in December, nor were the animals fat, though the flesh was sweet and tender, and the livers had their desired medicinal effect.

Anastasio said it was customary to hunt in summer, when the sheep were fat, and were compelled to resort to the water holes. Aside from the meanness of taking advantage of the animals' necessities, the summer is bad, both because the flesh is rank and spoils quickly, and the heat and insects are intolerable.

We packed in a gentle rain, and Anastasio made a great bundle of rejected meat for his own use. To get rope, he slightly roasted the leaves of the Spanish dagger, tore the hot spikes in shreds with his tough fingers, and knotted the fragments into a strong, pliable cord.

In two days we were again in the Trinidad Valley, and in two days more we had reached our old friend, Don Manuel Murillo, at El Rayo. Here we lay over a day to rest the animals, and Don Manuel again played the part of a good angel in letting us have some hay.

I tried a shot at a duck on a little pond. The shot was a costly success. The duck died, but I had to wade for his remains through many yards of frozen mud and dirty water. The duck, though lean, was tender. My last hunt was for deer at El Rayo, with a boy of Don Manuel's for guide. Toward noon I saw two deer and shot them. I do not at present know just how to class them. The tail is that of the ordinary mule-deer, or black tail of Colorado and Montana, but there is no white patch on the rump. I shall have to send a skin to the editor for identification.

Our journey home was accomplished in the worst weather. Snow, cold rain, gales of surprising violence, made life a struggle; but we jumped at every chance for progress, and finally crossed the line twenty-five days after we had left it, tired, ragged, dirty, but with our mules alive and our hearts contented.

Our experience of the peninsula indicated that there were few inhabitants of any kind, brute or human. We hardly saw a dozen rabbits on the trip. There were some quail, and many ducks, but the latter were visitors only. Deer were very scarce, and there were but a few half-wild cattle visible.

As for human beings, there was not an inhabited house on our road from Alvarez Place in the Trinidad Valley to El Rayo, a distance of fifty-five miles; nor from El Rayo to Juarez, twenty-five miles more. Indeed, except for the few hovels at Tecate, the houses for the rest of the way were hardly more numerous. And yet we had a strong impression that the country had nearly all the population it could support. Given a moderately dry year, and the part of Lower California which we visited can be thought fit only for bogus land companies and goose-egg mines, or, yes, it might be an ideal spot for a health resort or a penal colony.

And for intending visitors I will echo the words Don Manuel used to me: "For Heaven's sake, take a guide, or you may die of thirst!" as good men are doing every year. Also, if you go in winter, leave straw hats and cotton socks at home.

H. G. DULOG.

THE RANGELEYS IN WINTER.

BY MOLECHUNKAMUNK.

I have revisited the Rangeley lakes again in winter. Since the closed months have been established by the laws of Maine, prohibiting trout fishing from October 1 to May 1 (and a very good and essential law it is), there are but few, if any, sportsmen that visit the Rangeleys after the game shooting season, which ends Dec. 1.

It is difficult to get at the principal lakes, excepting Rangeley Lake proper, which adjoins the small town of Rangeley, and there are no settlements nor towns adjoining the big lake or the smaller lakes or the Richardsons, excepting the town of Andover which is twelve miles from the head of the lower Richardson, and which is connected by a road so little used in the winter that I usually have to get it broken out for my party, and have sometimes had to go to the expense of $40 or $50 to do so.

In one instance, a number of years ago, five feet of snow fell while I was at the lake, and drifted so badly that I had to snow-shoe my way out with a companion over the mountains, 22 miles, (we being up the lake twelve miles), which required our almost consecutive exertions for seventeen hours, leaving at 6 A. M. and arriving out at Andover at 11 P. M. In one instance we were two days in getting over the road from Andover, twelve miles to the arm of the lake, although we had two stout teams, but had to shovel and tramp through heavy drifts of snow, and were compelled to camp over night on the road. Several other times I have been compelled to camp at the arm of the lake by having the ice break up after it had frozen, and in one instance I had to wait a week at the arm for the ice to form sufficiently strong to get over. In fact I have had quite a number of adventures in getting up to camp on the Upper Richardson Lake, over the ice in the winter, and especially since the comparatively late law on deer shooting, which ends the season on Dec. 31.

To get the late December shooting about the lakes is difficult, as one must get up the lakes by boats, or on the ice.

From the middle of November the ice generally makes about the shores, making it difficult to get boats in or out, and very seldom does the ice hold after its first freezing over, although it may get an inch or two thick, and sometimes it breaks up when it is three inches thick from the sea made by a high wind on open places. The open places will grow larger, and sometimes break up the entire lake, at other times it will open in three or four or more parts, while the parts left closed will accumulate ice to the thickness of seven or eight inches, and at such times one must haul a boat over the frozen portions and row through the open ones.

The lake generally freezes up from the 10th to the 15th of December, wholly, or sufficiently so as to pass teams over. Parts of the lake in vicinity of springs or currents will continue weak at all times in the winter, and it is not very uncommon to break in with horses, though they are generaly hauled out safely, owing to the firm ice which adjoins the soft parts. The weak parts are pretty well known however, and avoided.

While the cold in the winter as indicated by the thermometer, would seem extreme, it is not particulary severe to those who come well prepared, and have a comfortable camp, for the dryness of the atmosphere militates against the effect of the cold in a most favorable manner. That chilliness and bone penetrating cold which one experiences, even in moderate weather on our eastern or western seaboard, is little felt at the lakes in winter, and familiar as I am with many climes, I will say that I have suffered more from cold, which my memory vividly reminds me of, south of Washington and amid the orange ripening localities of California, than I have in all my experiences in winter at the Rangeley lakes.

Yet during my last excursion here in the winter of 1890 and 1891, the self-registering thermometer in front of camp, indicated for thirteen consecutive mornings an average of 8 degrees below zero, the coldest, lowest marking being 26 degrees below, and the warmest morning being 12 above. That was an extremely cold spell, as noted by the usually reliable oldest resident in the country, who had no remembrance of so cold a period in forty years.

But the cold of this winter has not been far behind it; yet no day at the lake has been too cold for the children of our party to be out snow-shoeing, skating, and tobogganing.

Our trip was not made for shooting or fishing, as we arrived on the last day of the open shooting, Dec. 31, and we are strict observers of the game laws. We came to enjoy the cold bracing weather, to enjoy the sports of winter, and to view the beautiful ice bound lakes and the forest and mountains clad in their white vestments; to witness the dark and purple hues of the fringing woods, and of the distant ravines; to observe the countless minor features incidental to the season at the lakes, of which a recounting would be tiresome perhaps to our readers, but of constant note and attention to all lovers of the woods and waters.

We have a fine toboggan slide in daily use, and have created several skating courses on the lake by aid of horses and scrapers. We have snow shoe tramps through the forests and over the lake, and take occasional lunches by great fires on the lake shores, where some gigantic cedar or pine has sprawled out its dry roots for an inviting match.

At some risk of being tiresome, but to show how little the cold has interfered with our enjoyments, I will give some reference to the mercurial indications in front of our abode, distant as it is, twenty miles from a post office and forty miles from the railroad station of Rumford Mills.

Our party of nine, four being children, and two ladies, exclusive of guides and assistants, came in safely from Andover, Maine, on Dec. 31. We were held up two days at that town by the general blizzard, which coming from the west gave the New England coast a cold blocking storm. The weather during the two days at Andover was simply howling, the mercury holding obstinately below zero, and the air most of the time filled with cyclonic whirls of snow. But we were comfortable at French's Hotel. On the morning of the 31 it was still and clear, with the thermometer 18 degrees below zero, and it held below zero all day, closing at sundown 10 below, and opening the following morning at camp 22 below.

The trip of twenty-two miles through the woods, and nine miles up the Richardson lakes was entirely comfortable and free from touches of King Frost. It was slow going, however, from the necessity of breaking out the road and testing the ice, consuming four hours, including the stop of an hour and a half midway for lunch, and warming up at the foot of the lake.

During our stay of two weeks, now terminating, we have had but few mornings when the lowest markings of the thermometer was above zero. On Jan. 5, three of our party left to meet friends at Montreal. The marking of the thermometer was 14 degrees below zero at time of leaving, ten o'clock, for Andover, and closing at night 8 degrees below, but the trip was made without any discomfiture whatever. The night of January 4 was the coldest of any, there being a perfect gale of wind from the northwest all through the night, with the thermometer 18 degrees below zero, but the morning opened still and clear, and comfortable enough.

A gale of wind with the thermometer nearly 20 degrees below zero, constitutes unmistakably a blizzard, which would be fatal to human life unless somewhat protected from its fury. In our case, although the camp was openly exposed upon the lake shore to the full blast, we experienced no inconvenience. With double windows, and large fireplaces in every room, filled to repletion with consuming birch and maple, we were hardly conscious of the extreme cold outside, and passed the evening in witnessing the theatrical entertainment given by the children. To be sure, the cold gale was searching, and despite the fires continued through the night, it found out the water pitchers in remote corners, and glazed them over with its imprint.

The night was a comfortable one, for a slight freezing in one part of a room with a glowing fire in another, cannot be otherwise than comfortable in a dry air, to a well clad and a well nourished mortal. Still the contrast was striking, between the blizzard of the night, and the still air of 18 degrees below in the morning. It seemed hardly necessary to wrap up for snow-shoeing.

I would account a still clear cold of 60 or 70 degrees below zero, to be far more comfortable than a gale of wind having a velocity of twenty miles an hour with the mercury at 15 or 20 degrees below zero. The first could be endured very comfortably in an ordinarily well protected apartment before a glowing fire, but the latter has a searching power, which insinuates itself through the slightest crevices of the doors, windows, and floors, and of penetrating, when one is exposed to it, all the clothing one can put on. A moderate head wind at zero is far more biting than still cold at 30 degrees below. In fact no one but an Esquimau or the exceptional man, can endure the facing of a gale at 20 degrees below zero, with any part of his face exposed, for more than a few minutes, for the white frosting will form on the skin almost immediately, and with double veiling, the eye lids will soon glue together, and a glazing of ice will form over the mouth and nostrils. The face would freeze so quickly that one would hardly be aware of it, as it would be comparatively painless.

I was snow-shoeing in the afternoon before the blizzard. The morning had opened 22 degrees below, but not seemingly very cold, and during the forenoon the mercury crept up within a few degrees of zero, but began to drop steadily after ten o'clock. I had crossed the lake with one of my boys, to enjoy our lunch by a fire built upon the opposite shore, perhaps two miles from camp. I observed that the sun had a peculiar cold aspect and that the air was filled with countless particles of snow, which although as minute as diamond dust flashed and scintillated in the sunlight, a sure indication of intense frost. The tiny flashing crystals came from the moisture in the air, for the sky was cloudless, although tinted with an ominous hue which indicated some change from the quiet of the previous few days. I deemed it prudent to retrace our steps to camp, for the winter's short day was drawing to a close. When half way across the lake we observed from the upper end, approaching eddies of whirling snow,

and before we reached the camp they were about us, and the sun had disappeared and the whole sky had become obscured from our sight by the driving flurries. The blizzard which lasted through the entire night had commenced. The wind fortunately was at our backs, and with well hooded faces we experienced no inconvenience.

It was four o'clock, about sundown, when we reached camp. The thermometer indicated 10 degrees below zero. Before six o'clock, the mercury fell to 18 degrees below, where it remained all night, accompanied by howling bursts of wind which seemed bent on forcing in windows and doors. But the fury of the gale was lost upon us, and the morning opened quiet and serene, and seemed moderate in its still coolness of 18 degrees below.

A few days after this blizzard we learned that an unfortunate visitor at the big lake two miles above us (the Mooseluckmaguntic) had been caught out in it and very nearly lost his life. Alone and on foot he attempted the passage of eight miles from Haines landing to the Upper Dam, and when overtaken by the whirling clouds of snow which hid the shores, lost his bearings.

He could not face the gale and drifted with it until he reached the shore, a long way from his course Here, after passing into the forest a bit, and getting some shelter, he succeeded in building a fire which saved his life. His ears, hands and feet were half frozen. In the morning he found he was near the closed camps of Capt. Barker at Bemis Stream, four miles out of his course. He was unable to proceed further, still being eight miles from the Upper Dam. He broke open one of the camps, when he found plenty of firewood, but nothing to eat, and remained two days without food. He then made his way to the Upper Dam, arriving in a most wretched condition.

FLORIDA FUN.

It was on the 8th of January that four congenial souls started south from Richmond, Ind., bent on camping, shooting, fishing and a general good time in the south, the first stop to be at De Tuniak Springs, Fla. The party consisted of Gus, an old deer slayer, who looks on a shot gun with contempt; M. T., another deer hunter, and also a quail shooter from way back; while Billy and H., the other two of the party, were quail shooters, but not well up in deer shooting. Last, but by no means least in importance, was old Joe, whom the readers of "our paper" have frequently followed through its pages after quail and ruffed grouse.

The journey was without special incident. It was just forty-three hours of plain, every day riding on the cars. The ground was hard frozen when the party started, it snowed all the way across Tennessee, sleeted and rained all the way across Alabama, and at Pensacola the house roofs were sprinkled with snow. From Pensacola to De Tuniak Springs, eighty-five miles, it was all piney woods, probably called piney because the trees do not grow thick enough to be called pine woods. The ground is sand and the lay of the land varies from level to quite rolling. In the bottom of the narrow valley between hills is always a narrow strip of dense thicket, the leaves as bright green as in summer. In the uplands the ground is everywhere covered with grass a foot high. For a description of the transcendent beauties of De Tuniak Springs, the reader is referred to the numerous real estate and railroad descriptions, that describe them much fuller and in a far better light than this poor pen can do it. The writer has some remnants of a conscience and still has some respect for the truth, and the fellows who wrote the descriptions referred to are not handicapped by any such trifles.

Billy and M. T. had been down here last winter, and arranged for the camping, and supposed that their party would find their man ready to start their outfit into the woods in an hour after it was taken from the cars, but H. told them it would be to-morrow instead of to-day, for no native of Florida was ever known to do a thing before to-morrow. Sure enough, when they arrived they found their man instead of meeting them at the depot was out of town, but would be ready to go to-morrow.

After dinner the party took a stroll for quail, and found a covey which dropped into and along the edges of one of the "bays," as the dense thickets are called by the natives. H. and Joe went into the thicket to rouse the birds. Billy took the farther side, and M. T. stood at one end. Billy walked up three, soon as he got through the brush, tried to make a double and got one. At the same instant H. walked up two, and got one, while the other flew out to M. T., who downed it. During all this fusilade Joe was solid on another one which H. put up and killed. Gus, who carried no gun, was a much interested spectator, and his contempt for bird shooters was pretty well evaporated. M. T. marked two birds that got up wild, while the dog was getting the dead ones. Joe pointed one of these, and H. flushed and killed another while going to him. He then called to Billy to come over and have a shot at the bird which Joe was still pointing. The bird came out on the wrong side of a bush and Billy missed, then H. took a shot, making a clean miss. Billy said there were two more birds a hundred yards down the thicket, and he and H. went after them, M. T. going down the other side. Joe went into the bushes and got lost from the men, but at last M. T. found him, pointing the bird Billy and H. had missed. M. T. missed it with both barrels. Joe then came across to H. and Billy, and found one of the birds, which was killed by H. The other bird was not found. After two hours more hunting without a find, the party voted that the birds were scarce and went back to town.

The liveryman showed up after supper and declared he would start at 8 o'clock the next morning. H. told the boys they would eat dinner at the hotel and start about 2 o'clock, but to his surprise the procession started at 11.10 a. m. By sundown they had gone twenty miles, the sandy roads forbidding faster travel than a walk. At the top of a beautiful slope, covered with grass and pine trees, they made camp. A pole twenty feet long was put up between two trees, the pole being held about nine feet high by two forked poles leaned against the two trees. Against this pole other poles twelve feet long were leaned, and the big tent was doubled and spread over them. In front they built a rousing fire of "fat pine logs" and pine knots, which sent up a cheery blaze and thoroughly warmed the camp shelter. At a smaller fire they made coffee, and fried bacon. After supper they lay on the bedding under the tent, enjoying the genial warmth, cigars, good digestion, funny stories and the anticipation of shooting fat bucks and fatted turkeys. But by 9 o'clock drowsiness prevailed, and one by one they drew the covers and fell asleep.

At early dawn next morning everybody was astir, and by 7 o'clock they were started. Towards noon two hounds belonging to the liveryman took a deer trail, and were soon a mile away from the road, and presently out of hearing. An hour later they were heard again, and it was evident that they were coming up a bay (a small creek bordered by dense thickets), that headed 250 yards to the left of the road. From the road to the bay head was a gentle slope, covered with grass and shaded by stately pines. It was a park, in perfect order, with no underbrush nor any rubbish of fallen trees or branches. The thicket at the foot of the slope was 100 yards wide, the bushes 30 feet high and so thickly covered with leaves that its edges appeared a solid wall of green. No prettier sylvan scene has ever been spread before the eye, and no pen picture can give an idea of its beauties. Opposite the bay head the teams were stopped, and all the hunters except H. sprang out and ran to where the hounds should drive the deer. All of them ran ahead of the teams except M. T., who went straight toward the bay head. The hounds were now quite near, and a moment later the deer came out, almost opposite M. T., and seeing him and the teams circled to the left, going a mile a minute. Then M. T. began to work his Winchester. Bang! Bang! Bang! till seven shots had been fired, and M. T. stood in a cloud of smoke, and the deer ran on, crossing the road 110 yards behind the teams, and H. had the rare good fortune to see it all as he sat in the carriage. He will never witness such a scene again, and would not have seen much of this one, had he been trying to kill the deer. While this exciting episode was going on there was a tragedy enacted in the edge of the thicket, for there the hounds were killing a broken legged fawn they had pulled down. After the hounds had killed the fawn they took up the trail of the deer and were followed on a run by M. T., and one of the teamsters. From the noise of the hounds it appeared that the deer was running nearly parrallel with the road, so the rest of the party decided to drive on a couple of miles and then wait for the men. The noise of the hounds grew fainter, till at last they were out of hearing, and in an hour one of them came up with the teams.

Then H. took the hound and Joe and started on a little hunt of his own, and as usually happens to the man who don't care anything about it, he got a deer, less than half a mile from the wagon. The hound chased three out of a thicket and H.'s second shot broke one's back. A yell brought the teamster, who carried the deer to the wagon. (It must be remembered that a Florida deer is a very small animal compared with the northern one.) H. went on after more meat, and in an hour flushed a turkey from almost under his feet. He killed that turkey easily, and it got mighty heavy by the time he carried it two miles to the wagon.

After the party all got together and ate dinner they held a council of war and decided to make their permanent camp. The site was selected in one of the exquisitely beautiful pine parks, on the brow of a hill at whose foot there ran and murmured a brook of pure, cold water. All hands worked with a will, and before sundown the 16x24 wall tent stood among the trees, the baggage inside, the beds made, the stove red hot and the cook getting supper ready, while the rest of the party put up a dining table, wash stand, gun rack and various other little things necessary to the general comfort. Billy had named this first night's stopping place Camp Necessity, and now named this one Camp H., because H. had brought the first meat to it. That night the party suffered some from cold. Some of the blizzard at that time sweeping the North was still following them. The stove was amply sufficient to keep the tent warm, but the pine knots used for fuel would soon burn out, and then the boys would wake up shivering. Next night they got some oak logs, and they burned all night. In two days the weather became delightfully warm and remained so all the week. The subsequent doings of the party will be given in a future chapter.

O. H. HAMPTON.

THE CALLING OF A MOOSE.

Woodcraft in its many varieties is a study—in its entirety a wonderful profession. It cannot be taught except in its minor details, as was clearly and delightfully done by Nessmuk in his little volume bearing on the subject. One can go into the woods year after year, and having competent guides, can by watching and talking with them learn much of the art. Especially if one is fortunate enough to secure for his service an old woodsman and hunter, one who has lived in the woods from childhood up, is this true. Passing as he has his whole lifetime in a lonely struggle to exist, through hunting, oftentimes without shelter or food, he has been forced to exercise all his ingenuity to keep from perishing. Dire necessity is truly the mother of invention. The old hunter has discovered methods and means of securing the game, that none other would ever even imagine. Practice makes him perfect. He knows the habits and characteristics of all the game that he hunts, differing with the seasons of the year. Full well too he knows how to outwit their wisdom, calm their wildness, and above all secure them.

Many volumes of intense interest to any and all sportsmen could be written upon the subject of woodcraft. It is a subject without beginning or end, and could never be described even approaching entirety. The ingenuity displayed is wonderful. It sometimes produces something from nothing. Given an ax, nature furnishing all the rest in the forest, the old woodsman will produce anything. In desiring to secure game, if obstacles prevent pursuit, he will bring his game to him. If ammunition is exhausted yet will he secure game of all kinds through his ingenious traps. In a word the old woodsman can do and produce all things that life in the wilderness necessitates.

I have never seen anything written descriptive of the possibility, or better still, of the actual act of calling a moose a long distance, to the very point where the hunter awaits him. It was my good fortune to see this actually done, and as it was of intense interest to me I can well imagine what it will be to others.

In going into the Triton Tract in Canada early in September last, I was particularly fortunate to secure as one of my guides, an old hunter and woodsman, Canadian French, a man over fifty years of age. I quickly discerned that he well understood all of the elements of woodcraft. Almost every night I sat with him at our cheerful camp-fire, and listened to his experiences, anxious to learn. All that he related was of absorbing interest, so much so that our talks often lasted into the night.

He had commenced life in the woods at the early age of ten years, and had continued constantly at it winter and summer since. Without boast he could tell how dire necessity or unexpected circumstances had been his teacher to invent and learn. The large number of moose, caribou and bear that he had secured, indicated how well his lessons had been taught and learned. He had rarely if ever used a gun, but had been successful through the medium of his traps and his wonderful facility for drawing his game to them. He modestly asserted that he could imitate the cry or call of almost any of the birds or animals in that country, and in this his brother guides warmly substantiated him. More frequently he spoke of calling the moose and of his success in doing so. "Perhaps," he would say in his French patois, "we will hear one then, if you want him I will call."

I often asked him to imitate the call then and there, but he would always say, "wait until we hear one, then you will see."

It always hasbeen my ambition to shoot a moose, and unfortunately it is all ambition still. This was not through any fault of Lavoe, nor mine, only unfortunately circumstances. He fully proved his adeptness, and had not in any measure overrated his ability. He did the calling, I was ready to do the shooting, but—I am digressing.

Naturally I was all eagerness to see the feat of moose calling performed, and during all of our canoe expeditions for fish or game, I believe that I did much listening for them to the detriment of my other sport. Two weeks passed and I was unrewarded. Three caribou, a cub bear, small game, and trout unnumbered had kept four tables well supplied. Yet no moose in the flesh nor the voice of one was heard. At last the day came to break up our camp on magnificent Lake Batiscan. A cold heavy rain was falling, and an extremely strong wind blowing. We had been paddling up the Moose river for some two hours, when suddenly Lavoe who, had the bow paddle, ceased his labor and listened intently. Naturally I was all ears, but for the moment they failed me. Quickly turning to me he said, "a large moose, did you hear him call?"

"No," I replied, I heard nothing. "How far away is he?"

"Wait, I will see."

After a few moments I heard an indistinct cry, seemingly at a great distance. "I heard that," I said, "how far away is it?"

"About two miles." Suddenly in his best English, which was confined to a few words, he said, "you like?"

All excitement in a moment, I answered in my best English, "You can bet your boots I do."

He seemed to understand, or at least take it for granted that I did want it, and he immediately pushed the canoe to the opposite bank. After we had stepped ashore he seemed to examine the direcion of the wind carefully, and finally stated that it was "very bad." The Moose river takes its course through high mountains and hills and the wind being strong seemed to ricochet from all sides. For success in our attempt the wind must blow towards, not from us. After some study we concluded that our present position was the better one. The canoes were drawn from the water and hidden in the bushes and we also concealed ourselves. Lavoe alone remained standing. Forming a tube of each hand and placing one against the other, to make it as long as possible, he raised his hands to his mouth. Taking a full inspiration, he commenced in a low tone a prolonged cry sounding like ou-u-u-u-u-u-u-u-u-u. This he gradually increased in volume to the full power of his lungs, then again making it gradually die away. Finally ending in two sharp calls, ough!" ough!" This call lasted nearly a minute in its entirety. Eagerly we listened, and after an interval of two or three minutes Lavoe repeated his call louder and longer, and after an interval the answer came nearer and clearer. Following this Lavoe made his calls less often, and almost every call brought a response, each time nearer.

There was no question of his success, and the two questions arose, would the moose continue to come until he reached the river opposite? Would the wind favor us? Lavoe advised us that a moosecould not be content with another in his immediate neighborhood during the rutting season or thereabouts, and was always ready and willing to measure his strength with the intruder. Hence the reason he could be easily called, if the cry was correctly imitated.

The calls and answers were continued at long intervals; and with rifle poised and all excitement I awaited the appearance of the moose opposite. Nearer and nearer the answers sounded. Lavoe concealed himself, and it seemed but a few moments more, and our game would appear in view. Suddenly we heard the breaking of sticks and branches, certainly not one hundred feet back from the water. I almost felt that I already had the magnificent head in my possession, when all at once the breaking of branches ceased, and for a moment all was still. Lavoe again made his call, and for a few moments there was no answer. Suddenly we heard a startled ough! ough! but a very short distance from the river, immediately followed by a terrific breaking of trees and branches, as though a large body was rushing through the woods at headlong speed. For a moment no one spoke, disappointment was seen on every face. Everyone knew instinctively that the moose had winded us. This was where the element of ill-luck came in.

Lavoe finally broke the silence saying, "It is too bad, it was a very, very big moose. The wind was bad. Next time better luck. You see a hunter can call a moose. It is easy for him, but hard for you."

We again embarked filled with disappointment and an-

ticipating within a half an hour a new two and a half mile portage in a heavy rain. The disappointment was forgotten, and the portage was made in due time. How often I have thought, though, that I could have made a portage many times two and a half miles long, could I have been loaded down with that moose head, as my share of the baggage.

I have heard almost all animal calls imitated under various circumstances, by many guides during many trips made into the wilderness. The case that I have just related excels by far any that I have ever seen or heard. I can only add that I believe it to be the perfection of woodcraft.

EUGENE MCCARTHY.

TEXAS AND THE SOUTHWEST.

A Successful Trip.

For the past three winters the writer, always lucky, had the good fortune to make one of the famous Sam Allen fishing and hunting parties on Galveston Bay.

Col. Sam Allen needs no introduction to the readers of Forest and Stream, neither do his two sons, Balders and Percy. But then one never tires of talking and writing about good people, and as far as Houston is concerned, the jeunesse doree of the past decade did its best in producing such a man as Sam Allen.

We left San Antonio on the 14th of January, chaperoning Mr. Ernest Steves, who has earned a Lone Star fame a selling long 3x4 planks and telling 50x75 shooting stories. He is blessed with a face that is always resplendent with Southwest Texas bonhommie, with an appetite that is always necessary to support a large and muscular frame. I'll say nothing about the thirst, but the blue marks on various portions of my anatomy at the gentleman' good-natured habit of planting his fist forcibly upon you when he is in real good humor. The good humor never running short, the good-natured pounding is always on tap.

At Houston we were met at the depot by Mrs. Balders Allen who escorted us to the steam yacht Portland and barge under the efficient charge of Captain Thomas and pilot Pendleton. Of course, the cook and porter need no introduction so we will waive that ceremony.

In ten minutes more we were dodging barges and things on the narrow bosom of Buffalo bayou, but a few miles brought us skimming along the surface of a beautiful stream, profusely fringed on both banks with a heavy growth of semi-tropical plants and flowers above which towered giant pines and cypress trees. The ride was delightful, the colonel at his best and a halo of jovial spiritualism surrounded the expedition.

I had a good view of the famous and historic spot where the handful of American patriots bled and died in defense of their homes, fighting against the invading Mexican hordes commanded by the butcher Santa Anna.

At the battle San Jacinto 1300 Americans were pitted against nearly 4000 Mexicans. "Our boys," remarked Colonel Allen, "killed them as fast as they could load and shoot or smash their heads in with gun barrels. I tell you they didn't mind taking a pot shot in that fight. They killed until it ceased to be sport, and undoubtedly fearing that the game would spoil on their hands, they captured Santa Anna and the rest of them, tied them up in bunches and took them to Houston. As we passed the place, felt as though we were on sacred ground, and maybe surrounded by the spirits if they who so nobly made the greatest sacrifice that one can make—died for their flag: who knows? But my emotions were quickly dispelled as we passed a sign that has been erected not more than two hundreed yards from the monument erected to the memory of the brave dead. It reads thus:

"San Jacinto Battle Ground Tract, 20,000 acres at $20 per acre."

The Mulberry Sellers of the age has been there and left his sign.

After a most interesting ride down the bay, or across the bay, we reached the mouth of Trinity River. The ducks there had been "burnt out" by an army of market hunters, who shot by day and by night, until the water fowl sought new feeding and roosting grounds.

Col. Allen is much more of a disciple of the rod than a votary of the gun, and being thoroughly posted on salt water fishing, he was soon spotting around for shell banks. There being no shooting, and having had no fishing for a long time, I concluded to join the Colonel while the rest of the party went gunning.

We soon found the shell bank, and right here I experienced something I never had before. The voracity of the red fish and trout cannot be described on paper. There were three rods in the boat, and frequently these rods were almost bent double under the weight of a heavy fish. We caught none weighing less than two pounds; from that to ten pounds. It is the best fishing from every standpoint that I have had in twenty-five years. It is a dream.

It is still there, and should any of my Northern brethren hunt me up with fine sport in view, I'll send him where he'll like the place and do well.

A Market-Hunter's Preserve.

Now, Mr. Banker-Market-Hunter Moody of Galveston, Chambers County, of rice farm and canvas-back duck preserve fame, comes forth and soars into the empyrean blue with the grandiloquent statement that he saved the only canvas-back lake on the Texas coast from the rapacious clutches of the market hunters. That he is "preserving" the place against the murderous ravages of the indiscriminate market hunter, and that he defies the lake and surroundings by the sacred halo that surrounds ex-Governor Hogg and staff, when he invites them to go duck shooting.

I also understand that several gentlemen, one of whom is well known in shooting circles of Austin, have stated that Mr. Moody has done a great thing for the sportsmen in the State by appropriating Lake Surprise. The Austin gentleman referred to says that several years ago, while hunting the high-toned canvas-backs that sport on the broad bosom of the lake, he was shot at by one of the "gang" of market hunters that infested the place. That he is glad that Colonel Moody has driven them out and given the "sportsmen" of the State a "go" at the birds.

What a Lot of Rot.

The facts are, that while Moody has discharged one of the market hunters, and another has left him, he has replaced them with others more expert in duck killing, and that he is still a beneficiary of the practice of slaughtering ducks for the Northern markets. The "gang" that "infested" the lake heretofore are the Stevensons, and I was told last week by a good man who lived on the lake for years, that it was "Bud" Stevenson who shot the Austin gentleman in the mouth with a load of BB's. The Stevensons are now, and have been since the securing of the questionable patent by Moody, in command of the canvas-back slaughterers. They direct the movements of the murderous "gang," place Governor Hogg and his lickspittles on the duck stand, and often do the shooting for them.

In the meantime, Moody still receives his pound of flesh in the shape of one-fourth of the proceeds of this delectable game. He is not very particular as to his reputation as a sportsman—such men never are. But then he is very rich, and he proposes to fight with his money any attempt to dispossess him from the lake. A great many people worhip at the money shrine, but "Texas Field" does not and never will.

How about that party of gentlemen who asked Mr. Moody's permission to hunt on the lake for a brief week a year ago? If Mr. Moody was anxious to grant sportsmen the entree to the "preserve," why did he refuse them on the ground that he would not interfere with the "poor people on the lake who made a living there? He did not then say that the "poor people" he spoke of were the cordon of market hunters whom he had placed on the lake and from whom he exacted one-fourth of what they killed.

Nice way of "protecting" the game! Make an alliance with a lot of pot hunters, and not only exclude reputable gentlemen, but publish falsehoods about them in the Galveston News.

There is another thing yet to be touched upon: In order to secure the papers vesting the title in Mr. Moody, it was necessary to prove beyond a doubt that the lake was not a permanent body of water, and accordingly the Galveston contingent soon scraped up about fifteen affidavits to the effect that they knew the lake to go dry.

In a little over six months I have secured affidavits from not less than twenty people, some of whom have lived within a mile of Lake Surprise, to the effect that the lake never has gone dry; that it is a permanent body of water, and that it cannot be drained.

These affidavits will be presented at the proper time to the Galveston grand jury, and the gentlemen who have been so anxious to swear to something they knew nothing about will be called upon to explain before that tribunal.

The Sick Sportsman.

The hospital department reports progress. Mr. A. W. Adams, of Chicago, who has been visiting San Antonio this winter, is much improved in health. Mr. Laning has gone to the coast with A. B. Critzer, in search of web foots.

Quail.

Very plentiful and good sport may be had fifteen miles from San Antonio. Messrs. Rothwell and Phillips returned from their weekly hunt last Sunday evening with seventy-three quail and a lot of doves. I saw several other parties and all seeme,d to have had a good time and nice sport.

After Dr. Carver.

In a letter to me, Mr. E. Brown, of Burton, Texas, says he would like to have Dr. Carver come down to Texas and swipe the ozone with him. He only wants the doctor to call off five misses in a hundred birds, and wants the event to come off at the State shoot, in May next.

TEXAS FIELD.

ROUND ABOUT NEW ORLEANS.

Game Resources.

New Orleans, La., Jan. 18.—It is extremely difficult to write of the game and fish resources of Louisiana without raising in the mind of the reader a suspicion of gratuitous exaggeration. The stories of the bags which have been made and are made of the swarms of game and fish at different seasons and places, in their relation sound more like apocryphal flights of Munchausen than they do of the statements of plain truth.

But the infrequent accounts of the abundance of game of Louisiana, published as a fragment of an outing story, are wholly inadequate to give any clear conception of Louisiana's game supply. The fifty or sixty birds shot in a day by the shooter, while large within the scope of a personal experience, are a mere nothing as compared to the great whole.

Nevertheless, I believe that the game supply of Louisiana is diminishing. So far as the migratory birds are concerned, ducks, geese, snipe, woodcock, plover, etc., any diminution of their numbers in the North would be correspondingly but not so perceptibly felt here—not so perceptibly, because the ducks of the vast regions of the North, all congregating en masse in the vicinity of the Southern coast in winter, would then appear to be plentiful, even when the grand total had seriovsly diminished. That the incessant slaughter of ducs from early fall till late spring, commencing at the extreme North and continuing through the length and breadth of their Southern flight, and, most destructive of all, through the winter months, when they have settled in steady habits of habitat and feeding grounds, then in the spring the same merciless destruction awaiting them on their return Northward migration, will eventually exterminate them, I firmly believe. Shooters and improved methods are constantly increasing. The duck region is progressively more thoroughly covered by the shooters. There is hardly a slough, stream or lake from far North in British America to the Southern limit but what has its quota of shooters. The destruction in each place continues from the time that the ducks appear till the moment that they leave for elsewhere. But going elsewhere is but to run into the same vigilant destruction which awaits them everywhere. It is difficult for a duck to find a place whereon to safely lay his wearied head.

Were the destruction carried on by the sportsmen of the land, there is no doubt but what the natural increase would more than keep pace with the destruction caused by them. But the demands of the market are far greater than the demands of sport. Few people can shoot ducks, yet all can eat them. There are not ducks enough in existence to supply the constant demands of the market. The population is constantly increasing, while the ducks are decreasing.

Granting that the same efforts will be made to supply the demands of the market in the future as in the past, the fate of the duck is easily forecast. In the North I have heard the remark made that the ducks had abandoned some of their old routes and feeding grounds once favored by them in their Southern flights. The true explanation, I believe, is that there are not sufficient numbers of ducks to make the showing in their flights as in the years gone by. It is not reasonable to assume that there are just as many ducks after killing them as before killing them.

Game Preserves.

I believe that the game preserve is the solution of the problem so far as preservation relates to the birds which are not migratory. As to the migratory birds, the game preserve will prolong their existence indefinitely, perhaps permanently, for it will shut off territory from the multitude of shooters and reserve it for the use of the few. If the territory so preserved is large enough, it is plain that, with the restrictions which would be imposed by personal ownership, the perpetual preservation of the migratory bird would be assured.

Even in this section of favored abundance, the game preserve is coming into favor. The need of game laws, properly enforced, is also beginning to be duly appreciated. Still, a vast negligence or indifference prevails amongst the masses.

On West Pearl River there are about thirty fishing camps owned by amateurs. On the Queen and Crescent Road, situated on the north shore of Lake Pontchartrain, there are a number of camps, and there are also a large number of camps on the Morgan Railroad, the local name for this branch of the Southern Pacific. These so-called camps often are houses comfortably furnished. Several sportsmen club together, form a kind of joint stock affair, raise the necessary funds and build and furnish the house. They, of course, select a place in a favorable game section. There they spend a pleasant day, week or month, alone or with their families or friends, a most delightful way of taking an outing. As the fishing and shooting seasons are much longer here than in the North, a great deal of return can be gotten for the investment in a permanent camp.

The points mentioned, however, are still accessible to strangers, and live minnows and shrimp can be obtained for bait for black bass, known here locally as green trout. So far as fishing and shooting is concerned, any stranger who comes here properly accredited can have both to his heart's content.

No more generous sportsmen exist than those of the South. There are no latch-strings on their shooting or on their doors, so far as it refers to their hospitality. In giving this imperfect description of the evolution of sport and of the sport itself, I desire to pay this passing tribute to a class of sportsmen whose nobility withstands the mutations of time and progress.

Game Preserves for a Song.

The game preserve, in this section of abundance, is much in the nature of a gift to him who will take the trouble to reach forth his hand to accept it.

In a conversation with Mr. E. T. Manning, who is a perfect encyclopedia of sporting information, he gave me much valuable information. Said he: "The amateurs have just begun to appreciate the value of the great advantages of New Orleans as a starting point from which they and their friends can reach favored shooting and fishing grounds. In fact, the various clubs have begun to buy up the desired property from the State. That property, being overflowed land, has been transferred by the United States to the State authorities. Those lands can be bought for twelve and a half cents per acre from the State. The taxes are merely nominal, being 70 cents on every $1.00.

"Com. Thomas Sully, of the Southern Yachting Club, jointly with some friends, through Mr. James L. Bradford, a land attorney who made heretofore some very valuable selections on Lake Borgue shores, has secured several sections for a duck and fish preserve. Those localities are entirely free from market shooters, and as yet have but one camp of fishermen in that whole section.

"By making selections of the grounds adjacent to the entrances of the bayous and the bayous proper, he has been enabled to control enormous stretches of country where the greatest quantities of wild fowl and snipe are to be found, and of the waters where the black bass grow largest. At the entrances of the bayou sea fish, such as speckled trout, sheepshead, flounders, redfish and many other varieties less well known to the public, are taken in great quantities.

"In one trip of the 'Helen (Com. Sully's cruising yacht) eight of the party took 165 fish in three hours. The fish were speckled trout, redfish and sheepshead. At the same time, three guns got 82 ducks in the three hours' shooting, of which 50 odd were mallards, about 30 spring tails, and the rest teal. That was not an uncommon bag.

"Speaking of game, I remember, in 1886, we had a team shoot. Mayor Guillotte was captain of one team, and I was captain of the other. We had almost every variety of game as the result of the shoot—deer, turkeys, all kinds of ducks; in short, all kinds of game and animals but bear. Hawks and owls were also killed. My bag consisted of 67 woodcock, which counted 25 points each. There were over 76 men at the club dinner which followed, and at $20 per man of the losing team, the dinner was a good one."

In response to my question as to the extent of market shooting, he said:

"There are between 400 and 500 men engaged in market shooting within a radius of 30 miles of New Orleans. The largest camp of all is controlled by Mr. Felix Roux, at Bayou des Allemands, on the Southern Pacific Railroad. At that point there are from 100 to 130 men who shoot for market. The records of the station agent show that from 87 to 110 baskets of ducks are shipped daily, through the season, from that one point, and are shipped to L. Bartholomew & Co. in the French

Market. That means from 8,700 to 10,000 ducks shipped daily from that one point alone.

"Only one firm ships to New York. It operates at a point between Houston and Galveston, and it ships only high-class ducks, sprigtail and canvas-backs. All its ducks are shipped to Delmonico, with whom the firm has a contract to deliver all that it kills.

"Deer are killed within the city limits, at Lees and Michaud, on the L. & N. R. R.

"The protection to fish and game and the total prohibition of gill netting in waters contiguous to New Orleans, and the prevention of duck-shooting before the 1st of November, have resulted in a great and material increase in their numbers. The city laws are in addition to the State laws. The former are being enforced by the recorders of the courts. The effect is that the game has increased both for the professional shooter and the amateur.

'The regular market shooters have themselves established stringent regulations on duck-shooting, limiting the shooting from daylight to 9:30 or 10 o'clock A. M. These men often kill in a morning from 80 to 160 ducks.

Tarpon.

Mr. Manning also told of the vast numbers of tarpon seen in Lake Pontchartrain and Lake Maurepas, which are connected by Pass Mauchac. They could be seen jumping out of the water in great numbers. There is no doubt but what the tarpon abound in great numbers in the vicinity of New Orleans, and along the Gulf coast from Florida far West on the Texas coast.

Robins.

The robin seems to serve a double purpose in the domestic economy of man. In the North it is loved for its simple melody and pleasant association, for it makes its nest near the abode of man. In Louisiana it is prized as an article of food, and for that purpose is killed in great quantities. It is not an uncommon sight to see men walking along the streets with a large bunch of them, which they offer for sale or are carrying home. In the French Market bunches of them on sale can be seen at almost every stall where game is sold. B. WATERS.

Natural History.

THE SENSES OF ANIMALS.

Editor of Forest and Stream:

Under the heading, "The Lyre of Orpheus," in Forest and Stream of Dec. 22, is an article from one of your correspondents upon the very interesting subject of the senses of animals.

While it is doubtless true, as he remarks, that in a large majority of species smell is the most important and reliable of their senses, there are some decided objections to this rule, caused most probably by the nature of the surroundings, in which certain animals have ilved for many ages, having called other senses into greater use that that of smell.

Judging fom what many expeiernced hunters state about the moose, it seems almost certain that hearing is the most acute and valuable to that animal of all its senses. An Indian with whom I once encamped, many years ago in the bush of New Brunswick, told me that when he was stalking moose in very stormy weather, they took no notice of branches or twigs snabped off by the wind, but if he broke one with his hands they instantly detected the difference in sound and ran away.

The common antelope and gazelle of Ludia (Antilope Begoartica) and (Gazelle bennetti) always appeared to me to epen for safty almost entirely upon their sight, which is extraordinariyl long and good. The reason of that is that they have dwelt for great periods of time upon wide open plains where sight was more serviceable than hearing or smell, in saving them from danger. I have frequently observed them watching me from great distances. So long as I walked from them, or at right angles to their position, they stood still, but the instant I walked toward them they would run away, even when 800 or 1,000 yards distant.

Although their ears are large, I doubt if their hearing be very acute. I have often, by walking quietly in places covered with bushes, stalked to within 60 or 70 yards of an antelope and 20 to 40 yards of gazelle even when the ground consisted of bare hard clay or gravel, and I was wearing ordinary thick shooting boots.

I also feel sure that either their sense of smell is dull or else that, being in the habit of feeding in cultivated countries they have learned to pay little attention to the scent of man.

On one occasion I crawled to within 100 yards of a group of gazelles that were feeding upon the leaves of the bushes. I lay for a coniderable time watching their actions, and although a direct breeze was blowing in a direct line from me to them, they showed no suspicion of my presence. At length I tried to get a shot, but the instant that a few inches of the rifle barrel protruded outsie the bush behind which I was concealed, they saw it and ran off.

There is no doubt that deer living habitually in thick woods depend for safety chiefly upon smell and hearing.

Even if the sight be good, it seems in some species, decidedly limited in range.

When stalking axis deer (Axis maculatus) and some kinds of antelopes which live much in thick jungles, it is not very difficult, by attending to the direction of the wind and gliding quietly from one tree trunk to another, to approach within 60 or 80 yards, even on ground where the trees are not particularly close together, and where some of the animals ought to see the hunter if they were long sighted. Deer and antelope living in mountains, where bare of trees like the Alps and Himalayas, have an acute smell and hearing, and also long and sharp sight.

Mr. W. Baillie Grohman, in his work on Tyrol, says of the chamois. "Frightened by some unusual sound or sight, and dashing down the precipitous slopes of the most inaccessible mountains, it will suddenly stop, as if struck by lightning, some yards from the spot where recent footprints are visible in the snow, or when, by a sudden veering of the wind, its keen scent has warned it of the vicinity of a human being."

Lions, tigers and other animals of the cat tribe appear, from all accounts, to have only power of smell, and, to depend chiefly upon sight and hearing for either avoiding danger or finding the prey.

Elephants certainly have very inferior sight, but their senses of hearing, smell, and touch, are wonderfully good. I believe that a wild elephant that had become totally blind would have little difficulty in finding food and accompanying the rest of the herd anywhere.

I was once for several days with a shooting party in the Terai, a broad belt of jungle at the foot of the Himalayas. Each of us had an elephant to ride, and one, upon which a friend was mounted, was perfectly blind in both eyes, yet he kept, with apparent ease, in line with the other elephants when walking at their usual pace, and avoided trees, crossed swamps, and went in and out of water courses (some of which had perpendicular sides and were 7 or 8 feet deep) quite as safely as those which could see. The end of his trunk was constantly at work, feeling the ground and everything within reach.

On another occasion when I went shooting in the Sewalik Hills, at the northwest point of the Bengal Presidency, accompanied by a native shikari, we came upon the tracks of wld elephants and, following them for some distance, suddenly found ourselves in sight of two bulls, two cows and a calf about the size of a bullock. They had thrown sand over their backs to keep off the flies, as is the custom of tame elephants, and were browsing upon some small trees some seventy yards from us. Although the intervening ground was perfectly bare they did not see us, and we sat down upon a grassy back to watch their actions. There was no wind, but in a very short time the two bulls smelled us, and turned their heads in our direction. They stood moving their trunks from one side to the other to discover our exact position, and, having made up their minds about that, pointed their trunks straight at us for a few moments, then turned and walked rapidly away, followed by the others.

It is often supposed that the elephant is a clumsy animal, but, out of curiosity, I followed their tracks for about two miles, and found that they had walked up ridges so steep that I was obliged to hold on to the rocks with one hand while climbing them, and in some places they had apparently knelt and slid from the top to the bottom of grassy slopes that I could only descend in an oblique direction.

The statement of old writers about elephants making the ground tremble when they walk are utter nonsense. An elephant driven by his mahout, at a fast walk along a macadamized road, steps so lightly that he sometimes overtakes a man and passes within a yard before the latter is aware of his presence.

While it is generally true, as your correspondent remarks, that wild animals realize danger only in life, and life only in motion, it is wonderful how soon they learn to distinguish between that which is dangerous or otherwise, whether alive or not. Wild elephants, for instance, are greatly terrified at lightning, probably because they sometimes see their comrades killed, or trees destroyed by it.

In parts of India where there are few native shikaris, antelopes, gazelles and nilghai, allow natives to pass them on open ground within 60 or 70 yards, while Europeans, trying to stalk them have much difficulty in approaching within treble that distance.

It might be imagined that nothing would be more terrifying to wild animals than a railway train rushing along at full speed, but they soon discover that it does not hurt them if they keep off the rails. When traveling by train I have passed within 50 yards of herds of antloepe, and noticed that they were so unconcerned that those which were lying down did not take the trouble to rise.

Some animals seem to distinguish between a man with a gun and one without. Rooks in England undoubtedly do so, and there is reason to believe that other animals can learn the difference. I was stationed for six months at a place where jackals swarmed, and as they destroyed a great quantity of feathered game, I tried to diminish their numbers. The district being too thickly inhabited to make the use of a rifle safe, I generally carried a shotgun when out walking in the evenings, but never once had a chance of firing at a jackal. On many occasions, when I had no gun, they came out of the growing crops, and stood looking at me within thirty yards, or walked quietly across the road, not more than that distance in front of me.

There is one point upon which opinions of practical sportsmen and naturalists would be interesting. Are not wild creatures subject, like ourselves, to absence of mind?

There seems no other way for accounting of the fact that one of them will occasionally, though of course very rarely, stand looking toward a hunter until he is quite near, and then apparently awake with a start and bound away. J J. MEYRICK.

Maine Local Laws.

Legislation is progressing slowly in Maine, but both House and Senate are flooded with a mass of proposed law, both for private districts and waters. Some of the propositions are absurd, and sectional in the extreme. Capt. Fred C. Barker, of Lake Mooselucmaguntic, was in Boston Friday, for a short trip, in the interest of a continued charter for his steamers. He hopes that little new legislation will get through concerning fish and game. He believes, that with a very few changes, the laws now in force are excellent. It is better enforcement that is wanted. He is strongly in hopes that the added appropriation, asked for by the friends of protection, will be obtained. A hearing has been had before the committee on Judiciary, in the interests of the proposed change to a commission to take all special and local matters effecting fish and game protection in charge, and has already been explained in the Forest and Stream. The measure was thoroughly advocated by some of the best game protectors in the State, and it is believed that the committee may recommend a bill. It is believed that a measure of this sort, while stopping the continued string of special laws asked for and sometimes obtained, will also put the special protection of streams and ponds and sections of country into the hands of a good commission, which would be more likely to rule according to the merits of the case. This commission would have the power to prevent fishing and shooting, in cases of extreme need, at any and all times. The advocates of such a commission say that it often happens that very disastrous fishing and shooting is indulged in at times and seasons when the law is inoperative. Deer, for instance, have, the past two years, come down into the more settled counties of the State, and have fed there unmolested till the open season began, when immediately they have been set upon by a score of hunters and every one killed, nothwithstanding the owners of the land where they have frequented. and many of the best citizens of the towns would have been glad if they could have been let alone for a couple of years at least. Again certain waters are frequently excessively fished, when if there was a reasonable commission to stop it, the fishing might be preserved, to reasonable fishermen, instead of being utterly destroyed in the open season.

SPECIAL.

Hudson River Fishways.

Mr. A. C. Johnson, an engineer living at Mechanicsville, N. Y., has taken an active interest in the building and maintaining of fishways in the Hudson River since the first salmon appeared in the river opposite the village in which he lives. I am under obligations to Mr. Johnson for frequent reports concerning the condition of the fishway at Mechanicsville, and about the salmon in the river. He now writes me: "Do you know what is to be done this winter in the Legislature about fishways? I see not a word in the newspapers about it. I think there was not a single salmon at Mechanicsville last season, and yet I never saw a word in the Troy papers as to why they where not there. There should be some provision made for repairing fishways, for as it now stands there is no money for such repairs. For $50 the fishway at our place can be repaired so that driftwood cannot get into it. At present it is filled with drift. The game protector cleared it all out last summer, but he had no orders nor money to fix it so that it could not again fill up, and it is about full again. If called upon, I will do all I can to make the situation here plain. We must have the fishway in the Troy dam rebuilt next season, but I cannot learn that anything is being done about it, and I am getting so uneasy that I had to write you. I have watched the working of this fishway so closely, and know what it will do if attended to, that I am anxious that an early move should be made on the Legislature that we will not get left in the rush at the close of the session.

We have formed a Rod and Gun Club here, as you will have learned through Forest and Stream, for practice and for the protection of fish and game. As president of the club, I wish to say we will do all that we can to aid in procuring fishways, but if the fishway is to remain useless by reason of the driftwood in it which prevents fish from passing through it, we would like the signs removed which forbid fishing within a certain distance of the fishway. We would much prefer to have the fishway epaired and kept in order.

In the last published report of the New-York Fish Commissioners, for the year ending September 30, 1893, they say, on page 12: "The fishway at Lackawaxen was so damaged by the ice last winter as to be useless, while the one at Troy was entirely destroyed in the early part of lastsummer." It will be seen, by looking at the provisions of the chapters referred to (Construction of Fishways), that the maintenance of these two important fishways, as well as other fishways in the State, is wholly in the care of the Superintendent of Public Works. The Commissioners of Fisheries are entirely helpless in the matter. In the instances above referred to the Commissioners have both, by letter and in person, repeatedly urged upon the Superintendent of Public Works the urgent necessity of repairing the fishway at Lackawaxen and replacing the fishway at Troy. This certainly ought to have been done so that next spring the fish might ascend to their spawning beds. His answer to our request was that there were no moneys available for such purposes, and the most important fishways in the State are useless. Then follows a request that provision be made in the Supply Bill for money to make the necessary repairs.

Nothing was done in the matter by the succeeding Legislature, nd the Commissioners refer to it again in their report for 1894, not yet printed. It is true that the laws providing for fishways direct, that they shall be built and maintained by the Superintendent of Public Works, under the direction of the Fish Commissioners, but up to very recentlythe Fish Commissioners have understood that they were to keep the fishway open and free from drift, and they did it by giving orders to he game protectors to this effect.

I cannot say what legislation may be expected on this subject, but the Mohican Rod nd Gun Club, of Glen Falls, with a membership roll embracing the officers of the corporations, paper pulp lumber mills and factories that occupy nearly all the water-front above the fishway last built, will send a petition to the Legislature, asking that the Troy fishway may be rebuilt and that fishways may be built above Thomson's Mills. The club has sent circulars to the members of the Legislature, containing an agerement in favor of building of fishways.

A. N. CHENEY.

Game Bag and Gun.

SHOOTING AT GREEN LAKE.

Portland, Oregon, Jan. 16.—The pleasure to be derived from sports afield can only be determined by each individual sportsman's measure. What would constitute sport for one man would be spiritless and insipid to another. One would be disappointed if he did not succeed in bagging a cart-load of ducks, while another would be ashamed to bring such an evidence of a porcine nature into town. In nothing else does a man's true nature shine out so justly and faithfully as in his treatment of the lower orders of life from what he is pleased to designate "the sportsman's standpoint." It has been said that open confession is good for the soul; and while I would scorn to be recognized as a game hog, I must confess that I have always been rather proud of big bags and well-filled creels. I am getting rid of that disposition to a degree, but the boys cruelly insinuate that it is because I am getting old.

Byron, speaking of his governess, said: "She taught me how to read, and taught so well, that she herself, by teaching, learned to spell." So might my friend J. Roberts Mead say of me. Coming here from Connecticut, ignorant of this country, its sporting resources and its sporting customs, he appealed to me, some years ago, for direction, if not instruction. We have just returned from an outing wherein Brother Mead instructed me somewhat in the ethics of true sportsmanship.

Let me tell you about it. Saturday morning weather indications pointed very favorably toward ducks. Mead undertook the difficult task of inducing me to accompany him on a trip down to his preserve, the famous Green Lake in Washington. Well, he succeeded in his undertaking admirably; and 2 P. M. found us, well equipped, aboard the little river boat "Iralde," bound for the "happy hunting ground," so to speak.

We ferried across Lake River while it was yet light, and found Johnny ready for us with a fine hot supper. Johnny, you must know, guards the lake from trespassers; and incidentally cuts wood, washes dishes, stows the boats and puts decoys away after the day's shooting, and makes himself decidedly useful. In fact, Johnny is a prize, and Mead may consider himself fortunate in securing such a man for the place. While I am not ignorant of the fact that Forest and Stream has prohibited essays on the subjects of eating and drinking, I would like the privilege of informing the general public that Mead is a good provider and a marvelous cater. In the matter of selecting good things to eat and drink, and knowing how to cook and eat and drink them, Mead is a great success, and the sportsman lucky enough to secure an invitation to accompany him to the Green Lake had better accept. Well, after supper we proceeded to do just about what other hunters would do under like circumstances. We smoked and talked over the many hunting and fishing

trips we had enjoyed together in years gone by, and finally went off to bed, pleased with the past, contented with the present and full of happy anticipations.

Many years ago I was caught in a great dead'ning on the crest of the Coast Range in a terrible storm. Luckily for myself, I came out of that storm physicaly uninjured. But from that day to the present I have been very sensitive in the matter of wind storms. Any little zephyr irritates me and makes me uneasy. Well, Mead and I had just nicely got to sleep and commenced to dream of great bags of geese and ducks when whish! whish! went the wind through the great trees surrounding the cabin, and out on the floor went your humble servant in dread of falling tree-tops. I stirred the fire, lit my pipe and proceeded to keep Mead awake by all the annoying methods at my command.

The wind grew stronger, and sleep was entirely out of the question with me, so I shouldered my gun, whistled up old Mike, and started out for coons. I don't mind the storm if I can see it, but I dislike being cooped up in a cabin surrounded by tall firs. The moon was shining brightly, and the old dog and I proceeded to make the best of it But, as Frank Robinson said, when speaking of Mike in connection with the subject of cougar hunting: "He wasn't that kind of a dog." Mike could find plenty of tracks, but no coons. After about three hours of unsuccessful coon-hunting I went back to the cabin, to bed, and to sleep. The wind had settled into a stiff but steady breeze, and my nerves were correspondingly steady. By the way, it seems to me that nature has made some mistake out here in Oregon. Either the velocity of the winter gales should be abridged or the height of the firs and spruces somewhat abbreviated.

Morning found us full of bright hopes and an excellent breakfast; but it had been raining very hard for several days, and the lake was rising rapidly. The ducks were anxious and uneasy, and the prospects were anything but flattering. A rise in the Columbia is sure to make itself felt in the Green Lake, for the lake's outlet is into the Columbia not far below. Nevertheless, we set out and had fair shooting until noon, Canvas were anything but plentiful, but mallard and teal were there in reasonable abundance after the wheat discreetly deposited there by Johnny for their special benefit. Canvas are not at all partial to wheat, but they will eat it when it becomes a case of wheat or nothing. None of our sportsmen exactly approve this baiting with wheat, but since the "bloody carp" have destroyed every vestige of vegetable food in the lakes a little wheat now and then may be excusable. There are myriads of wild fowl along our coast, and the boys feel that almost any scheme that will bring a few of them to bag is justifiable, under the circumstances. But by the middle of the day the blinds were mostly under water and shooting with any degree of comfort was entirely out of the question. We returned to the cabin with a fair bag, cleaned our guns and set them away. Leaving the guns at the cabin, we strolled around the lake and over the meadows during the afternoon, taking stock of the Mongolian pheasants and quail. We found the pheasants in great numbers, all seemingly in fine condition. There is very strict protection for the Mongolian in Washington at present, and the indications are that they are thriving beyond the most sanguine expectations. Quail are not so abundant. The Mongolian is a better rustler than the quail, and far more prolific. The king-neck or Mongolian pheasant will be, if he is not now, the game bird of the Pacific coast. Being hardy, prolific, alert, cunning and a fine table bird, he possesses about all the requisites. He is all right, and long may he wave.

But I started in to tell you how Mead instructed me a little in the ethics of true sportsmanship. You see, I was somewhat disappointed in not securing a bigger bag of ducks, and was not at all backward in expressing my opinion of the duck shooting in general of hte present day as compared with the shooting of "ye olden time." Then Mead followed with his views of the game hog compared with the sportsman that goes to the lakes and the woods for recreation, fresh air, exercise and a whole lot of other things that I have forgotten. The argument was distasteful to me, and I declined further discussion of the subject. Comparisons are odious, anyway. Do you know that during the years I have hunted and fished with Mead I have never heard him complain of his luck. Whether the results were good, bad or indifferent, it was all the same to him. After being "skunked" I have known him to plan another trip over the same ground while on the way home. It is my opinion that such a disposition is entirely too angelic for the hunter and angler of this earth. My experience warrants the assertion that the only comfort left to the unlucky sportsman is in the exercise of the inherent right of "kicking."

S. H. GREENE.

A Monstrous Serpent.

Prometheus records the exhibition, at a recent meeting of learned society at Cassel, of the skin of a serpent (of very extraordinary dimensions) from Sumatra. The length of this skin reached 8 1-10 meters without the tip of the tail, which was at least 20 centimetres long. (Thus the snake measured nearly 27 feet.) This serpent, of the genus Python, was taken in a poultry-house just after it had swallowed nine chickens. These chickens, recovered intact, or nearly so, in the stomach of the reptile, were the pets of the native Malays who assisted in the capture of the serpent.—Revue Scientifique.

Winter Birds.

Binghamton, N. Y., Jan. 22.—Editor Forest and Stream.—A perfectly reliable person came to me yesterday and stated that on January 17 they saw the meadow lark To-day while passing along the road but a little way from the town I was surprised to see a wild pigeon start up near me. I was told that it had been seen there nearly every day. It may not be out of the order of things for these birds to be here at this season of the year, but they are the first I have ever seen at this time of either variety.

H. W. BROWN.

Antlers of Cow Caribou.

Burlington, N. J.—I hunted in Newfoundland twenty-three days last fall, and killed eight caribou, five stags and three does, and saw over 1,000 caribou. I took particular notice as to antlers on the cows. Those that carried antlers were the exception, not the rule. The taxidermist quoted by "Prowler" may base his claim that all cows have horns on the fact that no hornless ones have been sent to be mounted.

Holding the Rifle.

Editor Forest and Stream:

Having lately had the pleasure of a short examination of three late copies of your interesting paper I noticed an inquiry in regard to the position which different riflemen adopt when they have the opportunity to take a leisurely shot at game; and as I have found position, and the manner of holding the rifle, a very interesting point in rifle shooting. I will, with your permission, give the method which has enabled me to enjoy a satisfaction in rifle shooting that I never knew until I adopted it.

Place the left heel about five or six inches to the left of the hollow of the right foot, with the toes of the two feet pointing at nearly right angles to each other. Assume an erect position with the shoulders thrown well back, the weight of the body thrown slightly forward so as to rest squarely on the flat of both feet, and a little more weight on the left foot than on the right; place the butt of the rifle squarely in the hollow of the right shoulder, the right elbow well elevated and the stock of the rifle resting as little as possible against the breast and muscle of the right arm; grasp the grip of the stock firmly in the right hand, pressing the butt of the stock firmly into the hollow of the shoulder in such a manner as to support the weight of the rifle and balance it with the right hand at the grip, the left hand grasping the forestock well forward.

Avoid making a rest of the left hand, but let it assist slightly in pressing the butt of the stock back against the shoulder.

Now see that the barrel of your rifle is held perfectly level, the trigger finger just feeling the trigger and free to make a slight pressure at the right moment without disturbing a muscle of any other part of the body.

If the above position is well taken, the weight of the body and rifle are well balanced squarely on both feet in an easy and natural position, with the whole length of the rifle barrel partaking of any slight swaying of the body, without the muzzle bobbing about while the breech is stationary or *vice versa*, as in taking a muzzle rest without having a body rest at the same time.

Now, with a rifle that is sighted at point blank for a distance further than you can see where the bullet strikes fire five shots before going to see where the bullets have struck, holding as nearly the same as possible each time; if the balls are grouped in any particular direction from the center of the target, try five more shots in the same manner, but aiming first at the center of the group, changing your aim from thence to the center of the target and gently pressing the trigger at the moment the sights are coming in line with it.

After a little practice in this way it is doubtful if you will care to seek for a rest; in fact, it would not be surprising if you found you could shoot better off-hand than at rest.

The object of changing the aim from the first group before pressing the trigger is to compensate for the habit which most people have of making some slight and usually uniform movement at the moment of pressing the trigger in spite of all efforts to avoid it; though if you are shooting to the right or left it may be in consequence of not holding the barrel level, in which case turning the barrel over a little from the direction of the group will correct it.

Always have your rifle sighted low enough to shoot as the sights are coming in line with the target from below. A rather short barrel and stock will usually be found best adapted to this style of holding, and I consider a pistol grip an abomination on any gun.

GEO. H. GRACE.

IDAHO.

A Relief From Court Wrangles.

I enclose check to pay for subscription for the ensuing year. It came to me last year as a Christmas present from a niece of mine, and it has really afforded me a great deal of pleasure, the most relaxation I have had. The change from briefs and opinions and court wrangles to the literature in FOREST AND STREAM is very restful. I read with amusement the criticisms some one made of the picture on the front, and I have never picked the paper up since without thinking of them, and I think the artist who originated that picture should have a medal.

For the Eye of "Tenderfoot."

I can only hope that the gentleman who wrote the capital account of elk-stalking over the signature of "Tenderfoot," failed to read my prattle about rifles, calibers, etc., printed last week. But for fear he did, I hasten to say that I did not say that he was "no great shakes with the pen." What I wrote was a play on the pseudonym, viz., that he was no great shakes of a tenderfoot in wielding the pen, a statement for which I am sure I can get plenty of backing. I hope none of the gentle and gentlemanly fraternity, who write for and read these columns, will think me capable of such rudeness as the types laid to my charge. The very land I live in, of soft speech and suave manners, preclude such a thing.

And, while I am doing the great American mule act, what makes the editor and everybody else write bronco with an h in it? Spanish spelling is the essence of simplicity. The combination ch has the English not the hard Greek sound. Put it down a plain c, my Lord.

AZTEC.

San Louis, Potosi, Mex.

Usually Ahead, but this Week a Day Late.

There is very evidently something ailing the typography of the FOREST AND STREAM this week. It is all owing to an accident which on press night cast a generous portion of the type into the street in what is known to printers as "pi"; and only a printer can know what it means to repair such a catastrophy and to get the paper out, even a day late.

CHICAGO AND THE WEST.

Say It Will Be No Fake.

Chicago, Ill., Jan. 25.—During the World's Fair, it may be remembered, there was some talk over the much-advertised cowboy race from Chadron, Neb., to the city of Chicago. As I reported in these columns at the time, I saw the horses of the first riders to arrive, and I commented with considerable skepticism over the fresh condition they seemed to enjoy, stating at the time that a 60-mile ride ordinarily took much more out of a horse than these horses seemed to have lost. The condition of the horses was enough to found suspicion in any kind of a horseman's mind that the race was a big fake from start to finish, though at that time open evidence to that effect was not at hand.

And now we are told that there is to be another cowboy race, this time from St. Paul to Chicago, the start to be made February 7. The starters are to be Bud Ford, Jim Seeger, Bogie Henderson, Bill Anderson and Henry Benson, all hailing from divers parts of the West. These will race for a purse of $700, and each man is said to intend taking five horses at the start. Perhaps the most interesting feature of this race is the naive comment its projectors make on the Chadron affair. They say: "The forthcoming race will be on the square, if ever one was run. It is one of the requisites that every man register at points twenty-five miles apart, in order to show that he rode the entire way and to prevent any soldiering en route. As soon as any of the racers shows an inclination to put up a 'game,' it is the intention to put him out of the race. The cowboy racers in the Chadron affair would take a team for thirty or forty miles at a time, and some of them abandoned their ponies, taking the railroad train for fifty or more miles. It is to prevent a repetition of this sort of 'racing' that all of these safeguards are being atken, and it will be almost impossible for any of those participating to anything but straight work."

Our friend Dick Merrill, whom our party left behind at Rockport, Texas, on our return from this season's trip to that country, writes as follows concerning his later doings there.:

"We have made several trips on 'Novice' since you left, and have had fair shooting on redheads. There are large numbers of birds here, but they do not seem to work as well as they did last year. You will find them banked up along the shores of the bays, and they will stay there all day, beginning their flight along the coast late in the afternoon.

"John and Jim Bludworth and myself went over on St. Joseph Island for deer, and on the third day of our hunting Jim succeeded in killing a fine five-point buck. They followed this buck and a doe, after having shot at them, running across a flat, for fully a mile and came upon them unawares behind a hill. The deer started running on seeing them, and they opened up on the buck, and were gratified in seeing him tumble Found a 38-calibre bullet in the carcass, the size that Jim shot. Jim and Gaston Moquin and myself started out to day in 'Novice' to try the redheads again, and I will go over on the island and try and kill my buck, as I was not successful on the last trip.

Mr. John F. Cowan, of Butte, Montana, gives the following graphic account of the late dynamite disaster there. Among the few items of what can be called good fortune at such a time is the fact that the members of the Butte Gun Club were not added to the roll of victims, as came so nearly being the case. Mr. Robbins, who lost his life, I did not know personally, but no doubt many readers of Forest and Stream did. Mr. Cowan says:

"Your telegram received this morning, asking about the explosion here. The only sportsman hurt was Mr. E. W. Robbins, who was instantly killed by the second explosion, while in the act of carrying away some of the dead firemen. He was living near the scene of the fire, and as soon as the first explosion occurred he rushed to the rescue of the injured. He was a man of about fifty years of age, and an honored member of the G. A. R. He had of late years been acting as guide to parties making trips through the National Park and to the hunting grounds in the various posts of the Rocky Mountains. He was engaged for an extensive trip after big game for the coming summer by Theodore Roosevelt and other parties. He was considered one of the best posted men in the West as to the habits and haunts of the large game. Two years ago a wealthy gentleman from Switzerland came to this country for the purpose of photographing elk in their wild state. He engaged Mr. Robbins as guide, who took him in south of the National Park. They met with the greatest success, often getting within 25 or 30 yards of the game. Mr. Robbins was a thorough sportsman in every particular; and while making his living by conducting hunting parties no charge of wanton slaughter was ever laid at his door.

"All attempts to give anything like an accurate idea of this fearful explosion fall far short of the reality. One who has not seen such explosions can form no conception of the fearful force exerted by the exploding of tons of giant powder. The reason why so few people who were near the fire escaped unhurt was that the buildings burned were used as warehouses for two large hardware stores. In one of these was a room 12x16 feet, in which the powder was stored. To protect the powder against stray shots from outside parties the warehousemen had built up around this room a solid wall made of small iron plates, which were four inches square and one-half inch thick. When the powder exploded these plates were hurled with fearful force in every direction, some of them going through brick walls at least a quarter of a mile away. The powder was stored in these warehouses against the plain provisions of both State law and city ordinance. No complaint had been made for years about the storage of such explosiues, and the inhabitants had become so accustomed to the handling of giant powder that a two-horse load of it hauled through the streets occasioned no comment. But its strength and danger was demonstrated in a most cruel manner on the night of the 15th. Fifty-four deaths have occurred already, and there will be at least a dozen more. The only thing that saved the town from total destruction was the fact that a large par of the powder was frozen and did not explode. Those firemen nearest the building were literally blown into pieces, parts of human bodies being found scattered all over the section where the explosion took place. There were two heavy and distinct explosions which took place about ten minutes apart, and had the second one been three minutes later, half of the Butte Gun Club would have been among the victims, as they started in a body from the club-rooms for the fire immediately after the first explosion, and were within about 250 yards away when the second one took place. The scene as it was beggars description, and it is one no one wants to witness a second time.

"We have a new game law before the Legislature, and expect to repeal that prize 'fool fish law' you wrote about some time ago."

When, something over a year ago, I suggested that parties of shooters should send in quantities of cottontails or jack-rabbits to the Relief Society of Chicago for food to be given to the poor, there were some who smiled at the idea. Out in Lamar, Col., in the holiday season of this winter, a minister of the gospel started the same idea, and the people thereabout made a hunt and killed 5,142 jack rabbits in one day, all of which are said to have been shipped to Denver and given to the poor—over 35,000 pounds of meat This was probably a hunt more for blood advertising than for charity, and it was carried too far But what I want to know is, did that Denver minister read Forest and Stream?

Mr. McMillan, who lately inquired for data regarding skunk farming, may be interested in the following letter:

"Delaware, Ohio., Jan. 19, 1895: I saw your note in Forest and Stream of January 19, 'Wants Pointers on Skunks.' In 1891 the Rural New Yorker, published in New York City, contained quite a lengthy letter from a Michigan man, who is engaged in skunk farming. Mr.

McMillan could more than likely get some information from there.

"There is a skunk farm near Martinsburg, Ohio, but I have never obtained the owner's name. This, however, I will be pleased to do to enlighten Mr. McMillan should he not be able to get the information from the publishers of the Rural New Yorker.

"C. W. SEARS."

Michigan Partridge Shooting.

Mr. Bert Funk, of Baraga, Mich., writes this business-like account of a little partridge shoot he and a friend had:

"A chum of mine, Tom McGrath, and myself make trips every fall to a certain partridge ground. On October 12 we arranged to go out that night and stay a day for shooting. We left town about 8 P. M. on the 10th and drove about fifteen miles to the Silver River. When we arrived there we tied our horse to a tree and built a fire, then we rolled up in our blankets and went to sleep. In the morning we were up at 6 o'clock, and after our breakfast we started out on an old logging road. We had gone about a mile before we saw a bird, but pretty soon we started a covey in the brush, numbering six birds. We shot four of them. We travelled about five miles and shot twenty-three birds, and on our return killed eight more, making a total of thirty-one birds for that day. We had enough sport then, so we went back to our fire and hitched up our horse and started for home.'

"Pop" Hirth is Wrathful.

About two weeks ago I wrote a nice paragraph about Pa Hirth, Spalding's fishing-tackle chief, giving the affable old athlete as good a send-off as I knew how In return for this he chased me out of the store the first. time I went in. "There have been fifty people here inquiring for my dyspepsia," he said, wrathfully, "and I have had several letters from friends, telling me what to do for rheumatism." Here is a letter from a friend who believes all you said, and who recommends some English pills that he uses. Now, I'm not sick, never was sick, and can't get sick I was a color-bearer in the war, and I'm tough as they make 'em. I want you to say that I have not got rheumatism, neuralgia or dyspepsia, and never did have. You'll be saying I've got wooden legs next."

I must be all wrong in my diagnosis of Papa, but consultation with Dr. George Whitney, who runs the dog medicine counter next to Mr. Hirth, leads me to believe that it is biliousness that is what is the matter with Mr. Hirth. Does anybody know what is good for biliousness? If so, don t be afraid to tell him, for he is the best-natured man on earth, as I said before. Dr. Whitney has offered to prescribe, but Mr. Hirth counsels him to go hence.

E. HOUGH.

THE BOSTON MARKET.

Boston, Mass., Jan. 26.—Game does not cease to be shown in the Boston markets, nothwithstanding it is now in the close season, for almost all classes of game and game birds in the New England States. Boston game dealers are allowed to handle game at almost any season, and the greater is the pity, since there is always a temptatoin foor illegal shooting and fishing, if the game and fish can find a market. A handsome caribou was shown in a Quincy Market stall the other day—after the close season had begun in Maine, and the provinces as well. It evidently came from Maine. In another stall was a monster black bear, which had evidently just arrived. How this bear was taken in midwinter, it would be interesting to know. But the marketmen know, or pretend to know, but very little about the game they are handling.

Never in the history of the Boston markets has there been such a volume of rabbits received as at the present time. They have been coming in by all sorts of ways, and from many directions. One reciever of game has received "jacks" from the plains by the carload. He received almost 5,000 rabbits in a single consignment the other day. They went into store, such as were not piled up outsdie the sidewalk; for it is next to impossible to sell them. There are the small gray rabbits from Nebraska and Colorado, as well as the great northern hares from Maine and New Hampshire. These come in boxes and bundles, frozen stiff. The other day a lot came in bags to a well-known commission house. The receiver remarked that he could not sell them. "Anybody can have them, who will pay the freight." It seems to be a great pity that such a volume of game should be wasted, for wasted it will be, a good deal of it. In the Maine Legislature a bill has lately been introduced, making a close time on rabbits for a part of the year. The desire for such a close time evidently comes from the hunters in the more settled sections of the State, where excessive hunting has made the game scarce. The Forest and Stream's effort to stop the sale of game might apply to rabbits in Maine, where they are generally fairly plenty, but where the rate of slaughter and shipment that has prevailed the present season will soon reduce them to the small numbers of other game and game birds.

The unusual number of whistlers along the coast, and even in the inland rivers this winter, is a surprise to the duc-shooters and naturalists.

The Inglewood Club will sowwild rice this spring at its preserve in New Brunswick, to mae feeding ground for the ducks. Mr. Harry B. Moore, of Boston, has been commissioned to obtain the wild rice for seed.

The hearing before the Committee on Fish and Fisheries in the Maine Legislature has been set for January 29, and that for better game laws, before the Committee on Game, will take place on February 5. Several Boston sportsmen propose to be present at the latter hearing.

SPECIAL.

West Virginia Game.

Randolph County, W. Va.—The game season here was only fairly successful to the sportsman. A short time after it opened we had a pretty good snow, which gave us about a week of good deer hunting. After that it froze upnad the conditions were mostly unfavorable subsequent snows crusted Some twenty deer or upwards were secured in my immediate vicinity. My son and I got but one; we had lots of sport nevertheless. We also secured one small black bear in fine condition, the only one procured in the neighborhood.

Ruffed grouse were tolerably plentiful; quail almost unknwn, as faor as I could learn. The terribly severe winter two years ago destroyed them almost entirely. As fro wild turkey, I heard of but one being killed.

In our deer hunt we track detwo large cougars, or panthers, as the old hunters call them. We followed the trail about two miles, but night coming on, were forced to abandon the pursuit without coming up with the cats.

I intended giving you some of my more or less cranky experiences about loading for game, but will reserve that for a future article. BACKWOODS.

New Hampshire Deer.

Josh Farnsworth, of Connecticut Lake, a veteran sportsman, tells me that up to November 1 he kept tally, and that the score for First Lake alone for the season of '94 numbered 70 deer. How many were afterwards killed by tracking on error, I have no means of knowing; but for upper Coos County more than 100 deer were known to have been killed the past season.

These figures need no comment. I would advise the New Hampshire Legislature, while reading of the stringent protection granted deer in Vermont, Canada and Maine—regions bordering on Coos County upon three sides—to put these facts in their pipes and smoke them.

C. H. GLEASON.

Imported Game in Connecticut.

Leriden, Conn., June 16.—The English pheasants have done first rate during the past year. The prairie chickens, which were brought here last year, do not seem to thrive very well in our climate. Partridges and quail did exceedingly well and are standing the winter well so far. More quail will be imported this spring by the club. A great horned owl has been having a good time stealing pheasants and porairie chickens until Warden Stiles trapped him, and now he numbers one among my collection. T. A. J.

Illinois Quail and Doves.

Jerseyville, Ill.—Several petitions to the Legislature now in session at Springfield praying that the opening of the quail season be changed from Otober 1 to November 1 and to end January 1 instead of December 1, as at present, have been circulated and signed by many of our sportsmen and farmers in this and adjacent counties. These petitions also ask that doves be classed as game birds, and a suitable open season be assigned for them.

L. S. H.

Sportsmen's Association of Cheat Mountain.

Pittsburg, Pa., Jan. 22.—At the annual meeting of the Sportsmen's Association of Cheat Mountain, held January 21, 1895, the following persons were elected to serve the ensuing year: President, W. M. Kennedy; vice-president, W. K. Shiras, D. M'K. Lloyd, W. S. Edwards, Utilies Baird, Nathaniel Ewing; secretary, Theophilus Sproull; treasurer, D. P. Corwin; naturalist and surgeon, Dr. J. W. Riggs; board of directors, W. G. Brown, A. P. Tallman, C. C. Scaife, Dr. Jos. N. Dickson, S. B. Elkins, Geo. Shiras, III, H. P. Pears. In order to raise the amount necessary to build a telephone line from Huttonsville to club house the board of directors have made the annual dues for this year $15. The 50,000 acre preserve of the association is near Cheat Bridge, P. O., Randolph County, W. Va.

A Large Adirondack Buck.

Rochester, N. Y., Jan. 21.—Editor Forest and Stream: While still hunting on the St. Regis, Franklin County, last October, I shot an eleven prong buck which weighed, dressed, 213 pounds. The long tines measure 11½ inch each, the next one on the left side 9 inch, corresponding one on the right side, 8 inch. The antlers are beautiful in shape, being very regular and finely curved. One of my friends says they look as if they were "steamed and bent" I have the head finely mounted and shall be glad to show it to any of the rifle fraternity when visiting Rochester. I have read accounts from time to time of some good sized buck, so I submit my story and figures, and shall be pleased to hear through your paper of some one who has done as well or even better than myself. I was told by the guide that this was a very unusual specimen, and this, coupled with the fact that I made a running shot at 50 yards (guide's measure, take off ten), I think warrants me in putting myself on record. The measurements given above are taken from exact base of prong where it joins the antler. With best wishes to all lovers of the still hunt who "climb the crag and thread the brake." FRANK E. SHEPARD.

Sea and River Fishing.

A DAY WITH THE STEELHEADS.

On the Eel River, about 25 miles from Eureka, Humboldt County, Cal., is a deep pool three-quarters of a mile long and 150 yards wide, known as the "Grizzly Bluff Pool." It takes its name from a mountain peak which rises from the river's edge, its sides covered with redwood and madrone, but the top as bare as the writer's head.

The party, consisting of our kind host, his wife and daughter, and two ardent fishermen from San Francisco left the country home of the former at 6 a. m., and after a drive of six miles reached Alston, where our host left us to go to Eureka. We soon arrived at the pool, and procuring boats from Mr. Weymouth we were ready for anything from a half pound salmon trout to a twenty-five pound steelhead. The ladies took one boat and we followed with other. It was a clear September morning, cool and bracing, and the trout were in evidence in large numbers as they leaped out of the water, their silvery sides shining in the sun's rays. My partner took the oars, and with a slow stroke, keeping near the deep, alder covered banks the boat was impelled up stream.

Suddenly George cried, "A strike!" and dropping his oars and grasping his rod the butt of which was resting on the bottom of the boat within easy reaching distance he commenced to reel in slowly. The fish would take a notion that the spoon belonged to him, and George would let him take it until, thinking that the trout had gone far enough in one direction, he would check him with the reel. He was finally coaxed to the landing net, and the first battle ended in a defeat to a two-and-a-half salmon trout. By the time we reached the riffle at the began to think "we were in it," when, meeting another fisherman and asking him, "What luck?" he held up a end of the pool five more trout were brought to net, and we six-pound steelhead for our inspection. This cheered us, for we now knew that the big ones were around. Examining our tackle and finding everything O. K., started down stream, occasionally picking up a trout to relieve the monotony. By 12 o'clock we had fifteen beauties averaging a pound.

The ladies in the meantime had not been idle, for they had beaten our score by two. This defeat we took as a matter of course, for their catch outnumbered ours everytime we fished in their company.

The inner man had now to be repleted, and, landing on the gravelly beach, we were soon busy with the lunch. Pipes for the men were now in order, and as we rested, gazing at the timber-clad mountains, I thought with compassion of the poor fellows in town slaving at their desks or in the workshop, but did not think of the short time that would elapse ere I would be one of them.

I was awakened with the admonition that the day would not last forever, so hastily packing up the remnants of our lunch we got into the boats and were ready for business once more. The fish were also taking a siesta, and the strikes were few and far between. I was lazily watching the little trout jumping near the boat when suddenly the pole was almost snatched out of my hands, the reel commenced to hum and I knew that I had hooked on to something big. The way that small silk line run off the reel was a caution, and I began to fear that there would not be enough to last out this trout, as I had only sixty yards. I did not dare to raise the tip of the rod much for fear that it would not stand the strain.

The extra drag was applied to the reel and while busily engaged with this, George sung out, "There he is, and he's a steelhead sure enough." Hastily looking up I saw him as he was returning to the water, and he looked as big as a mountain. George had reeled in his line and I had plenty of room to play him. The strain on the line was not severe by this time, and I commenced slowly to reel in, gaining about ten feet, when he made another dash, breaking water again and taking about twenty more feet of line. My friend commenced to pull slowly toward the fish while I took up every available foot of line and soon had gained enough to feel comparatively safe, especially as the heavy drag was beginning to tell on my antagonist. He still kept fighting, and broke water twice more, but his mighty rushes were over and he sounded for the bottom of the river, which was about thirty feet deep at this spot. Slowly working the boat to the opposite bank, where the water was shallow, we landed on a gravel bar and cautiously drawing the trout over it (for we had no gaff) we dragged him on to the bank.

While the fish was in shallow water I was fearful that it would break away in one of its flurries, and asked my friend to wade out and get behind it with the landing net. As he started from the boat I heard his reel playing out at an alarming rate and asked him if he had a strike. He replied that the spoon had caught in his clothing. "Why don't you take it out, then?" I said, impatiently waiting for him to go to my assistance. "I can't get at it." Quickly moving over to where he was I found the hooks imbedded in the seat of his trousers. I gave the spoon a yank, not caring in my excitement whether the whole seat gave away. Luckily only a few threads parted and he was free.

When we reached home a tape line was produced. The steel head measured 27 inches and weighed 9½ pounds. A few days before I saw one taken from this pool that scaled 14 pounds, and one was caught several years ago weighing 25 pounds.

As a fish possessing all the game qualities of a fighter the Eel River steel head has few peers and no superiors.

JAS. S. TURNER.

NEW YORK FISH COMMISSION.

Albany, N. Y., Jan. 28.—The Senate Committee on Fish and Game to-night introduced a bill for the consolidation of the Fisheries and Forest Commissions. The Committee's report sets forth:

"The proposition for the consolidation of the Fish and Forest Commissions originated with the Committees on Finance and Game Laws in the Senate, and is submitted after a thorough investigation of the powers, duties and operations of the two commissions. The Committee on Finance at the last session of the Legislature was directed and empowered to make a thorough investigation into the workings of the several State commissions and ascertain if it were not possible to consolidate some and reduce the expenses of others inasmuch as the burden of maintaining these commissions had grown to be intolerably great. The attention of the Legislature was also called to the advisability of consolidating commissions having powers almost similar by the Governor in his admirable message. The two committees at the beginning of their investigation naturally directed their attention to the two commissions above mentioned, as in their very nature they were working upon almost parallel lines. The Committee on Finance considered whether the Fish Commission might not very properly assume the care of the Adirondack Park and the preservation of the forest, or whether the Forest Commission could not perform also the duties relating to the preservation of fish and game. They also considered whether it was not practicable to compel the fish and game protectors to perform the duties of forest inspectors and foresters, or whether those latter officers could not, without much additional trouble, take care of the fish and game. The Committee on Game Laws of the Senate, after a thorough investigation of the operations of the game laws of the State, came squarely to the same conclusion. They agreed with the Committee on Finance that the two commissions might very properly be consolidated; that a Commission of Fisheries and Forests, with a paid president, could very easily take care of the forests as well as provide for the preservation of the game and fish they contained. As a result of these conclusions this bill has been prepared. It provides

first for five commissioners, to be known as the Commissioners of Fisherries and Forests, with a paid president, who is required to devote his entire time to the duties of his office. The bill also provides for the necessary clerical force and for the appointment of thirty game and fish protectors, who will possess the powers now enjoyed by foresters and other employees of the Forest Commission, as well as those they enjoy under the present law. A very careful expert estimate has been made, and is given below, of the total cost of operating the new commission, with two additional fish hatcheries and an increase of ten in the number of game protectors, and it is conclusively shown that a saving of over $30,000 a year can be effected to the State."

ANGLING NOTES.

Mohican Club Officers.

At the annual meeting of the Mohican Rod and Gun Club, of Glens Falls, N. Y., the following officers were elected: President, A. N. Cheney; Vice-President, Byron B. Fowler; Treasurer, Stephen A. Hays; Secretary, Franklin F. Gunn; Executive Committee, N. R. Gourley, J. M. Davis, D. L. Robertson, Dr. T. I. Henning and Beecher Clothier. The club has a local membership of nearly 120 and a non-resident membership of over 40.

Spawning of Salmon.

Mr. Edward Hallam writes me: "In your article of Feb. 19th you speak about the spawning of land locked salmon. You mention one case where a salmon spawned at Plymouth Hatchery, N. H., that weighed two pounds. Now this may be all right as far as freight goes, but still it is indefinite. Could you not tell us how many years or months elapse from the time the eggs of land locked salmon hatch before the salmon so hatched begins to reproduce its kind. This would be worth knowing. According to your theory food makes weight and growth, and following out this line of thought a fish that had all it could eat might be only two years old and still weigh five pounds, while another salmon hatched at the same time, if it did not get enough to eat, might live five years and weigh only five pounds. Wont you please give it to us in years and months instead of in pounds."

The note referred to was written because of a statement concerning the weight of spawning land locked salmon, the age not having been brought into the question. Land locked salmon in wild waters will spawn in their third year (confinement in hatchery ponds or tanks may change the habits of fish slightly, depending upon the conditions which obtain), or, to follow the life of a salmon, the eggs taken last fall will be hatched this spring and the fry will remain in the brooks for one or two years according to the man who tells the story, for there is an honest difference of opinion about the matter when observations have been made in different waters.

I planted one lot of land locked salmon in the month of May in a brook which never had seen them before, and in a year from the following October they were still there in such numbers as to make me think none had left, but some few must have gone, for two were caught in a mill flume in the river below. The fish which ran down would be called yearlings, for they went down the next year after they were hatched, but as they were hatched in the spring and ran down stream in the fall they might have been 19 or 20 months old from the egg. Therefore when I say they spawn in their third year—I write of an actual case of a newly planted stream in New Hampshire—as they are born in the spring and spawn in the fall the salmon are in reality three years and eight months old or thereabouts.

The young land locked salmon run down from the streams where they are hatched or planted into the lake, which may be called their home exactly as the sea salmon in smolt stage run down from the fresh water streams into the sea.

That "food makes weight and growth" is not a theory, but a condition, if I may borrow that expression, but the land locked salmon does not begin its remarkable growth until it has left the stream of its infancy and gone down into the lake of rich pasturage.

The salmon of smolt stage when it runs down into a lake, weighs but two or three ounces, but in another year or two it may weigh four to six pounds.

Death of Thomas Andrews.

The last issue of Fishing Gazette, London, announces the death of Thomas Andrews, one of the best known and most progressive of English fish culturists. I have had occasion to quote from Mr. Andrew's personal letters concerning his methods of rearing fish several times during the past few years in this column, particularly his advocacy of rearing and planting yearlings of the salmonidae to obtain the best results and concerning his methods of rearing natural food for trout. For the past two years at intervals he has furnished to the Gazette papers upon "How to Breed and Rear Trout," and they have been written with such care as to details and have been read with so much interest on this side of the ocean, that I have urged upon the author and publisher the desirability of printing them in book form.

It is to be hoped that the papers were completed before the author's death as they will serve as a monument to his memory. The Gazette states simply that Mr. Andrew's died of pleurisy and promises a sketch of his life later.

Eyes of Fishes.

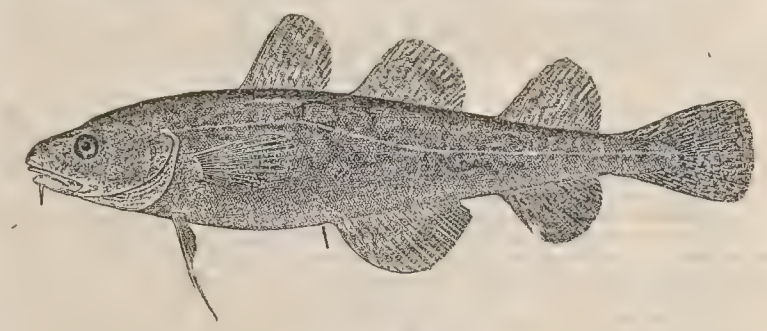
A friend who has read Dr. Hinde's note in Forest and Stream of Jan. 5, concerning his examination of the eyes of the large mouthed black bass writes: "While these deductions are apparently conclusive, it would be interesting to know how under such conditions black bass are able to protect their young at night. That the fry have nocturnal enemies cannot be doubted. The catfish, or bull head, which is generally supposed to be a night feeder is one of them. A microscopic examination of the retina of the eye of the catfish might reveal some facts whether its habits are nocturnal or not. I do not know as you will agree with me as regards the nocturnal habits of the catfish. I only know of this from observations in the brackish water in the bay in front of my residence. I have often seen these fishes at night during a moon, chasing the fry of edible sorts on the edge of the beach, and feeding upon them. How it is with the fresh water catfish I have no positive knowledge."

The fresh water catfish or bull head or horned pout is a night feeder. So much so that there is a popular delusion that the pout will not bite during a bright day. They are usually fished for at night, at which time they bite ravenously. The eye of the bull pout is very different in appearance from that of the beach bass, and I presume Dr. Hinde will be glad to act on the suggestion, and examine and compare the eyes of the two fishes, but whatever the results may be, I doubt not that plenty of evidence will be forthcoming that the black bass does feed at night.

In a previous note I referred to a belief that artificial propagation made salmon less game when they became dult, and said that I would submit the matter to the veteran John Mowat. He writes me: "As to the salmon of the Restigouche, not fighting or being as game since artificial stocking began, it is all nonsense. Pisci culture has no doubt increased the average weight of the fish with better protection and care, and a heavy fish is not game as a rule. Fish from 17 to 25 pounds, are the game fighters, above that it is more brute force than gameness. I am sending yu some chats on the salmon for Forest and Stream, and I amy chat over this subject by and by."

Brook Trout Abroad.

The dis cussion about our native brook trout in the waters of Great Britain has brought out some curious testimony as I have already related. One writer comes to their defense as follows:



They are the wickedest little fellows I have met with, for they rise well and fight their battles on the surface."

A. N. CHENY.

THE TOMCOD.

Now is the time for tommy-cod fishing in our neighborhood.

I don't know what family of fishes he belongs to and I do not suppose he is a cod at all. Doubtless thousands of your readers do know, but those are not the ones I have inquired of. All I know is that the French people call him petite morue (little cod), and the English people, "tommy cod." Down in Nova Scotia and New Brunswick, where he is very plentiful, I believe he is called frost fish. What his habits are in that region somebody else may tell. I only know he comes along here about Christmas and continues about three weeks; not longer. He is fished for here through holes cut in the ice from little cabins set just along the line of rocks that borders the channel of the St. Lawrence on the north side. He does not wander far on to the flats nor out into the strong current, but keeps just along the edge of the slack water. When the tide gets to running heavy he disappears. One may sit and bob there for hours without a bite, but for a while at about high or low water he usually takes hold well. The night tides are best, and not seldom three, four or five hundred are taken from one cabin by a couple of men or boys in a night. Here they are only caught with hand lines, but at some places farther up the river a great many are taken in traps. One night last winter

THE TOMCOD.

two men took fifty bushels in a night, selling them on the spot at fifty cents the bushel, which is about the usual price. When frozen they would run about 250 to the bushel.

One would hardly suspect a little fishery of the kind lasting only three weeks, to be of commercial importance, but a few years ago when the winter was so mild, that there was no ice on the flats and the cabins could not be placed at the proper time, we reckoned the loss to the village at about $2,000.

The fish go to the head of tide water to spawn, coming back in two or three weeks, very hungry, but so poor and thin as to be scarcely eatable. In the spring the fry may be seen along our shore in millions, making their way to their summer habitat in the salt water.

Just now the fishing is a little past its best, and the close of the week will almost see the end of it. For about a mile the edge of the channel is lined with cabins. We can count nearly a hundred of them, some only large enough for only two men or boys, and a few to accomodate four or even six. In these pleasant moonight evenings the lights resemble those of a miniature Canadian village. If you go to a man's house to inquire for him, the chances are fully three out of five that you will be told he has gone fishing. And not only the men but the women and children, boys and girls, youths and maidens, go to fish for tommy cods, although these last mostly in the daytime, for the distance is long and the way over the ice not the best.

And besides the villagers, parties come from the country and even from Quebec, for a day or a night's fishing. These are mainly people who have friends owning cabins and who come for a little lark, bringing their provisions with them, of which a good share is in bottles. Doubtless they enjoy themselves and they make no disturbance, so we will not begrudge them their pleasures.

Years ago, along the Beaufort shore, and by the mouth of the river St. Charles, at Quebec, people used to build similar cabins but larger, having facilities for cooking and eating the fish on the spot. Probably they do so now, but these improvised restaurants must be better conducted than they sometimes were formerly. I remember one winter when the carousals held at some of them scandalized the community to such an extent that I believe the clergy was obliged to interfere.

Some places were decently kept and were frequently visited by highly respectable people; but it can well be imagined that situated as they were, quite far from shore, beyond police supervision and often difficult to reach or leave in a dark night, there would be some that would be frequented by characters that decent folks would prefer not to meet.

But in the cabins along our shores we hear of nothing objectionable and the people who have little to do at this season, comfortably seated in warm cabins, doubtless enjoy catching tommy cods to last them through Lent just as much as the millionaire enjoys taking the salmon that perhaps costs him a hundred or two dollars and that he hardly knows what to do with when he has it.

And this one of the fishes that asks no law for its protection. Its wonderful instinct makes all the law it needs and man can apparently do nothing to apparently diminish its numbers. Ages hence future generations of Canadians will doubtless find the petite morue as plentiful as it is to-day.

QUEBEC, Jan. 10. G. DE MONTAUBAN.

Special writes of tomcod fishing in Massachusetts: The fishermen in the vicinity of Salem, Beverley and Byfield tong them. This tonging is a peculiar method, but it affords the boys some amusement, and takes the fish. A pair of wooden tongs are constructed, with sharpened brads between the jaws, in such a way that once they are closed on to the tail of the tomcod, "he is a goner." The fishing or tonging is done at low tide, and at the mouths of brooks and rivers that enter the salt water over a rocky bottom. The tomcod swim up among the rocks as far as possibe, at this season of the year, and are caught among the rocks in shoa water, when the tide is out. Then comes the tonger. He quietly crept up, clad in rubber boots and with waterproof gloves, or old mittens that he does not care for. Down among the rocks the wriggling tail of the tomcod is seen, when down go the tongs, and with one bite of the bradded jaws the tomcod is out of the water and in the basket.

THE COLOR OF BLACK BASS.

Editor Forest and Stream: I agree with Mr. Cheney in his belief, expressed in your issue of January 19, that small-mouth black bass take on a color similar to the bottom over which or about which they rest; but I do not think this color results simply from the stationary, as alleged, habits of the black bass on dark nights, nor that this color demonstrates that the habits of the black bass on dark nights are stationary.

I think the color depends upon the residence of the black bass—whether of stationary or restrictive character—and whether such residence be during the day or the night. It is the home where this valiant warrior of flashing eye and quivering fin finds his most delightful siesta or dress-parade or base of assault, which gives to him his light or dark coat. Roaming elsewhere for temporary purposes, whether impelled by hunger or a desire to see the world, he carries with him to the new grounds the distinctive evidences of the character of territory in which he most delights.

Bass naturally seek, when hungry, places where food is attainable. Who has not seen them chasing minnows on shoals and riffles where the water scarcely covered their backs, yards away from their usual haunts, and where not a cannibal fish would be "fool enough' to make his residence? And again on these same shoals, when jigging suckers and "red hoss" at night by the light of a torch, who has not seen bass of goodly size darting away to the deeper water?

Among the rocks and deeply-submerged limestone shelves of Elkhorn Creek, I have often taken bass of dark color and lighter ones from the shallower sandy bottoms. Amid the immense cavernous rocks and exceeding depths of Rockcastle and Cumberland Rivers I have taken bass almost inky black, and at any time of the day.

Mr. Cheney says: "I knew that the fish came on the bars and shoals at night to feed," and again, "It was customary to catch bass on the shoals in the evening, baiting for them to come on, long after dark." Does this indicate that the habits of the bass at night were stationary?

The man who knows when the black bass are going to be "on their feed," I think has not yet been born. If he has ever lived, he joined the silent majority without giving to the world a secret which anglers have thirsted to know since the memory of man My judgment is that the black bass feeds when he is hungry, and that time is, as yet, beyond human ken.

Nor do I think that the stationary habits of the bass attach to the night alone. In a five-weeks' fish on Elkhorn Creek, the past summer, I daily took from under ledges and shelving rocks, often within a foot or two of the shore, small-mouth black bass, and rock bass, or "red eyes," that I am satisfied had been daily stationary from dawn to dark. Nor was there any "luck" in dropping the bait in the chaneel or open deep water. Fishing without float or sinker, the minnow was laid alongside or in front of the rocks or ledges underneath which I knew, with almost certainty, the bass were gently resting. They would not deign to come out two or three feet to take the bait, but it had to be laid under their very noses and even, at times, temptingly wiggled to induce them to take it. As the creek was low and the water unusually clear, this tempting of the wary bass grew almost into a passion, and often, when feeling certain of one's presence, the playing of the bait was variously continued for many moments before its disappearance denoted the biter had bit.

As to bass biting at night, in company with another "Kingfisher," the past summer, we had opportunity to make a test. We were fishing in Clear Lake, Canada. After supper, one afternoon, we took boat and slowly trolled along the shores, using grasshoppers for bait. Not a bite did we get until twilight deepened into night, and the night grew into nine o'clock, too dark to see our lines or even the end of our rods. Then suddenly one of the party felt a jerk and found work in hand. A small-mouth bass was landed, and within the hour five or six bass and as many pike were taken. We finished by guess. The biting ended as suddenly as it began.

Enlarge the bill of particulars, Mr. Cheney, and widen the logical deductions, and see if we can't agree that it is the residence of the black bass, whether he is at home, by day or night, that tends to fix his color and not the mere remaining stationary on dark nights that gives the color, nor, inversely, that the color proves he remained stationary on such nights.

OLD SAM.

Angling With a Bulldog.

Editor Forest and Stream: In the last issue of Forest and Stream my very good friend, "O. O. S." manifests a decided inclination to reflect upon Billy's story about catching salmon with a club and a bulldog. When I say Billy's story, I do not wish to be understood as "hedging," and if Brother Smith feels disposed to hold me responsible for the yarn, why, I suppose I will have to shoulder the responsibility and accept the burden of proof; for a friend is not much of a friend when he deserts a fellow in deep water. Brother Smith knows how devotedly I have stood by him through all these years about that cougar story of his, and I will stay by him closer than the old she-cougar did, even until the end; and Billy has always been a faithful friend to me, and I shall proudly back up his story about the bulldog until he himself weakens.

And I want to tell Brother Smith right now that Billy is no "spring chicken," and is not likely to weaken about the truth of any of his stories. The story is undoubtedlly true, and none of us old mossbacks ever thought of doubting it. If Brother Smith thinks that it is a pretty tough story, he only manifests his ignorance of the wonderful resources of this wonderful country. Why, I can find him a dozen or more old Oregonians that will gladly give Billy cards and spades in talking about salmon. I myself feel as if I could say something when you begin to talk about chinook salmon. Yes, I have gone in among them on the riffles in spawning time and thrown great big fellows ashore just for the fun of it, and then returned them to the water, and my teeth are not half as well developed as are Billy's bulldog's. Now I am not disposed to assume any more responsibilities in this matter, but I wish that my friend Smith could hear a gang of "old settlers," regular old webfooters, talk about salmon for a while. He would never again think of questioning so simple a story as Billy's bulldog story. Knowing Billy as I do, I am only surprised that he let the boys down as easy as he did. There is nothing about the story that is at all unlikely. What would Brother Smith think of salmon crowding a stream during spawning time so that you could not drive a team and wagon through; frightening the horses by running against their legs and crowding between the spokes so that the wheels could not be turned. And yet no old Oregonian would think of doubting the story. As a matter of fact, Eastern people can have no conception of the myriads upon myriads of salmon that thronged the streams of Oregon and Washington in the early days, and the man that undertakes to tell of it takes great chances if he has any respect for his reputation for truth and veracity. Of course, the salmon are not so plentiful now as in years gone by, but I myself have seen them so thick below the Falls of the Willamette during the running season that, by lying down and looking across the surface of the water one could see only a living mass of leaping salmon, thousands upon thousands of them. As Brother Smith well says: "That great West is a terror of a country," and nobody ought to know it better than he, if my recollection serves me right.

S. H. GREENE.

Portland, Oregon

Fishculture

California Fishculture.

With an area twelve times as great as Massachusetts, the State of California appropriates very little more than the former for the protection and propagation of fish and game. Its grant is only $17,500, of which $7,500 was for the support of three hatcheries, located at Sisson, Olema and Tahoe City, besides several temporary stations.

The Sisson establishment received 27,000 eggs of Eastern brook trout from the Nevada Fish Commission, February 1, 1893, and planted the fry in Castle Lake, Shovel Creek and the headwaters of the Sacramento. These waters contain rainbow trout, and it remains to be seen whether that spring spawning fish will destroy the smaller brook trout, which spawns in the fall. The Dolly Varden will also figure in the struggle for the survival of the fittest, making the game at least a triangular one, to say nothing of the various little acres of rainbow and steel-head which are making life a burden to zoologists, as well as to the small fry.

The brook trout hatched at Sisson were supplemented by a much larger number, 226,000, obtained from Marlette Lake, Nevada, and developed at the Bear Valley hatchery at Olema, in 1893. The same establishment distributed 181,000 brook trout fry in 1894, while from Sisson 85,000 were planted in the latter year. The species has been widely distributed over the State, and if it thrives as well as in Nevada and Colorado, Californians will soon have superb fly-fishing.

It is surprising to note the growth and multiplication of Eastern fontinalis in Colorado. From two stocked lakes visited by Mr. H. D. Dean, from Leadville, for the United States Fish Commission, more than one million eggs of that fish were taken during October and November, 1894. Even in Jefferson Lake, at an elevation of 11,000 feet, the brook trout grows and increases rapidly.

The work of the California Commission during 1893 and 1894 can best be shown by the summary which follows. The salmon were furnished by the United States Fish Commission.

FISH DISTRIBUTED CALCFORNIA.

	1893.	1894.
Quinnat salmon	2,554,450	7,776,400
Brook trout (fontinalis)	251,500	266,000
Rainbow trout	754,000	1,080,240
Red throat trout	106,000	2,983,950
Black bass	155	9,350
Muskellunge	93,000	
Total	3,759,105	12,115,940

The young black bass distributed in 1894 were taken in Russian River. The Commission has a good word to say for the introduced catfish, and even for the carp, which has proved of the greatest value as a food for the striped bass, another immigrant from the East, and more esteemed than any other. The shad also continues to multiply so that the dealers have been compelled to limit the fishermen's catch in order to avoid a continual glut in the market.

The report from which these notes are drawn is nicely illustrated by pictures of the Sisson hatchery, the shad, striped bass, golden trout, muskellunge, wall-eyed pike, the black basses, lobster and spring lobster, and is supplemented by an article on Salmon and Trout of the Pacific Coast by Dr. David S. Jordan, which also contains numerous illustrations. The adult male rainbow trout facing page 137 represents a fish artificially reared at Verona, Missouri.

California is to be congratulated upon the growth of public sentiment in favor of fish and game protection and the vigorous enforcement of close seasons by its officers. It is that alone which makes the artificial hatching of quinnat salmon and other valuable fishes possible. T. H. B.

New York Hatchery Superintendent.

Albany, N. Y., Jan. 25.—Editor Forest and Stream: At a meeting of the Commissioners of Fisheries held at their office in the Capitol to-day, the following preamble and resolutions were unanimously adopted:

"Whereas, At a time when but four hatcheries were operated by the Commissioners of Fisheries, a system was adopted of having a superintendent for each hatchery, with a Commissioner of Fisheries in charge. And,

"Whereas, The operations of the Commission have become so extended that to-day there are seven regular hatching stations each with a superintendent, and in addition thereto a station for hatching muscalonge at Chautaqua Lake, a station for hatching pike at Oneida Lake, a station for hatching white fish and ciscoos at Alexandria Bay, and a station for hatching shad on the Hudson River. And,

"Whereas, The old system inaugurated when there were but four hatcheries is plainly inadequate to meet the requirements of the present situation. Therefore,

"Be it Resolved, That a General Superintendent of Hatcheries be appointed who shall have full charge of the hatching and distribution of fry for the Commissioners of Fisheries. And,

"Be it Further Resolved, That James Annin, Jr., of Caledonia, Livingston County, N. Y., be and he hereby is appointed General Superintendent of Hatcheries, for the Commission of Fisheries, at an annual compensation of $2,500, payable in equal monthly installments, together with his actual travelling and incidental expenses."

Mr. Annin, Jr., is the well-known proprietor of the Caledonia and Randolph trout ponds. He is the only man in the State who has made a business success of hatching fish fry for sale. Mr. Annin was strongly indorsed for his position by Hon. Eugene G. Blackford, for many years President of the Fish Commission, by Frank J. Amsden, of Rochester, President of the State Association for the Protection of Fish and Game, by William Hamilton, of Caledonia, by Senator Parsons, of Rochester, and many others throughout the State. Mr. Annin has been engaged by the United States Fish Commission as an expert to pack eggs for foreign shipment, and received a diploma for his exhibit at the Berlin Exposition in 1880. He began his fish hatching work in 1870, and has had twenty-four years' experience.

E. P. DOYLE, Secretary.

Game and Fish Protection.

An Adirondack Game Police.

Editor Forest and Stream:

My notion of a game police for the Adirondacks is briefly this: There should be an Adirondack police to have powers for the enforcement of all laws, but with special reference to the forestry laws, to wit, the preservation of game, the protection of timber and the prevention of fires. At present these various duties are dvided, very much as if in New-York we should have separate establishments for the prevention of larceny, and murder, and street incumbrances. Such a police should have a responsible single head who should have not merely a nominal but a real supervision over the whole Adirondack region; so that if the law were habitually violated in any district he would know it promptly and could send men there. The men to be employed should not, I think, be residents of the Adirondack region, or at any rate should not be residents of the particular district in which they are to act, although they ought to be familiar with game and with timber. If residents are employed they are apt to use their power chiefly to spare their friends and oppress their enemies. A single police for all classes of offenses would not only result in great economy, as far as time and money employed in traveling around went, but would often find the same persons violating more than one statute. A timber thief is very apt to be a game thief as well.

I am not sufficiently acquainted with the conditions in other parts of the State to know whether the Adirondack region could be best treated separately or in conjunction with the rest of the teriritory, but I see no reason why such a system as I propose could not be applied at least to all regions where the State has forest lands, and it could certainly work in co-operation with, or subordination to any central authority to which the State might commit the general enforcement of the game laws.

HERBERT M. LLOYD.

Michigan Fish and Game Interests.

Editor Forest and Stream:

I send you copy of extracts from my monthly reports as transmitted to the Secretary of State. Chas. S. Hampton, Game and Fish Warden.

Until last year the law forbidding the export of game was a dead letter, hunters from other states taking hundreds of deer home with them packed in baggage. This year by securing the co-operation of transportation companies and arranging for a systematic watch of all trains leaving the deer region, and a search of all suspected baggage, freight and express, the export of venison by hunters has been almost entirely broken up. The arrest and conviction of so many who attempted to violate the law, and the seizure of tons of venison, deterred scores of outside hunters who have been in the habit of disregarding the law, and saved hundreds of deer for the use of our own citizens. About a thousand pieces of baggage were searched by the state warden and his assistants, and great credit is due to all the county and deputy wardens for their careful and efficient work in preventing the export of game, even when shipped to some point near the border, to be secretly conveyed across the line. The papers speak of the cold storage warehouses of Chicago being filled with thousands of deer from Wisconsin and Minnesota. But thanks to the efforts of my assistants, and to the public spirited friends of game protection who gave us hints and information, the markets of the Union are not supplied with Michigan game.

The law against the use of dogs in hunting deer was more generally observed this year than it has ever been before, but in some counties, particularly in the northeastern part of this peninsula there were numerous violations. From the very nature of things it is a most difficult matter to secure sufficient evidence to secure a conviction for putting dogs upon deer tracks, and the law should be amended so as to make it more easy of enforcement. If dogs were used only by men possessed with the true instincts of the sportsman it might do to permit their use. But in most cases they are simply used to drive the deer out of the swamps and bring them within the range of guns in the hands of pot hunters who would sooner kill a deer swimming in the water than in any other way. I visited one camp on Hunt's Creek, Montmorency county, where fifty-three deer were killed within a circle of five miles the first two weeks of the season. Outside hunters to the number of about twenty were camped with a resident who had a number of dogs. The owner of the dogs and his hired man would take the dogs into the swamp and unseen by any one put them on the track of the deer, and the men who presumably paid for the privilege, although there was no way to prove it, surrounded the swamp, making escape impossible. And, strange to say, the sympathy of the community seemed to be with the men who were responsible for this ruthless slaughter.

In accordance with former custom I present with this report for the last month in the last year of my four years of service as Game and Fish Warden of Michigan, suggestions for the consideration of the Legislature and my successor in office, together with information for the general public. In this connection I wish to express my hearty appreciation of the assistance I have received in the discharge of the duties of this office. As a rule the county wardens have been much more active and faithful in the discharge of their duties than could be expected, the compensation of all being small, and in most cases nothing at all. The deputy wardens have been faithful and reliable, and have almost invariably shown good judgment in the discharge of their difficult duties. Among those to whom I am most indebted I cannot forbear mentioning Deputies F. O. Mayotte, Chas. E. Brewster, Leander Rivard and Jason E. Nichols. Great assistance has also been received from officers and members of fish and game clubs and from hundreds of private citizens all over the state who realize the necessity of restricting the destruction of game and fish. The transportation companies have shown their appreciation of the efforts of the wardens to save them from unnecessary annoyance and expense, and by yielding a cheerful obedience to the law and exacting a rigid compliance on the part of their employees have done a great deal to put a stop to violations. The increasing public sentiment in favor of the game and fish laws which has been mentioned in previous reports by my predecessor and myself is constantly becoming more marked. It was only a few years ago that these laws were absolute dead letters, and no one even took the pains to make a pretense of observing them. Now, however, open violations are unknown, except in those neighborhoods where all laws are disregarded, and people have learned that secret violations are liable to become known, and that if reported to the state warden, with information as to time, place and witnesses, will be properly prosecuted. Laws of all kinds will be violated, but I doubt if there are any of our laws punishing misdemeanors which are more generally observed than are the fish and game laws; and it is certain that these are much better enforced than the liquor laws, the Sunday laws, or other similar police regulations.

Michigan has been making rapid strides in the direction of fish and game protection for the last few years, and now stands ahead of every other state in the Union. The wonderful record of enforcement this year, which has resulted in the conviction of 324 violators, and the collection of $3,320 in fines (not including costs) is one that stands unparalleled, particularly in view of the small cost of the enforcement in this state, compared with that in others.

One great reason for our superiority is the fact that our laws, imperfect as they are, are better in some respects than those of our sister states. This is largely due to two acts of 1893, one extending the powers of the warden and his subordidates, providing for search and seizures, giving complete power over prosecutions, etc., and the other affirming state ownership of fish and game under any and all circumstances, and providing easily enforced regulations concerning the possession, use, sale and transportation of fish and game. The amendments to the Game Warden Act which I presented to the last legislature were bitterly opposed because the arbitrary power given the wardens might create serious trouble if injudiciously used. I am pleased to say, however, that there has not been a single instance of the abuse of this power, and in the two or three instances where innocent parties have been put to inconvenience or loss by mistake, they have been properly reimbursed. The wonderful results achieved this year by the deputy wardens with less than two thousand dollars in all for salary and expenses proves the great superiority over the plan of paying a fixed salary. Michigan has accomplished a great deal more with ten men and two thousand dollars, than a rich and experienced state accomplished with fifteen wardens on salaries of a thousand dollars each.

No doubt the principal reason the present warden has received such cordial co-operation and assistance, regardless of party prejudices, is because in employing deputies he considered the fitness for the work in hand, regardless of politics. There is no doubt but that the same policy will prevail in the future, for while the office of state warden is very properly considered a political office, the subordinate positions are of no political consequence.

CHANGES IN THE GAME LAWS.

A session of the legislature without a new game law would be like playing Hamlet without the melancholy Dane. There is no question that all our laws are changed too often, and unless there are good reasons it is better to leave the provisions with which the people are already familiar. There are some changes, however, which are absolutely necessary. The difference between the upper and lower peninsula seasons on deer and partridge leads to great confusion, and interferes with the law concerning sale, etc., during the close season. The season for pinnated grouse should be made to conform with other seasons. I do not consider it my province to advise what the seasons on various kinds of game should be, but I would caution our law makers to profit by existing blunders and use the same and unmistakable words in prescribing each season. It should also be borne in mind that it is better for our seasons to be the same as in other states, to cut off the peripatetic pot hunters. The experience of the upper peninsula, where the theory of the people that an early season for deer would prevent shiping and thus keep away outside hunters has proved to be such an utter failure, should also be kept in mind by our law makers.

SALE OF GAME.

Enthusiastic sportsmen are very generally in favor of prohibiting absolutely the sale of game, even in the open season. I fear such a law would not meet their expectations. In the first place it would be considered as legislation in the sole interests of the small class who have time and opportunity to kill their own game. Fish and game belong to all the people in common, and the great mass of the people would not cheerfully pay the expense of enforcing laws for others while they could not buy a brace of their own birds or a pound of their own venison. In my opinion the result would be to create a prejudice against the game laws that would do more hurt than all the good that could be accomplished by the best possible enforcement.

LICENSING HUNTERS AND OTHER RESTRICTIVE LIMITATIONS.

There are other means of restricting the killing of game, such as forbidding the killing of female deer, restricting the number that each person may kill, and restricting the number that may be transported. I am of the opinion that a law licensing all hunters, those of our own state being charged a mere nominal fee, while non-residents are compelled to pay twenty-five dollars, is for the present, at least, the best restrictive measure. The decision of the supreme court of the United States in McCready vs. Virginia (94 U. S. 391) would seem to set at rest all doubts as to the constitutionality of such a law. Any man carrying a gun and not having a license in his possession, or refusing to show it to any citizen on demand, should be subject to penalty. The license should contain a description of the holder, like an enlistment blank, by which he could be identified and fraud prevented. Licenses should be issued yearly by the Secretary of State. Our own citizens should have their applications accompanied by an official certificate that the person described is a voter in that particular precinct, this entitling him to the nominal fee. The money received from non-residents would pay the entire cost of enforcing the law, and if (as in my opinion would be desirable) the non-resident holder of a hunter's license was permitted to take a limited amount of game home with him, the law would be a benefit to the sportsmen of other states, and would be popular with everybody, except those who would like to indulge in ruthless slaughter to supply the markets of Chicago and New York. The license system, too, is the most feasible way of restricting the number of deer shipped by our own citizens, if that is to be done. By requiring the surrender, punching or cancellation of the license, or the removal of a coupon, before game could be received as baggage, express or freight, all evasion of the law could be readily avoided. I therefore again present the license system for consideration by this legislature, as I did two years ago.

THE FISH LAWS.

The fish laws need a thorough overhauling, and the substitution of one, or possibly two acts for the score or more of conflicting and inconsistent acts which now encumber our statutes. All of the local acts should be repealed, and all desired variations from the general provisions of the law should be included in one section of the general law, so that changes to suit the preferences of different localities could be made by the change of a single section. If it is thought best not to put all the provisions for the regulation of fishing in one law, I would recommend that there be but two, one "An act to protect fish and regulate fishing in the boundary waters of this state," and the other "An act to protect fish and regulate fishing in the inland waters of the state."

GAME STATISTICS AND ESTIMATES.

There has always been a great diversity of opinion as to the increase and amount of game, and the state warden has received many inquiries upon these matters. In order to secure information which could safely be made the basis of estimates, I have sent out hundreds of reply postal cards during the month of December, containing blanks for answers to printed questions as to the increase of game in general, the increase of deer, the number of deer shot that could actually be counted up, the number actually shipped from that particular place, an estimate of the number of deer killed in the county, and the probable number of men from other states who hunted in the county this fall. These inquiries were sent to every county in the upper peninsula, and to all the counties in the lower peninsula north of Montcalm, Gratiot and Saginaw. They were sent to all county wardens, and to every editor and station agent in each county, and to a large number of postmasters. While the replies cannot be expected to be anything more than approximately accurate, they nevertheless furnish the best basis for estimates concerning the game of Michigan that has ever been obtained, and the results of this first attempt to secure systematic information are so interesting and valuable that it is to be hoped that next year the warden will arrange to secure more extended and carefully prepared information, and give notice in advance that it will be called for.

The replies received this month have been tabulated and placed on file with the other records of this office. It is gratifying to see the number of informants who state that game is increasing in their vicinity, particularly deer. Many informants state that the increase "has been noticed the last year or two," "seems to be lately," etc. Such replies are so general in regions where there has been an awakened public sentiment and a more rigid enforcement of the law, that they furnish conclusive proof of the value of game laws properly enforced. There are only two counties in the upper peninsula from which any considerable number of replies were received reporting deer increasing, and even in these, Gogebic and Mackinaw, it is quite probable that the increase was due to the animals having been driven in from some other vicinity. But in nineteen of the northern counties of the lower peninsula the great majority of my informants state that deer are now becoming more plenty, notwithstanding the armies of hunters in the woods. This is certainly most gratifying information to every citizen of Michigan, and it indicates that by wisely checking the

slaughter of deer, the thousands of square miles of vacant land in our northern counties, much of it unfit for cultivation, being deserted tracts stripped of the timber or stretches of plains and swamps, will become a great range for deer, affording a source of profit to the state, as well as pleasure for sportsmen and food for settlers.

The number of deer killed can only be roughly estimated. In forty-two counties there were 3,423 deer shipped this year from 192 different places. The average of the estimates of the number killed in the several counties would be nearly ten thousand, but my estimate of the number killed in the forty-seven counties from which reports were received is eight thousand. This is based upon the most reliable reports from each county, the number actually known to be killed and the number shipped from different stations, and is probably a safe estimate.

The average number of hunters from other states reported in forty-four counties would make a total of over three thousand. The total of the best estimate I am able to make for these counties is 2,755 and making allowance for the duplications from parties who moved from one county to another, it is my opinion that there were about two thousand non-resident hunters in Michigan this fall. I have hoped to secure more accurate data from the railroads, but so few of them have reported up to the present time that I am compelled to realy principally upon local reports.

Trap-Shooting.

CONTROL OF TRAP-SHOOTING.

The convention of trap shooters, held at the Astor House in his city January 24, accomplished about all that its promoters could hope for. The copy of the minutes of that meeting given elsewhere, shows that there was a unanimous desire for the organization of a governing body for the trap shooters of America. The question of rules, handicap, punishment for work that might bring discredit upon the sport, and various other matters, were all judged to be fit subjects for a governing body to act upon.

It is a noteworthy fact that no argument, either by personal representation or by letter, was adduced to show that such an organization was undesirable. This fact is very cheering. On the other hand, for a meeting of this class there was a very good showing, and the number of encouraging letters received was decidedly reassuring.

The plea of "too short notice" advanced in many instances was undoubtedly well founded. It was, therefore, a very wise thing to postpone final organization for a couple of months. This postponement will enable every club to make arrangements to be represented on April 3, by delegate or by proxy. It will also enable those clubs to study the proposed plan of organization, as well as the constitution and by-laws which will be recommended for adoption at the next meeting on April 3. It is hoped that the above documents will be ready for publication at least one month before the date set for the meeting, as it would be an impossibility to mail a copy to every club without running the risk of forgetting one or more. The decision arrived at is that the publication of the same in the columns of the sporting papers shall be accepted as notice to every gun club of the proposed organization. It will, of course, be understood that the publication of these documents as above is ordered for the purpose of receiving suggestions for amendments.

The fact that a decision was arrived at not to organize permanently until all sections of the country had full opportunity to be heard in the matter, is a positive guarantee that there is to be nothing sectional in the proposed organization.

FOR ORGANIZATION.

On Thursday, January 24, at 2 P. M. a meeting was held in the Astor House, New York city, in response to the call issued in the columns of Forest and Stream, signed by the following well known shooters:

B. H. Breintnall, South Side G. C., Newark N. J.
David Brown, West Newburgh G. & R. A., Newburgh, N. Y.
Wm. L. Davis, Worcester (Mass.) Sportsmen's Association.
T. A. Divine Memphis G. C., Memphis, Tenn.
Chas. Fehrenbach ("Bilderback"), Wilmington R. & G. C., Wilmington, Del.
W. S. Gummere, New Brunswick (N. J.) G. C., Trenton, N. J.
C. M. Hostetter ("Old Hoss"), Pittsburg G. C., Pittsburg Pa.
J. B. Halsted, Peekskill G. C., Peckskill, N. Y.
G. V. Hudson, M. D., Emerald G. C., New York city.
N. A. Hughes, Williamsport (Pa.) G. & R. A.
T. J. Jackson, M. D., Union G. C., Springfield, N. J.
P. A. Jeanneret, Boiling Springs G. C., Rutherford, N. J.
J. T. Mascroft, Worcester Sportsmen's Association, Sutton, Mass.
D. J. O'Connell, Chattanooga, G. C., Chattanooga, Tenn.
Geo. H. Taggert, West Newburgh G. & R. A., Newburgh, N. Y.
L. H. Schortemeier, Rockaway Point G. C., N. Y.
W. P. Mussey, Chicago Shooting Association, Chicago, Ill.
Rolla B. Organ, Chicago Shooting Association, Chicago, Ill.
F. R. Bissell, Audubon G. C., Chicago, Ill.
F. P. Stone, Audubon G. C., Chicago, Ill.
J. Gillespie, Calumet Heights G. C., Chicago, Ill.
Henry Stephens, Cumberland G. C., Chicago, Ill.
Capt. A. C. Anson, Chicago, Ill.

The meeting was called to order by Edward Banks, Chairman pro tem., who with the assistance of W. R. Hobart, Secretary of the New Jersey Trap Shooters' League, received credentials, and drew up the following roll of those clubs which were represented:

North Side G. C., Pittsburg, Pa., Elmer E. Shaner.
Herron Hill G. C., Pittsburg, Pa. (by proxy), Elmer E. Shaner.
Braddock G. C., Braddock, Pa. (by proxy), Elmer E. Shaner.
Emerald G. C., New York, Dr. G. V. Hudson.
Park City G. C., Bridgeport, Conn., W. M. Thomas.
Peekskill G. C., Peekskill, N. Y., B. C. Everinghim.
West Newburg G. & R. A., Newburg, N. Y., David Brown.
Boiling Springs F. & G. C., Rutherford, N. J., J. H. Richmond.
Pittsburg G. G., Pittsburg, Pa., J. A. H. Dressel.
Brunswick G. C., New Brunswick, N. J., H. H. Stevens.
Flemington G. C., Flemington, N. J., J. L. Chamberlain.
Essex G. C., Newark, N. J., R. Heber Breintnall.
Union G. C., Springfield, N. J., Dr. T. J. Jackson.
Keystone Shooting League, Philadelphia, Pa., W. H. Wolstencroft.
Altoona Rod & G. C., Altoona, Pa., Edward Banks.
Hartford G. C., Hartford, Conn., C. H. Burbridge.
Hell Gate G. C., New York, L. H. Schortemeier.
Endeavor G. C., Jersey City, N. J., W. Fred Quimby.
South Side G. C., Newark, N. J., W. R. Hobart.
Climax G. C., Plainfield, N. J., Jacob Pentz, who also represented Shooting and Fishing.

There were also present P. A. Jeanneret, of the Boiling Springs Gun Club, Justus Von Lengerke, and representatives of the American Field and Sportsman's Review, etc.

The roll of delegates being completed, Mr. Banks stated that it would now be in order to elect a temporary chairman. Major R. H. Breintnall was duly elected as temporary chairman, W. R. Hobart being chosen as temporary secretary.

The chairman directed the secretary to read the call for the convention which runs as follows: "In view of the fact that there is unquestionably much crooked work indulged in at the trap tournaments throughout this country, and being certain of the fact that such cannot but be prejudicial to the best interests of this sport, we, the undersigned, do hereby issue a call for a convention of those interested in the future welfare of trap-shooting, to meet at the Astor House, New York city, on Thursday, January 24, at 2 P. M. The purposes of this convention will be the organization of a governing body for the trap-shooters of the United States, and the consideration of the best and surest method of combating the evil referred to. We ask all gun clubs and kindred organizations to elect a delegate to attend this meeting, or in default of so doing, to send to the convention a resolution indorsing the purposes thereof."

Mr. Justus Von Lengerke started the discussion by asking the chairman to call upon Mr. Edward Banks, of Forest and Stream, to explain to the meeting the object of calling it together and also to give the meeting his views on the subject.

Mr. Banks stated that he had set forth his views from time to time in the columns of the paper which he represented, but that he might as well state again that he was satisfied that there was a necessity of some governing body for the trapshooters of America. At present they had no head, and he thought that the exigencies of the case demanded some such head. He was in favor of some permanent organization based on the same lines as the League of American Wheelmen. He thought that the best time to organize was the present, although he had received several letters urging that the notice of the meeting had been too short.

Letters were then read by Mr. Banks from Messrs. T. A. Divine, President, and Irby Bennett, of the Memphis, Tenn., Gun Club; Col. J. T. Anthony, Charlotte, N. C.; Capt. E. B. Wadsworth, President, Boston Shooting Association; H. W. Brown, Binghamton (N. Y) Gun Club; J. M. Ranger, President, Lynn (Mass.) G. & F. P. Association; Archie R. Stokes, Secretary, Charlotte (N. C.) Gun Club; J. H. Healey, President and Chas. R. Combs, Secretary, Belfast (Me.) Gun Club; W. L. Davis, Worcester (Mass.) Sportsman's Club; B. G. Empie, Secretary (pro tem), Lynchburg, Va., Gun Club, etc., etc. A telegram from Irby Bennett to the following effect was also read: "Am with you in spirit."

Mr. Pentz said that, in view of the tone of certain letters read by Mr. Banks, which letters seemed to suggest that sufficient notice had not been received by the different gun clubs, he was opposed to immediate organization, thinking it better to continue the temporary officers until some future day when it was likely more clubs would be represented.

Mr. Everinghim was opposed to delay as he thought the public had had sufficient notice to be represented either by delegate or by letter. The meeting, he thought was quite large enough and representative enough to warrant the forming of a permanent organization. Tournaments, also, were being advertised, and he felt that it was time that some action was taken toward forming a national association.

Mr. Pentz stated that his understanding was that the object of the meeting was of national importance, and that as with but few exceptions only local organizations have spoken, he felt that more time should be allowed in which to hear from other and more distant portions of the states.

Mr. Von Lengerke said that a general discussion should take place in order to get the thing started and also in order to be able to formulate some plan of organization; and also to find out whether the organization should be formed of clubs, associations, or individuals. A committee on constitution and bylaws should also be appointed, which would report same at the next meeting; they would then have something to work upon.

Mr. Shaner said that the clubs he represented were in favor of a judicial body to govern trapshooting, but that those clubs did not know what line of action would be proposed. He was opposed to any merely local organization, but said that Pittsburg would be satisfied with any organization which contained representatives of North, South, East and West. He recommended that the next meeting of the present temporary body (as suggested by previous speakers) should be held on some evening during the Grand American Handicap week.

Mr. Pentz agreed with Mr. Shaner and said that he thought the suggestion a good one as there would be a very large delegation of shooters present in New York at that time.

Mr. W. M. Thomas said that his club (Park City, Bridgeport, Conn.) was in ignorance of what was proposed to be done at the convention, but that it was in favor of anything that would really benefit trapshooting.

Mr. Banks remarked that the real object of the meeting was to ascertain the sense of trap shooters on the questions touched upon in the call for the convention.

Mr. Quimby said he had listened to the remarks of the various speakers, but had so far heard no plan of organization presented. It seemed to him that all dishonesty at the traps should be punished and that an organization should be formed with power to punish all evildoers. In doing so he felt that such an association would be advantageous not only to sportsmen, but to the trade in general, manufacturers of guns, targets, traps, ammunition, etc. He therefore made a motion "that a committee be appointed to obtain subscriptions from the sporting goods houses, in order to defray the transportation of delegates, one from every club, to attend a general convention to be called at some future date." For his part he was willing to give from $25 to $100 a year toward such a fund.

Mr. Richmond said that his idea was that state associations be formed and from them a national association be organized.

Mr. Jeanneret thought that states should be represented by delegates in proportion to the number of clubs in the state. He was of the opinion that the manufacturers of sporting goods were taking both ends of the string, getting the amateurs' money for ammunition, targets, traps, guns, etc., and then taking more money out of their pockets by paying the expenses of, and salaries to, experts to shoot their guns and ammunition, these experts taking the majority of all the prizes at the tournaments. He thought that trapshooting should be less of a business and more of a sport.

Mr. Pentz asked how many would shoot if there were no stakes to shoot for. Dr. Jackson (Springfield, N. J.) stood up as one who did and always would, saying that though he shot in many tournaments, he only shot for "birds."

Mr. Banks also stated that secretary Hobart would bear him out in the statement that at the last tournament of the South Side Gun Club, Newark, N. J. held on New Year's Day, 1895, there was quite a kick among many shooters because there were often 20 to 30 entries in some events, half of which entries shot for "birds."

The chairman, Major Breintnall, added: "Yes, and there was a big kick, too."

Mr. Wolstencroft thought that the rules were at fault; these rules, he said, were drawn up simply to benefit manufacturers, the object being to shoot off as much ammunition and break as many targets as possible. He recommended the adoption of the "one man up, five unknown traps" system. In his opinion, 16 yards was too short a rise for any expert shots.

Mr. Shaner said that Mr. Quimby's idea would necessitate an outlay of $50,000, that is, if it was intended to pay the transportation of a delegate from each club in the country. Within a radius of thirty miles around Pittsburg there were as many gun clubs with a membership of over 500 shooters.

Mr. Schortemeier said he did not believe that anything would be gained just now in discussing shooting rules, but thought that a committee should be appointed as a judicial body for the purification of trapshooting. He said that the Emerald Gun club at its recent tournament had added a fifth money in ten target races to encourage the shooting of amateurs. Although this had been money out of pocket for the club, yet the plan gave satisfaction.

Dr. Jackson said that a national association should be formed, but that it was a question whether it should be composed of clubs or individuals.

Mr. Quimby's motion not being seconded, it was accordingly dropped. In order to bring things to a head, Mr. Quimby said he would like to make another motion. "That we now form a permanent organization." This was seconded by Mr. Schortemeier.

Mr. Everinghim said that he would be willing to come to New York once a week if any good could be done the cause thereby. Dr. Hudson, too, believed in striking while the iron was hot, adding that if nothing was done at this meeting, those present would say that nothing would ever be done. Mr. Shaner thought that there was probably not enough general representation of the gun clubs of the United States at the meeting, and that therefore those not represented might say the organization was purely local.

Dr. Jackson thought that if there was likely to be any feeling of exclusion, he was opposed to forming a permanent organization; he thought, however, that there was a good nucleus for a grand association.

Mr. Thomas thought that if the association was formed it should be composed of individuals, while Dr. Hudson said that it should be composed of clubs; adding that if a club did not care enough to pay a nominal initiation fee that club would not be worth having as a member.

Mr. Jeanneret moved to amend Mr. Quimby's motion as follows: "That it is the sense of this meeting that it is necessary to form a permanent organization in pursuance to the terms of the call for this meeting, published in Forest and Stream." Mr. Shaner seconded the amendment.

Mr. Quimby withdrew his motion in favor of the amendment; and Mr. Jeanneret's amendment was then put to the meeting as the original motion, and was carried unanimously.

Mr. Dressel moved "That the present officers be continued until a permanent organization is effected, and that the chair appoint a committee of five to present a plan for such permanent organization, and to present also a draft for a constitution and bylaws, at the next meeting to be held for the purpose of organization." Mr. Chamberlain seconded the motion, which was carried unanimously.

Mr. Hobart being unable to fulfil the duties of temporary secretary, owing to his other business connections, begged leave to resign. His resignation was accepted, and Mr. Banks, of Forest and Stream, was elected unanimously to fill the vacancy. Mr. Banks stipulated that, in view of the pressure upon his time, the publication of these proceedings, the draft of the proposed constitution and bylaws, and the proposed plan of organization, in the columns of Forest and Stream, American Field and Shooting and Fishing, should be taken as service of due notice upon all gun clubs and kindred organizations throughout the country.

Mr. Everinghim moved "that it is the sense of the meeting that the proposed organization should be composed of both clubs and individuals." The motion being seconded, it was carried unanimously.

Mr. Thomas moved "that when we adjourn, we adjourn to meet on April 3, at 8.30 P. M., in the Astor House." Mr. Dressel seconded the motion, adding that he would make it a point, as secretary of the Interstate Manufacturers' and Dealers' Association, to write a personal letter to every person who entered in the Grand American Handicap, asking them to be present at that meeting as delegates from their clubs, and also to obtain as many proxies as possible, in order that a thoroughly representative meeting might be had. The question was put and carried unanimously.

On motion, meeting adjourned to meet as above.

The chairman (Major Breintnall) appointed as committee on constitution and bylaws, etc. J. A. H. Dressel, Pittsburg Gun Club, chairman; Edward Banks, Altoona Rod and Gun club; B. C. Everinghim, Peekskill Gun club; L. H. Schortemeier, Hell Gate (N. Y.) Gun club; W. H. Wolstencroft, Keystone Shooting League.

W. R. HOBART, Acting Secretary.
EDWARD BANKS, Temporary Secretary.

Christianson Defeats Budd.

Des Moines, Iowa, Jan. 18—To-day, George Christianson, of Randall, and C. W. Budd, of Des Moines, shot a pigeon match on the grounds of the Highland Gun Club, of this city, for $100 a side. Budd stood at thirty-two yards, Christianson at thirty yards. The birds were an uneven lot, some slow and some extra fast. In the first fifty birds Christianson was favored by the birds, but in the last fifty they ran quite even. There was a high wind to help the birds along, and quite a number fell dead outside the boundary. Both contestants used L. C. Smith guns, Winchester Leader shells, and E. C. Powder. Score:

Budd	2212022202122221222202022—21	
	2122022222022231221221222—23

C. W. BUDD

Illinois Trap Notes.

Henry, Ill., Jan. 22.—It is quite the fashion now to have shooting tournaments, as they have been held this winter, in almost all the towns of central Illinois. So few of them are written up for the sporting press that I have taken up the laborious task of writing something of those I attend. One thing I notice is that the management do not get the programmes out soon enough, and do not send a notice of nor advertise them in the sporting press, hence the most of the shooters are local.

Henry has a good club, and the fair grounds afford ample facilities for the comfort of shooters in either hot or cold weather. Hotel Camp is very accomodating and furnishes 'bus to the grounds.

One of the Henry shooters is coming rapidly to the front, as Mr. Bacon, in a 25 live bird race defeated the crack shot of Peoria by killing 25 straight to his opponent's 21. The match was made during the tournament, 25 live birds, $25 a side, American Shooting Association rules. Mr. Mallett, of Milo, was chosen referee, and Mr. Irwin, of Peoria, and Mr. Brossfield, of this city, as judges. There never was any difference of opinion between the judges, save that of a bird or two killed on the ground. The birds were a poor lot of flyers, and mostly killed inside the traps They were shipped from commission houses in Chicago, and were nothing to be compared with good country birds.

Most of the two days was occupied by smashing targets.

WINGSHOT.

Clark Took the First.

Altoona, Pa., Jan. 25.—The first of the matches arranged between W. M. C. Jones, of Pittsburg, and W. G. Clark, of this city, was shot at the Juniata Baseball Park, this city, on Wednesday, Jan. 23. There were present from Pittsburg, Elmer E. S. Shaner, who was official scorer; C. M. Hostetter (Old Hoss) referee; George Snow, J. N. Anderson, Jr., J. S. McIntosh, A. H. King, D. S. Boyd, Dave Creelman, Jno. F. Lewis, E. W. Lewis, J. F. Stoddard, O. J. Bannon, Jno. Hancock, E. M. Boyer, C. C. Anderson, H. J. Levis, L. G. Hanna, etc.

The day was extremely cold and stormy, the shooting being done under difficulties as a result. The birds were an excellent lot throughout, and the scores were good under the circumstances. After the first quarter Jones weakened considerably, and Clark finished an easy winner. After the first thirty birds were shot at there was not a doubt as to what the result would be. The run of the birds was pretty evenly divided. The race was for $100 a side and expenses. Scores:

W. M. C. Jones	0222222222202222002*22222—20	
	0002202222202222220202220222—17	
	222222*2022222022222*2222—21

	2222222231022112211121200—22—84	

The next match will be shot at Pittsburg on Wednesday, Jan. 30.

There were two other matches also shot at the same place, and on the same date as the above match. One was a match which has been pending for some time; the contestants were Ed. Kottman and W. F. Tappan, both well-known members of the Altoona Rod and Gun Club, and both of them capital shots in the brush. The conditions of the match were 25 live birds, $20 a side, loser to pay for the birds, Rhode Island rules. Kottman was an easy winner by three birds; "Tappy" starting out very poorly, was never dangerous. W. G. Clark refereed this race.

The other match, refereed by W. Sands, was between W. G. Clark and J. H. "Kane," the latter having challenged for the Keystone Top Shot Wad Company's medal, held by Clark. The scores in both matches are as follows:

Match, 25 live birds, $20 a side, loser to pay for the birds, Rhode Island rules.

Kottmann	1101111111*11*0*01101101—17
Tappan	*1001110101110011101100 10 —14

Challenge shoot for Keystone Top Shot Wad Company's medal; 20 live birds, 30 yards rise, 50 yards boundary:

"Kane"	22*02220211110221112—16
Clark	2211111122122*2*2221—18

GRANT.

Live Birds on Horicon Marsh.

Horicon, Wis., Jan. 23.—An interesting live bird contest between J. M. Yorgey and F. A. Melcher took place Jan. 20th at the club on Steamship Island at 70 birds each for a consideration, and price of birds. The party, consisting of the contestants, their families, John Little referee, Chas. Dowe, trap puller, and several others, bundled themselves into sleighs and started the day's programme with a six mile ride on as fine ice as one could wish for to the Island, where fires were built, and after a good warming up, the shooting commenced in a dense fog, which hung over the marsh like a veil. As the first string

of 25 was finished the women folk called dinner, and found every one ready, as we all expected the fog to blow off by the time we had finished dinner. However, we were sadly disappointed, the fog was thicker than ever, and before the shoot was finished had turned into a fine rain; at times the birds could hardly be seen, especially the white ones. They were a picked lot of old birds and would make any shooter smile Everything considered, the scores are much better than they look. American Association rules governed the match.

Morgan Shot A Good Race.

Willard Park, Jan. 12.—There was an interesting match shot here this afternoon between Gus Freche, of Newark, N. J., and Ed. Morgan, of the Patterson Gun Club, at 50 birds each, $50 a side, Hurlingham rules, 50 yards bounds, 30 yards rise. The weather could not have been improved upon as it was an ideal day for shooting. The grounds were heavy with mud, making it hard work foi the dogs. Quite a large crowd was present to witness the shooting, considerable interest being taken in the result of the match. George Hopper was referee, H. Wolf pulled the traps, while Chris Reinhardt turned the indicator. The birds were a good fair lot, mostly dark in color, some of the birds trapped were as good birds as ever any man shot at. Morgan was never headed after the 20th round, running out the conqueror by five birds, his score standing 43 to Freche's 38. Score:

Terry vs. Hopper.

Scott Terry, of Plainfield, N. J., and Garry Hopper, of Paterson, N. J., shot a race at 50 live birds each for $100 a side on Jan. 22, Terry beating this man by 5 birds. The score stood 36-31 at the end of the 47th round when Hopper retired. The following were among those present: T. W. Morphey, Chris Wright, Eddy Morgan, Bunn, H. Wolfe, Harry Folsom, Frank La Mott, Tom Brantingham, John Benner, "Dutchy" Smith, Neaf Apgar, Jerry Maher, Al. Heirtage, etc. Score:

Match, 50 live birds, $100 a side.

Krueger—Ertter.

York, Pa., Jan. 20.—The second Lion Bird Match between A. C. Krueger, of Wrightsville, and C. R. Ertter, of Gettysburg, was shot on Friday, January 18, on the historic battlefield of Gettysburg. The conditions of weather and light were about the same as on the occasion of the first match, the light perhaps being a worse one; the grounds, background and arrangements generally left much to be desired. Nothing was done to keep the spectators away from the score, and at times the shooters could only with difficulty reach and leave the score. The attendance was quite large, York, Harrisburg, Christiana and many other surrounding places being represented at the gathering. The birds proved rather an uneven lot. I remember in particular three individuals which were positively the best birds I have ever seen leave a trap, not excepting the bird on which E. D. Fulford dropped out of the tie for third place in the Grand American Handicap at Dexter Park last year, which I always thought was one of the hardest birds of my experience.

The retrieving was done by an eight-year-old son of the famous Irish setter champion "Brush." This dog, "Oro Fino," is the property of R. M. Sefton, of Gettysburg, and is a splendidly bred dog, and although carrying good age and an excess of fat, stuck gamely to his work, and never hesitated to retrieve every bird of the match; by his clever work he saved both contestants several birds. The scores, although not in the nineties, must be looked upon as good ones, considering the disadvantages under which the shooting took place. Krueger was not at all well on this occasion, suffering from a severe cold. Both men did fine work. Ertter started in with a strange gun and missed three out of his first six; he then went back to his own gun and finished in something like his old form.

H. A. Dill, of Harrisburg, acted as referee, George Bushman, of Gettysburg, as official scorer, and M. J. Corcoran, of York, as trap-puller. The following are the scores:

Krueger.....1112222102212202212112210—21

CUMMINGS—TAYLOR.

January 24.—A very interesting Live Bird match was shot on Tuesday, January 22, between Dr. W. G. Taylor, of Columbia, Pa., and W. Park Cummings, of Lancaster, Pa., at Hambright's hostelry, on the Lancaster and Columbia Turnpike, about three miles west of Lancaster. The match was shot under American Association rules, 100 live birds a man, $50 aside. Aside from these stakes close to $1,000 changed hands on the result of this match. The birds furnished by Mr. Hambright were a splendid lot, not over a half dozen of the lot refusing to fly when the traps were sprung, and most of them leaving the trap like streaks. The shooting was of the hardest kind, the ground being covered with snow and a stiff, raw wind blowing from the southwest across the traps. Physically the two men form a marked contrast, Cummings being a picture of health and weighing well over two hundred, the doctor, on the other hand, being much smaller. Cummings' experience in shooting individual matches gives him an unquestionable advantage over the doctor, who had no actual experience of the kind. Another match between the two men is spoken of. Messrs. Duffy, of Marietta, and Grube, of Lancaster, acted as judges, and Wylie, of Lancaster as referee.

Cummings.....220222111*12*0212221*2011—19
1*2200222111*2121*2102121—19
2112*2020221222012211122—21
11220221120—68
Taylor.....0221*0011002212202001201l—15
0100001001121011202200*00—11
1022014001012222212*110*11—17
2201212110—8—51

As will be seen from the above, Taylor had four dead out of bounds, while Cummings had seven. The element of luck was rather in favor of the latter. Of the better birds, Cummings' fourth, thirteenth and forty-first, and Taylor's tenth and forty-ninth were veritable, "corkers." Some of the best kills were made on the following birds: Taylor's sixteenth bird from trap No. 5, a very swift left quarterer, missed clean with first barrel, was cut down as clearly with the second; his eighteenth, a bird from No. 4 trap, a speedy right quartering driver was scored in the same manner; his eightieth, a straight, strong driver from No. 5 trap, was probably the most difficult second barrel kill in the doctor's string. Cumming's thirteenth, a fast direct left quarterer from No. 5 trap was hit hard with both barrels, but dropped out; his twenty-seventh from No. 2 trap taking the same flight was also hit with both barrels, but also fell dead just outside of the line, in fact so close to the line that the judges and referee lost quite a little time in coming to a decision. Some of his better second barrel kills were his thirty-third, thirty-ninth, forty-first and forty-fourth, the latter being the star second barrel kill of the day.

After the conclusion of the match and after the thawing out of frozen limbs a ten bird sweepstake, $5 entrance, was shot. Ten shooters entered the event. Score:

Kendig	0222222222—9	Duffy	0121211200—7
Franklin	1122012012—8	Grube	1011222001—7

YORK.

Fred Hoey at the Gun Club.

The English Field, of Jan. 19., contains the scores made at the Gun Club's meeting of Jan. 12. These scores are of interest to Americans as they contain the first data in regard to Fred Hoey's campaign in London and at Monte Carlo during the next few weeks. A record of 6 out of 9 does not sound very encouraging, yet strangely enough with that record, he divided the second event with the score of 4 out of 5. The lowness of some of the handicaps will surprise all who have never shot at English bluerocks. All events and miss are out. No. 1 was the New Year's Cup, value, $100 or specie, added to a $10 handicap sweepstake; No. 2 was a $10 sweepstake, 30 yards rise; No. 3 was a $10 handicap, same handicap as No. 1. Scores:

	No. 1.	No. 2.	No. 3.

Good Scores in a Gale.

When George Work and J. P. Knapp entered into an arrangement to shoot a race at 100 live birds, they completed the preliminaries for one of the most interesting matches that will find a record as one of the events of this year of 1895. George Work's reputation as a shot has been assured for the past two or three years. He is to-day, in all probability, the best man on fast birds, 21 yards boundary, in America, nobody barred. Knapp, on the other hand, is a man who has come to the front comparatively recently. The general public, who, perhaps, know him better as "J. K. Palmer," only began to realize that he was a dangerous man short time before Christmas; the members of the various clubs of which he is a member recognized early last fall that "Joe" Knapp's form was rapidly improving. At Carteret his handicap was 29 yards to Fred Hoey's, George Work's and L. H. Thompson's 31; that was last year. The way he made the cracks hustle in the cup contests at that club, particularly in the last three contests of the year, added one yard to his handicap, but still he was not placed on an equal footing with the three above named. It required his record of 95 out of 100, made in the Larchmont Club's championship $100 sweep, January 11 and 12 of this year, to make people fully acquainted with the excellence of his work with the gun. After that event a match with George Work on even terms was by no means considered a cinch for the latter. In 'Drivers and Twisters" in Forest and Stream of January 19, I said that "a match between George Work and Knapp on even terms, 30 yards rise, 50 yards boundary, woud be a capital betting race; at 21 yards boundary Work woud seem to have an advantage; he is quicker, and his lightning second barrel is a great advantage under such conditions." That's what I wrote, but the printer, though he knew what I meant better than I did. He therefore elminated the semi-colon after the word "race," and placed a period after the words "21 yards boundary," fixing things to suit himself.

The result of the race shot one Wdnesday, January 23, the Westminster Kennel Club's grounds, Babylon, L. I., shows that I was not very far wrong in my estimate of the two men's powers. On ordinary good club birds it would be nip and tuck. That day, with a strong gale behind the birds, Knapp was beaten by three birds. The conditions being 21 yards boundary, the majority in favor of Work would probably have been close to double figures. As it was, Knapp's showing on such birds as those provided by Superintendent George Mott was an excellent one, when the disastrous start he made is cosidered. The wind that day was blowing strongly from the west in New York City; at the Westminster Kennel Club's grounds that westerly wind attained the dignity of an able-bodried gale the sweep over the even country of Long Island beingno bar to its progress. Prior to commencing the shoot, the Old Glory that waved from the club's flagstaff had to be hauled down to save it from being blown to pieces.

Shortly before noon Work shot a few practice birds, and was quickly satisfied that his time and aim were all he could expect under the existing conditions. Knapp, however, was utterly at sea when he went out to shoot his "byes." Bird after bird got away from him, some untouched, others hit hard but not fare enough forward, while others again fell dead out of bounds. It was not until he had managed to kill three straight that he expressed his readiness to start the match. Work stepped to the score at 12.01, and the race was on, with a dead out of bounds to his credit as a starter. Knapp killed a fast left quarterer and led by one bird. The second round saw the score tied, when Knapp only feathered a driver from No. 2 trap. His fourth bird, a driver from No. 1, fell dead over the line, giving Work the lead at the close of the first 25 Knapp was three birds in the rear, with 18 to Work's 21; in the next 25 that lead was reduced to a single bird, Knapp killing 22 to Work's 20, the score for the first 50 pigeons being 41—40 in favor of Work. The 52nd round saw the score a tie once more, when Work lost a very fast driver (dead out of bounds), from No. 5 trap. Ciphers were very numerous just then; Knapp lost his 53rd and 54th birds, both dead out of bounds, Work losing also his 54th and 55th birds. The last cipher again tied the score. Then Work had his 63rd bird, a towering driver from No. 1 trap, playing a mean trick on him; he hit it hard with the first, and apparently killed it stone dead with a second barrel stop that called forth a generous round of applause. Just as the dog reached it, up got the pigeon and was over the boundary before the dog managed to retrieve it. This gave Knapp the lead for the first time since the second round. He didn't keep the lead for more than a few minutes, as his 67th bird, a twisting driver that towered as it left No. 1 trap, getting away without apparently losing a feather. At the end of the 57th round the score was still a tie, 62 everybody. Each man then killed five straight, the 80th round finding both men credited with 67 kills. Then Knap let his 81st bird, a driver from No. 2, escape him, but Work evened matters up once more when he missed a twisting driver from No. 2 in the 83rd round. Knapp's 84th, an incomer from No. 1, somehow or another managed to get over the dead line, notwithstanding the strong wind. Again Work tied the score by losing a driver from No. 2 in the 87th round. Both men killed their 88th birds, the score being a tie, with but 12 more birds to shoot at. Out of that 12 Knapp lost his 89th, dead out of bounds, also slipping up on his 91st, 93rd and 99th birds, whereas Work only missed one, his 92nd. After such a close fight for the 50th rund, Knapp's defeat by three birds at the very finish of the match was a surprise to his friends, particularly as he had shot such an uphill race from the very beginning of the match, the 26th round ending with Work in the lead by four birds. The extraordinary quality of the birds, aided as they were by a gale directly behind them, makes the scores good ones, notwithstanding their comparative lowness. Prior to the commencement of the match it was acknowledged as a pretty sure thing that 85 would win; the only bet Work said he'd make on the result, so far as birds were concerned, was that he'd kill 83!

The luck of the birds was apparently somewhat in favor of Knapp, as the table given below will show; his slightly slower time, however, enabled his birds very often to become hard when quicker work would have stopped them close to the traps. He materially improved his shooting in this respect during the last 75 birds; given a little more practice on birds as fast as those were on January 23, he'll be a hard nut for anybody to crack. The following gives the flight of the birds:

	D	LQD	RQD	LQ	RQ	LQI	RQI	I	HorT
Work	42	27	17	7	3	—	—	3	1
Knapp	39	27	9	11	5	2	1	4	2
Totals	81	54	26	18	8	2	1	7	3

The above shows that out of the 200 birds trapped, 161 had outgoing tendencies, over 50 per cent. of that number being actual drivers.

In the fall of the traps, Work drew a majority of No. 3 and No. 5. The even manner in which all the traps fell to Knapp is worthy of note:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.
Work	14	22	26	13	25
Knapp	22	21	20	17	20
	—	—	—	—	—
	36	43	46	30	45

The time taken to decide the match was two hours and six minutes, as follows: 1st hundred—62 minutes; 2nd hundred—64 minutes. The extra two minutes in the last half of the match was due to a slight falling away in the strength of the wind and also to the fact that a gatherer was sent ont twice to retrieve doubtful birds. Work had five birds drop dead out of bounds to Knapp's eight; had these birds been scored to each of them, the totals would have shown 89 apiece. George Mott, superintendent of the club's shooting grounds, acted as referee; his duties were very light, there being but one or two close things for him to decide.

Match, 100 live birds, 30 yards rise, 50 yards boundary:

George Work.....*12222122*0221022222222212—21

Magoun (26)	010 — 1	111110—5
Ewing (26)	1110111110— 8	111111 6

George Work and P. H. Morris also shot a 5 bird race for $25 a side, Work to stand at 30 yards and use one hand, Morris to stand at 24 yards with the use of both hands. Work won with the score of 3 out of 4 (one dead out of bounds) against his opponent's 2 out of 5. On his fourth bird Work made one of the most phenomenal second barrel kills ever made on these grounds, killing a fast driver from No. 5 trap when the bird was fully 30 yards from the traps.

EDWARD BANKS.

Bronx River Gun Club.

West Farms, N. Y., Jan. 26.—The Bronx River Gun Club held its regular monthly shoot at targets this afternoon. The class A medal was won by B. G. Loomis; in class B, H. Fensterer and W. L. Hall tied with 12 each, Fensterer winning on the shoot off; M. Lipps won the medal in class C. The next club shoot takes place Feb. 9, at live birds.

Club Shoot for Medals, 25 Targets per Man.

JOHN T. MURPHY, Secretary.

Union Gun Club's Tournament.

The Union Gun Club, of Springfield, N. J., held a two days' tournament January 22 and 23 at its grounds near Springfield. Various causes militated against a large entry list, but those present had a good time. On the second day the wind blew almost a gale, making the targets at times very erratic in flight.

Scores of both days:

FIRST DAY.

No. 1, 10 Empires, $1.00: Sigler 7, Miller 8, Thomas 6, Hoffman 7, Drake 9 Hebbard 9, Jackson 7.

No. 2, 10 Empires, $1.00: Sigler 8, Miller 10, Thomas 7, Hoffman 9, Drake 10, Hibbard 8, Jackson 8.

No 3, 15 Empires, $1.50:

Sigler .....111111111111111—15 Hebbard ...111010011101111—11
Miller. .... 111111011111111—14 Drake.....111111111111100—13
Thomas.....110011111101110—11 Jackson .... 111111110110101—12
Hoffman. ...101011010111111—11

No. 4, 10 Empires, unknown angles, $1.00: Thomas 7, Drake 8, Hoffman 10, Lindsley 6, Vandyke 7, Sigler 7, Miller 9, Jackson 5 Chase 5.

No. 5. 20 Empires, $2.00:

Vandyke	11111111111111111011—18
Drake	11111111100111111110—17

No. 10, 10 Empires, unknown angles, $1.00: Miller 7, Hoffman 9, Jackson 6, Drake 8, Williams 9. Woodruff 7, Eager 4, Sickley 7.

Some Suggestions Worth Noting.

MASSILLON, O., Jan. 12.—*Editor Forest and Stream*; With the last issue of Forest and Stream, I see that a long cherished dream is about to be realized. War has been declared! The enemy, Pooler, Dropper, Kicker Boor, et al., are already trembling in their shoes. The call to arms, bearing the signatures of honest, ardent sportsmen is the opening gun and the battle will be short and decisive. If the shooting public are what they ought to be, they will rally to the support of these gentlemen at once and help them to accomplish the desired end. There is something good to come out of the year 1895 after all. We are about to place trap shooting on its proper level, with kindred American sports. With the call for a convention of trapshooters, such as you have just published, having such a commendable object in view, and backed by the signatures of men whose honesty of purpose is unquestioned, every trapshooter in Amreica who has a drop of true honest blood in his heart, should offer up a benediction of thanks to Forest and Stream for its good work in bringing this about, and should do everything within his power to aid and assist the movement.

I regret exceedingly that the meeting could not have been held at a point nearer the geographical centre of the trapshooting world, for it is highly important in organizing bodies of a national character that all parts of the country should be well represented in order that unanimity of opinion may be reached. I also join you in your expressed regret that the call does not contain the names of some of our well-known Western shooters, but while I, like many others, will find it impossible to be with you in person at the convention, I feel sure that the Western element is thoroughly in accord with the Eastern and Southern gentlemen who have signed the call, and are satisfied to await the final outcome of the meeting, safe in the assurance that the undertaking is in excellent hands.

While you are about it, gentlemen, do not stop at a simple house-cleaning of the sport, which will do away with dirty work at the traps, but go farther and establish a national organization of trap shooters which will give us a clean fraternal organization which gentlemen will be glad to join. I would respectfully urge upon the meeting the desirability of considering a plan of organization somewhat similar to that of the American Wheelmen, as suggested by "National League," in a recent issue of this paper. I have been a member of that body for many years, during which time I have held a number of its important offices, among them chairman of its racing board, and am somewhat familiar with the work of the organization and its most excellent results. It is to-day the largest amateur athletic body in the world, and its growth and popularity is phenomenal, which fact proves conclusively that its rules and their rigid enforcement are sound in every particular, and while, of course, it will be necessary to make many changes in the constitution and by-laws, in order to make it fit trapshooting, I think a careful examination of its general make-up will reveal many important ideas which will be of great benefit to the proposed trap-shooter's league. Especial consideration should be given to the rules of the L. A. W. racing board. Through this board the cycle racing of the entire country is controlled. In their hand lies the fate of any man who is guilty of violation of the rules and the prompt manner in which these rules are enforced has made bicycle racing one of the cleanest and most successful sports in the world, and it is to-day entirely free from foul play, underhand, ungentlemanly attributes. Trap-shooting can be made as clean, and the new organization intends to make it so.

There is no doubt in my mind about the fact that considerable questionable work is done at most of our tournaments, but it strikes me Mr. Hough's ideas of the sport are very largely overdrawn. If we have been associating at tournaments all these years with touts, cutthroats, ringers, confidence men, etc., etc., etc., as he claims, it is a wonder that we have not all been contaminated, and that we are allowed to live in decent communities. If our wives ever get a peep at his article, we will all have to sell our guns, or confine ourselves to field shooting. I sincerely hope that the meeting will be well attended, and that by this time next month the new organization will be an established fact.

GEO. S. ATWATER, Tuscarora G. C.

Kelley Gun Club's Tournament

Des Moines, Ia., January 17.—Enclosed please find scores made yesterday at the tournament of the Kelley, Iowa, Gun Club. The weather was cold and blustery, the scores, in consequence of the weather and lack of practice, being by no means good ones. Among those present were Grubben, Peterson and Hamaker, of Randall; Hicks, Milner, Kirshaw, Whitney and Budd, of Des Moines. Scores:

No. 1, 10 targets, $1.00: Hamaker 6, Williams 9, Gray 3, Swede 10, Freese 8, Gubben 7.

No. 2, 15 targets, $1.50: Gubben 13, Hamaker 12, Williams 12, Freese 12, Sweede 12.

No. 3. 10 targets, $1,25: Hamaker 8, Milner 7, Williams 5, Grubben 8, Budd 6, Hicks 8, Sweede 8, Freese 8, Kirsher 8.

No. 4, 5 pairs, $1.50:

Milner .....11 11 11 10 10— 8 Freese.....11 11 10 11 10— 8
Budd.....11 11 11 10 10— 8 Grubben ....11 11 11 11 11—10
Hamaker....00 11 00 10 10— 4 Hicks.....11 10 10 11 10— 7

No. 5, 15 targets, $1.50

Budd	111011111101101 12	Williams	011100111101101 10

No. 13, 15 targets, $1.50: Freese 14, Hamaker 11, Milner 15, Budd 13, Grubben 14, Williams 10, Alfred 11, Kirsher 14, Sweede 10.

No. 14, 10 targets, $1.00: Freese 9, Hicks 7, Budd 10, Martin 3, Hamaker 6, Grubben 9, Milner 9, Kirsher 10, Williams 7.

No. 15, 15 targets, $1.25: Freese 11, Budd 13, Grubben 14, Milner 14, Grey 10, Kirsher, 11.

C. W. BUDD.

Annie Oakley On the Stage.

Miss Annie Oakley, who is now starring in "Miss Rora," in all the principal cities and towns of Great Britain, is making quite a hit according to reports received from her. The following is clipped from a long notice which she received in a Hereford (England) daily: "Miss Annie Oakley's abilities as a shot are equally well-known in England and America, and in the first act she entertains the audience with a remarkable performance in this direction, proving herself to possess almost dexterous and unswerving aim. She is also a lithesome actress, and sustains the role of Rora with much vivacity, seeming to be completely enthralled with her part. The last scene in which she appears with her trained horse and a small pack of fox hounds, is very effective." In addition to appearing on the stage in Hereford, Miss Oakley has been giving the Britishers a taste of what she can do behind a flying pack of hounds over the stiff country that is met with in Herefordshire.

Cos Cob Gets Even.

Rye, N. Y., Jan. 19.—The postponed shoot of the Cos Cob and Rye gun clubs was shot at Cos Cob January 17. About twenty five friends of the Rye Club attended to witness the sad defeat of our boys by the score of 128 to 79. The unusually poor shooting of the members cannot be accounted for, or excuses given as the grounds, traps, targets, etc., were all that could be desired

The shooting, in general, was far from the club's average,, Mr. Bulkley being the only local shooter to make a favorable score. The "boys" are not discouraged, but take their defeat kindly, and are anxiously awaiting the third shoot of this series. This will occur on the Rye Club's grounds during the latter part of January. They will then endeavor to "load up" once more.

Team race, 9 men teams, 25 targets each.

E. J. POPE, Secretary.

The Question of Handicapping.

Editor Forest and Stream:

I have been watching your columns with additional interest since the crusade against modern methods of trap-shooting has opened, and have read all the various trains of thought suggested by various gentlemen, all interested in the assassination of the "combines" and "droppers" and other malodorous attachments to a tournament of the day, and the possible but extremely improbable equalization of two unequal things—*i. e.*, the expert and the so-called amateur.

The extinction of the gambling element seems to me an easy task at all large tournaments if the management get down to business and *stick*. No man of a dozen I know will shoot crooked so long as every one else goes straight; but it is against human nature to have the ability to place one's self where there is most money and not do it, where it is the rule and not the exception for every one to do the same thing.

The result of the Memphis and Knoxville tournaments will be looked for by hundreds who long for genuine sport at the traps.

Agreeing that such drawbacks can be removed, there remains what, to me, seems an insuperable obstacle, viz., equalizing two opposing elements in a tournament—the expert and the amateur. By expert we mean the man who goes from one tournament to another either as the accredited representative of some firm or sufficiently expert to render it a means of at least winning expenses; by amateur we mean the man who shoots in a desultory sort of way, perhaps once a week, certainly not oftener than twice; he is used to a quiet shoot, the pools, if any, are small, the competition not great, and his scores range up in the nineties.

This man goes out to a tournament where the conditions are totally different to any he is acquainted with, and he is a loser. He kicks then, and wants the expert handicapped to his class. Why? To make the expert a loser and himself a winner.

Now, I am an amateur myself, and yet, honestly, I cannot see why any man who, by reason of ability or practice, becomes an expert should be handicapped to place him on a level with others who are unable to get into his class. But how is it possible, without being unfair to the expert, to adopt a method where each will be able to shoot on a plane of equality? To me it seems like trying to mix oil and water. Any one of a dozen schemes to thus handicap the expert seem to be plausible; but is it a fair thing to do?

It seems to me that the plan of hiring an expert to show off sporting goods and entering him in the events of a tournament on the same level as the man who puts up his own money is not fair to the amateur. It seems to me that these paid experts would be just as larged-sized advertising cards if they were present at the tournament as exhibition shooters and not as competitors, especially as the manufacturers are themselves not only profiting by the enormous sales of guns and ammunition stimulated by tournaments. They are not only reaping the harvest from their sales, but getting their expenses of advertising back from the winnings of their paid expert advertisers.

The general equality of amateurs is more nearly equal; few of the many who attend our tournaments have more advantages for practice than others, hence it seems to me that this question hinges upon the admission as competitors in the pools of paid experts, and a proper method of handicapping amateurs.

If men tell the truth, all they want to do at a tournament is to come out square; if this is true, winners of first money in any one event have no business in the class in which they won, certainly until they fail to win either first, second or third in another class, but placing them up with experts whose whole time and sole business it is to win handicaps them too severely.

The fact is that just so long as money is the attraction to our tournaments, just so long the losers will be calling for handicaps. It has been my experience that no winner has ever been heard to want anything better than the game at which he wins, and until some scheme is evolved wherein the entrance money cuts but a small figure in the possible amount a man can win just so long will trap-shooters be anxiously looking for a plan whereby a 60 per cent. man can win from a 90 per cent.

SAM'L J. FORT, M.D.

ELLICOTT CITY, Md.

DRIVERS AND TWISTERS.

A new gun club has been organized under the title of the Holley (N. Y.) Gun Club. Its officers are: President, B. B. Atkins; Vice-President, C. Frank Bennett; Secretary, A. G. Southworth; Treasurer, Floyd Storms; Shooting Master, Dayton F. Groves; Executive Committee, B. B. Atkins, A. G. Southworth and Edward Peck.

The officers of the Pittsburg (Pa.) Gun Club for 1895 are: President, George E. Painter; Vice President, Samuel Shaner; Secretary-Treasurer, E. E. Shaner; E. E. Shaner; "Old Hoss" and "Jim Crow" form the Board of Directors.

The Kensington Gun Club, of Philadelphia, Pa., has elected its officers for 1895 as follows: President, J. F. Schauffele; Vice-President, J. Link; Secretary, R. Walters; Treasurer, C. Baumann; Field Captain, T. Doell; Official Scorer, F. Guenther.

Although Mr. Bowman, of Hamilton, Canada, stated that he would mail us papers giving an account of the Brewer-Cockburn match, shot at Hamilton on January 18, no papers have reached me. As the whole matter is now in the hands of the law, it will be better to let the affair rest until it becomes a matter of record in the Canadian courts.

The Newark (N. J.) Gun Club held a most successful shoot last week. Twenty-seven entries in one event of 25 live birds is something for Secretary Green to plume himself upon.

At the Newark shoot the air was full of matchmaking. Elliott and Fulford agreed to shoot a series of three 100 bird races, $100 a side, at Marion, N. J., on February 19, 20 and 21. Frank Class and Tom Morfey were also matched to shoot a similar series of races for a like amount; the first race to take place at Morristown, N. J., February 7; the second at Willard Park, February 12; the third is set for February 19, but place was not named. Chris. Reinhart and Frank Class also made a match which was shot on Thursday of this week, January 31, under the following conditions: 50 birds, $50 a side, Class at 30 yards, Reinhart at 28.

It will be noticed that the first Class-Morfey match clashes with the live-bird day at Utica, N. Y., and that the date set for the third is the same as that for the first Elliott-Fulford match. Why couldn't this third match be shot at Marion, N. J., either before or after the Elliott Fulford match; The two events would be a big drawing card.

By the way, the Utica shoot is going to be a good one. Fulford says that they have got everything in first-class shape to give the boys a rattling good time.

Lynchburg, Va., Gun Club announces that they will give a two days' tournament on April 17, 18. This shoot will be held under the auspices of the Interstate Manufacturers' and Dealers' Association. As Lynchburg is easily accessible from all points South, as well as from the North, this shoot, coming as it does at the very commencement of the season should be an exceptionally good one.

New features this week are a three days' tournament of the Boston Shooting Association, to be held at Wellington, Mass., on April 9-11, and the annual tournament of the Kansas State Sportsmen's Association, at Kansas City, Kansas, may 21-23.

The following press clipping tells who possesses the badge emblematic of the live bird championship of the United States: The championship live bird shoot for $100 a side between Dr. Carver and George Kleinman, which was to have been held at Watson's Park yesterday afternoon, was forfeited by Kleinman, he being sick with the grip. Dr. Carver took the championship medal and half of Kleinman's forfeit money and returned last night to Kansas City. He was in good form for the match. In the morning he killed fifteen birds straight for practice.

It is said that Rolla Heikes will come East some time soon, and shoot a 100 bird race with T. W. Morfey, of Paterson, N. J.

E. D. Fulford, on January 23, tried conclusions with 50 pigeons, provided by Frank Class, the latter betting $50 that Fulford could not kill 45 out of that number. The birds are said not to have been nearly as good in quality as those provided for either Brewer or Hill, yet Fulford only just managed to squeeze through with exactly 45 kills.

Altoona, Pa., Jan. 24.—The Altoona Rod and Gun Club held its annual meeting January 19. The following officers were elected for the year: President, G. J. Bell; Vice-President, W. W. Wilson; Treasurer, R. H. Fay; Secretary, W. G. Clark; Captain J. F. Killitts; Directors, Ed. Kottman, J. K. Roush, W. E. Bell, G. G. Zeth, F. Bender, W. S. Bookwalter, C. F. Slottenberg. A review of the past year shows the club to be in a healthy condition, with a membership of 129. It was decided to hold a two days' target tournament on June 25 and 26.—

Clashing of Dates.

As the approach of every tournament season the same trouble of clashing dates is encountered to a greater or less extent. This is apparently unavoidable, as many fixtures are sent in during the same week, the dates chosen having been previously unclaimed. Sometimes this clashing of dates occurs through inadvertence, or through parties being unaware of a supposedly priority of claim. Although this clashing causes a slight trouble, owing to the necessity often times of another change of dates, the clubs which happen to have chosen the same dates generally come together and agree upon a change for one or the other.

The following letter from T. A. Divine, president of the Memphis, Tenn., Gun Club, explains the change of dates for that club's annual tournament next June: "When we selected our dates for our annual tournament, we were not aware of the fact that the Illionis State shoot had for years claimed and held dates 3rd to the 8th, and in deference to and out of courtesy for this association, we have decided to postpone our dates, and will claim the 11th, 12th, 13th, and 14th of June."

Another instance is the claim made by the Saratoga, N. Y., Gun Club for June 24-28, as the dates on which the New York State Sportsmen's Association's annual tournament will be held. The Altoona, Pa., Gun Club last week announced that it claimed June 25 and 26 as the dates for its annual tournament at Wopsononock. The tournaments of this club have always been largely attended by New York shooters, so that it looks as if it might be advisable for that club to change its dates

Could not this clashing of dates be done away with, or at any rate reduced to a minimum, when a national association is formed, by having all claims for dates made to the governing body, the claims being filed as received? In case of a conflict of dates, the secretary of the club that applied last could be informed at once that the dates claimed by his club were already secured. Of course, as a rule, tournaments could be held simultaneously in the East, North, South and West, without either endangering the success of the other. It is only tournaments on a large scale and those held in adjoining States that need any consideration.

Newark City Handicap.

Twenty-seven men put down their names on the entry list for the Newark City handicap, at Erb's Grounds, Newark, N. J., on Thursday, Jan. 24. Among the number were such cracks as Elliott, Fulford, Morfey, Class, Capt. Money, Van Dyke, Clark, Capt. "Jones," Lindsley, Eddie Hill, etc. With men of such calibre entered, it looked dollars to doughnuts that a straight score would be made. Such, however, was not the case, 24 being high, and only two being in first hole at that. Elliott and Capt. Money both missed their last birds, falling into second place with no less than six others; that 25th bird would have been worth a good deal to either of them. Owing to the large number of entries, it was impossible to finish the event on the first day; it was finally decided on Friday afternoon. Scores:

Newark City Handicap, 25 live birds, $16.25 entrance, including birds:

Capt. Jones, 30	1110221121121112112222121—24

C. Zwirlein, Eddie Hill C. W. Smith, G. Piercy, Dickson, and Scott Terry, withdrew.

New Utrecht Gun Club.

The New Utrecht Gun Club had a 25 live bird handicap sweepstake on Wednesday, Jan. 23, at the grounds at Woodlawn, L. I. The entrance money was only nominal, $5. birds extra. Capt. Money and C. M. Meyer were easily top scorers, with 23 each, their nearest opponents being M. F. Lindsley who scored 19. It is only fair to say that no less than five out of his six cyphers were scored to him for birds that fell dead out of bounds. Capt. Money seems to have found his form again, shooting in quick time and killing his birds well; he was shooting Du Brays' gun on this occasion, a Parker with Whitworth fluid steel barrels. Meyer is just now shooting in very good form, and is a hard man to beat; his score of 23 on birds like those trapped in the event is a capital one in every respect. The following tells the tale:

Capt. Money, 30	2211220111122112022212212—23
C. M. Meyer, 30	2222221022022222222222222—23
M. F. Lindsley, 30	0222222*22222*2222*2*22*2—19
W. Lair, 28	1020111102001211*2210111—18
H. P. Fessenden, 28	02*22220120111121002102012—18
D. Littlefield, 28	0211001120*21212222202120—18
C. T. Pennington, 28	1022020001200211102221222—17
Gus Greiff, 30	*0201*02222220*22202022222—16
A. W. Du Bray, 28	*1110202201212210110l0 w.—15
Dr. Parker, 28	0022212020121210012200w.—14

NEW YORK, January 23.—The club held its regular shoot to-day at Zettler's, 219 Bowery. The following scores were made, off hand, German ring target, 75 feet, any rifle, sights and trigger pull, two best scores to count:

A. H. Isbell, 71	246	245
C. C. King, 65	241	246
M. Herrington, 63	245	245
T. Lloyd, 63	241	244
Geo. Shorkley, x	240	242
R. J. Young, 64	240	242
C. E. Genoch, 64		242
G. L. Mason, 51	228	230

R. J. YOUNG, Secretary.

Knoxville Gun Club.

KNOXVILLE, Tenn., Jan. 4.—*Editor Forest and Stream:* Being fully aware of the lack of interest that at times possess the membets of a gun club to go out and shoot, we herewith briefly state the plan adopted by this club for its '95 club contests. This scheme was tried during '94 with success, and the following is an improved addition:

Club Days—Every other Saturday in the afternoon.

Purses—$75 by the club, and all challenge fees added, to be divided into 40, 30, 20 and 10 per cent. at end of season.

Conditions—16yds. rise, rapid fire, known traps, unknown angles, 25 targets, class shooting.

Handicap—Allowance of targets—*i. e.*, the poorer shots to shoot at say 32 targets on down to 25, which equals the scratch man—to be determined by genetal six or twelve-months' averages of each member, and to be corrected every two months by the handicap committee.

Plan—The secretary issues to the highest scores—class shooting—three "certificates of merit" (one to each class) of equal value toward winning the prizes. The four members holding at end of the year the greatest number of certificates win the four cash prizes respectively.

RULES AND REGULATIONS.

1. All scores of 25 targets in regular order as shot to be each shooter's record to determine the winner of the regular club certificate contest. The first 25 shot at on the grounds to be counted as his club certificate record, or win.

2. All ties shall be shot to a finish on same day of any contest, unless either party can show satisfactory evidence to the handicap committee for a postponement. The other party to the contest shall have no right in the decision of the case at issue.

3. Any certificate holder may challenge or be challenged by any other certificate holder upon payment of a challenge fee of 25 cents to secretary—but no certificate owner can contest at any time for more than three challenges, and then only on the regular club days.

4. All individual challenges shall be made after the regular certificate contest on club day. The right of challenge being with the lowest score and then in regular order up, one challenge to each and repeat—to not exceed giving and receiving three to each certificate holder. After leaving club grounds unfilled challenges to be open to all provided they are filed with secretary two days preceding the regular club day.

5. The challenger or challengee may for good cause hand in writing to the secretary a day before the contest his excuse to postpone a challenge contest to an agreed date before the next regular club day, otherwise by default he will forfeit his certificate of merit. A postponed challenge must be shot to a finish and shall not conflict with any regular challenges that may be in order to either, to be shot on the regular club day,

6. Any member absent from any regular club certificate contest can use up at the next club shoot he attends his back chances. He must shoot one, next after his regular certificate score, failing to win it; if he wins the regular club certificate in his class he then carries along with him this back shoot or shoots (chance or chances) to be used when he does fail. If he has more than one back chance to use up he can elect to do so in regular order of scores at each following club shoot or all of them on the same day.

This plan has proved entirely satisfactory in getting the boys out. Try it and see when about a dozen certificates are out if the fur don't fly on challenges, and then look out for friendly rivalry. To get a "yaller ticket" is the animating desire, as no fellow likes to be the under fellow in any contest.

Three cheers for the Knoxville Gun Club, and all have in their mind's eye visions of that $3,000 added money on May 21-24, '95.

How do you feel, boys? R. VAN GILDER, Sec.

Shall it be Speed or Nose?

Wakefield, Mass. Editor Forest and Stream: It is with great pleasure that I read articles in your paper from the pens of experienced beaglemen. While not as experienced in beagle work as some of your contributors, I believe, as a result of my observations, that breeders need to strive for courage, "hunt," nose and staying powers more than for speed in begales for practical work. I like a dog that has ambition, is not timid, and when cast off will get to work a tonce, going at a good clip and having the nose to back up his "hustle," not having to depend on a slow dog to work out the trail. Speed is desirable, but we should not be so carried away with the "speed craze" that we neglect the more necessary qualities of hunting and nose. A hustling man does not amount to much without a level head, and a hustling dog does not suit a practical hunter, unless the dog has keen scent. Too many begales of long pedigrees and of bench show stock, and some of fiel.-trial fame, have to be coaxed to "hunt 'em up," when the hunting ground is reached. Let breeders aim to produce dogs with the eagerness to hunt that spaniels have.

Mr. Kreuder, in your issue of December 22nd, says: "Speed without nose is all poppycock, and is a physical impossibility." I cannot agree with him, for I have seen beagles hustle a rabbit fast and true for quite a distance, but when the scent became weaker on less favorable ground, where it required a good nose to carry the trail, these dogs were at a loss until my dog Ringwood—Flute M. stock—nearly as fast, but with better nose, worked out the trail for them. Now, these dogs had speed surely, but were without the proper nose for such speed; so I claim, speed without a good nose is a physical possibility, and in too many cases a sad fact. Jean Valjean cannot be a dog of this sort, or he would not have rightly beaten Buckshot at Oxford. Jean must have the proper nose for his legs.

I once knew of a half-breed foxhound and Gordon setter that drove foxes very fast, and would take a fox away from any hound in this vicinity; but as his nose was not as fast as his legs, he would get a "check," and after the hounds straightened it out for him he would outrun them again. Now, which style of a beagle is the best gives the most satisfaction when hunted alone; the sprinter without the right nose, or the steady driving, keen-scented dog? I like Mr. Stoddard's letter in your recent issue, but do not like a dog with a "farmhorse" jog. I believe in the hustling, level-headed, sure-scented, staying road horse style of a beagle. RURAL.

Yachting.

The Origin of the Centerboard.

The following is taken from the Philadelphia Press, of January 20, and is at least amusing:

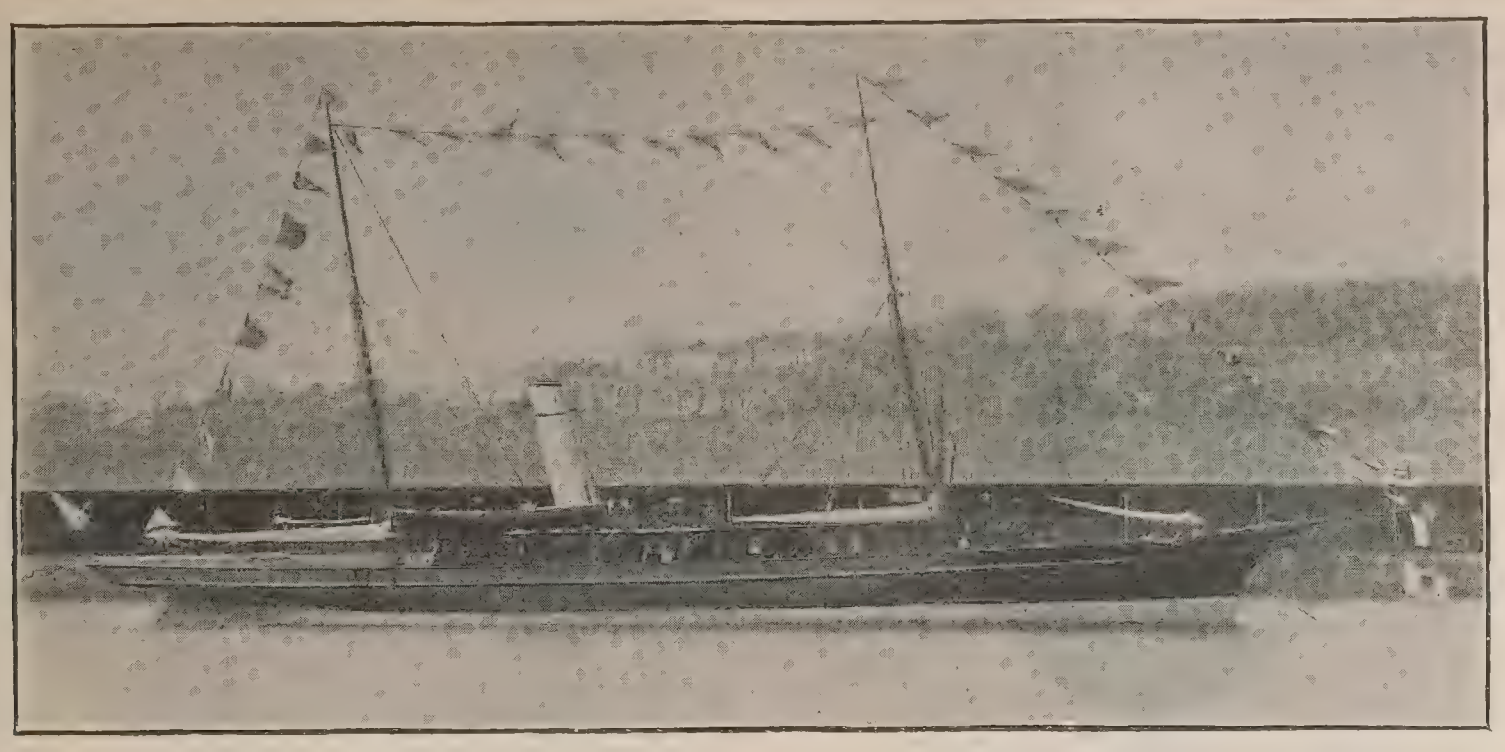
"Here of late considerable discussion is going the rounds as to the relative merits of the centreboard in vessels as being a distinctly American invention, and for that reason resting its chief claim for superiority.'

To Benjamin Franklin belongs the honor of having first perceived its utility. It was while working at his trade of printer in London that one day in crossing the Thames the strong currents carried the flat rowboat he was in down the stream, and it occurred to him at once that if a movable board were placed at the side and lowered as occasion required the boat would be less liable to be affected by the currents. This was done so successfully that lee-boards, as they were called, soon began to attract notice for use on shallow vessels, until ultimately they have developed into the more pretentious name of centreboards. It is a little singular that the change from lee-board to centreboard has not been, in the estimation of the profession, attended with anything like the advantage the original form first presented to Franklin's notice. One may see now but very rarely on those long, narrow, and as they are called, canal schooners, with their sides straight up and down as a brick house, the heavy, cumbrous looking lee-board, one on each side, about midway, slung in heavy chains on one end and pivoted on the other for raising or lowering. This was Franklin's idea of placing them on the sides, and practice has shown that in this position they are at their best, notwithstanding custom has relegated them to the centre of the vessel."

"The chief difficulty in placing lee-boards on the sides is in keeping them there. The same holds to a certain extent with the centreboard."

"Here, again, another problem presents itself, viz: Does not the keel in its rigidity bear the same relation to the moving vessel as does the fin. That is to say, if a rigid fin fails to hold a vessel up when close hauled on the wind how is it reasonable to expect a keel to do so when the construction is nearly similar?"

"To take a more familiar illustration, did any one ever see in running matches a sprinter making phenomenal speed with his arms (fins) rigid against his sides? There is a natural law that it may be well to quote, "Like causes produce like effects," and following up this line of reasoning the superiority of the American centreboard asserts itself and it ceases to exist as an abnormal growth. Broadly speaking, all pressure is in the line of least resistance."



"In the case of the keel and fin the resistance becomes greatest in their immediate vicinity, hence we cannot look for pressure when the least resistance is located elsewhere."

"With the water passing swiftly along a vessel's bottom and the blade of the board moving at will up and down constantly creates a least resistance vacuo, against which the water rushes with telling effect and the consequence is the 'end justifies the means,' the pressure of the water rushing against the submerged movable board forces the hull around toward the wind and holds her there until another change creates a vacuum when the same forces act again. It is the creation of vacuum that gives to the American centreboard its superiority over the rigid keel or fin."

"When we discard the appendage in our racing yachts we run the risk of losing the cup. The keel is good and far superior to the fin. The use of all three at their best is not absolute, but relative to high speed, therefore, the relation of keel with centreboards to use a Hibernicism to take the boat in places 'where the hand of man never put foot,' used in conjunction they become invincible. Designer Burgess believed thoroughly in this, with other things. See how heavily he leaned on the keel with the centreboard and how admirably both work together has been attested by the splendid victories of his yachts over the narrow, deep keeled English cutters sent over here to race."

The Voyage of the Sylvia.

The steam yacht Sylvia, whose name has appeared so frequently of late in connection with various startling reports, is a small craft, as modern steam yachts go, but trim and shapely, of 130 ft. B. P., 18 ft. 6 in. beam, 9 ft. 4 in. depth of hold and 10 ft. 10 in. in draft. She was designed and built in 1882 by the firm of A. Stephens & Sons, at Glasgow, of iron, with four bulkheads, and is still classed 100 A 1 at Lloyds, with a star, denoting special survey. Her engines are two-cylinder compound 17 and 28x27 ins. of 60 H. P. Late last fall the yacht was purchased in London by Capt. Arthur H. Clark, of New York, for Vice-Com. E. M. Brown, of the New York Y. C., to replace the steam yacht Sheerwater. Com. Brown was for some years the owner of the wooden steam yacht Fedalma, built in New York in 1886, which craft gave place last yearto the Sheerwater, a nice little Burgess boat, but small for her owner's wants. As there was nothing suitable to be found on this side, Capt. Clark was commissioned last October by Com. Brown to purchase a boat in England, and the Sylvia was finally selected. Capt. Clark was accompanied by Com. Browne's sailing master and engineer, both of whom had been in the old boats, and for some years in his employ. The yacht was purchased, then lying at Dublin, laid up for the winter, the captain and engineer took

STEAM YACHT "SYLVIA," COM. E. M. BROWN, NEW YORK Y. C.

charge, and the balance of the crew was sent out from New York. The foremost jacks were Norwegians and Sou'wegians, the captain and officers being all Americans. The yacht was turned over to them on October 10, being then in good condition, and Capt. Clark returned to New York, expecting the yacht to follow as soon as she could be fitted for sea.

On Nov. 14 a cable message to Com. Brown brought the news that the yacht was at Waterford, Ireland, and that the crew refused to proceed in her, on the ground that she was unseaworthy. In this emergency Capt. Clark was called in and advised shipping an entire new crew and continuing the voyage, but a difficulty arose in the refusal of the underwriters to continue the insurance in view of the action of the crew and the season of the year. They finally offered, however, to continue the policy on condition that Capt. Clark would bring the vessel over himself, and in the latter part of November he, accompanied by Mrs. Clark, left New York on the Teutonic, arriving at Queenstown on November 27.

Next day Capt. Clark visited the yacht and found her uninjured, but entirely unprepared for a long sea voyage. Arrangements were at once made for returning all hands to their homes safely and comfortably by steamer, and shipping a new crew of sailormen, preparatory to continuing the voyage. A force of scrub women were set to work below, a spar maker and sail maker were called on to overhaul the rigging for the winter trip across the Atlantic, the rigging was rattled down, storm cloths fitted on the bridge, the stores re-stowed and the vessel completely overhauled fore and aft. Although time and money had been freely expended on this work in the original fitting out, it had been very badly done, and the yacht had started in no condition to go to sea. It came out incidentally that on her voyage from Dublin to Waterford she had never been out over night, running by day from port to port, a safe and easy proceeding that answered for a time, but could hardly have been continued much further in the direction of New York.

Nearly three weeks were spent in preparation, and on December 20, at 11:05 A. M., the "Sylvia" cast off from the moorings of the yacht "Celia," in Queenstown harbor, dipped her colors to the Roval Cork Y. C., passed the "Majestic," just from New York, saluted the big "Warsprite," lying in harbor, and with a flock of sea-gulls following in her wake she made her number at noon off Roche's Point. Captain Clark was in command, Mrs. Clark accompanying him, the other occupants of the cabin being a handsome little Irish terrier presented to them in Queenstown, and their cat, Belgic, who always travels with them. An entire new crew has been shipped. The bunkers were full, 40 tons of coal, the average daily consumption being 4 1-2 tons.

On Friday, December 21 the yacht took her departure alongside of Daunt's Rock Lightship, and set the log soon after setting mainsail, foresail, main and fore staysail to a fresh N. W. wind which held throguh the night, with light rain squalls. The log records: "Ship going along finely, throwing spray across the decks, but no solid water."

On December 22 the same N. W. wind held, growing fresher, and the same canvas was carried until 4:30 P.M., when the staysails were taken in, the wind hauling to S. W. and increasing. 8 P. M.: Blowing hard from S. W. through the first watch, high sea, ship going through it finely, throwing spray fore and aft, but no green water except over whaleback forward. At 11:30 P. M. shipped heavy sea forward, carried away weather cloth on bridge and broke stanchions. Slowed down and hauled up to S.W. by W. Middle watch, high sea, ship behaving splendidly, hove to, no water on deck. 6 A. M.: Wind hauled to northward. Kept off to S. S. E., easy speed, with oil bags over starboard bow, keeping sea smooth. 8 A. M.: Full speed, course S. W. 1-4 S. Set all fore and aft canvas. Day ends fine, with high sea.

December 23 came in with a moderate breeze from N. N. W. and high and confused sea, clear and fine overrhead, all fore and aft canvas set, but taken in at 4 A. M., the weather being calm, with long rolling sea. 8 A. M.: Foggy, continuing through the day.

December 24: Fine, with light northerly breeze. 2 P. M.: Set all fore and aft sails. Through the night fine, with long rolling sea. 2 A. M.: In all fore and aft canvas. 6 A. M.: Fine strong breeze from N. N. E. Set squaresail with bonnet off, considerable sea, ship running well. 11 A. M.: Set fore and mainsails and main staysail, day ends with strong N. N. E. wind and high sea. Overcast, with light rain squalls.

Tuesday, December 25: Comes in with strong wind from N. N. E., overcast, high sea, square sail, foresail, mainsail and main staysail set; engines racing considerably. 4:30: In squaresail, wind hauling more to the eastward. 12:20 A. M.: Stopped engines to repair valve of air-pump; turned ahead at 4 A. M. 6 A. M.: Sea smooth, decks dry for first time since leaving Queenstown. At sunrise clear and mild, gentle breeze from N. N. E. Ends fine, light breeze from the eastward and smooth sea. All fore and aft canvas set.

Wednesday, December 26: Comes in fine, with smooth sea. 3 P. M.: Calm, in all fore and aft canvas. 4 P. M.: Sighted Porto Santo, 40 miles distant, dead ahead. At 8 P. M. western end of Porto Santo abeam. At 8:10 sighted Fora Island. Light ahead 20 miles distant. In company with steamship bound in. At 12:30 anchored in the harbor of Funchal, Madeira, 5 days 12 hours from Queenstown. The daily runs were: 237 miles, 4 1-2 tons of coal; 178 miles, 4 tons; 242 miles, 4 1-2 tons; 251 miles, 4 1-2 tons; 208 miles, 4 1-4 tons; 98 miles, 3 tons; a total of 1,217 knots, an average of 9.2 knots, on 25 tons of coal.

December 26-27 were holidays in Funchal, and no work was done. Repairs were required on the air-pump, but the machine shop ashore was closed, and it was not until Saturday, December 29, that the yacht was ready for sea again, having repaired the pump and taken aboard 23 tons of coal in the bunkers and 29 tons on deck, a total of 67 tons. The day was clear and fine, with a strong N. E. wind, and at 9:30 A. M. the anchor was weighed and the yacht passed out to sea, saluting H. M. S. ship "Rambler." The departure was taken from Loo Rock at 9:50 A. M.; and at 11 the large squaresail was set.

Sunday, December 30: Comes in with strong N. E. wind and high sea, the yacht shipping considerable water. The large squaresail was set; oil bags were hung over the bows. 8 P. M.: Sea and wind moderating; fine through the night, with light rain squalls. 6 A. M.: Wind hauling to the eastward; set main and foresails and main staysail. Day ends fine, with heavy rollers from the eastward. Distance by revolutions from Loo Rock, 257 miles; 5 tons of coal burned in 27 hours.

Monday, Dec. 31: Fine with moderate breeze from the eastward. 3 P. M.: Calm, with heavy rollers from northward; ship rolling and squaresail slatting. At 3:30 in squaresail. 10 P. M.: Fine, with fresh breeze from N. E.; set squaresail. Fine through the night. 6 A. M.: Rigged port squaresail boom, which sets sail finely. 8:45: Stopped engines to repair air-pump, breeze moderate from S. E., making 3 knots under fore and mainsails and squaresail. 10:20: Ahead at full speed. Ends fine, with wind fresh from S. W. Distance, 210 miles.

Tuesday, January 1, 1895: Comes in fine and clear, with fresh gale from E. S. E.; squaresail and fore and aft canvas set. Through the night, strong S. E. wind and high sea: heavy squalls of wind and rain. Carrying canvas hard to drive her along. At 4 A. M.: In a heavy squall, burst the foot of squaresail and took it in for repairs. Through the night large quantities of water on deck. Ends with gale from E. S. E. and high sea. Distance, 245 miles.

Wednesday, January 2: Comes in fine with heavy sea and strong wind from E. S. E. 6 P. M.: Heavy squall of wind, rain and lightning. All fore and aft canvas set, but too heavy for squaresail. Through the night, heavy sea from southward and sharp squalls of wind and rain from S. E. 8 A. M.: Rolling rail under and filling decks with water. Fore and aft canvas set to ease her. Ends clear, with heavy sea. Distance, 230 miles.

Thursday, January 3: Comes in fine, with heavy sea, from southward. 4 P. M.: Sea moderating; sighted large four-masted ship to the southard, bound N. Through the night high sea, heavy squalls of wind and rain from S. W. 8 A. M.: Sighted a barque to the southward, bound E. 10 A. M.: Large ship and barque in sight, steering to the northward. Exchanged signals with the barque, but could not read her number. Ends clear and fine, with high sea from westward. Distance, 220 miles.

Friday, January 4: Clear, with high sea from westward and S. W., with passing squalls of wind and rain from the southward. Wind strong from southward. 8 P. M.: Sky clear and wind and sea moderating. Ends with strong gale from the west and high sea from southward. Decks constantly full of water; ship going through it finely. Distance, 210 miles.

From Madeira Captain Clark had steered a S. W. course to catch the N. E. trades about latitude 25; and at noon on January 4 was on that latitude, in longitude 40-16. The looked-for N. E trades and fine weather had not yet appeared, and the original plan of running along latitude 25 until well to the southward of Bermuda, was abandoned, and the yacht at once hauled up for that port, on a N. W 1-2 W. course.

Saturday, January 5: The day opened with a continuance of the sea and gale, and at 2 P. M. the course was shifted from W. to N. W. by W., for Bermuda direct; setting main and fore staysails to steady the ship. The log notes: "I am satisfied that there is no better weather for steaming here than further to the northward, and so have decided not to run our easting down on latitude 25, but to steer for Bermuda direct." Through the night fine and clear: but with heavy sea. Day ends fine, with moderate breeze from W. N. W., but less sea. Distance, 210 miles.

Sunday, January 6: Comes in fine, with moderate wind from W. N. W., and high sea from westward. Evening and all night fine, with heavy sea from westward, and strong wind. 11 A. M.: Wind hauled to the northward. Set foresail and fore and main staysails. Ends with moderate wind from northward and high sea. Distance, 200 miles.

Monday, January 7: Comes in clear, with heavy sea from N. W., strong breeze from N. N. W., and hauling more to northward. Through the night, less sea and steady wind. At 7 A. M. set mainsail and unbent squaresail, and got yard on deck. Day ends overcast, with sea making from northward. Ship going well. Distance, 223 miles.

Tuesday, January 8: Strong gale from northward and heavy sea. Ship rolling lee-rail under and filling decks. At 1 P. M. took in fore and mainsail to ease ship. Have never seen any vessel run better across heavy seas. 4 P. M.: Sea broke across bridge and forward house. Should heave her to, except that we have barely coals for Bermuda. Through the night the same. 3 A. M.: Shipped heavy sea, filling decks. 4 A. M.: Heavy squall, took in fore staysail. Day ends with less sea, set fore and mainsail and fore staysail. Distance, 205 miles.

Wednesday, January 9: Comes in with fresh gale from N. E., and considerable sea. Fine through the night. Wind haulnig to the eastward, and less sea. At 1 A. M. set main and foresails, sea smooth, ends fine. At noon St. David's Head bore W. N. W., 35 miles distant. Distance, 248 miles.

Thursday, January 10: Comes in fine, with light passing rain-squalls. At 2 P. M. sighted St. David's Head, 1-2 point on starboard bow, 15 miles distant. At 3 P. M. took pilot on board; at 4:30 P. M. health officer; 5:30 P. M., made fast to coal hulk in St. George's Harbor. Twelve days 5 hours from Madeira. Distance steamed, 2,734 miles. Coal consumption during passage, 55 tons leaving 12 tons in bunkers.

January 10-11 were spent in coaling, 30 tons being taken aboard, the voyage being resumed at 11 A. M. on the latter date, the pilot being discharged at noon outside St. David's Head.

Sunday, January 13: Comes in fine, with fresh breeze from S. S. E. At 12:30 the N. E. buoy bore west. At 1 P. M. set all fore and aft canvas. 4 P. M.: Moderate breeze hauling to S. W. Fine and clear through the night with moderate sea. Ends with strong breeze from S. W., clear and fine. Distance, 245 miles.

Monday, January 14: Comes in with heavy gale and high sea from S. W., throwing spray fore and aft, and some solid water, filling decks. Washed away breakwater on whaleback and shifted starboard anchor and hawser on main deck. Day ends the same; the little ship making good weather and going through the seas finely. Distance, 168 miles.

Tuesday, January 15: Comes in with strong N. W. gale and high sea; toward night more moderate. Midnight, sea much smoother and fine overhead. 10 A. M.: Made Barnegat Lighthouse on port bow, 15 miles distant. At 11 A. M. took New York pilot from schooner "Fannie," No. 17. Day ends smooth and fine. At 3 P. M. passed Sandy Hook. 5 P. M., and let go anchor off Bay Ridge; weather fine and clear. So ends this voyage. Distance steamed from Bermuda to Sandy Hook, 685 miles; coal consumption, 16 tons. The average revolutions for the voyage was 93; the coal consumption 4 1-2 tons per day. The distance covered, from Queenstown to New York, was 4,636 nautical miles, the time being 20 days, 22 hours.

On January 16 all hands were employed in cleaning up and stowing away gear, being paid off next day; the chief engineer and two firemen, with three of the crew, being retained to take the yacht to Port Jefferson, which was done on January 18, the vessel being moored securely, after which Captain Clark hauled down her colors and gave over the command to her original captain, who had reached home safely by steamer some time before.

The "Sylvia" is, we believe, the smallest steam-yacht which has crossed the Atlantic, with one excention. When Captain Clark took the little sloop "Alice" across from Boston to Cowes, in 1866, she was the smallest yacht that had then made the Atlantic passage. November 29, years later, he has made another record for the smallest steam-yacht to make the winter passage. That the voyage was no mere pleasure trip is shown by the abstracts of the log; but at the same time it presented no difficulties nor hardships to appall a competent and courageous seaman.

That the fears and complaints of the first crew were groundless, and that they slandered the little ship, are proven by her performance through a long stretch of rough weather. Just who is to blame for the disgraceful fiasco, we do not know, nor does it much matter, the captain claims that he was ready and willing to make the voyage, but that his crew refused to sail and this may be true; but it speaks poorly for American seamen when an American crew refuses to do the work that is done later by a mixed crew of all nationalities; and when an American skipper, with a good ship under him, and every inducement to make a passage, makes no attempt to replace a poor crew with a good one, but deliberately gives up the task to another and goes home by a big liner. We are glad that, after some Americans have thus failed, their task has been completed, not by a foreigner, but by such a true American seaman as Captain Arthur H. Clark.

A Racing Circuit on the Sound.

The question of a racing circuit on Long Island Sound has been under discussion for some time, and the initiative was at last taken by Mr. F. B. Jones, of the Indian Harbor Y. C., who issued the following call:

"You are invited to attend a meeting of the chairmen of regatta committees of yacht clubs located on Long Island Sound, to be held at the Arena, 41 West Thirty-first street, New York City, on Monday, January 28, at 8 P. M., the object being to arrange, if possible, a schedule of dates for racing events for the season of 1895, and to discuss other matters relating to the racing interests of the different clubs."

The response was most encouraging, the following yachtsmen being present.

F. A. Moore, Horseshoe Harbor Y. C; Thomas Fleming Day, Huguenot Y. C., New Rochelle, N. Y.; C. F. Pierce, Riverside Y. C., Riverside, Conn.; T. W. Creedon, Harlem Y. C., New York City; J. W. Shephard, Huntington Y. C., Huntington, L. I.; E. W. Sheridan, Sea Cliff Y. C., Sea Cliff, L. I.; Oscar Chellborg, Knickerbocker Y. C., College Point, L. I.; F. T. Alder, New Rochelle Y. C., New Rochelle, N. Y.; F. B. Jones, Indian Harbor Y. C., Greenwich, Conn.; C. W. Wetmore, Seawanhaka-Cor. Y. C., Oyster Bay, L. I.; J. Howard Wainwright, American Y. C., Harrison, N. Y.; D. M. Goodridge, New Haven Y. C., New Haven, Conn.; Dr. A. G. Weed, Stamford Y. C., Stamford, Conn.; Julius Finkenstern, Roton Point Y. C., Rowayton, Conn.; J. Douglas Sparkman, Corinthian Mosquito Fleet, New Rochelle, N. Y.; E. S. Wheeler, Cedar Point Y. C., Saugatuck, Conn.; James C. Green, Norwalk Y. C., Norwalk, Conn.; W. G. Newman, Douglaston Y. C., Douglaston, L. I., and W. H. Bradley, Shelter Island Y. C., Shelter Island N. Y.

Mr. W. H. Bradley was elected temporary chairman and F. B. Jones secretary. Mr. Jones addressed the meeting, stating the need of concerted and harmonious action. A proposal was advanced to form an association but the prevailing idea was that for the present nothing more should be done than to agree on dates, which were finally arranged as follows:

RACING FIXTURES.

June 8—Knickerbocker annual.
June 15—Larchmont spring regatta.
June 22—Douglaston annual.
June 24—Seawanhaka Cor. annual.
June 25—Seawanhaka Cor. run to New London.

RACING CIRCUIT.

June 29—New Rochelle annual.
June 1—Indian Harbor special.
June 3—Seawanhaka Cor. race to Larchmont.
July 4—Larchmont annual.
July 5—American special.
July 6—Riverside annual.
July 8—Seawanhaka Cor. special.
July 9—Horseshoe Harbor special.
July 10—Huguenot special.
July 11—New York special.
July 12—Larchmont special.
July 13—Hempstead Harbor Club annual.
July 20—Sea Cliff annual.
July 27—Indian Harbor annual.
Aug. 3—Shelter Island annual.
Aug. 3—Larchmont special.
Aug. 10—American annual.
Aug. 15—Sea Cliff special.
Aug. 17—Huguenot annual.
Aug. 24—Horseshoe Harbor Club annual.
Aug. 24—Norwalk annual.
Aug. 3—American special.
Aug. 31—Huntington annual.
Aug. 31—Larchmont special.
Sept. 2—Larchmont fall.
Sept. 5—Larchmont special.
Sept. 7—Larchmont special.
Sept. 12—Sea Cliff special.
Sept. 14—Larchmont special.

The chairman, on motion of Mr. Jones, appointed a special committee of three to draw up a resolution to be presented by the assembled delegates to their respective clubs, stating the objects of the new association:

C. W. Wetmore, Seawanhaka Cor. Y. C., as Chairman; F. B. Jones, Indian Harbor C., as Sec., and S. C. Pirie, Cliff Y. C.. The committee submitted the following resolution:

Resolved, That it is the sense of this meeting that the various yacht clubs situated on Long Island Sound should co-operate to promote the interest of yacht racing, and to that end that the question should be submitted to the various clubs at their next meetings of considering what measures shall be adopted to further this purpose.

The resolution was unanimously adopted, after which the meeting adjourned, to meet at the call of the chairman, in the spring.

Yacht News Notes.

Mr. A. Cary Smith has just placed an order with Harlan & Hollingsworth for a steel schooner for W. G. Brokaw, who has sold his schooner Viator to Alfred J. Morgan, of New York. The new yacht will be 99 ft. over all, just under 70 ft. l.w. l, 21 ft. beam and 12 ft. draft, though having a centreboard. She will have the handsome sheer for which Mr. Smith's boats are noted, emphasized by long ends, with low buttock lines. The fore end shows the modern Roman nose. Mr. Smith has also an order for a steel steam-yacht, beside several catboats.

Mr. H. C. Wintringham has completed a very taking design for a 34-footer to the new Larchmont special rules; the lines are very handsome, and the interior shows an amount of space in excess of the requirements of the rule. Anyone intending to build for the class may find in this design at the least a handsome and comfortable craft, and from all indications a speedy one as well.

Vigilant is still minus her centreboard, nothing having been done to replace it. She will probably be brought over early in the season and refitted here with a new board for the trial races.

The New York Herald and the New York Sun have each started a competition for names for the new syndicate cup defender. In the case of the Herald, some unknown yachtsman has offered a prize of $100 for the best name sent in by March 1. The three owners of the boat will decide the best name submitted.

Columiba, schooner, is at Port Jefferson, being replanked.

Mr. Clement Gould, President of the Gas Engine and Power Co., died in New York on January 17, at the age of fifty-three. The great success of the naphtha launch industry is due very largely to Mr. Gould's energy and business ability, and the company will find it very difficult to fill his place.

The Albany Y. C. has elected the following officers: Com., B. M. Gordeniet; Vice-Com., John C. Hughson; Sec., John Vlasblom; Treas., H. A. Grey; Meas., John Apple; Board of Trustees, W. A. Bloomer, James D. Glenn and C. M. Bacheller; Inspectors of Elections, T. B. Wilkinson, Louis Van Kamerick and Edward Du Bois.

Eleanor, steam-yacht, was at Bombay on January 24.

Yampa, schooner, R. S. Palmer, was spoken on January 21, in latitude 33-20, longitude 57-30. All well.

The latest report concerning Valkyrie III. is that Captain John Carter, of Britannia, will sail her in the cup races. Captain Carter is well known here, having sailed Genesta in 1885.

A canoeists' dinner will be held at the Arena, 41 West 31st street, on Saturday, February 9, at 6:30, the cost being $1.50 per plate. Mr. C. V. Schuyler, 860 Broadway, N. Y., has charge of the arrangements.

At the annual meeting of the Biscayne Bay Y. C., held on the first Saturday of the year, officers were elected for the ensuing year as follows:

Com. R. M. Munrod; Vice-Com., Lewis D. Benton; Secy, Kirt Munroe: Treas., Walter H. Browne; Meas., Albert L. Caillet.

Commodore Munroe, having sold Wabun, has brought out a new boat this winter that he had built at Tottenville last summer, and sailed down the coast in the fall, taking two months to one trip. She is Utilis, a remarkably seaworthy little craft, only 33 feet over

all, carrying but two, full battened, working sails and a ringtailed topsail similar to those used about San Francisco Bay. She promises well and will undoubtedly be heard from at our forthcoming regatta. O. K. CHOBEE.

Yacht Building at Bristol.

Preparations are being made here among the yacht builders, such as the J. B. Hcreshoff company, and George H. Saunders, for great activity in the immediate future.

Large quantities of material, such as Tobin bronze plates, oak planking, etc., have arrived during the week. Should the Herreshoff company receive an order for the new cup defender, room would and could be immediately made in the south shop for her, by launching John B. Hereshoff's new steam yacht, which is practically completed.

In the north shop Mr. Theodore R. Hostetter's (of Pittsburg) new steam yacht is approaching completion. She is all planked to the water ways, and the coal bunkers and compartments are under construction. One 10-rater on the stocks is all planked, lacking two streaks on her top sides.

The 20-rater for Mr. Howard Gould is double planked to the wales, and her Tobin bronze plates for her fin keel are being bent —the spars are also in hand.

The yawl Gannet, owned by a New Yorker, will be changed in rig to a sloop yawl.

Mr. Geo. H. Saunders, of Bristol, must be given a position in the front rank of successful designers and builders, if those for whom he has designed and built have any right to an opinion. He is always better than his word, which is as good as many a man's bond; the writer from personal knowledge, both as regards a yacht built for himself and as well as for others, can honestly state that Mr. Saunders gives a realization to owners of their highest expectations. The following list of yachts can attest the statement, for their honest construction, excellent design for the purpose in view, and in all cases for the speed developed.

Lena, now owned in Philadelphia, sloop-yawl; Elsie, Mr. Brooks, Fall River, R. I.; Tarpon, Dr. Howe, Philadelphia, cat-yawl; Wanita, Dr. Hollingsworth, Philadelphia, cat-yawl; Lilly, Mr. Purse, Providence, cat-yawl; Rana, Mr. Weightman, Providence, R. I. sloop-yawl; Razzle Dazzle, Mr. Geo. Gladding, Bristol, R. I., cat-yawl; Bambino, Mr. Grinnell, New Bedford, R. I., cutter; Hadassah, Mr. Merriman, Providence, sloop-yawl; Eveline, Miss Perkins, Hartford, Conn., cat-yawl; Sea Gull, Mr. Low, Brooklyn, N. Y., cat-yawl; Eclipse, Mr. L. M. Cortwright, Bristol, R. I., steamer-yacht.

Some few remarks on these boats may show the quality of design and build.

Lena was built for a small cruising fishing smack and was used for the cod fishing off Block Island, and in surrounding waters. She was renowned for her speed, weatherly qualities, beside being an extraordinary sea-boat in very heavy weather, often remaining out until the schooners were forced to run for harbor.

Lena is now a yacht enrolled in the Philadelphia Corinthian Y. C., under a new name.

Tarpon and Wanita—Two sisters boats, the record of the last named was published in The Rudder some three years ago, and caused a good deal of favorable comment. She proved an ideal boat in every respect.

Lilly was built off the same moulds as Wanita, but lengthened bodily three feet, the same may be said of the Eveline, both of them having been ordered upon the strength of Wanita's extraordinary record for ability, speed and weatherly qualities.

Rana, belonging to Mr. Weightman, of Providence, has given perfect satisfaction, but is for sale, as the owner desires to build a larger yacht of 40ft. low waterline from designs by Mr. Saunders.

Razzle Dazzle cannot be bought, her owner simply swears by her in all weathers and under all conditions.

Bambino makes her home in New-Bedford waters, and has proved most thoroughly satisfactory.

Hadassah has an unbroken record of victories—in fact, her ability and speed is such that she has invariably made a splendid record in all the R. I. club runs, with their largest class.

The Forest and Stream has already printed a description of her.

She is to have alterations to her sail plan made in order to increase the area. She is to be a full sloop yawl rig. Saunders has finished the design for the alterations, and will make the changes necessary in time for the early June races.

He has just received an order for a large cat-yawl of the following dimensions:

Length over all 34ft., low waterline 26ft., extreme beam 9½ft., extreme draft 4ft. 6in. Lead ballast all carried on outside. Headroom in cabin 5ft. 3in.

The plans for the cabin accommodation show great care and forethought in the distribution of space conveniently. Under the cock pit floor there is to be a water tank and a refrigerator, the latter reached by the swinging of the companion ladder. The cabin shows as a very large and commodious one for a yacht of her dimensions, and every inch is utilized in a surprising manner for convenience and comfort. Forward of the cabin is a large forecastle separated by a bulkhead, furnished with a forehatch for access to deck and ventilation; a single gas pipe bunk is fitted in and an oil gas stove and dresser find places. Water closet and washstand finds room in a most ingeniously contrived space beween forecastle bulkhead and cabin.

The lines of this yacht are such as to be a treat to sore eyes, as they seem to insure great buoyancy with speed and seaworthy qualities of a high order. The owner will be able to congratulate himself upon testing this new creation of Saunders.

A beautiful set of lines for a schooner yacht, for a gentlemen living in Philadelphia, is attracting a good deal of attention among the local yachtsmen here in Bristol. Inquiries have been made for specifications, price, etc., for one 18ft. low waterline pole masted fin keeler, also for two more of the same class with slight alterations in construction. BOWLINE.

Rifle Range and Gallery.

Scores at Shell Mound Range.

San Francisco, January 13, 1895.—To-day was the initial shoot of the various clubs that patronize Shell Mound Range.

The Columbia Pistol and Rifle club offers a somewhat elaborate programme for 1895 (a copy of which I shall forward as soon as possible). They offer solid gold medals to all comers for pistol, target rifle, military rifle, rest shooting, revolver, .22 calibre rifles for ladies and "all around" shooting. Also, a new feature has ben introduced, the "Columbia Diamond 50 shot Pistol Medal," to be shot for quarterly. Conditions: Only one entry allowed each competitor, cost $5, with 80 per cent. of receipts returned to shooters in three prizes. The medal is perpetual, and is offered to stimulate our would-be "cracks" to show what mettle is in them.

To-day Smith Carr set a hot pace for the pistol devotees by leading off with 97 out of 100 in the Blanding Allcomers Medal contest. E. Hovey pushed him sharply with 96, followed by F. O. Young 94, Dr. Rodgers and F. Gehret 92 each.

On the Kuhnle Allcomers, Target Rifle shoot Dr. Rodgers won the honors with 90 (standard American target); F. O. Young and Col. Kellogg 81 each.

For class medals, Target Rifle, champion class, A. H. Pope 85, Dr. Rodgers 80, F. O. Young 81, C. M. Daiss 76, F. Gehret 71, and P. Bohr 67.

Second class: A. Fetz 61, F. Dennis 59, J. Mannel 56.

For Pistol Class Medals.—Champion Class: Col. Kellogg and A. H. Pope 90 each, C. M. Daiss 89, S. Carr 88, F. O. Young 87, E. Hovey 86.

First Class: F. Baumgartner 88, Dr. Rodgers 88, J. E. Gorman 84, F. Gehret and A. Gehret 81 each.

Second Class: H. Folster 76, A. H. Kennedy 75, L. Zimmermann 70.

At the annual election held January 7, the following officers were elected: President, Dr. L. O. Rodgers; secretary, F. O. Young, 43 Phelan Building, S. F.; assistant secretary, C. M. Daiss.

ROEEL.

Missouri Rifle and Pistol Club.

Editor Forest and Stream:

You will notice that the rings on our targets are ⅛in. apart, instead of ¼in. as on the targets of the Zettler and other clubs. Ours is the regular German ring target reduced to 25 yards. The 20-ring of the Zettler corresponds to our 14 ring.

We were glad to see that you published the score of our shoot with Rochester. We can do better next time, as Staley was not in form, and we will substitute another man for Vogt, who went to pieces. Our "Infant Class" (B team) outshot the Rochester score last week by 85 points, so we have good material for substitutes.

The accompanying card was shot January 17 by Robert W. Staley, of the Missouri Rifle and Pistol club, at 75 feet, offhand, using a 10 pound Stevens ideal rifle with 12 ounce single trigger, and ordinary .22 short rim fire Winchester cartridges. The shots were fired in the following order: 25 23 25 25 25 25 25 25 21 23—242.

Seven of the shots entered or cut the 25-ring, which is only ¼ inch in diameter Staley was not satisfied with his score in the

Rochester shoot, being out of form at the time, and he has been practising steadily of late. His last twelve consecutive scores on above target, to date, are as follows: 223 229 239 226 242 222 227 225 232 235 228 237—2765.

This is an average of 230 5-12. HORACE KEPHART, Sec'y.

RIFLE NOTES.

WINONA, MINN.—At the present time one of the frigid regions in Uncle Sam's domain contains quite a number of enthusiastic riflemen, whose circulation is such that they can brave the terrors of zero weather, and put up scores that would worry many of our Eastern experts to equal under the most favorable summer weather conditions. On Dec. 18, the Winona marksmen held a swwepstake shoot, 100 shots per man. The weather conditions are said to have been of the blizzard order, yet, with such conditions, many scores of over 2,000 points per 100 shots were made by the competing marksmen.

Many of our Eastern riflemen hardly wait for Autumn frosts before they begin to show signs of hibernation. Some years ago the shooting element in the Zettler Club as well as that of the other local societies, could be found on the Guttenberg, N. J., range one day in the week during the entire winter. Good scores and good fellowship were the order in those days. We trust that Eastern riflemen will improve the opportunity to take in the Great Shooting Festival which takes place in New York next July. Go in and put a first mortgage on the long list of prizes that will be put up for competition, and show Eastern experts "Where they are at," then perhaps we way see a little more life and energy injected into our local experts whose exploits have in a measure become a matter of ancient history.

The Kennel.

FIXTURES.

BENCH SHOWS.

Feb. 19 to 22—New York—W. K. C., Jas. Mortimer, Supt.
Feb. 26 to March 1—Detroit—City of the Straits K. C., J. W. Garrison, Sec'y.
March 5 to 8—Chicago.—Mascoutah K. C., J. L. Lincoln, Sec'y.
March 12 to 15—Denver.—Western K. C. Co., E. T. Weiant, Sec'y
April 16 to 19—Boston.—New England Kennel Club. D. E. Loveland, Sec'y.
May 8 to 11—San Francisco, Cal.—Pacific Kennel Club.

FIELD TRIALS.

Feb. 4—New Albany, Miss.—Southern F. T. C. T. M. Brumby, Marietta, Ga., Sec'y.
Feb 11—Salinas, Cal.—Pacific Coast F. T. Club.
Sept. 10—Morris, Man.—Manitoba F. T. C., John Woolton, Manitou, Sec'y.

Don't forget that entries for the W. K. C. show close next Monday, Feb. 4, with James Mortimer, 59 Liberty street, Room 2, New York.

U. S. F. T. C. ANNUAL MEETING.

On Wednesday evening, January 23, the annual meeting of the club was held in the Holt House, at West Point, Miss., in accordance with the change made at Chicago at the last annual metsng.

Mr. Madison presided. The matter of selecting a judge for the Pointer Stake was considered. Mr. W. W. Titus was selected.

The old Board of Governors then met. Mr. W. B. Stafford presided. Major Purcell's protest was read in respect to judging one of his dogs. The decision of the judges was sustained.

The resignations of H.J. Smith, J. A. Balmer, R. L. Shannon, R. P. Daggett, Col. G. Sloo, B. Waters, Julius Winter and H. L. Smyser were accepted.

Messrs. Louis McGrew, Allegheny, Pa. N. B. Nesbitt, Charlottesville, Miss.; P. M. Essig, Natchez, Miss.; S. L. James Angora, La.; C. E. Buckle, Charlottesville, Va.; D. G. Rowland, Louisville, Ky.; Prof. Edmond H. Osthaus, New York were elected to membership.

The Board of Governors adjourned.

The club's annual meeting was next in order Mr. Stafford presided. The minutes of the previous meeting were read and approved.

The Committee on Grounds was not ready to report. The grounds inspected at Elizabethtown Ky., were not satisfactory. Mr. Adams explained that there were good grounds at Irvington, Ky., but that there was doubt as to the birds being in sufficient numbers. Hotel accommodations, he said, were ample. The Committee on Grounds was continued.

On recommendation of the secretary, Dr. N. Rowe and Mr. William H. Child were elected life members without dues.

The list of the new Board of Governors is as follows: Dr. N. Rowe, J. M. Freeman, Norvin T. Harris, J. M. Avent, W. B. Stafford, C. E. Buckle, J. Adams, D. G. Rowland, P. M. Essig, St Marc M. Mundy, P. T. Madison, H. Hulman, Jr., S. L. James, J. N. Seale and Richard Merrill.

Voted that the Board of Governors be requested to hold a chicken trial in the Northwest.

Voted that the annual meeting be held now at West Point instead of at the Mascoutah Club's next bench show.

The Board of Governors' meeting was next in order. Following is the new list of officers: President, Dr. N. Rowe; 1st Vice-President, Norvin T. Harris; 2nd Vice-President, H. Hulman, Jr.; Secretary-Treasurer, P. J. Madison.

The hour being late, the meeting adjourned till the following evening at 7:30.

At the adjourned meeting, Thursday evening, Mr. W. B. Stafford in the chair, it was voted that three trials be held by the club—one in the Northwest, one at some central point, and one in the South.

Carried that the trials on chickens comprise two stakes, each stake for setters and pointers.

Carried that for the chicken trials the club offer a purse of $700, divided into $350 for each stake, four prizes, $125, $100, $75 and $50. Derby fee, $20, divided into three payments, $10, $5, and $5, to start. All age fee, $20, divided into two payments, $10, and $10 to start.

It was decided that the trials commence on the first Monday in September.

A committee was appointed to select grounds, a restriction being made that they be selected within the United States. The committee is W. B. Stafford, P. T. Madison and J. M. Avent.

The chicken Derby closes May 15. Second forfeit to be paid July 15. The all age stake entries close August 1. The last payment of both stakes to be paid the night before starting. Carried that there be but two judges to judge the chicken trials.

The committee on judges appointed is as follows: P. T. Madison, Norvin T. Harris and J. N. Seale.

Carried that the fall trials (A) be held on either the 7th or 11th of November, to be determined by the secretary, the latter date being contingent on making arrangements with the E. F. T. C. to hold its trials a week later than it commonly does.

Voted that the purse of the Derby be $1,000 in each of the trials, A and B, the same amount as that of the all age stake, and divided into five prizes as at present, for pointers and setters respectively, $500 to each.

The Committee on Field Trial Grounds, appointed by the old Board of Governors, was discharged on motion of J. L. Adams. Messrs. Madison, St. Marc M. Mundy and D. G. Rowland were appointed a new committee on grounds, and authorized to expend the amount for birds now expended for grounds, if necessary to do so, contingent on getting new grounds free of rent.

Carried that Trials B be held at West Point on the third Monday of January.

The club tendered a vote of thanks to the M. & O. R. R., its officials and employees, for favors extended the club; also a vote of thanks to the good people of West Point and vicinity in general, and to Mr. Titus in particular, also to the press of West Point for the many favors extended to the club, also to the judges.

A vote of thanks was extended to Mr. Madison by the Board of Governors for valuable services rendered for and in the interest of the club. The meeting then adjourned.

Following herewith is Mr. Madison's annual address, which is most instructive reading. It gives some valuable comments on doggy interests, besides giving a review of the club's interests. He said:

"Gentlemen: In making my annual report, I am pained to say that the past season has been a disastrous one for field-trial clubs. The great falling off in entries and starters made it difficult for clubs to get through and survive, yet I am pleased to state that our club will come through the ordeal and have a surplus of about $500 as a nucleus for next season.

"Making a report of the financial condition of the club at this time gives you only an approximate one, as it is impossible to tell what the receipts and expenditures of trials B will amount to. I desire to call your attention to the physical condition of our honored president, Dr. N. Rowe, who has done more for the club than any other member. The doctor's health, I have just heard, is improving. I ask, in appreciation of his valuable services and his many favors extended to the club, that you honor him with a life membership free of dues. I also desire to call your attention to the physical condition of William H. Child, a member of this club, who has been confined to his bed over two years. Mr. Child has been an ardent admirer of the club since its inception, but on account of his extended illness, which has cost him an immense outlay, he now reluctantly tenders his resignation I ask that Mr. Child be also elected a life member free of dues. I think the club will do itself proud in extending these favors.

"The life of a field-trial club depends on the allegiance of its members and the confidence of the public. The members should throw no impediments in the club's road to success, but should endeavor to create a friendly sportsmanlike feeling among outsiders as well as members, try to get new patrons each year, and let us by our conduct show to our outside friends that they will be kindly treated, and their dogs will receive the same opportunities extended to those of members.

"It is natural for an owner to see faults in the dog of another quicker than he does in his own. We should be generous enough to acknowledge that our own dogs are imperfect. The place to test a dog's qualities is in a competition in the field, and not in the columns of our sportsmen's journals, and as field-trial clubs are organized for the purpose of affording times and places for these competitions, I think it advisable for this club to discourage private matches, and I earnestly hope that the members of this club as well as all outsiders will abandon the challenge business and if they are as successful as past challengers have been they will run one race in a decade. If journals of the country will decline to publish matter of this character, they will become much more instructive.

"The question of holding trials on chickens in the Northwest next fall, also one on quail in the Midde States in November, and one in the South during next winter, should receive your earnest attention at this meeting.

"I thank the members for the many favors extended in the past, and ask that the same may be extended to my successor." P. T. MADISON,
Secretary-Treasurer.

The reference to the "challenge business" stirred up a

good deal of discussion. A motion to adopt the address was opposed, and it was finally decided that it was out of order Mr. J. L. Adams and Mr. J. M. Avent were the parties who seemed most aggrieved. Indeed, there are many columns of high-colored bombast called challenges which have never yet resulted in a match. It is doubtful if in writing them the intention to make a match was near so great as the intention to secure cheap advertising On their face, most of the challenges bear the imprint of an intention to advertise free and a lack of sincerity in issuing them.

Were the parties sincere in their long-spun effusions which they cloak under the misnomer of a challenge, they could arrange all the details privately by mail, and announce the results when the match was made. But what kennel owner sends a private challenge by mail? There is no advertising in that manner of challenging. After mutually belittling each other and each other's dogs for weeks, the challenge which began in wind ends in nothing but ill temper between the parties directly concerned, with perhaps a few friends involved, and with much disgust to the general public. Forsst and Stream has kept its columns free from the bombastic trash called challenges, when it was plain that they were simply a vehicle for advertising dogs at the expense of others. Mr. Madison was right. B. WATERS.

DOG CHAT

Mr. F. W. Kitchell, of Perth Amboy, N. J., the well-known spaniel breeder, in sending a batch of Kennel Notes alludes to the vagaries of spaniel breeding. The last litter by his Jasper (Red Roland—Winter's Floss) is phenomenal for variety in color. There were six pups in all. One black, one yellow, one lemon and white, two black and white, and one with a trifle of black. It has long been Mr. Kitchell's ambition to show a good team of parti-colored cockers of his own breeding, and if these live his dream will be realized. They should make a good team for the field, anyhow.

Mr. W. B. Wells writes that the sense of his letter on the International Trials and Brighton Tobe was altered by a typographical error, and his argument weakened thereby. In referring to the single work along the creek, Mr. Wells says he wrote: "Whereas along the creek the single work, with the exception of Luke's, consisted of 'flushes not points,' and not a printed, Points and Flushes," which certainly makes a material difference.

The Pacific Kennel Club has secured the Pavilion for its coming show.

The bulldog Sheriff, a winner at New York shows, has been purchased from Mr. E. K. Austin by Mr. Charles Parsons, Jr., He will probably be shown at New York next month.

During the past year the sport of whippet racing has been brought very prominently before the better class of sportsmen in England, and the late meeting at the New England K. C. Terrier Show, held at Brookline, Mass., last November, has served to create an interest in whippets among our wealthy dog-owners that is bound to provide a good deal of racing in the near future. In this country whippet racing has been confined to certain sections and among a certain class, and the general run of sportsmen know little of the fun that competitions between fast whippets can afford. A few more meetings such as that held at Brookline will surely bring the sport into prominence. To meet the demand for points on whippet racing, the well-known writer, Mr. Freeman Lloyd, has written a full treatise on whippets and the manner in which the racing is conducted. Chapters are devoted to the make, shape and characteristics of the whippet, training, racing rules—in fact, every information in regard to the conduct of a meeting; tables of times, distances and weights, how to lay down a track, rules of handicapping, etc. The proper feeding requisite for a whippet in active training is also treated of, as well as the diseases these delicate little racing machines are liable to. Excellent half-tone portraits of noted English whippets afford an opportunity of forming an idea of the characteristics of the breed. The book is well printed and arranged, and is bound in an attractive and suitable manner. "The Whippet and Race Dog" is for sale by Forest and Stream Publishing Company. Price $1.50.

Mr. H. B. Cromwell, who is spending the winter in the Adirondacks for the benefit of his health, came down to the city for a day or two recently. His friends will be pleased to hear that he has derived much benefit from his soujourn among the pines. Mr. Cromwell has done a great deal of quiet and unostentatious work for the American Kennel Club during the past two years, and his presence will be sorely missed in the preparation for, and conduct of, the W. K. C. Show this year, for, as one of the bench show committee, he took very active interest in its affairs. We wish him a speedy recovery.

Active preparation for the W. K. C. show next month is now fairly under way and in answer to the many queries as to the extent of the entries, this year, we may say that the number is ahead of the number for corresponding years. A big batch of entries has come in from Philadelphia already, and the dam and for premium lists indicates another record entry when the fees are counted after Feb. 4. Probably owing to Mr. Mortimer's recent visit to England, and his close relations with a number of prominent exhibitors over there, there has been an unprecedented call for premium lists from the other side of the Atlantic. Mr. F. R. Craven, the owner of the celebrated collie, Doon Perfection and other cracks is an applicant. Our old friend "Scotch" Baillie, who managed a large kennel in Lexington, Ky., several years ago, and who now manages Mr. Robert Chapman's large asssortment of Gordon setters, pointers, spaniels, etc., at Glenboig, Scotland, wishes to know how the prizes will suit him, and should he decide on an invasion, his many friends will not begrudge him a hearty welcome. Mr. Sam Woodewiss one of England's principal exhibitors, has vouchsafed an intimation that he will be here with a team of bull dogs, greyhounds, and old English sheep dogs. His presence would indeed lend an international flavor to the show, and we trust that he will carry out his intention. Mr. Edward Booth is also anxious to know what can be won in St. Bernard's. English exhibitors have been liberally supplied with entry forms, and it is to be hoped that some of them will take the hint.

The premium lists having been sent out somewhat earlier than usual, many specials were omitted. In addition to those already published, St. Bernard breeders will be pleased to hear that the W. K. C. Challenge Cup, valued at $500, and contributed by Col. J. Ruppert, Jr., Mr. W. C. Reick and the W. K. C., for the best American bred St. Bernard sired in America, after March, 1890, will again be offered. A friend of the W. K. C. also offers $20 for the best St. Bernard in the show. Mr. George Elliot offers a silver cup (plated) for the best Irish setter dog that has been placed at any public field trial and another one for the best Irish setter dog that has been placed in any public field trial, to be shown with two of his progeny, the merits of both to be considered. Mr. C. Albert Stevens' special, already announced in the lists, is for the best American bred bull terrier dog under 12 months old. Mr. Stevens also offers a silver cup, valued at $50, for the best two bull terrier bitches entered and owned by one exhibitor. In our review of the specials published last week, we remarked that no doubt the Foxterrier Club would as usual come to the front with a good array, and in a letter to the club, Mr. H. W. Smith, the secretary, writes: "We have got up a list of specials for your show, and I am only waiting to have Mr. Young send me on a notice of his special sweepstakes for wire haired foxterriers, so that I can send them all out together." Mr. Young is the originator of a special sweepstakes for wires which will be as follows: A. F. T. C. Special Sweepstakes, for American bred wire haried fox terriers. Purse, $100, in two divisions. Division A, for dogs and bitches born previous to Jan. 1, 1894. Open to members only. Entry fee, $2. The prizes in each division will be $25 and 50 per cent. of entry fees to first; $17 and 35 per cent. of fees to second; $7.50 and 15 per cent. of fees to third, also $10 to absolute winner in both divisions. Entries to be made with Mr. James Mortimer, 59 Liberty street, room 2, New York.

It is popularly supposed that the W. K. C. makes money out of its shows and the large crowds which attend would lead one to form such an opinion, but far from being financial successes late shows have barely paid their way, in fact the last two shows failed to do so. But the W. K. C. is composed of sportsmen, and it must be remembered that in giving a show of such magnitude, they assume a responsibility that few clubs would care to undertake. The regular prize list foots up a total of over $8,000, and with a $6,000 rental to pay for the use of Madison Square Garden, in addition to the other incidentals, such as attendants, catalogues, etc., the club is responsible for an outlay of over $15,000. It is easily imagined, therefore, what havoc a couple of wet days would make in the returns. Bearing this in mind exhibitors should support them to the best of their ability, for in doing so their own interests are served. A gathering of dogs such as is seen at New York is a public educator in cynology, as Dr. Mills would say, and the shows given by the W. K. C. have exerted an influence on dog breeding which cannot be easily estimated but is proved by the great advances made in so many breeds during the past years. Further, it is an accepted fact, among breeders, that no show in the country affords such a market for high class dogs, the sales made at New York far outnumbering those of any other show in the country, not to mention the orders for puppies that are booked by the large breeders. In many cases these buyers become exhibitors, and so the good work goes on. Intending exhibitors should bear in mind that entries close on Feb. 4, and that no entries will be received after that date. Extra puppy classes will be made, and those classes where sexes compete together will be divided if a sufficient number of entries are sent in.

The owners of the Terra Cotta Kennels, of Hamilton, Ont., do not seem to be disheartened by a few defeats, and are going sensibly to work in strengthening their kennel of wolf hounds by importing a couple of Russian bred hounds, and winners there. On the S. S. Bovic, that is due to-day, Monday, is Ataman IV., whelped March 16, 1888; color white, with brindle markings. He is a winner of the silver medal at Moscow show in 1892. He is said to be a strong, powerful dog. As Argoss was also a winner of this medal, it will be interesting to note the difference in type between the two dogs, and ruminate over the fact that both dogs could win it. We are premising, of course, that Mr. Rousseau, from whom Ataman is purchased, will send over an animal of that style of dog he is on record as upholding, and which, on the many discussions on these dogs during late years, we have termed the "distinctively Russian type," as exemplified by such dogs as the late Leekhoi, Col. Dietz, Princess Irma, etc. Ataman IV., we are told, was purchased as a sapling for $1,000 roubles by Count Strogonoff. A bitch is also coming, Biddy Rees, whelped May 15, 1893. Color, white, with lemon markings. She is by the noted Ataman, and out of Mr. Rousseau's Outschischka, which is said to be the only wolfhound living holding the Russian K. C. gold medal. Biddy is a sister to the Princess of Wales' dog, Alix, and before being shipped from Russia was bred to the celebrated stud dog Zlobrey, being due to whelp in February. The Terra Cotta Kennels have had a share of fancier's ill-luck lately, as they have lost a dozen greyhound and wolfhound pups from distemper. The new dogs will be seen at New York and on the circuit.

A letter from Mr. W. Partridge, of Boston, Mass., well known in spaniel circles, years ago, reminds us of the days of Champion Helen, Champion Rob, and many others that won ribbons in the cocker classes. Close upon the heels of the announcement of the death of Champion Obo, II., comes word that Partridge's champion Critic, another old timer, has been gathered to the happy hunting grounds. She died Jan. 20, presumably of old age, as she also was whelped in 1882—May 1, and was by Imp. Brush II. out of Imp. Blackie, II. Those who care to weave a pretty romance around the death of Obo II. and Critic, have ample material when it is known that there were "first loves" from which union resulted such a good one as Champion Helen; they were whelped the same year, and died in the same month and year. Mr. Partridge loses an old friend, and we sympathize with him.

Another good bull dog has been shipped to this country. This is Mr. George Smartt's Baron Killarney, by Smartt's Punch, out of Curme's Zabetta, was whelped Sept. 29, 1893. Price and purchaser are unknown.

The horrible death of the noted pointer, Kent Elgin, has been the subject of much discussion among dog men during the past week, and considerable sympathy is expressed for his late owner, Mr. T. T. Ashford. The first inclination is to sneer at the Pasteur treatment, and deride the "cure" as quackery; on the other hand the Pasteur people talk statistics that almost bewilder one, and that seemingly prove that there must be "something in it." This claim we are quite willing to admit, something for the Pasteur people. Kent Elgin was bitten on Dec. 29, by a little common cur which, seemingly mad, ran amuck and bit a negro and several dogs. Kent was slightly bitten on the right foreleg, just above the pastern. The dog that made the trouble was killed by a policeman, and the postmortem examination by Dr. Drummond proved that the dog had rabies. Kent Elgin's wound was at once thoroughly cauterized at French and Drummond's Hospital. Then Mr. Ashford taking advantage, as he supposed, of every safeguard, wired Forest and Stream to make arrangements for the Pasteur treatment in this city, as already stated in these columns. This office being closed early on Saturday, Dec. 29, the telegram was not opened until Monday morning, Dec. 30. We at once communicated with Dr. Gibier, and advised Mr. Ashford, who shipped the dog on the first available through train. Kent arrived in New York on the Tuesday folowing at 6.22 A. M., and the Adams Express office in this city was advised by the Birmingham office of the urgency of the case and requested to deliver at once. But the express people, with their usual nonchalance, where a dog is concerned, however valuable, did not deliver Kent until 5 P. M. It is the opinion of doctors in Birmingham that every hour was of vital importance, and this delay at a critical period, is very much to be regretted, and may lead to a claim for damages. We have given the particulars of Kent's treatment in previous issues, up to the time of his shipment home. On January 17, he was expressed to Birmingham, seemingly in good health, but arrived at 1.30 P. M. on January 19, showing every symptom of a fully developed case of dumb rabies. Mr. Ashford at once telegraphed Dr. Gibier to that effect, and asked for instruction as to treatment. The latter, in answer, advised that Kent be bled freely. When Mr. Ashford went to the hospital where Kent had been confined, he found the dog raving and vicious; it was subdued and freely bled, but died at 8.30 o'clock on Sunday night, Jan. 20. At 3.30 P. M. that day, Mr. Ashford was called to the hospital and found Kent a raving maniac, and a demon in fierceness, though naturally he was a dog of a most lovable and kind disposition. Kent Elgin's remains were taken in charge by a taxidermist and will be mounted. Kent was by King of Kent, out of Vera Bang, and was bred by Dr. H. B. Danforth of Trimble, O. His performances in the field are familiar to field trial men. One consolation in the unhappy affair remains to Mr. Ashford, Kent Elgin left a son that we hope will prove as good as his sire.

The citizens of Birmingham are so worked up over this mad dog scare that a committee went before the Mayor and requested him to take such steps as would mitigate the danger, and the next day he issued an order to enforce the law regarding dogs at large. Three mad dogs were killed between noon Jan. 19 and 20, and a mule that is supposed to have been bitten by a mad dog died in great agony on Jan. 20, at the French and Drummond Hospital, where it had been taken for treatment.

Kent Elgin's case seems to have been an authentic one of dumb rabies, proved by careful postmortem examinations both in his case and the others that died after being bitten by the same dog. The disease is so rare that in view of the undeniable failure in this instance one cannot help wondering if the so-called "cures" on which the Pasteur people base their statistics are cures at all. The majority of the people bitten never having really been in danger, except possibly from their own nervous fears, which probably in most cases the belief and faith in the Pasteur treatment served to allay.

The Pointer Club secretary informs us that a meeting of the club was held Jan. 25, to reconsider their donations to the W. K. C. special prize list. They decided that the following be offered: $10 each for the best heavy weight dog and bitch and $10 each for the best light weight dog and bitch; to be competed for by members of the Pointer Club only. The American Field Cup is offered, and the Grand Produce Stakes will also be decided at this show. We are pleased to see by the above that the Pointer Club is willing to prove itself disinterested and offer prizes that will produce general competition and consequently help the breed. It now remains for the English setter and Irish setter Clubs to come forward in a similar manner.

The entry blanks for the wire haired fox terrier sweepstakes at the W. K. C. show and other information in regard to it may be had of Mr. A. M. Young, 19 West Thirty-first street, New York.

The Pacific Coast Field Trials have been postponed until February 11, on account of the heavy rains in the neighborhood of Salinas. Much of the country is said to be under water.

Mr. J. W. England, of Redlands, Cal., has purchased the noted pointer bitch, Hempstead Blossom, from the Hempstead Farm Kennels. She will be bred to Sandford Druid before leaving for her new home. This good pointer should prove a winner at the Coast shows.

Mr. George Crocker, of San Francisco, is bringing home a bull dog which is said to be a "pointer"—if such a bull will be allowed. His friends wish him to challenge the all age winner at the coming trials out there.

George Thomas, so Mr. Symonds informed us last week, has sent three dogs over from England. Two are wolfhounds: Trajan, by Dosuydai, out of Palma, and bred by Count Stroganoff. Trajan is white and fawn, with gray patches, and is said to be a very handsome dog; the other is a bitch called Vera Vassalovitch, by Sovonchai, who is by Attaman ex Leverkai, and out of Oulechka; breeder, George Kalmouzky. The third importation is a collie bitch, Endcliffe Flirt, by Rivelin Cocksie, out of Rivelin Nellie. She is a black, white and tan, and bred by H. S. Sanfield. This bitch has whelped a fine litter of seven to the crack Southport Perfection, since her arrival, but will probably be shown at New York. The young Irish terriers in this kennel, by Jack Briggs and Brickbat, Jr., have just come in from walk, and are said to be fit for ribbons.

The United States Field Trials.

THE POINTER DERBY.

West Point, Miss., Jan. 25.—There were nine starters, rather a light stake in respect to numbers and in respect to the quality of the competition it was mediocre. Indeed, it was uniformly so. There was no sharp, accurate work even in parts of the competition, but it can be said in extenuation that sometimes the birds ran a great deal, and everyone knows that it is extremely difficult for a dog to show much apparent precision in points on running birds. Granting this unfavorable circumstance, the bird work was poor nevertheless.

The interest taken in the trials was greater than has been exhibited for some time. Quite a number of newcomers were in attendance, giving evidence by their presence and interest, that the support and interest in field trials is not dead yet. Indeed, the love of the dog and good competition is so great that field trials will probably exist for a long time to come.

This stake was for all setters and pointers, whelped on or after Jan. 1, 1893, with five prizes as follows: To first, $200; second, $150; third $100; fourth, $75; fifth, $50.

The dogs were run in the following order:

Charlottesville Field Trial Kennel's liver and white dog Delhi, Rip Rap Queen II., C. E. Buckle handler with T. L. Tinsley's liver and white dog Roderick T., Dash Ranger R., Jr., Fanny Kennerly, Geo. Richards, handler.

Charlottesville Field Trial Kennel's liver and white dog Tippoo, Rip Rap, Monterey, C. E. Buckle, handler, with H. K. Devereux's liver and white dog Tamarack, Jr., Tamarack, Maud Graphic, Geo. E. Gray, handler.

L. W. Blankenbaker's liver and white bitch Lad's Lady, Lad of Rush, Lady Margaret, owner, handler with Maj. J. R. Purcell's black and white dog Staunch George, Lad of Rush, Lady Margaret, owner, handler.

Hempstead Farm's liver and white dog Hempstead Don, Sanford Druid, Merry Legs, J. M. Avent, handler, with W. B. Stafford's liver and white dog Rex Fast, Rex, Mousey, owner, handler.

W. J. Love's black and white dog, Love's Kent, Kent Elgin, Mac's Juno, a bye. J. M. Avent, handler.

Second Round.

Tamarack, Jr., Delhi.
Don, Tippoo.
Rex Fast, Love's Kent.
Staunch George, Lad's Lady.

Third Round.

Roderick J. Rex Fast.
1. Delhi.
2. Tamarack, Jr.
3. Hempstead Don.
4. Rex Fast.
5. Love's Kent.

MONDAY.

The weather was so unpromising that the start was delayed for a while. Heavy, broken masses of clouds soon joined into a black whole. Then it rained. From a gentle start the rain increased until it fell in torrents. By lunch time the sky had cleared up, and the sun shone clear and warm. The fields were wet and soft, and, in cultivated ground, they were muddy. These conditions made hard running. After lunch a start was made.

Birds were found in abundance during the afternoon, numbering about fourteen bevies found by the puppies and horsemen, the latter riding up a few bevies. In some instances two lots of birds were found so close together as to raise the presumption that they belonged to one bevy. The bevies were large and numerous, showing that pains had been taken to preserve them for the field trials. The work was ordinary, but the birds ran from the dogs points many times.

FIRST ROUND.

Delhi-Roderick T. At 1,30, they were started in open sedge. Both showed good speed and range. Delhi was a bit head strong, went beyond control sometimes and did not heed properly the interests of the gun. Roderick seemed able to get where the birds were, but was very faulty in his point work. At the edge of woods. Roderick pointed to a flush, or the birds flushed afer he had pointed them. The heavy sedge concealed him partially from view. At the same time, about thirty yards away in the woods. Delhi pointed another bevy. About fifty yards further on Delhi roaded and the birds flushed wild. Next, Roderick made several bad flushes in succession and Delhi made one. Delhi made a cast into woods and pointed a single well. Roderick made another flush and the heat ended. Down 30 minutes. Delhi showed good speed and wide range. Roderick also was speedy, and wide in range, but his faulty point work spoiled his chances.

Tippoo-Tamarack, Jr. They were started at 2.20. Tamarack pointed well an outlying bird of a bevy after two or three had been seen to flush. Then he drew on to a good point on the bevy and was steady to shot. Next he pointed near a plum thicket. Gray failed to flush the bevy. The birds were partially across wind from Tamareck, and therefore were difficult to locate. Tamarack drew on carefully. At the same time, Tippoo began to draw straight up wind to a point on the bevy at the same time Tamarack pointed it. Moved on. Tippoo pointed at the same moment that the bird flushed. Up at 3.10. Tippoo handled hard. Tamarack showed good judgment and accuracy in roading and pointing his birds. Both ranged well. Their point work, however, was not up to thier opportunities.

Lad's Lady-Staunch George. They started at 3.15. George flushed a bevy in woods. He flushed a single wilfully. In woods, Lady pointed and George backed. Sent on, George, going down wind, flushed the bevy. Lady ran about irregularly and with poor judgment. It was said that he was in season. Neither one showed much range, and they beat out the ground without exercising judgment. Maj. Purcell explained that the bitch being season spoiled his dog's work. The heat was a poor one.

Hempstead Don-Rex Fast. They were started at 3.51. Don, in the open, made game and pointed the bevy which was flushed by his handler. The birds were followed. Don made two false pionts and was backed. Rex made a point on a single, flushed twice and pointed another single. Sent on. Don pointed a bevy, and Rex, apparently not seeing Don, drew by him three or four yards to one side, and pointed the same bevy. Both were steady to shot. Don pointed a single. Next he roaded, pointed, roaded, and Rex, crossing in ahead, took up the same trail, and roaded the bird. He stopped at the moment it flushed. Rex pointed a single. Up at 4.30. Don's style was poor. He had a sneaky, slow manner of roading, with head and tail carried low. Rex showed fair ability in his point work. In range, they were fairly good.

Love's Kent was started alone at 4.37 and ran 30 minutes. He started very slow and pottered close about his handler. Toward the last of the heat he showed more spirit and industry. He made two points to which nothing was found. Next he pointed a bevy which ran away from his point, and was seen running along the hedge close by. The birds flew up the hedge. Kent got two birds on the scattered birds, and made a fair showing out of what apparently was at the start a very poor heat.

This ended the day's work.

TUESDAY.

A frosty morning, a clear sky, and a balmy temperature were conditions favorable for good work on the part of the dogs, and pleasant for the spectators. As the day advanced there was a slight tinge of coolness in the air. A gentle breeze sprung up and prevailed during the afternoon. A start was made at the Jourdan place, nearly five miles from town. The cover on the grounds was much thinner and there was a larger ratio of area under cultivation than in the grounds of yesterday. There were plenty of birds, still the pointers showed an inferior competition, and some of it was decidedly poor.

After the first, second and third, it was very difficult to select the winners of the remaining places, so indifferent was their work.

SECOND ROUND.

Tamarack, Jr.,-Delhi. Owing to the Derby being drawn in the morning, and the longer distance to the grounds, the competition was begun late, at 9.10. Delhi drew nicely to a point on a bevy in open weeds and sedge; Tamarack backed nicely. Both were steady to shot. The scattered birds were followed. Delhi pointed and roaded in a cotton field, then Tamarack pointed; nothing found.

A bevy was marked down by spectators and it was followed. Delhi made a sharp point on a single bird. The birds appeared to be holding their scent and lying very close, for they were flushed by the handlers, judges, etc., after once walking through and past them. Down 40 minutes. Both ranged well, and with good judgment, though Delhi was better and did a higher class of work. He stayed out well, beat out his ground with judgment, and was uniformly industrious.

Hempstead Don-Tippoo. At 9:57, they were cast off. Tippoo worked out of control several times during the heat, and, while he showed first rate speed and stamina, he was faulty in being disobedient and in not working to the gun. Both pointed; nothing found. Don showed an inclination to false point. He pointed a bevy by the edge of woods, a good steady piece of work. The birds were followed. Tippoo wheeled to a point close to a single bird the moment it flushed. He seemed to point it to wing. Tippoo made two flushes and Don pointed a single. Both were drawing together, Don in the lead and the bevy flushed ahead of them. Don pointed a single bird. Up at 10.56. Don secured some good points on birds, but his manner of working was inferior, and he needed a deal of coaching to get his points accurately.

Rex Fast-Love's Kent. They were started at 11.18. Rex pointed two birds on a side hill in sedge. They proved to be outlying birds of a bevy. Kent took up the trail and roaded a few yards to the bevy and pointed it. The credit of the find was Rex's. On a bevy marked down in woods by spectators, both did sloppy work. Both ranged close and pottered frequently. Rex was the better performer in a poor performance. Up at 11.48.

Six dogs had been kept in but the work was so poor that Staunch George and Lad's Lady were given another chance.

Staunch George was started alone at 11.50. He pointed a bevy in sedge, and was steady to shot. In woods, on scattered birds, he pegged a single nicely. Next, he pointed on foot scent. He flushed a single. He pointed to wing and another single bird was flushed behind him. Next, he pointed, then roaded cautiously and a single was seen to flush in the woods about thirty yards ahead. While going down wind, a bevy was flushed by the handler or dog. Up at 12.11. His range was narrow.

Lad's Lady started at 12.14. She was worked to where a bevy had been marked down in open sedge. On the scattered birds she did some bungling work. She flushed twice, pointed well once, and lost several good opportunities. Up at 12.24. She pottered frequently and her range was close. She was in season, which may explain her poor performance. Lunch was next in order. The judges, owing to the poor performances of some of the competitors, were unable to decide the stake, so Roderick T. was called up. While he was being brought from town, the setter Derby was begun. Three heats were run before the Pointer Derby was resumed.

Roderick T-Rex Fast. They were cast off at 4.23. Both roaded in open sedge to a point on a bevy. Rex a bit in the lead. The birds were marked down in the open. Rex pointed a single well. He was about steadying on another when his handler called to him to go on, thinking he was on foot scent. Rex held the point on a bird. Next he flushed a single which he was drawing carefully on. Roderick flushed a single. Up at 4.42. Rex came in to his handler once in awhile. While Roderick ranged well and showed good speed, his point work was very faulty.

Staunch George-Love's Kent. They were started at 4.44. Kent pointed a bevy in the open field. The birds were followed and Kent secured another point on the same bevy. He flushed a single. Next, on marked birds, he made game, and George, about fifteen yards ahead, pointed the scattered birds and chased them when they flushed. Up at 5.11.

This ended the day's work and the stakes. In the evening the judges announced the winner, namely, first, Delhi; second, Tamarack, Jr.; third, Hempstead Don; fourth, Rex Fast; fifth, Love's Kent.

The stake was most difficult to decide after the first three places were decided

Delhi showed excellent capabilities, though at times hard to handle His point work was sharp and accurate, and he beat out a lot of ground with good judgment.

Tamarack, Jr., also was speedy, and covered a great deal of ground in his ranging, but in work he was outclassed by Delhi.

As for the rest, their work was from ordinary to less than ordinary.

THE SETTER DERBY.

There were fourteen starters, a number of them were dogs which had competed in the fall trials, and therefore their doings in competition are not new to the reader.

There was quite a difference in the class of work in this stake, as compared with the preceding one. It was much better.

The dogs were drawn in the following order:

Blue Ridge kennels' black, white and tan bitch Lady Mildred (Antonio—Ruby's girl) D. E. Rose, handler, with F. R. Hitchcock's black, white and tan bitch Tory Dotlet (Count Gladstone —Tory Della), J. M. Avent, handler.

Blue Ridge kennels black, white and tan dog, Tom Beggs (Antonio—Ruby's girl), D. E. Rose, handler, with Minnesota kennels' Jock Scott. Geo. Richards, handler.

Manchester Kennel company's black and white bitch Dashing Novice II (Gladstone's Boy –Queen Novice), A. P. Gilliam, handler, with Jackson and Denmark kennels' black, white and tan bitch Lady Clare (Prince Lucifer—Clare) Thos. Bond, handler.

Norvin T. Harris's black, white and tan bitch Cynosure, Rodergo—Norah II), J. M. Avent, handler, with Fox and Seiler's black, white and tan dog Tony's Gale (Antonio—Can Can), J. H. Johnson, handler.

Norvin T. Harris's black, white and tan dog Dixie's Flag (Wun Lung—White Wings), J. M. Avent, handler, with Blue Ridge kennels' black, white and tan bitch Nellie Fox (Antonio —Can Can), D. E. Rose, handler.

Major J. W. Renfroe's black, white and tan dog Joe Cummings (Antonio—Piscaola), W. W. Titus, handler, with Norvin T. Harris's black, white and tan dog Tony Boy (Antonio—Laundress) D. E. Rose, handler.

Avent and Thayer's black, white and tan bitch Clementina (Roderigo—Norah II), J. M. Avent, handler, with Geo. H. Read's blue belton dog, Wun Lung's Pride (Wun Lung—White Wings), J. H. Johnson, handler.

Tony's Gale ran a high class race, ranging well and with judgment. He showed that he could find birds and point them too. The flaws in his work were not at all serious and will be corrected by a greater experience.

Tony Boy ran a very creditable race, and proved himself a good finder, and his point work was superior. His range and speed were good. He has trained on remarkably well since his previous competition.

Lady Mildred showed excellent capabilities, though her range was but middling. Her work was not uniformly good.

Cynosure ran below her best form, not being in good condition.

Lady Clare was quick and sharp in her bird work and a good finder, but she marred her work by false pointing.

The full report of the running will be published next week.

FIRST ROUND.

Lady Mildred—Tory Dotlet.

They were cast off at 1.33. Lady drew prettily in the open to a good point on a bevy and was steady to shot. Sent on. About forty or fifty yards further, she pointed another bevy nicely. The birds were marked down in the open. Rose was ordered to hold up his dog till Avent caught up, but he kept pushing quietly ahead till he got his dog pointing the scattered birds, then he waited. Dotlet backed; Rose shot and Dotlet chased. Avent complained that Rose ought not to have done so, and Rose explained that he didn't mean to do so. Sent on.

Lady pointed one of the scattered birds at the moment it flushed. She pointed a single and flushed one. Dotlet pointed a single.

Next Lady pointed a bevy on top of a hill in sedge and was steady to shot. Dot pointed a single and Lady made a flush. Up at 2.14. Dotlet had an energetic manner of going, but was overcautious when on game and required some urging to keep her going among scattered birds. She had not the quick accuracy and judgment displayed by Lady in her point work.

Tom Beggs—Jock Scott.

Tom was first to point, in a corner of woods, on a bevy. On the scattered birds he was less successful, flushing twice and scoring a doubtful point, made simultaneously with the flush of the bird. In the open, he pointed a single which Rose failed to flush. He ordered Tom on and the latter drew to an excusable flush. Jock in bottom pointed to a flush and Tom backed. Tom pointed in open sedge; nothing found. Toward the last of the heat, Tom pottered now and then. Both had shortened their range. Tom was making game, apparently on larks. He was working on a bevy. Rose ordered him on and he flushed it. The birds were followed. Jock pointed and roaded, but failed to locate. Tom pointed a single. Up at 3.18. The point work fell short of the opportunities. Tom, however, did fairly well. Both showed good range, which was well maintained till toward the close of the heat.

Lady Clare—Dashing Novice, II.

A bevy was seen to flush with Lady not far away from it. Both pointed about 100 yards apart in the open. Lady had a bevy: Novice had no birds. Sent on. Novice flushed a bird. She stopped to the flush and half pointed; Gilliam flushed a remaining bird ahead of her. Both pointed some scattered birds. Lady pointed a bevy at the same time that Novice was making game on it. The latter drew to a point and both then ad a point on it. On the scattered birds, Lady made one and Novice two points. Next, Lady made a flush. Up at 3.58. Lady was the better ranger and finder, and was sharper in her point work. Novice's work was but fair.

WEDNESDAY

A crisp morning gradually warmed into a delightfully clear and pleasant day, too warm in the midday hours for the best working conditions. It was one of the mild balmy kind, enjoyable in itself apart from all considerations of sport. Birds were found in plentiful numbers. The work was excellent in part, with some of the rest of it fairly good, and a small part of it ordinary. An early start was made and the competition was kept going all day with very little delay between heats.

Cynosure—Tony's Gale.—They were cast off at 8.15. Each pointed single birds separately in woods and were steady to shot. Sent on, Gale soon found and pointed a bevy—a good piece of work. Cynosure was not near at the time. On a side hill, Gale pointed a single bird well. At the same time, a short distance away, Cynosure pointed a bevy. Working after the scattered birds in an open field, Gale pointed a bevy. In the meantime, Cynosure made two points on the scattered birds of the bevy found previously. The point work was very clean, sharp and accurate. Gale ranged the wider and with more regularity. Cynosure ran a bit heavy. It was said that she had had but little work in three weeks, having been in season. Up at 8.56.

Dixies Flag—Nellie 'Fox.—At 9.04 they were cast off. Nellie pointed a bevy nicely. The birds lit in rank, heavy weeds where it was impossible to get good work. An effort was made to get some points on them, but was abandoned. Nellie, while being worked toward them, made a firm point; nothing found. Nellie pointed scattered birds in heavy weeds. Sent on. On the next bevy, found in heavy weeds, both dogs were found pointing it. A frightened rabbit, while scrambling through the weeds ran almost under Nellie, and she looked hard after it, but remained steady. The birds were followed. Nell made two flushes, and another one was hers on circumstantial evidence. Up at 10.11. The heat was inferior. Both ranged fairly well in the beginning, but gradually showed signs of weariness. They worked far under their opportunities.

Joe Cummings—Tony Boy.—They begun at 10.21. Joe flushed a bevy in heavy sedge. Sent on. In jumping across a ditch, Tony, as he landed, flushed excusably a single, then wheeled to a point on the rest of the bevy, which was on the opposite side from him. In a plain thicket, both roaded. Joe made a point close on a single which flushed a moment afterward. Sent on. Tony pointed a bevy in open sedge, and was steady to shot. Sent on, he pointed nicely another bevy and Joe backed prettily. Joe ranged well at the start, but gradually changed to irregular effort and did not keep up a uniform interest in his work. Tony kept up a well sustained range, and his point work was quite good as also was his success in finding.

Clementine—Wun Lung's Pride.—Down at 11.16. Clementine flushed a bevy in a thicket in a run. Next she pointed in weeds; nothing found. After nearly an hour's run, Clementine pointed a bevy. On the scattered birds, Pride pointed, and was backed. He roaded on into a cotton field on the trail of a running bird but gave it up. It flushed afterward and joined other flushed birds in their flight. Clementine pointed a bird. Pride flushed one. Sent on. Clementine pointed a bevy on a side hill in weeds. Next, sent on Pride got a point on a bevy in weeds. Up at 12.24. Neither ranged well and the manner of their work was inferior.

SECOND ROUND.

This ended the first series. Eight dogs were retained in the second round, with Joe Cumming's and Dixie's Flag in reserve to be called up again in the event that the judges so decided.

Lady Clare—Lady Mildred.—They began at 1.34. Claire soon found and pointed a bevy and at the same time Mildred about eighty yards away, found and pointed another bevy. Claire was a bit unsteady. She made two points to which nothing was found. Next, she pointed a bevy on a side hill in sedge. Mildred at the same time pointed a bevy. Next Clare made a good point on scattered birds after which shs made two barren points. Up at 2.11. Mildred did not run up to the excellent form of her first heat, though doing creditable work. Clare marred her excellent form of her first heat, though doing creditable work. Clare marred her excellent capabilities by false pointing. Both exhibited firm capabilities as finders. Their range was middling and they were industrious.

Tony Boy—Tory's Gale.—Off at 2.21. Tony pointed and was nicely backed. Nothing found. Tory next pointed a bevy in open sedge. There was some haste exhibited by the handlers, and Major Taylor admonished them that they must go slower and let their dogs come to them instead of going after their dogs at every long cast. Tony pointed a bevy. Not so certainly as he might have done. He flushed a single. Tory pointed and Tony backed to caution. Nothing found. Sent on. After going about sixty yards, Tory pointed and as Tony came up he drew aside at sight of Tory and refused to back. Tony pointed; nothing found. He next pointed a single bird. Up at 3.14. Both handled hard. The work was not up to the opportunities, though both showed capabilities of doing better work. They ranged wide and fast, and seemed to handle harder than they really did handle, owing to the handlers, who were mounted, following their dogs when a long cast was made.

Cynosure—Wun Lung's Pride.—They were started at 3.17. Pride roaded a bird and Cynosure passed ahead and flushed it. Pride pointed a bevy in sedge and was steady to shot. Cynosure got a point on two birds. Pride backed. Pride pointed a single and next both got a point on the scattered birds. Cynosure pointed, Pride backed; both then roaded, pointed and roaded, Cynosure finally locating and pointed the bevy, Pride close behind. The credit of the find was Cynosure's. She next pointed a single bird. Pride pointed; nothing found. Up at 3.57. Prides range was greatly shortened as the heat progressed, and he showed signs of fatigue. Cynosure's point work was good, but her range was not well sustained, though she kept diligently at work.
